In addition, he asks "Would the Soviets not set in motion extensive and time-consuming [civil defense and other] preparatory measures before beginning a conflict that could rapidly escalate?" The Kremlin, however, could conclude that Assured Destruction threats are sufficient to deter the United States from defending NATO with strategic nuclear weapons, and therefore abstain from executing city evacuation plans.

[26] Intentions deal with the determination of countries or coalitions to use their capabilities in specific ways at specific times and places. Interests, objectives, policies, principles, and commitments all play important parts. National will is the integrating factor. Intentions are tricky to deal with, since they are subjective and changeable states of of mind, but estimates of capabilities and intentions in combination are essential for decisionmakers who hope to design sound strategies.

NATO's poor peacetime posture is directly attributable to Norwegian policy, which permits no allied forces in the country, except in response to emergencies.

[44] NATO's south flank includes Italy, Greece (which has withdrawn from the Alliance militarily, at least for the moment), and Turkey. Opponents are primarily Bulgaria, Rumania, Hungary, and forces from southwestern U.S.S.R.

[45] Moscow massed 95 ships south of Turkey during the Arab-Israeli outburst of 1973 (Sixth Fleet totalled 60, including three attack carriers), plus 30 in the Indian Ocean, a spectacular feat for a force devoted to coastal defense in the recent past.

[46] For further background, see U.S. Congress. Senate. U.S. Naval Forces in Europe. Report of Senator Gary Hart to the Committee on Armed Services, 95th Congress, 1st Session. Washington, U.S. Govt. Print. Off., 1977, 9 p.

[47] A full discussion of U.S. bases is contained in U.S. Congress. House. United States Military Installations and Objectives in the Mediterranean. Report prepared for the Subcommittee on Europe and the Middle East of the Committee on International Relations by the Congressional Research Service, Washington, March 27, 1977, 95 p.

NADGE stands for NATO Air Defense Ground Environment, designed to provide early warning to air attack and direct interceptor actions.

PART VII. WRAPUP

THE PRESENT BALANCE IN PERSPECTIVE

Quantitative changes in U.S. and Soviet armed forces since 1970 favor the Soviet Union, with scattered exceptions. U.S. qualitative leads, less pronounced than in the past, can not completely compensate.

The full significance of such trends is beyond the scope of this unclassified study, but a few findings stand out.

First and foremost, essential equivalence with the Soviets across the conflict spectrum is neither necessary nor desirable. Opposing capabilities would be quite different in many cases if forces were identical in size and structure, because circumstances and strategies are dissimilar. Possible Soviet preemptive employment of ICMs and/or antiship cruise missiles, for example, would pose counterforce perils far out of proportion to reciprocal U.S. actions constrained by second-strike concepts.

Procuring unnecessary or unusable assets simply for the sake of achieving apparent parity (a strong argument supporting some U.S. systems) seems a poor way to influence perceptions among enemies, allies, or uncommitted countries. Practical power would pay greater dividends.

It is clear, however, that current trends curtail U.S. freedom of action. The upshot impinges increasingly on American abilities to deter attacks against the United States, defend this country if deterrence fails, and safeguard associates whose security is closely linked with our own.

In the strategic nuclear field, Mutual Assured Destruction seems less mutual than it was in 1970. U.S. conventional capabilities have also faded, in comparison with those of the Soviet Union. U.S. land, sea, and air forces alike consequently would be hard pressed to support NATO plans at existing levels and cope concurrently with large-scale contingencies, including those caused or sustained by the Kremlin.

THE PROBLEM OF U.S. PRIORITIES

A second set of asymmetries, between complementary U.S. systems, bears directly on abilities to maintain a satifactory military balance with the Soviet Union. Airlift, for example, is adequate to commit forces quickly, but sealift is insufficient to sustain them in crucial contingencies. Marines are ample, but lack amphibious lift.

Congress and the Executive Branch, with focus on Forces and funds, clash annually over expensive programs, each considered essentially in isolation, and each with a life of its own. Interrelationships with enemy systems and each other commonly get short shrift, except for matching counts with Moscow. Political expediency and technological excellence, rather than real requirements, too often are the tests. Misplaced priorities consequently stress inessentials in many important cases, while slighting critical sectors.

Problems will prevail as long as U.S. decision-makers bank on bigger budgets to cure defense ills, without reference to better strategy. More money will ensure substantial improvements only if connected with force sufficiency factors that match meaningful U.S. ends with measured means in ways that minimize risks and reinforce weak spots.[1]

ANNEX A: NICKNAMES FOR SELECTED WEAPONS SYSTEMS

United States

U.S. Armed Service designation, and nickname:

Missiles—

Strategic:

ICBM LGM–30F/G, Minuteman II/III; LGM–25C, Titan II.

SLBM; UGM–27C, Polaris A–3; UGM–73A, Poseidon C–3; UGM–93A, Trident C–4.

Air-to-Surface: AGM–12, Bullpup; AGM–45, Shrike; AGM–65, Maverick; AGM–69A, SRAM; AGM–78, Standard; AGM–84, Harpoon; AGM–86A, ALCM.

Surface-to-Air; CIM–10B, BOMARC; MIM–14B, Nike-Hercules; MIM–23A, Hawk; XMIM–104, SAM–D.

Shipborne: AIM–54L, Phoenix; RIM–8G, Talos; RIM–24B, Tartar; RIM–2F, Terrier.

Air-to-Air: AIR–2, Genie; AIM–4, Falcon; AIM–7, Sparrow; AIM–9, Sidewinder.

Aircraft—

Bombers: B–52, Stratofortress; FB–111, (None).

Fighter/Attack: F–4, Phantom; F–14, Tomcat; F–15, Eagle; F–16, (None); F–100, Super Sabre; F–101, Voodoo; F–102, Delta Dagger; F–105, Thunderchief; F–106, Delta Dart; F–111, (None).

Naval Aircraft: F–8, Crusader; A–4, Skyhawk; A–6, Intruder; A–7, Corsair; AV–8, Harrier; P–3, Orion; S–2, Tracker; S–3, Viking.

Helicopters: UH–1, Iroquois; CH–34, Choctaw; CH–47, Chinook; CH–54, Flying Crane; SH–3, Sea King; CH–46, Sea Knight; CH–53, Sea Stallion.

Airlift: C–5, Galaxy; C–7, Caribou; C–97, Stratofreighter; C–119, Flying Boxcar; C–123, Provider; C–124, Globemaster; C–130, Hercules; C–141, Starlifter; KC–135, Stratotanker.

[1] For force sufficiency factors, see U.S. Congress. Senate. The United States/Soviet Military Balance, p. 41, 47–54.

Artillery: M–101, 105mm Howtizer; M–102, 105mm Howtizer; M–107, 175mm Gun; M–109, 155mm Howitzer; M–110, 8–inch, Howitzer; M–114, 155 mm Howitzer.

Anti-Tank: M–47, Dragon; BGM–71A, TOW.

Armor: M–48, (None); M–60, (None); M–555, Sheridan; M–113, (None); LVTP–7, (None).

Soviet Union

Numerical designation and nickname:

Missiles—

Strategic:

ICBM: SS–7, Saddler; SS–8, Sasin; SS–9, Scarp; SS–11, Sego; SS–13, Savage; SS–17, (None); SS–18, (None); SS–19, (None).

IRBM: SS–5, Skean; SS–20, (None).

MRBM: SS–4, Sandal.

SLBM: SS–N–4, Sark; SS–N–5, Serb; SS–N–6, Sawfly; SS–N–8, Sasin; SS–N–X17, (None); SS–N–X18, (None).

Air-to-Surface: AS–2, Kipper; AS–3, Kangaroo; AS–4, Kitchen; AS–5, Kelt; AS–6, (None); AS–7, Kerry.

Suface-to-Air: SA–1, Guild; SA–2, Guideline; SA–3, Goa; SA–4, Ganef; SA–5, Gammon; ABM, Galosh.

Shipborne: SA–N–1, Goa; SA–N–3, (None); SA–N–4, (None).

Air-to-Air: AA–1, Alkali; AA–2, Atoll; AA–3. Anab; AA–5, Ash; AA–6, Acrid.

Tactical Shipborne: SS–N–2, Styx; SS–N–3, Shaddock; SS–N–9, (None); SS–N–10, (None); SS–14 (None); SS–N–13, (None); SS–N–14, (None).

Aircraft Bombers: TU–16, Badger; TU–22, Blinder; TU–95, Bear; TU–??, Backfire; M–4, Bison; IL–28, Beagle.

Fighter/Attack: MIG–17, Fresco; MIG–19, Farmer; MIG–21, Fishbed; MIG–23, Flogger; MIG–25, Foxbat; SU–7, Fitter–A; SU–17, Fitter–C; SU–9, Fishpot.

Recon/Intercept: SU–15, Flagon; TU–28, Fiddler; YAK–25, Mangrove; YAK–28, Firebar (Brewer).

Naval Aircraft: BE–6, Madge; BE–12, Mail; IL–38, May; YAK–36, Forger (VTOL).

Helicopter (Naval): KA–25, Hormone; MI–4, Hound; MI–24, Hind–A.

Airlift: AN–12, Cub; AN–22, Cock; IL–76, Candid.

Artillery: M–55, 203.2mm; S–23, 180mm; M–43, 152mm; M–46, 130mm; M–1938, 122mm; M–1955, 100mm; M–1975, 152mm (SP); ZSU–23–4, 23mm (AA).

Anti-Tank: AT–2, Swatter; AT–3, Sagger.

Armor Tanks: T–55, (None); T–62, (None); T–72, (None).

APC/AFV: BTR–50P, (None); BTR–60P, (None); BTR–152, (None); BMP–76PB, (None).

NOTE: Naval ships are identified by class throughout the study.

ANNEX B.—ABBREVIATIONS

AAA—Anti-aircraft armament.
ABM—Anti-ballistic missile.
ACR—Armored cavalry regiment.
ADCOM—Air Defense Command.
AFCENT—Allied Forces Central Europe.
AFV—Armored fighting vehicle.
ALBM—Air-launched ballistic missile.
ALCM—Air-launched cruise missile.
APC—Armored personnel carrier.
ARNG—Army National Guard.
ARPA—Advanced Research Projects Agency.
ASM—Air-to-surface missile.
ASW—Anti-submarine warfare.
AT—Anti-tank.
CBR—Chemical, biological and radiological.
CD—Civil Defense.
CEP—Circular errors probable; Circle of equal probability.
CGS—Command and general support.
CIA—Central Intelligence Agency.
CONUS—Continental United States.
CRAF—Civil Reserve Air Fleet.

DCSLOG—Deputy Chief of Staff for Logistics.
DIA—Defense Intelligence Agency.
DMC—Defense Manpower Commission.
DOD—Department of Defense.
ECCM—Electronic counter-counter-measures.
ECM—Electronic counter-measures.
EUCOM—U.S. European Command.
EUSC—Effective U.S. controlled (fleet).
GNP—Gross National Product.
HE—High Explosive.
ICBM—Intercontinental ballistic missile.
IR—Infrared.
IRBM—Intermediate-range ballistic missile.
K—Warhead lethality factor.
KT—Kiloton.
LAMPS—Light airborne multi-purpose system.
LAW—Light anti-tank weapon.
LOC—Line of communication.
MAC—Military Airlift Command.
MAD—Magnetic anomoly detector.
MARAD—Maritime Administration.
MaRV—Maneuverable reentry vehicle.
MICV—Mechanized infantry combat vehicle.
MIRV—Multiple independently-targetable reentry vehicle.
mm—Millimeter.
MRBM—Medium-range ballistic missile.
MRV—Multiple reentry vehicle.
MSC—Military Sealift Command.
MT—Megaton.
NADGE—NATO air defense ground environment.
NATO—North Atlantic Treaty Organization.
NCA—National command authorities.
NCO—Non-commissioned officer.
NDRF—National Defense Reserve Fleet.
Nuke—Nuclear.
OASD—(Compt) Office of the Assistant Secretary of Defense, Comptroller.
OASD (M & RA)—Office of the Assistant Secretary of Defense for Manpower and Reserve Affairs.
PACAF—Pacific Armed Forces.
PGM—Precision-guided munitions.
PH—Passive homing.
POMCUS—U.S. pre-positioned stocks.
PONAST—Post-nuclear attack study.
psi—Pounds per square inch.
RDT&E—Research, Development, Test and Evaluation.
R&D—Research and development.
REDCON—Readiness condition.
RRF—Ready Reserve Force.
SAC—Strategic Air Command.
SALT—Strategic Arms Limitations Talks.
SAM—Surface-to-air missile.
SEATO—Southeast Asia Treaty Organization.
SLBM—Submarine-launched ballistic missile.
SLCM—Sea-launched cruise missile.
SRAM—Short-range attack missile.
SRF—Strategic rocket forces.
TAC—Tactical Air Command.
UE—Unit equipment.
USAF—United States Air Force.
USAFE—United States Armed Forces Europe.
USMC—United States Marine Corps.
V/STOL—Vertical/short take-off and landing.
VTOL—Vertical take-off and landing.

CURRENT NEGOTIATIONS BETWEEN A.T. & T. AND THE COMMUNICATIONS WORKERS OF AMERICA.

Mr. MATHIAS. Mr. President, on May 19, 1977 representatives of American Telephone and Telegraph and the Communications Workers of America began negotiations on a new nationwide contract.

More than one-half million workers are involved in the outcome of these important negotiations. Beyond them, however, the entire country could be affected by a break in service. The first offer was made by A.T. & T. during the week of July 25 and their second offer came today. Both have been rejected.

The current contract expires at midnight August 6, 1977. The members of the union have voted by a margin of 6 to 1 to go on strike if no settlement is reached by that time. Because of the structure of the union, ratification of any agreement would take 3 weeks. The economic impact of such a lengthy strike or shutdown is difficult to assess. But certainly it would not be healthy for our economy.

I simply want to take this opportunity to urge both parties in this matter to make every effort to avert a strike and any subsequent break in service. The valuable services provided by the corporation and its employees are needed to help this country during this period of recovery. I hope and I know that good-faith bargaining will continue in order to reach a reasonable and just settlement.

PRM–10 AND THE INCOMPETENCE OF THE HIGH STRATEGISTS

Mr. HATCH. Mr. President, the Evans and Novak column in yesterday's Washington Post starkly portrays the tragic result of elitist foreign policy conducted without the participation of the American people. The academics who design American foreign and defense policies, having convinced themselves that the American public will not support military forces that are adequate to deter Soviet aggression, have allowed a document to be prepared—Presidential review memorandum 10—which may prove to be the most tragically destructive document in the Nation's history. This document, in effect, writes off Western Europe on the grounds that it is too expensive to defend. But no one has taken the case to the American people. The people have not been presented with a choice. Not even the Congress has been presented with a choice. The elitist academics have certainly not consulted our allies. Rather, they have determined among themselves in private rooms that the politicians in Washington would rather build their welfare dependencies—their political spending constituencies—than pay the price of freedom for ourselves and our allies. Mr. President, the American people, our few remaining allies, and the remnant of the spirit that Western Civilization once had have all been betrayed by the abstract academic mind that dwells in untested and untried theories neglecting the accumulated wisdom of mankind.

American foreign policy has now built a tradition of neglect of the values, strength and commonsense of the American people. Instead its direction comes from academic minds, victimized by abstraction, that structure hypothetical world orders according to the principles of the theory of the moment.

The commitment of the academic mind to the latest fad interpretation of world politics is as tenuous as the commitment of western intellectuals to their own civilization. In short, Mr. President, it is a flighty commitment. And that explains why the only coherence to American foreign policy is a pattern of surrender.

Many of us have been worried about the sellout of our Asian allies. On June 6, I warned in the Senate that "to sell out another ally is a serious business. Those who remain are no doubt wondering who is next." They now know, Mr. President, and the answer is all of Europe. Whoever wrote PRM–10 is an idiot. And I say that not just in anger, but also to emphasize that here we have the case of the emperor without any clothes. The high strategists are not clothed in sophistication; they are stark naked. If we were to replace them with the proverbial first 600 names in the New York City telephone directory, we could only do better.

Mr. President, what PRM–10 tells our NATO allies, the Soviet Union—indeed, the entire world—is that if it is too expensive now with existing Soviet force levels for us to defend all of Germany, so that we have to give up one-third of the territory of our ally, then if the Soviets add a few more divisions, we will give up two-thirds of Germany. A few more tanks and we will write off the rest of Germany, and France as well. And Italy. And England.

Mr. President, the Western European nations are too sophisticated to allow us to sell them out in the way we sold out South Vietnam. They will strike their own deals with the Russians first. I would be surprised, in the light of PRM–10, if they are not already scrambling to sell us out first. This is certainly not to say that the Europeans are not honorable people. On the contrary, who can criticize them for putting their own survival ahead of a futile commitment to the dishonorable ally who would fashion and follow a PRM–10? What confidence can they have in an ally so stupid as to write down on paper that we rely on a psychological deterrence for the defense of Europe and would not counterattack Soviet aggression?

Most ominously of all, the doctrine expressed in PRM–10 eliminates Europe as a theater of war and, thereby, makes the homeland of the United States the focus of Soviet military capability. In fashioning PRM–10, we have fashioned a lightning rod that invites Soviet attack; we have signaled to them that they no longer have to worry about Europe. They now know that they can shift their focus away from the Rhine to the Atlantic. They now know that there is nothing between them and us. No allies, nothing but the maginot line of "overkill," a psychological deterrence that exists only in our minds. The Soviets now know that the only thing they have to do is hit us hard and the whole free world collapses. The focus of the next war is now on U.S. soil, and we are not prepared for that.

Mr. President, if PRM–10 is not totally and harshly and rapidly disavowed, it will achieve the "Finlandization of Europe," and with it the "Finlandization of the United States."

Mr. President, I have noticed that the administration's denial of the Evans and Novak report was weak and unconvincing, and I ask unanimous consent that the Washington Post's report of the administration's response be included in the RECORD along with the Evans and Novak article at the end of my speech.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. HATCH. Mr. President, the incompetence of the high strategists and the damage inflicted on our security by PRM-10 are so extraordinary that only strong action can remedy the situation and restore the military credibility of the United States. Strong action is absolutely necessary. I think the public ought to demand that the White House disclose the PRM-10 document and if the document shows that Evans and Novak are correct in their assertions, the public ought to and I will call for the removal of the President's National Security Adviser, and I must then question the judgment of the Secretary of Defense and the Secretary of State for allowing the preparation of Presidential memorandum 10.

EXHIBIT 1

[From the Washington Post, Aug. 4, 1977]

CONCEDING DEFEAT IN EUROPE

By Rowland Evans and Robert Novak

President Carter late this week will be presented by his national security advisers with a new defense strategy that secretly concedes one-third of West Germany to a Soviet invasion rather than seek increased defense spending, which these advisers say would provoke Moscow and divide Washington.

PRM-10, the Carter administration's top-secret strategic study, suggested that this policy could be made palatable to Western Europe by simply not admitting its implications. This course was wholly adopted in high-level meetings July 28 and 29 by Zbigniew Brzezinski, the President's national security adviser. There was dissent from the senior officials assembled.

The strategic policy paper to be given the President (about three pages of single-spaced typing) makes no mention of surrender or duplicity in central Europe but talks of a commitment to a "minimum loss of territory" in NATO. To achieve a broader perspective Carter ought to look at the minutes of the July 28-29 meetings of his Senior Coordinating Council (SCC) on national security.

The SCC agreed on a 3 percent annual increase in defense spending, fulfilling Carter's promise to his NATO allies earlier this year. But, according to verbatim notes taken by one of the participants, Brzezinski declared: "It is not possible in the current political environment to gain support in the United States for procurement of the conventional forces required to assure that NATO could maintain territorial integrity if deterrence fails. Therefore, we should adopt a 'stalemate' strategy. That is, a strategy of falling back and leaving the Soviets to face the political consequences of their aggression."

Brzezinski went on to declare that these "political consequences"—world opinion, U.N. disapproval, U.S. mobilization—would help deter a Soviet invasion. There was no dissent from those present, including Vice President Mondale, CIA Director Stansfield Turner, Chief Disarmament Negotiator Paul Warnke, Deputy Defense Secretary Charles Duncan and Joint Chiefs of Staff Chairman Gen. George Brown.

Brzezinski continued: "We agree there must be a gap between our declared strategy and actual capability. We cannot for political reasons announce our strategy." Again, there was no dissent, though some officials voiced the opinion there would be hell to pay if the Germans learned what was happening.

All of this follows the script of the June 20 draft of PRM-10, which lists four options for lower-range defense spending. Each would stop a Soviet offensive at a line formed by the Weser and Lech Rivers, surrendering about one-third of West Germany (including Saxony and most of Bavaria).

These four options, according to PRM-10, do not "plan" to stop "a determined Warsaw Pact conventional attack. . . . If the Soviets persist in their attack, a U.S.-NATO conventional defeat in Central Europe is likely." Yet these options are certainly not rejected out of hand.

"Many of the adverse political implications" of the reduced defense options (such as independent German rearmament or, conversely, European accommodation to Moscow) "probably could be avoided if the U.S. continued to publicly support" present strategy. Adverse reaction by Western Europe "could be significantly softened . . . if the U.S. were to avoid any statements to the effect that a loss of NATO territory would be acceptable."

PRM-10 also proposes these political steps, accompanying defense reduction, that could help forestall a Russian attack: "The U.S. might pursue arms-control initiatives more vigorously to obtain reductions in threats and opposing force levels, thereby minimizing the risks of unilateral U.S. reductions. With respect to the Soviet Union, the U.S. might undertake a broad program of economic assistance to the U.S.S.R. on trade, credits, food, and technology, thereby lowering political tensions and reducing the risks of war."

The four options calling for increases in defense spending, says PRM-10, would be intended to roll back a Soviet invasion but "may provoke adverse Soviet *and* allied reactions." This "might provoke a similar Soviet counter-buildup or even a preemptive attack," and therefore "might actually undermine deterrence."

Arms-control negotiations would be disturbed by "strategies requiring a visible and rapid increase in the size of U.S. and allied forces, particularly in Europe. . . . Soviet suspicions of U.S. motives would make it more difficult to conclude meaningful arms-control agreements, either SALT [Strategic Arms Limitation Talks] or MBFR [Mutual Balanced Force Reductions]."

PRM-10 predicts any increase in defense spending would generate "divisive debate" and warns an across-the-board hike in defense capability "is likely to find little domestic support." In general, the options calling for decreased strength are seen as causing less trouble; in particular, the option calling for approximately the present military level but with less sustained power in Europe is described as "probably the most anodyne [option] in terms of its domestic impact, unless it were only described as a lowering of our sights."

These views were implicitly accepted last week by Brzezinski and the other senior officials. So the President is about to adopt a policy boiling down to this: Instead of seeking greater defense spending to defend central Europe, rely on political pressures to deter Moscow while secretly conceding a military defeat. Whether this reflects a "political environment" as claimed by Brzezinski, it certainly reveals the environment within the Carter administration.

[From the Washington Post, Aug. 4, 1977]

"PULLBACK" POLICY IN EUROPE IS DENIED

(By Edward Walsh)

Senior administration officials yesterday denied a report that the United States is considering a defense policy that would concede the loss of one-third of West Germany in the case of a Soviet invasion of Western Europe.

The denials, in response to a report by syndicated columnists Rowland Evans and Robert Novak published yesterday in The Washington Post, came from the State Department, Defense Secretary Harold Brown, White House press secretary Jody Powell and President Carter's national security adviser, Zbigniew Brzezinski.

Brown, testifying before a Senate Armed Services subcommittee, said U.S. policy still is to contain any Soviet attack near the German border.

"I do not advocate and will not support a policy which called for the United States to accept a loss or defeat in Europe," Brown said.

Powell, answering questions at the White House, said that Presidential Review Memorandum 10—the subject of the column—proposes no change in policy that would accept the loss of territory in Europe. U.S. policy, he said, remains unchanged and includes the possible use of tactical and strategic nuclear weapons as well as conventional forces in defense of Europe.

PRM-10 is the administration's overall review of U.S. global strategy, including military strengths and force levels. It has not yet been presented to the President.

Evans and Novak reported what they described as a meeting of high-level administration officials July 28 and 29 to discuss aspects of PRM-10. The thrust of the column was that the officials agreed with Brzezinski's contention that given the "current political environment" the administration could not expect to gain support to procure enough conventional forces to assure turning back a Soviet invasion.

In these circumstances, the columnists said Brzezinski argued, the United States should adopt a "stalemate strategy," in effect "falling back and leaving the Soviets to face the political consequences (such as adverse world opinion) of their aggression." But under no circumstances, Brzezinski was reported to have said, should the United States publicly acknowledge any such change in its strategy, since this would cause an uproar in Western Europe, according to the columnists.

The syndicated column contained lengthy quotations attributed to Brzezinski which Evans and Novak said came from the verbatim notes of one of the participants in the meeting.

The White House did not directly deny that Brzezinski made the statements attributed to him. However, Jerrold Schecter, Brzezinski's press spokesman, said the statements in the column were "partial, inaccurate and deal only with one aspect of the over-all defense strategy that might be applied in the event of an attack on Western Europe."

Schecter declined to elaborate on where the statements attributed to Brzezinski were inaccurate.

Powell described the Evans and Novak report as another "in a series of the 'Oh, my God, they're caving into the Commies' columns" by the two writers, who are known for their hardline stance on defense issues.

Powell conceded that discussions of PRM-10 have included reviews of "political options" open to the United States in the event of Soviet aggression in Europe, but he said the discussions were "not limited" to political options. The response to a Soviet invasion, he said, "would be other than words."

Asked whether the administration believes the United States and its NATO allies currently have the strength to regain any territory initially lost to an invasion. Powell, after hesitating replied:

"Yes we do . . . It is our policy to regain any territory and it is our belief at this time that we can do that. However, it is important for NATO to take certain steps to maintain that ability."

Last May at a meeting of the NATO ministers in London, Carter reaffirmed U.S. support of the alliance and simultaneously warned that unless there is an early agreement for mutual and balanced force reductions NATO must be beefed up.

U.S. GENEROSITY TOUCHES TASS

Moscow, August 3.—The United States is prepared to give up someone else's territory—West Germany's—to a country that has no intention of taking it, the Soviet Union, the official Soviet news agency, Tass, declared today.

"What generosity!" Tass said, commenting on an article in which columnists Rowland Evans and Robert Novak said the United States is ready to surrender a third of West Germany in a conventional land war with Warsaw Pact forces rather than increase defense spending enough to meet an attack head-on.

THE MARSHALL PLAN

Mr. HARRY F. BYRD, JR. Mr. President, on April 21 ceremonies were held in Washington, D.C. commemorating the 30th anniversary of Gen. George C. Marshall's speech at Harvard University when he outlined the European recovery program.

This ambitious postwar program became known as the Marshall plan. Under the auspices of the George C. Marshall Research Foundation, headquartered in Lexington, Va., a prominent group of individuals associated with the Marshall plan, gathered to pay tribute to General Marshall.

The Honorable William McChesney Martin chaired this event. Other participants included Gen. Maxwell D. Taylor; His Excellency Jacques Kosciusko-Morizet, Ambassador of France; His Excellency Sir Peter Ramsbotham, Ambassador of Great Britain; the Honorable John Gilligan, Administrator, Agency for International Development; and the Honorable W. Averell Harriman.

The remarks delivered by these distinguished gentlemen provide a valuable insight into the scope of the Marshall plan.

Mr. President, I ask unanimous consent that the proceedings of this ceremony be printed in the RECORD.

TRIBUTES TO GEN. GEORGE C. MARSHALL ON THE OCCASION OF THE 30TH ANNIVERSARY YEAR OF THE INCEPTION OF THE MARSHALL PLAN

Chairman WILLIAM MCCHESNEY MARTIN, Jr. This evening it's my privilege to welcome all of you who are trustees of the Marshall Foundation and your ladies and associates of the Marshall Foundation and friends of the Marshall Foundation, friends that are connected with foundations that have contributed to the Marshall Foundation. It's a great privilege for me to welcome all of you to this Second Annual Dinner of the Marshall Associates.

Now just a word about the background, about the Marshall Foundation. It was founded in 1953 with the enthusiastic support and help of President Truman. On one occasion I heard him say that he thought that General Marshall was one of the greatest men that he'd ever known and he was very enthusiastic about having an organization of this sort founded.

It has facilities in Lexington, Virginia. I think it is really developing in the way it should because the idea was that there would be a place where you could have research in military and diplomatic history and memorialize, perpetuate the work of one of our great statesmen and great soldiers and I believe that the Marshall Foundation has been performing that.

It was called the George C. Marshall Research Foundation and they took as their motto: "That tomorrow may know our times better." I think that's an interesting motto and it certainly is a very valuable one. I am one of those people who think perhaps we're changing too fast these days and perhaps too much of tomorrow is occurring today but, nevertheless, it's a very good thing to have a center where these things can be evaluated and analyzed and considered and in the light of the character of a man that we know is worthy of all the youth of our land following. So it's a very nice thing to be able to participate in this dinner and to pay tribute to the Marshall Associates.

It's the Thirtieth Anniversary of the Marshall Plan. And this afternoon about four o'clock I received a very nice message from our President which I would like to read to you at this time.

From the White House, April 21st:

"I am deeply honored to join in this tribute to the memory of the brilliant General and Statesman who offered to the war-torn nations of Europe a program by which both victor and vanquished could work together in a common effort to assist their economic recovery following World War II.

"On George C. Marshall's creative and determined enterprise now rest the entire structure of trans-Atlantic cooperation and goodwill. His leadership then should be our guide now as we work to strengthen the Atlantic Alliance. Together we face new challenges, less dramatic but no less important to our collective security and economic well-being. Together we can overcome these challenges, if we address them with the same invincible and daring spirit that marked the public service of this remarkable man.

"For many of you who knew General Marshall and who were part of the gallant and valorous undertakings of that era, the Thirtieth Anniversary of the Marshall Plan is a milestone of the deepest personal satisfaction. For all of us, it is an occasion to rejoice in the success of the selfless cooperation that gave western nations renewed hope and confidence in the future."

JIMMY CARTER.

Now it's my privilege to introduce one of America's most distinguished military men, one who has served our country in a great many different capacities. He was Chairman of the Joint Chiefs of Staff, Chief of Staff of the Army, not long ago Ambassador in Viet Nam. He led two combat divisions during World War II and, above all, from our standpoint, he's been an effective trustee of the Marshall Foundation.

Gen. MAXWELL D. TAYLOR. Distinguished guests, ladies and gentlemen:

My mission here on the platform is very simple, to explain and to announce the formal adoption of the General Marshall ROTC Award. This was a concept developed within the trustees last fall. As you're well aware, they are constantly seeking for ways of properly memorializing this great man and, obviously, with his enormous contribution, his versatility, his many contributions to the country, that's not hard. The question is one of choice.

This time recognizing his great concern as a military man for the quality of the officer corps and, more precisely, the problem of creating officers in time of emergency, as in World War II, he was always expressing his view of the essentiality of the Reserve officer Training Corps Program, and, hence, for that purpose, this award is being chosen.

If we needed any citation, chapter and verse, of his interest, I am indebted to Cabot Lodge for calling attention to the fact a statement made before a Senate Committee in the course of World War II to the following effect:

The most valuable asset we have in this emergency, namely, World War II, has been the product of the ROTC. If we lost these officers at a critical juncture such as now, the result in mind would be disaster.

The concept is simple, simply that the Foundation support and propose to the Department of the Army a program whereby the Foundation can give an award to the senior cadet of the graduating class in the ROTC units and the 285 colleges and universities where we have representation today the choice of the young man who has shown the greatest characteristics of leadership and has the best record in military studies in that particular unit.

This decision will be made by the commanding officer in the unit and will be nominated to the Foundation. The Foundation's role will be threefold.

First—To give a certificate of excellence in the terms of the intent of the Foundation, namely, outstanding ability, outstanding potential in leadership and in military studies.

Next—There will be the gift of the Marshall biographies of Dr. Pogue.

Third—There will be a conference held each year in Lexington by the Foundation in which there will be a discussion of national security issues and there will be not only the representatives of the ROTC, the winners of the awards, but also distinguished citizens, men of background to add to the discussions which will take place.

It seems to all of us that this is indeed a very valuable program from many points of view. First, it gives us, I would say, a very apt way of recognizing General Marshall. It also allows us to impress his image on these young men at a formative time in their lives, the qualities of this great man. It utilizes the facilities of the Foundation, which, under Dr. Hadsel, has become more and more a center of vitality, I would say, in inviting thoughtful people to come to Lexington and under the aegis of General Marshall to consider these worldwide affairs.

This was taken then—this was our proposition. We took it to the Chief of Staff of the Army, General Rogers. He saw the merits of it, he accepted it. He designated Major General Charles D. Rogers, Deputy Chief of Staff for ROTC Training, to monitor this and to work out the arrangements with us.

We think we have, as I mentioned, a great potential in this. We should all watch it closely. The real payoff, of course, will be the quality of the young men who are brought to Lexington but I would say that with the concept we have and with the image of General Marshall behind it I'd be surprised if we don't bring there young men who will receive something and in turn will give something to us in the vitality of youth and, most of all, I think we will bring young men of whom George Marshall would have approved.

Chairman MARTIN. I think that is a very encouraging development and we're most appreciative to General Rogers and to General Taylor for this initiative.

Now the response to the Marshall Plan after the talk on June 5th of 1947, was dramatic and inspiring and any number of countries rallied round but we are fortunate that two of them, France and Britain, that were in the forefront, we're fortunate to have representatives of both of them here tonight

and we're going to ask them to make a few remarks.

In the case of France, we've had an ambassador here, a very distinguished ambassador for sometime whom I first heard when he was teaching at Columbia University in New York. He then went back to Paris and was in the French civil government for a number of years and has been His Excellency, the Ambassador of France to the United States here in the United States since 1972.

I would like very much to ask him to say a few words, if you would, Mr. Ambassador, on behalf of your government.

His Excellency JACQUES KOSCIUSKO-MORIZET. Mr. Chairman, Governor Harriman, Senator Byrd, Mr. Zablocki, my dear colleagues, ladies and gentlemen: Thirty years in the history of nations is very little. In fact, it seems only yesterday that the United States in a generous and intelligent gesture put the resources of its power at the disposal of a battered, devastated Europe so that it could reorganize and rehabilitate itself through self-help.

I also remember, as if it were only yesterday, the time when Secretary of State Marshall visited President Auriol, for whom I was head of staff and foreign policy advisor at the time. I showed the visitor into the Presidents office. He was tall, typically American, squarely built, rugged features, and his hair was already white. I remember his kind, intelligent look, his forthright and still rather military speech.

Mr. President, he said, I am not a diplomat, I go straight my road. I often thought about these words. First of all, I viewed them as my own guidelines because I've always found that the best diplomacy was to follow a straight path and, secondly, this was a reminder that in matters of foreign policy the great innovators are rarely the professionals, the experts, as we are wont to call them, who are hidebound by routine and by their very professionalism. The innovators are usually those who have a broad, simple vision of the political necessities and intuitively know what the future holds.

President Truman's vision was clear when he said on March 12th, 1947, that it was essential and good to support free peoples who are resisting attempted subjugation by armed minorities or by outside pressure. Incidentally, it is a clear lesson for the western countries considering what happens today in Africa, frightened by the same totalitarian domination.

On June 5th, at Harvard, General Marshall took up the same theme. It is our duty to help free peoples. That was the good news, the important political decision and the concept itself was well suited to the purpose. My country, France, was in need. It had been shattered by the war, bled dry, vast areas had been laid waste, houses and cities destroyed, roads and bridges cut, railroads paralyzed and people were undernourished. What France needed more than immediate help, necessary though this was, was to set its war-torn economy in motion again.

The Marshall Plan was to give an indispensable boost to the recovery and modernization of our economy. On the American side there was legitimate concern that the funds might be poorly used and swallowed up by the chasm of budgetary operating expenditures but France prepared, thanks to Jean Monet, a gifted Frenchman who was able to transcend preconceived ideas and take the longer view.

After consultation among government, management and labor, a settlement was established, thus the structure existed for the aid so generously offered by General Marshall. As Jean Monet wrote in his recently published memoirs. For the first time the responsibility for the effort had been shared, Americans were helping Europeans to help themselves.

I cannot emphasize strongly enough the importance of the historic joint effort between the French team and the American team. I would have to mention many names but it would take some restraint. The French team inspired by our beloved Governor Harriman, aided by Ambassador David Bruce, and under the leadership of a man who is, alas, no longer with us, a man whom I later had the honor to work with at the United Nations, a great American, an outstanding man of action, Paul Hoffman.

I would also like to pay special tribute to his memory today.

The scope of this methodical assistance is well known, $30 million to 16 nations, 97ths of which was reimbursed by the 6 founding members of the European community. And in all cases, the entire debt was repaid.

The results were spectacular. There was the German miracle. There were many miracles in Europe. There was also the French miracle. With a current G N P of about $400 billion France is now the world's third ranking exporters of goods and services. The results could not have been achieved without U.S. aid and without this aid the Western World would not be what it is today.

I can see two lessons in this superb demonstration of solidarity.

First—The Marshall Plan illustrated the interdependence of western nations and cemented the 200-year-old friendship between our countries.

And secondly—It showed what we were capable of achieving when we work together in freedom.

As early as in 1949 Jean Monet wrote in an official government report, France has risen above the threatening economic decline. This statement alone is enough to show you the extent of our gratitude.

Chairman MARTIN. Thank you, Mr. Ambassador.

Now, in introducing the British Ambassador, I am presenting to you one of Britain's most accomplished diplomats. He entered his service in 1948 and was immediately involved in German affairs. After arriving at the United Nations in Paris and, of course, in his own Foreign Office, he was High Commissioner to Cyprus and Ambassador to Iran. He has been Her Majesty's Ambassador to the United States since 1974.

Sir Peter Ramsbotham, Knight, Commander of the Order of St. Michael and St. George and the Ambassador of the United Kingdom to the United States.

Ambassador PETER RAMSBOTHAM. Mr. Chairman, Governor Harriman, Senator Byrd, Mr. Zablocki, Mr. Gilligan, dear colleagues, ladies and gentlemen: It's a great pleasure and privilege to join with you this evening in this commemoration. It's an evening when I can look back to the beginning of my own career as a diplomat, for I entered the British Foreign Service at the age of 28, just six months after the signing of the European Recovery Act by President Truman.

In the late forties things were difficult and life was cold, they were hard years in Europe and Britain's spirit then was less capable of coping with the slow task of reconstruction than it had been with the quick, harsh dangers of war and, with so many of our overseas assets sold off to pay for the war, we were desperate for help. And then the hand of friendship was offered in the concrete form of the Marshall Plan at a time when it was not the thought only that counted but the quality of the gift. Ernest Bevin, our beloved, rather eccentric but immensely practical Foreign Secretary at the time, seized upon the opening in a vigorously positive response. It was a lifeline and the name of General Marshall will always be revered in my country, the symbol of integrity, of loyalty, of selfless public service, the Mr. Standfast of his day, and his memory will never fade.

There's no need for me to recall to you what the Marshall Plan meant for Britain then. Many think, as my French colleague has said, many think that it saved Western Europe, saved it perhaps from Soviet domination. Certainly beyond that it was itself a remarkable reaffirmation in peacetime of a comradeship which had been bred in war and whose spirit might well have evaporated once that war was over. I believe that, if the Marshall Plan had been no more than an arrangement between governments, then that might have been the case. But it was a gesture, it was a gesture that went far deeper than that. It came from the American people as a whole.

Indeed, to me it was an illustration of how ideas which were put together in hammering out the Constitution of the United States still influenced and influence and control the effectiveness of American foreign policy. Seen through the eyes of the head of the British delegation at the Committee of European Cooperation in 1947, Oliver Franks, who was soon to become an Ambassador in Washington, one of our greatest, seen through his eyes the negotiations for the Marshall Plan were themselves a remarkable affair.

For 8 weeks in Paris in that hot summer 16 European nations, under his chairmanship, worked at drafting the European Recovery Program, their response to the American encouragement for the first move to come from Europe. When Oliver Franks came into the bar of his hotel, he records, he'd come across American congressmen, American journalists. They would cross-question him for hours on what his committee was doing, what figures they were using, when they would finish their report. When the report was completed and transmitted to Washington Oliver Franks was asked by the British Government to come here to explain it and to justify it. As soon as he arrived, he was subjected to intensive questioning in the State Department and in the Treasury. He appeared before the Senate Foreign Relations Committee where one of the first questions asked him was whether the European Recovery Program was not just an operational rathole.

From Washington he traveled all over the country speaking at meetings with businessmen, women's luncheon clubs, groups of teachers, Rotarians, local radio and newspaper reporters and he became involved in a nationwide debate on the Marshall Plan. It seemed to him, as he moved from one place to another, that it was all one continuous discussion and debate with the American people. Meanwhile, all around him major processes in the American government were taking place of which he was hardly aware at the time.

You remember Senator Vandenberg's proposal which led to the creation of the Harriman Committee. After the publication of the report a bipartisan group was established to consider it in detail.

President Truman made a radio address to the nation and then spoke to a special session of Congress.

And, finally, the President sent a message to Congress explaining the part to be played by the United States in a comprehensive plan for the recovery of Europe. Congress passed the European Recovery Act and it was signed into law on the third of April 1948.

Now this account of the experiences of a predecessor of mine, the one who played a central role, an account of Oliver Franks's experiences, illustrates to me something of great importance in America's political way of life. Your Administration formulates a piece of major policy and publicly announces its proposal. The people are informed by the preparation and publication of reports on the implications of this policy. Congressional leaders are approached on a bipartisan basis and agreement and support is sought. The

President makes an address and a nationwide debate ensues. The people feed their reactions back to Congress and Congress votes on the bill.

The European Recovery Act was effectively and successfully enacted because all the parts of the United States Government were then in harmony and enjoyed the broad support of the people. Those were the Marshall days. "We, the people," perhaps your greatest constitutional contribution, were being fully consulted, and this is reassuring to see. With this Administration, as I view it, it is reassuring to see the same conscientiousness in bringing the people into the process of evolving a foreign policy. If there was value to the United States in a restored and independent Europe there was also value to Europe in seeing that the American people as a whole wanted it that way. A policy became the demonstration of a state of mind, of partnership, or generosity and after 30 years we still feel the warmth from that glowing moment. Indeed, the Atlantic Alliance owes a great deal to the habits of cooperation and mutual respect which were developed during the Marshall Years. Its example will, I know, illuminate our future actions also.

And, before I sit down, Mr. Chairman, I shall pay a tribute from the people of Britain to one of the great architects and technicians of American foreign policy in this century, Averell Harriman. Not only did his wisdom and his tireless energy see the Marshall Plan executed for the benefit of Europe, he has labored for and guided and loved and sometimes chastised the American people itself over a long career of public service. British and Americans alike and our European friends with us owe him a special debt of gratitude for he has strengthened the bonds that join us. To the spirit of trans-Atlantic partnership which he and General Marshall have so nobly symbolized I reaffirm the British commitment tonight.

Chairman MARTIN. Thank you, Sir Peter. You and the French Ambassador have helped pull us together into a spirit of nostalgia that will be adequate, I think, for some time to come as we look back over our history.

We're very happy to have here tonight the current Administrator of International Aid John Gilligan. I won't introduce him again because I went down the line and forgot that he was going to speak and I said that he was Governor of Ohio and has been a congressman.

The Honorable JOHN GILLIGAN. Thank you, Mr. Chairman. I'm honored indeed to be here this evening among so many who contributed so much to the realization and the implementation of the vision of General Marshall.

To Governor Harriman, to their Excellencies, the Ambassadors from our allied and friendly countries throughout Western Europe, to Chairman Zablocki and his colleagues in the Congress and to all here present, many of whom played important and significant roles in filling out the dream that George Marshall and his colleagues once had.

I am doubly honored to be here representing the 6,000 people who today work in the fields of economic development all over the globe on behalf of the Agency for International Development and, indeed, for the thousands of people, American, Europeans and others who have worked in the Marshall Plan and the Point IV Program and the Mutual Assistance Operation and the Peace Corps, which numbers at least 50,000 alumni who have carried through their own individual efforts and talents and dedication this typically American message of help to others who are in need.

I think that one of the important things to remember tonight on the Thirtieth Anniversary of the inception of the Marshall Plan is that, if George Marshall's dream, the dream of a military man who understood quite clearly that the resources of the nation could be used for construction, as well as destruction, if that dream had been his alone, he would have been dismissed as an eccentric visionary. But the fact was that the dream and the vision that he had was shared by those in government, by President Truman and the Presidents who succeeded him, by those in Congress who accepted and debated the practical aspects of the program that he presented to them and adopted it in the name of the American people, and by those in other countries who understood what the program meant, responded to it, cooperated with it and today, I think it is significant to note, the very recipients of the benefits of the Marshall Plan of 30 years ago are contributing from their own resources to the development of less-developed countries all over the world, very generously and very deeply from their own resources, and most of those countries who are so contributing are represented here tonight through their distinguished Ambassadors.

And that spirit embodied in the message of George Marshall at his Harvard address 30 years ago, implemented by President Truman and by the Congress of that time and endorsed and supported by the American people in the years since then are expressed again in the words of President Carter in his inaugural address this year when he said the world itself is now dominated by a new spirit. Peoples more numerous and more politically aware are craving and now demanding their place in the sun, not just for the benefit of their own physical condition but for basic human rights.

The passion for freedom is on the rise, said President Carter. Tapping this new spirit there can be no nobler nor more ambitious task for America to undertake in these days of a new beginning than to help shape a just and peaceful world that is truly humane.

I think in those words we have truly a continuation of the spirit and the vision of George Marshall and those who worked with him and I think all of us here this evening and the nations we represent are privileged indeed to carry this tradition on into a new generation.

Chairman MARTIN. Thank you, Governor.

We have now covered in a general way from the start of the Marshall Plan to the present Administration of the aid program and we come to the climax of our evening.

You've all heard of carrying coals to Newcastle. Well, when you look at the biography of our guest of honor this evening you can see that there is a limit to the things that could be said. He has been our Ambassador to the Soviet Union, our Ambassador to the Court of St. James, Secretary of Commerce. He has been Governor of the State of New York. He has been on any number of commissions and there's no way that you could probably summarize his activities but in respect to the Marshall Plan, and the tribute that has already been paid to him, I can only say that on one occasion I heard him referred to as Mr. Marshall Plan.

So, without any further introduction, Averell, I'm going to ask you to take the podium.

The Honorable W. AVERELL HARRIMAN (Extemporaneous Remarks). Thank you Bill Martin.

Your Excellencies, warm admirers of General Marshall, and my friends: This is, as we know, the Thirtieth Anniversary of the great speech that General Marshall made at Harvard in which he outlined in the most brilliant manner the most complex subject in the briefest and simplest words. He was a past master at making complex things seem simple and clear and certainly he did it in this speech. Covering just two pages in your program, that speech started perhaps more activity than any statement. Those few words started more activity in more nations which affected more masses of people and which in fact changed the course of history in a manner which had not been known before.

I was much interested in the British Ambassador's statement. I am grateful for your kind words. But it is the description of Ernie Bevin moving and moving rapidly and, of course, his words about Oliver Franks were well deserved but along with Oliver Franks I want to say that Jean Monet played a very important role in those deliberations which lasted two months in Paris. It was a joint effort under good leadership.

But I want to tell you a story about Ernie Bevin which I like very much and it affects other people as well. Dean Acheson, who in no small measure was involved in the thinking that developed General Marshall's final statement, was concerned that it would not be taken seriously in Europe and so he called in two British correspondents and told them that this was was a most serious statement and the British Government should take it seriously.

So dispatches went to London and Ernie Bevin was shaving in the morning when he heard on the early radio the statement of what General Marshall had said and he immediately understood its importance. So he rapidly finished shaving and breakfast and arrived at his office 15 minutes before he usually did.

Anyway, he was getting there early, no one was there and so he rang every bell that he could and asked for every officer that he could and finally the first to arrive was the Economic Advisor, Hall Patch, Sir Edmond Hall Patch, and Ernie said, Why don't you do something about this? This is in your field. Immediate steps must be taken. So he put Hall Patch on a plane and sent him to Paris to see the Foreign Minister who was then M. Bidault and together they arranged there should be a meeting in Paris very quickly. Of course, General Marshall's plan was for all European countries including the Soviet Union. So they thought it was well to ask Mr. Molotov to join them and they had a big three meeting.

Mr. Bevin and Mr. Bidault stood absolutely firm on the position that General Marshall had taken that this must be a joint venture, the European countries must work together and develop a program which was a mutual program, that was called later Self Help and Mutual Aid, and Molotov said, of course, in his normal manner, it's simple for us. All you do is to ask the Americans how much money they'll give and we'll divide it on the basis of those who suffered the most will get the most.

But both men stood definitely firm and, God bless them for it, and Molotov was recalled by Stalin. He had arrived, I should have said, with a team of 40 individuals among which were their most distinguished economists, and it was very fortunate that he did leave.

We've often wondered just why General Marshall made that offer. Some have said it was a considered risk. Others have said that he maybe wanted to give Stalin a last chance to join. I'm among those that are convinced that it is the latter, he wanted to give Stalin the last chance. I know that because—and I think this is one of the reasons why we can discount the present group of people that are revisionist historians who try to pretend that if we had taken certain other steps we could have gotten along with dear old Uncle Joe Stalin and it wasn't Stalin but it was the United States that caused all the difficulties of the cold war.

The fact is that General Marshall was the very last, and also General Eisenhower was very late to give up hope of being able to

deal with Stalin. They couldn't believe that after the devastation of the war that anyone would be so utterly ruthless as not to cooperate.

There was a statement that came from the Kremlin. Stalin declared war on the Marshall Plan. Perhaps many of you have forgotten that. And did so in so many words and called it an American ploy to enslave Europe. At the same time they started the Cominform, which you remember was an institution which was a device and an effective device to dominate the nations of Eastern Europe.

Of course, during the Marshall Plan days they did everything they could to undermine the Marshall Plan and it was in spite of that that it was a success. Of course, there are many who played a role in getting it through Congress. General Marshall himself played perhaps the leading role due to his prestige with the Congress in his testimony and in his speeches throughout the country. Then, of course, Senator Vandenberg, the Republican Senator from Michigan, took a lead and he insisted on certain matters being done which were not entirely as President Truman wished it to be. President Truman wished to appoint Acheson the Administrator because he had had more to do with the early thinking and the early work which led General Marshall to make his proposal but Vandenberg said, We have to have a Republican, and, of course, Paul Hoffman was the obvious choice. But he said, No, Paul is too liberal, many Republicans think he's too liberal. We ought to get a hard-boiled Republican.

So we went over a list; and name after name, I pointed out to Senator Vandenberg, are men that are opposed to the Marshall Plan! You can't put a man in who's opposed to it. So finally he agreed to Paul Hoffman and never a wiser decision was made. But President Truman thought it was an invasion on his constitutional responsibility and he was very much annoyed that the Senate should interfere with his right to nominate and then to consult the Senate.

But in any event Vandenberg knew what he was talking about. It had to be a Republican and I want to say that never was there a more fortunate choice. President Truman in fact gladly accepted him and called him in to see him. This is one of the stories of Truman that I like the most among them. Paul explained why it was utterly impossible for him to take this position and, with that, he left. Truman kept saying that he had to do it, but Paul left and he got into his car and he happened to turn on the radio. I don't know whether this is exactly right but this is the net of it. He listened to the radio and he heard an announcement from the White House that the President had appointed Paul Hoffman to head the Marshall Plan.

[Laughter.]

So, Paul, being a very practical man, realized that there was nothing else he could do, so he took the job.

[Laughter.]

And again, thank God that he did, because no one could have handled the situation in this country as he did or give the inspiration of the fantastic conception that General Marshall had. He gave us in Europe the greatest amount of support and help and advice. We in Europe understood what General Marshall was after and out of it came a great many new conceptions.

The first thing we did was to insist that the Europeans should divide the aid. The OEC director said that it was utterly impossible, it would divide them. We felt that it was essential for them to divide the aid because otherwise there would be 16 countries coming to the United States and we would satisfy none of them and we'd make 16 enemies. In addition to which it was General Marshall's idea that it should be a European program and, if it was to be a European program, they were the ones to decide which countries needed the aid—and the amounts involved.

They said it would destroy the OEEC but it made the OEEC and then, of course, every country had to come before the OEEC and submit their programs and it became a concerted program in a manner in which nations have never worked so closely together.

We, for our part, did something which the Congress was quite upset with. We tried, through our publicity, to minimize the American assistance. I remember that the total gross national product for 16 nations was only $100 billion at that time and we were giving in that year something over $5 billion, so we publicized the fact that we were only doing 5 percent, the European nations were doing 95 percent of the job. I was called before Congress and I was asked, Were the Europeans grateful for what we were doing? And I said, Gratitude is the—I really spoiled almost all of Paul's relations with Congress. He used to say that I caused him a great deal of difficulty because I was very blunt—I said gratitude was the emotion that we were not trying to evoke. Gratitude was the shortest-lived of any emotion and it carried with it also some aftermaths which weren't so desirable.

I said, I know what you men would like to have me do. You'd like to have me bring to you pictures of French children waving the American flag, dancing in the provincial capitals and singing God Bless America and, I said, As long as you keep me in Paris that's exactly what we're not going to try to do.

That took them aback so much that they didn't demand my resignation. But it was the respect and confidence of the Europeans that we were trying to achieve. I think we did that because we called upon American businessmen, American labor, American farmers to come over and help, and we found that productivity was not one of the virtues which Europe understood.

During the inter-war period they had come to regard productivity as perhaps very dangerous, causing overproduction and unemployment and yet our teams that came over by industry did a great job in education and our labor representatives worked with the noncommunist unions to strengthen them. And, incidentally, we had the help of the CIA. It isn't very popular to say that today but I want to tell you that the CIA played a very important role and a very honorable role in assisting the Marshall Plan, helping the noncommunist unions to maintain a stronger position in Europe against the communist unions which were well financed, and we were well informed of it, by moneys that came from Moscow.

The press did not have in the beginning pulp enough, newsprint enough and the communist press was getting it from the East in some of the countries. We saw to it that the press got enough paper to print what they wanted to. We never interfered with what any noncommunist or anybody said but we helped those that were carrying the banner.

We have a little post-Vietnam and post-Watergate inhibitions just now, particularly in Congress and they seem to think that the work of the CIA is not important. I say to you, my friends, the CIA is the first line of defense because, with all of the good will that comes from Mr. Brezhnev and it is sincere, in detente and in wanting to come to agreements on the nuclear arms race, he makes it perfectly plain that he is going to continue to support everywhere in the world liberation movements and, as I say, that is our first line of defense.

Nuclear bombs do not destroy communism but the way we act based on real information and the way we behave is the vital force in this competition that we have, still have with the Soviet Union.

We went through many periods and many things were done during the Marshall Plan days, new conceptions, but above all, for instance, Schuman made the historic rapprochement with Adenauer which united the objectives of Germany, France and Germany. That was one of the outcomes. The coal and steel community, which has led to what we wanted to have Europe do, unite with the common market. It hasn't gone as far as we'd want but it has gone a long ways even in these 30 years and let's hope it goes further. We had the European Payments Union which broke down barriers and which helped break down the quantity restrictions and the tariffs and the trade went up remarkably well and laid the basis for the present common market.

There were difficulties. The OEEC was not very strong because it was established as not to be too strong. There were some that didn't want to give up any of their sovereignty but we finally got them to agree, the ministers to agree to appoint a permanent ministerial chairman. It turned out to be Mr. Stikka. I wanted Mr. Spaak because he was known to be a European but oddly enough the British labor government was not so keen about that.

But I want to say for both Ernie Bevin and Stafford Cripps, they gave us some difficulties, but when they made an agreement the British always do more than they say they will do and that is among the many reasons why I respect them.

As we look at the world today, as we look at Europe today, we see that instead of the communists being under control we see them developing. We see the Euro-communists gaining strength, particularly in Italy and in France, of course Spain now, we don't know where it will go, and Portugal, but our eyes particularly are on the Euro-communists in Italy and in France and people wonder what to do.

Number one—I want to say we never want to turn our backs on any communist group because I have found that there are very few who live west of Moscow that want to be dominated by Moscow. In the early days Stalin could control everything. Stalin controlled all the nations and all the communist parties throughout the world. In fact, Tito was concerned that he would unleash the satellites to attack him. Moscow has no such power today and that is a change for the good and yet we see these Euro-communist parties gaining power and in all probability they will be in governments and what should our policy be?

I'm not going to try to answer that question fully but I'm going to say a few things.

One—We should never turn our backs on them in a way which would force them to go back to Moscow. On the other hand we want to make it plain just what we think of communism and I think it's most fortunate that at this time we have a President that makes the human rights an international issue because that is an issue which the communists cannot stand up to and, if they do, they will be repudiating their own faith. Then, too, we have perhaps the most important problem or work to do and that is to make our own country stronger, more prosperous, with more social justice.

And above all, in facing the communist issue, it was Mr. Stimson that said we should—something of this character. I'm paraphrasing it. By our actions we should make it doubly clear that freedom and prosperity march hand in hand and then he went on to say, This is the answer to communism but it's the right thing to do anyway. That is the way I think it's clear today that we can do more for Italy and more for other European countries by getting our economy in shape and also follow-

ing what President Carter wants to do and that is to understand that trade is a two-way street and, although it may be necessary to restrict over-imports, temporary imports, the conception which he has of freer trade is of vital importance.

Then too he has the conception that we must work with our European allies and members of the OECD, which include Japan, and then go to the developing nations with an outstretched hand and help them and it is through those actions that we can look forward to stability and to peace.

It is, as you can imagine, unhappy for me, having thought-through the Marshall Plan and through the brilliant proposals—that we had the communists under control. It's a new situation. They are not under control but through the concept of human dignity and human freedoms that President Carter is announcing so loudly today from the White House and through the strength and determination of our own nation to have a sounder economic life with greater social justice we will be able to deal with the problems that we face ahead.

It's nothing like the difficulties that existed in '46 and '47 that General Marshall faced. There's a sound basis on which to build but the nation must stand together and I won't go into our problems but I must say to you that I doubt in history whether any President has had as much courage as—or any more courage than President Carter did in the speech that he made to the Congress yesterday. We must face those issues and find the solutions of them here at home and when we do we can again regain the leadership which we had at a time when we were so enormously the only strong nation economically in the world.

We have sound partners and we must work with them but our great responsibility is our problems here at home.

Chairman MARTIN. I know all of us are very grateful for Ambassador Harriman sharing his experiences with us.

And if you'll indulge me in just one personal thing, the thing that impressed me about General Marshall was the authority of command that he had. He had a striking ability to say something and you knew that he meant it and it was the command authora and I happen to think that in the times we're living in we hear a great deal of gloom and doom talked about by various people. The stock market's going to pot or all of our savings are about to be blown up and we can look back on the career of a man like General Marshall and, if you'll forgive me for quoting one of my favorite poems—You know last year I closed with my poem from Browning that I like so much as applying to General Marshall. I still am very much intrigued with the lines of Arthur Hugh Clough:

"Say not, the struggle naught availeth,
The labor and the wounds are vain,
The enemy faints not, nor faileth,
And as things have been they remain.
If hopes were dupes, fears may be liars;
It may be in yon smoke concealed,
Your comrades chase e'en now the fliers,
And, but for you, possess the field.
For while the tired waves, vainly breaking,
Seem here no painful inch to gain,
Far back, through creeks and inlets making,
Comes silent, flooding in, the main."

Thank you all for being here and the meeting is adjourned.

ARCHBISHOP MAKARIOS III

Mr. BROOKE. Mr. President, the world has lost a great leader and the United States has lost a friend. Archbishop Makarios, President of Cyprus for 17 years, died on August 3. His sudden death came as a great shock to the people he led, to world leaders who admired his statesmanship and political ability, and to me personally for it was only 7 months ago that I sat with the archbishop in Nicosia discussing the tragic conditions on Cyprus.

His Beatitude was an extraordinary man; a religious giant and a pragmatic, skillful statesman. He was loved by his people because he epitomized the deep spiritual qualities that abide in the Greek soul. He was respected by political friends and foes alike because of his deep understanding of the political forces that determine the course of events in the eastern Mediterranean. He knew how to work within those forces in pursuit of his main goal—an independent, unified Cyprus.

To the people of the Commonwealth of Massachusetts, the death of the archbishop is especially sorrowful. As a young man he attended Boston University. And in the years since that time, the people of the Commonwealth have pointed with pride to him as one of their own. In my recent discussion with him I was pleased that he spoke so fondly of his experience in the Commonwealth and his warm affection for the people of Massachusetts.

The archbishop was at his best when confronted with difficult situations. Dealing with the problems and dangers inherent in leading a country constantly threatened by internal ethnic hostilities, he was able to defuse many explosive situations because of the personal respect he commanded from the Cypriot people. Living as he did in such a potentially perilous position, His Beatitude learned the art of survival, and he learned it well.

Lellos Demetriades, mayor of Nicosia, characterized the archbishop well when he said: "The Cypriots are not fatalists, they know how to bend so they will not break." This physically impressive leader of Cyprus indeed knew when to bend, but also when to stand firm. It was his ability to adapt and flourish in the face of adversity which made him uniquely qualified to lead Cyprus into nationhood.

The Archbishop was much more than a successful politician. He was, as the Washington Post noted, the "incarnation of Cypriot nationalism." Every one of his official actions was designed to further his vision of the future of Cyprus. Originally, that vision meant unity with Greece. "Enosis" was his goal when, as a young monk, he scrawled it in the wet cement of the monastery at Kikkud. It drove him to lead the movement against British colonial rule during the 1950's. He was later forced into exile for his beliefs, but enjoyed a triumphant return to power in 1959. Since 1960, he has, through his political actions, attempted to steer a careful course designed to avoid the political ties which could easily compromise the delicate domestic balance on Cyprus. His political wisdom and experience led him to the realization that "Enosis" was not the answer for Cyprus and her people. He came to understand that the future of Cyprus would not be served by unification with Greece, and his old vision of "Enosis" was replaced by a new one—a slow, careful building of a true Cypriot national culture. Archbishop Makarios died believing that internal unification of the Cypriot people was the key to the future survival and well-being of Cyprus, not merger with either Greece or Turkey. His hopeful view of Cyprus' future led him to work untiringly for a strong central government uniting the Greek and Turkish enclaves on Cyprus.

Today, it appears to many observers of the Cyprus situation that Archbishop Makarios dreamed the impossible dream. Despite an economic boom in the Greek community for which the Archbishop was largely responsible, his hopes for Cypriot nationalism seem quite far away. Cyprus is a partitioned island with each side developing its own institutions. This is the tragedy of Cyprus.

Some observers saw the archibishop only as the leader of the Greek Cypriot community. Yet it seems apparent that in the thicket of Cypriot politics, the archbishop was much more than a partisan. In a region known for its political instability, the leadership of His Beatitude was the one factor which lent continuity to the system. George Ball once called him "the stubbornest man I ever met." It was this very stubbornness when necessary, this strength of character and purpose, that gave Archbishop Makarios a decisive role to play in the turbulent eastern Mediterranean. Few men have the ability to truly lead a people as he did, and his death robs Cyprus and her people of their major unifying force.

I do not believe that Archbishop Makarios dreamed the impossible dream. I cannot subscribe to the pessimistic view put forth by some that the situation on Cyprus can only continue to worsen. On the contrary, being the optimist that I am at heart, I can only hope that the legacy left by Archbishop Makarios to the Cypriot people will inspire them to work harder than ever before at finding just and lasting solutions to their differences. And I pray that God will guide them in this endeavor. Choosing a new leader will not be easy. However, my faith in the wisdom and prudence of the Cypriot people leads me to believe that they will be equal to the herculean task before them.

Mr. President, those of us who had the privilege of personally knowing His Beatitude will never be able to think of Cyprus without thinking of this imposing man. We mourn with the Cypriot people his passing and can well understand and share the emotional grief they feel. But we can also be grateful that he, in some way, touched our lives. And, paraphrasing the Apostle Paul, we can truly say of the archibishop that he ran the course well.

SHAHEEN EXCELLENT CHOICE FOR NEW HAMPSHIRE U.S. ATTORNEY

Mr. McINTYRE. Mr. President, I was pleased and gratified when the Senate this morning confirmed the new U.S. attorney for New Hampshire, because this able young man is a superb appointment and my State will be the beneficiary of

the President's good judgment in naming him to this post.

I have watched Bill Shaheen come of age in the legal profession, realizing from the first time that I met him that he held great promise and satisfied now that my initial reading was on target.

Bill is a native of New Hampshire, born in Dover in 1943, and a product of that community's public school system. From Dover High School, Bill went on to take his bachelor of arts degree from the University of New Hampshire, majoring in history. After teaching high school for a year in Milton, N.H., Bill entered the U.S. Army in October of 1965. He served in Germany and rose to the rank of captain before his release from service.

He entered the University of Mississippi School of Law in September of 1970 and ranked second in his class when he took his law degree in May of 1973.

His other academic honors and activities included: president of the law school student body for two terms; president of the Lamar Society of International Law; member of the National Moot Court Competition team; cited in Who's Who Among Students in American Universities and Colleges; member of the editorial board of the Mississippi Law Journal; winner of the award for highest scholastic average in his senior year; recipient of the Am Jur award for legal bibliography, civil procedure and criminal law; and winner of the Phi Delta Phi award as the senior selected by the faculty as the student who best exemplifies what it requires to become a successful lawyer.

After graduation, Bill first served as a research assistant for a sea grant coastal law project. Admitted to the Mississippi State and Federal Bar and the New Hampshire State and Federal Bar, he became city attorney for Somersworth, N.H., in July 1974 and served in that capacity to the present time. He has also been a member of the law firm of Keefe, Dunningham and Shaheen of Dover, N.H., since August, 1976.

New Hampshire's new U.S. Attorney is married to Jeanne Bowers, a native of Huntington, W. Va., and holder of a master's degree in international relations from the University of Mississippi.

The Shaheens have one child, Stefany Amber Shaheen, who is now 2 years old.

Mr. President, I would like to take this occasion to congratulate Mr. Shaheen upon his appointment, to wish him well, and to commend the President for making this appointment.

THE "SOVIET DAY OF SHAME"

Mr. HEINZ. Mr. President, August 21, 1977, will mark the ninth anniversary of the Soviet invasion of Czechoslovakia. The Czechs are observing this date as the "Soviet Day of Shame." We in the Senate should reflect upon this sobering occasion.

The Russian invasion of Czechoslovakia was in direct contradiction to article 2, section 4 of the United Nations Charter, which prohibits the use of military force in the relations between individual members of the U.N. The invasion also violated the principle of self-determination of peoples, and denied Czechoslovakian citizens their autonomy. Indeed, the Soviet occupation was a clear act of aggression and repression.

Since the time of that brutal attack, freedoms have been severly restricted in Czechoslovakia. Human rights guaranteed by the Helsinki accord are disregarded and individual actions come under the scrutiny of government. Freedom of speech is suppressed by central management of all mass media, including publishing and cultural institutions. There is no political, scientific, philosophical, or artistic work in Czechoslovakia that differs from the firmly established Soviet ideology.

Those men and women who deviate from this authoritarian system often suffer harsh repercussions. Their mail is opened, their apartments are searched, and their phone conversations are monitored. As a result of systematic suppression of civil rights, open discussion of intellectual and cultural matters is almost eliminated. Those who speak out have no redress in the courts if they are arrested and even false accusations cannot be refused.

I urge my colleagues in the Senate to observe August 21 as a day for remembrance of human rights. We have a responsibility to millions of Czech citizens who have lost most of their liberties. The Soviet regime will not allow a citizen to leave his country—this discrimination under the pretext of "protecting the State security." Soviet oppression cannot be tolerated, and our Government must recognize and denounce its tactics.

CUTTING PENTAGON WASTE

Mr. METZENBAUM. Mr. President, when President Carter recently announced his courageous decision to halt production of the B–1 bomber, he stated that it was based, in part, on the high cost of the bomber program. As the President explained at his press conference, American taxpayers must not be required to pay billions of dollars for a weapons system that another system—in this case the cruise missile—could perform equally well at a lesser cost.

I strongly support the President's concern for spending defense dollars in a more cost-effective manner. I hope the Carter administration will now turn its attention to the billions of defense dollars which are being wasted because of bad management. I believe these dollars can be saved simply by applying good business methods to our defense purchases.

Since I have been in the Senate, I have had an extended dialog with Secretary of Defense Harold Brown on the way the Pentagon manages the taxpayers' dollars. At Dr. Brown's public and executive confirmation hearings, I questioned him closely about his commitment to savings through the use of better business practices. His answers were vague, which is understandable since he had not yet assumed his office. But Dr. Brown was generally supportive.

After Secretary Brown had been in office 4 months, I wrote to him with some detailed suggestions for cutting Pentagon waste. I did not expect him to agree with everything I had suggested, or to provide complete solutions to the problems I had raised. I did, however, hope that—given the Carter administration's commitment to efficiency and cost cutting—he would acknowledge that Pentagon inefficiency was a major problem which had to be given a high priority.

Mr. President, Secretary Brown's answer to me is a very revealing one. I ask unanimous consent that my original letter, and Dr. Brown's reply, be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. METZENBAUM. Mr. President, I have enormous respect for Dr. Brown's intelligence and abilities. However, his letter is disappointing because it seems to indicate that Dr. Brown does not consider Pentagon inefficiency to be a major problem. He does not see the need for new, tough-minded business methods. Apparently he believes that business as usual will suffice.

The two key sections of the Secretary's response to me are particularly disturbing—his comments on overruns, and on competition.

In asking questions on cost overruns, I did not expect that Dr. Brown would develop an immediate solution to this complicated problem, nor that he would endorse my proposed solutions. But I did hope that he would acknowledge that overruns are a major problem which requires new solutions. Instead, Dr. Brown and his staff have used a very superficial analysis of Pentagon data to make it appear that almost all overruns are caused by inflation.

Dr. Brown says that 78 percent of the $60 billion cost overrun in the Pentagon's September 1976 selected acquisition report was due to "cost growth stemming from inflation in the national economy." To be sure, this is how it appears if one looks only at the brief SAR summary distributed to the press and public by the Pentagon's public relations personnel.

However, the Pentagon also prepares more detailed unclassified SAR summaries, which it supplies to the Armed Services Committees, and anyone else who requests them. If Dr. Brown's staff had looked closely at these figures, they would have realized that inflation is not the main cause of overruns.

The September 30, 1977 detailed SAR summary shows that less than half of the $60 billion cost over-run was due to economic escalation. More than $30 billion of the overrun could be traced to Pentagon and contractor mismanagement.

Moreover, Pentagon figures show that, since September 1976, the effect of inflation has decreased, while overruns due to mismanagement have grown dramatically. As of December 1976, this overrun was $49.7 billion. By March 31 of

this year, the mismanagement-caused overrun had risen to $52 billion. It is very unfortunate that Dr. Brown ignored the steady growth of this staggering sum.

Secretary Brown's comments on competition were also very disappointing, and I am afraid he may have misunderstood me. I do not believe that price competition will prevent all Pentagon overruns. But, I do believe that—in the long run—increased price competition slows cost growth and gives the taxpayers more for their money.

In answering my questions about the Pentagon's use of price competition, Secretary Brown says that "During fiscal year 1976, almost 57 percent of the Department of Defense procurement was subject to either price or technical competition and to follow-on contracts after price or technical competition. This was a noticeable improvement over the prior year."

I am frankly puzzled by this figure. I addressed my remarks to price competition. Dr. Brown has responded by providing data on design competition and follow-on contracts, which do not involve price competition.

Dr. Brown should have focused his analysis on the Pentagon's data on price competition. If he had done so, he would have found that in fiscal year 1976, only 7.9 percent of Department of Defense procurement dollars were awarded through sealed bid price competition. This figure is a decrease from 1975, not an improvement. Only 22.2 percent of Department of Defense dollars were awarded through competitive negotiated contracts, which are obtained from two or three contractors. Thus, 69.9 percent of Department of Defense procurement dollars were awarded without price competition of any kind. This is only a 0.1-percent increase in price competition over the previous year, hardly a major improvement. Moreover, there is still less price competition in Department of Defense buying than there was in 1970.

This lack of price competition is especially dismaying, since congressional studies, to which I referred in my letter, have shown that such competition can lead to major cost decreases, especially in follow-on contracts. Moreover, the Pentagon's current indifference to competition leads to cases, such as the one GAO discovered, where common items like oil filters, spark plugs, recording tape, window screens, and water faucet handles were purchased at inflated prices without price competition.

Mr. President, Dr. Brown is a brilliant man, and he is in many ways proving to be an outstanding Secretary of Defense. He helped President Carter make a tough decision against the B–1 and in favor of cost-effectiveness. However, to date he has not done nearly enough to improve the way the Pentagon is managed. I hope that now that the B–1 decision is behind him, Secretary Brown will begin to turn his attention to the Pentagon's continuing problems. I look forward to working with him in the future and I hope our dialogue will continue.

The articles follow:

EXHIBIT 1

The Honorable HAROLD BROWN,
Secretary of Defense
The Pentagon
Washington, D.C.

DEAR DR. BROWN: During your confirmation hearings I expressed to you my concern about certain wasteful practices in Pentagon procurement policies. I have been a reasonably successful businessman who feels that the taxpayers should get a dollar's worth of product for every dollar spent. I am convinced that billions of dollars can be cut from the Defense budget through the use of tough-minded business methods. Overruns can be drastically reduced. More competition can cut costs. Conflicts of interest can cease. Your early actions in office indicate your own concern about cutting back expenditures in the Defense Department and I commend you for these actions.

Now I have some specific suggestions about what you, as Secretary of Defense, can do in other ways to demonstrate your commitment to better management of the Department. I would like to have your specific response to my suggestions, and your thoughts on alternative solutions.

Though the public furor about cost overruns has, unfortunately, died down since the late 1960's, Defense Department figures show that too many major systems continue to have astronomical cost increases. One recent report showed that 46 major weapon systems had over-runs of more than $61 billion. Now I realize that some over-runs may be justified but, with good management, most could be avoided. I hope that one of the first things you do is put the Services and defense contractors on notice that the DOD will no longer routinely approve over-runs. To do this, more is needed than a pledge by you to look closely at the problem. Every President, every Secretary of Defense, and every Assistant Secretary of Defense dealing with procurement has pledged that he will do all he can to end over-runs. But costs continue to skyrocket. Specific steps must be taken to curb mounting over-runs.

One step that I would recommend is to insert the following phrase into Part VII of the Armed Services Procurement Regulations:

"No Department of Defense official shall agree to, or otherwise authorize, modifications of a procurement contract which provide for a total percentage cost increase greater than the rate of inflation since the date the contract was originally entered into, without the specific approval of the Secretary of Defense."

Clearly, you cannot personally review every contract change, though I hope you would review the larger ones. Perhaps you could take a leaf from former Defense Secretary Robert McNamara's book. McNamara brought a new team of bright young men, of whom you were one, to the Pentagon in 1960 to centralize decisions on force structure through systems analysis. I would like to see you centralize the audit function at DOD by assembling a team of bright young cost accountants. These could expand and improve the Defense Audit Service and the Defense Contract Audit Agency. This new staff would give you the tools to monitor cost increases and decide which are justified and which are not.

In addition, I would like to see the current Selected Acquisition Report system drastically improved. At Congress' requests, the GAO has made periodic special audits of the way the SAR system has been functioning. The results of the audits were disturbing. The GAO found that in 1972 and 1974 the DOD failed to report a total of $7 billion in over-runs on programs which Congress was reviewing. Just last year, another special GAO audit found that DOD had failed to report a $260 million cost increase in the F–16 fighter.

In each of these reports the GAO made recommendations for improving the DOD's performance on the SAR's. Will you review these recommendations and make a general evaluation of the DOD's reporting under the SAR requirements within the next year? Will you make public the results of this review?

No reform will have any beneficial effects as long as the DOD continues to bail-out wasteful contractors. The Defense Department has been unwilling to take the final step of cutting off contractors who do not perform well. Admiral Rickover has described the result very well:

Large defense contractors can let costs come where they will and count on getting relief from the DOD through changes and claims, relaxation of procurement regulations and laws . . . or other escape mechanisms . . . they will make their money whether their product is good or bad; whether their price is fair or higher than it should be; whether delivery is on time or late.

Will you commit yourself to diverting Defense Department procurement funds away from contractors with a record of waste, over-runs, and poor management?

I am also very concerned about a closely related problem—the lack of competition in defense procurement. I find it shocking that in 1975 only 8.6 percent of military procurement dollars was awarded through sealed bid price competition. Only 21.4 percent of DOD dollars was awarded through competitive negotiated contracts, in which two or three contractors were invited to bid on a project. Thus, 70 percent of DOD dollars was awarded with no price competition at all. Moreover, the trends have been in the wrong direction. There was less price competition in 1975 than in 1970.

The Services have always been extremely reluctant to encourage competition. I suspect that even though the Services claim most contracts are for sophisticated systems which cannot be procured through price competition, that oftentimes provides a shield behind which to hide rather than a reality applicable to most of our procurement purchases. I suggest you have all the Service Under-secretaries read "The General Advantages of Competitive Procurement Over Sole Source Negotiation in the Department of Defense," a November 1973 study prepared for the Joint Economic Committee. The study examined 20 complex weapon systems, including sophisticated electronics and missile systems. These contracts originally were awarded through sole source procurement, but for various reasons their costs were later readjusted through price competitive bids. The results were dramatic—price decreases averaging 51 percent.

There are a number of specific steps I think you should take to increase competition, the easiest being for you to make it clear to the procurement officials you appoint that the general policy of the Department is to encourage price competition. Price competition should be the rule and sole-source procurement the exception.

To implement this, as I suggested at your confirmation hearings, you could require that all exemptions from price competitive bidding be approved by the Office of the Secretary of Defense; additionally, I urge you to institute a system of regular quarterly reports to the Congress containing the reasons why sealed bidding was not feasible in relation to each contract where it was not used.

If you do not approve of both of the procedures herein suggested with respect to competitive bidding, what alternative procedure will you adopt to require more competitive bidding, and how will you keep Congress advised of your progress?

Furthermore, I suggest that you require that all procurement contracts which are for follow-on buys be awarded on the basis of sealed bidding. This could have an immediate effect in reducing DOD spending since between 15 and 20 percent of DOD procurement dollars is spent on follow-on contracts. The follow-on buy should logically be far less costly than the original purchase, and once the technology is completed, many companies may be interested in submitting competitive proposals. What steps do you propose to take to implement savings with respect to follow-on buys?

On another point in your testimony, you addressed yourself very briefly to the protection of DOD procurement officials who speak up about waste. I am concerned about dedicated government officials being encouraged in this regard. What channels do you plan to establish to insure that those who report on waste can be effective in making their complaint, and that they are accorded a fair hearing? I would appreciate a detailed answer on this key point.

Finally, in the open hearing I suggested that you require the military and civilian personnel which you appoint to procurement positions to sign a pledge not to go to work for at least two years for defense contractors they monitor. You responded that I had identified a problem but you doubted that I had identified a solution. I would appreciate hearing your solution, since I feel that the American people—by and large—do not approve of the present practices.

Dr. Brown, I look forward to a good working relationship with you. To date, I have been very impressed by much of your performance in office. But as a Senator who is committed to reducing wasteful expenditures of our tax dollars, I hope to help you focus in on areas wherein I believe billions of dollars can be saved.

I look forward to hearing from you soon.

Sincerely,

HOWARD M. METZENBAUM,
U.S. Senator.

THE SECRETARY OF DEFENSE,
Washington, D.C. July 7 1977.

Honorable HOWARD M. METZENBAUM,
U.S. Senate,
Washington, D.C.

DEAR SENATOR METZENBAUM: This is in response to your letter of April 18, 1977 which conveys both your concerns and your suggestions as to the conduct of the procurement operations of the Department of Defense. I certainly share your desire for increased efficiency in these operations. There are a number of observations which I would like to make concerning these suggestions.

You can be sure that I share your concerns about the contractor cost overruns. Although I am uncertain of the source of your data regarding the $61 billion, the 30 September 1976 Selected Acquisition Report (SAR) did identify a total cost growth of $60 billion ($117 billion to $177 billion) for major systems. Of this amount, $47 billion (78%) was due to cost growth stemming from inflation in the national economy. The remaining 22% ($13 billion) was caused by a wide variety of reasons which are mostly Government required changes; cost overrun generated by contractor action was relatively minor. While the specific individual approval procedure you suggest presents problems, I can assure you that I am involved in decisions concerning significant changes to major programs.

I would like to note that the SAR system was revised extensively in September 1975. This review was due in part to the recommendations of the GAO to which you refer. We continuously review the system for possible improvement and will continue the reviews during this calendar year. In addition, we have substantially centralized the audit function within the Department with the establishment of the Defense Audit Service which has responsibilities that were dispersed among five audit organizations.

Aside from the methods available for monitoring or controlling cost growth, however, I can reassure you that we will, as relevant, examine the past performance of a contractor's cost control and reporting system in conjunction with the award of new contracts.

There is no necessary relationship between cost growth and the existence of competition in contract awards. While price is a statutorily specified element in the conduct of competitive procurement, there is a significant number of situations where meaningful competition can be maintained only on a basis other than price. During FY 1976, almost 57% of the DOD procurement was subject to either price or technical competition and to follow-on contracts after price or technical competition. This was a noticeable improvement over the prior year.

Price competition generally results in lower prices, particularly for off-the-shelf items. At the same time, I want to reiterate the view, expressed during my confirmation testimony, that the achievement of this result depends very much on the character of the supplies or services to be procured. In the case of major production procurements which will involve substantial learning curves and significant capital investment, price reductions through competitive procurement are not usually attainable.

Finally, as to the conduct of procurement officials within the Department, people should be afforded the means to communicate findings on wasteful practices to their superiors. Any action I might take as a result of somebody stepping out of departmental channels to discuss wasteful practices within the procurement system will depend on the facts of each case. As to the employment of former Department of Defense personnel by contractors, the President has announced that he desires to reexamine the existing restrictions and make appropriate changes. I intend to work with him in this effort.

Your comments and suggestions are appreciated. They will be taken into consideration as we review our current processes pertaining to defense expenditures.

Sincerely,

HAROLD BROWN.

SUPPORT FOR CIVIL RIGHTS LITIGATION

Mr. JAVITS. Mr. President, the Ford Foundation recently commissioned an important study of the litigation program of the Foundation in the civil rights field in order to judge its effectiveness and responsiveness to the needs of the community. This report was prepared by Robert B. McKay, the former distinguished dean of New York University Law School and now director, program on justice, society and the individual, Aspen Institute for Humanistic Studies.

Throughout the long struggle for equality of opportunity in this country many organizations in the private sector have contributed significantly as Federal and State law, as well as private action has sought to promote equal opportunity in housing, education, health and jobs and to remove barriers to minority electoral participation.

One of the important areas of interest for those seeking to strengthen the implementation and enforcement of constitutional, statutory and public policy guarantees is civil rights litigation. Since 1967 the Ford Foundation has made grants for this purpose approximating $18 million. Many groups have participated in this program including the National Association for the Advancement of Colored People, the Southern Regional Council, the National Council of La Raza, and the voter education project.

Mr. President, Dean McKay's report "Nine For Equality Under Law: Civil Rights Litigation" is a timely and informative statement about the status and progress of the civil rights movement. I ask unanimous consent that the first and last segments of the report entitled "Discrimination and Equality" and "Summary" be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. JAVITS. Mr. President, I wish to take this opportunity to commend both the Ford Foundation and Dean McKay for their continuing leadership in this important effort to implement national public policy. Strong commitment to the support of litigation activities is indispensable to the continued health and success of the civil rights movement:

EXHIBIT 1

DISCRIMINATION AND EQUALITY

Discrimination has been constant in United States history. It has affected and hurt many minority groups. Sometimes it has been unthinking, almost casual. Today, even in an age of sharply increased awareness, it persists with particularly harmful effects—against blacks, who were largely invisible during long periods of American history; against American Indians in continuance of of a dark chapter in this history; against Mexican Americans, who were suspect because they (or their forebears) were "foreigners"; against Puerto Ricans, who spoke a language and followed traditions alien to the mainland; against women, who were respected as conservators of hearth and home but not accorded equality elsewhere; against others who only offense was age or poverty, and against ex-addicts and ex-offenders as if to ensure recidivism.

Other groups that have suffered the lash of prejudice and exclusion over the course of American history are Catholics, Jews, and certain Protestant immigrant groups. They have sometimes been excluded from equal access to education, employment, and positions of political and social influence. But the weight of that discrimination, based mainly on religion, has been lightened a good deal as these groups have succeeded in making their way up the ladder of economic and social mobility in American society. The problem is more complicated for people of a different color, or when it comes to discrimination on the basis of sex or cultural differences.

On the other side of the ledger of American history, there is a deep commitment to equality. It appeared originally in the literature and declarations leading to the war for independence and, at the insistence of the victorious citizens, in the Bill of Rights. The emphasis was on freedom as the guarantee of individual rights, and as an atmosphere

in which everyone had an opportunity to find his place in society.

The Civil War Amendments to the Constitution—the Thirteenth, Fourteenth, and Fifteenth—broadened the national commitment to equality. Those amendments became the basis of decisions that provided increased opportunity for the exercise of individual rights in political, as well as economic and social terms. But in the last quarter of the nineteenth century the promise of equal opportunity faded into rationalizations of "separate but equal," and often worse without even a pretense of equality. From that time until the second half of the twentieth century there was little progress toward the realization of the ideals and opportunities expressed in the Bill of Rights and subsequent amendments. The legacy of discrimination and disregard for equal rights made it difficult, if not impossible, for those who continued to be the victims of prejudice to rise above their dismal economic and social plight on the basis of individual merit. As Judge Leon Higginbotham has observed: One of the tragedies of today's racial polarization is that blacks, who have been the major victims of historic racial deprivations, are now in some strange way being held accountable for those very conditions which they did not create, which they did not want, but were forced to take.

Mexican Americans, Puerto Ricans, and Native Americans, with problems more recently exposed to public view, have often shared a similar outcast status. But it is the blacks, having felt the string of oppression most massively, who have led the fight to give substance and reality to the principle of equality. Their long and continuing struggle was and still is required because the right to equal treatment is not self-enforcing. The vindication of the principle involves a complex legal, legislative, and administrative process:

1. The Supreme Court of the United States must interpret the constitutional text, through decision in specific cases, to assure that the words are clearly understood. In the case of the equal protection of the law clause, as applied to blacks, that full assurance did not emerge until 1954, with the decision in *Brown* v. *Board of Education*.

2. Since the Supreme Court often speaks negatively—it says "thou shalt not," as it were—the majesty of the constitutional imperatives requires translation into the affirmative specifics of legislation by Congress and state legislatures.

3. Even when the courts have spoken definitively, and the legislatures have followed the command, there remains the need for public acceptance. Here, the importance of leadership by the executive branch of government, and especially by the President, is crucial. Equally important is the support provided by local leaders; again, success or failure depends largely on community acceptance. The law plays an important but limited educational role.

4. No matter what the leadership provided by the Supreme Court, by Congress, the President, and by local leaders, problems are bound to arise in the translation of principles into patterns of everyday living. Economic or social conflicts of interest, often exacerbated by deeply held prejudice, tend to slow or halt the process, necessitating yet another round to reassert the principle in the courts and in the legislatures.

Examples come readily to mind. The promise of equality in the Fourteenth Amendment was a long time in being fulfilled. Only in the voting rights cases was the language of the Fourteenth Amendment used to guarantee an element of equal rights. But these legal victories were late in coming and sporadic at best until Congress acted, haltingly in 1957 and 1960, and more effectively with the Voting Rights Act of 1965, and its renewal in 1975. Not until 1954 was there a significant Supreme Court affirmation of the anti-discrimination aspect of the equal protection clause of the Fourteenth Amendment. The ruling in that case, *Brown* v. *Board of Education*, was eloquent and straightforward: We conclude that in the field of public education the doctrine of "separate but equal" has no place. Separate educational facilities are inherently unequal.

Before long it was demonstrated once more that even the clearest constitutional mandate is not self-enforcing against determined resistance. Every step along the way, from the express ruling through various steps of legislative and administrative action, can and often does serve as a basis for challenge by opponents. If the guard is let down, the constitutional principle is again at risk. To protect against this hazard requires commitment, competent personnel, and considerable financial resources.

Until at least the mid-1960s the NAACP Legal Defense and Educational Fund stood almost alone in this effort. Although the Legal Defense Fund, as it is popularly known, had as its principal mission the protection of blacks against all forms of racial discrimination, it recognized that success in this work might well be jeopardized if it were not accompanied by efforts to secure protection for other groups against whom discrimination was being practiced on grounds of race, religion, ethnic background, or sex. The equal protection clause, in its proscription of acts of bias against individuals, is all-embracing. Accordingly, the Legal Defense Fund has all along been a champion of all who suffer from discrimination.

In the late 1960s the Ford Foundation recognized the heavy obligation that the Legal Defense Fund had until then assumed largely by itself. Relief from what might otherwise become an intolerable burden could be provided in two ways:

Direct financial aid to provide the necessary resources for litigation of high quality.

Establishment of other organizations to assume primary responsibility for litigation on behalf of different constituencies (e.g., women, Mexican Americans, Native Americans, Puerto Ricans), or to specialize in litigating cases in specific areas (e.g., housing, narcotics addiction, prisoners' rights), or to exercise oversight of the implementation of legislation and policy in the civil rights field.

With some planning and much improvisation the Foundation moved in both directions. It made grants totaling approximately $18 million during the seven-year span of 1967–1975. The purpose of this report is to examine the manner in which this major commitment has been carried out and to describe what has been accomplished.

BACKGROUND AND OBJECTIVES

The civil rights movement has long received support from varied private sources, including foundations, corporations, and individuals. But litigation work has received a relatively small share of that total, with the bulk of support going to the more traditional areas of research, scholarship grants, and the strengthening of institutions weakened by discrimination. The reluctance for many years of philanthropic institutions to make major allocations to litigation as a means to promote progress in civil rights may have its roots in a traditional view of the judicial function, which holds that where an injustice exists that is within the power of the courts to correct, litigants will come forward to set in motion the necessary machinery to right the wrong. Yet in reality, wrongs are not self-righting, even when courts are at hand to take the necessary corrective steps, needing only the trigger of litigation. The natural plaintiffs often are reluctant to initiate action, and more often lack the resources to commission the studies, conduct the investigations, and engage the legal talent essential to an effective challenge.

Furthermore, many people, including elements of the organized bar, have long felt that to provide financial assistance for the conduct of litigation, regardless of the merits of the case, might be an inappropriate intrusion into the judicial process. In fact, litigation was necessary to establish the very proposition that group advocacy of individual rights is permissible. But even when court decisions had established the appropriateness of civil rights litigation, there was no large outpouring of philanthropic support. Perhaps the commitment to other kinds of civil rights efforts was too solid to permit easy diversion of the effort in new directions; perhaps there remained a lingering mistrust of judicial intervention into individual cases as a means of achieving broad reform and fear of controversial consequences. Whatever the reasons, litigation as an instrument of civil rights reform has not attracted financial support in anything like the amounts that have gone to other civil rights activities.

The Foundation made its major commitment to civil rights and disadvantaged minorities in 1967. Parity for minorities and efforts to find new approaches to the often related problems of urban areas became the main goals of the newly created National Affairs Division. The change in Foundation priorities was reflected in a rapid increase in grant funds related to minority rights: from only 2.5 per cent in 1960 to 38.5 per cent in 1968, and 40 per cent in 1970.

But only a part of this money was for litigation. Ranked in the order of dollar support originally allocated to the minorities and the poor, the Foundation listed four areas for action:

1. Community development, particularly in inner-city ghettos.[1]

2. Civil rights advocacy, such as the activities of the Urban League and the NAACP (as a separate entity, distinct, from the NAACP Legal Defense Fund).

3. Civil rights litigation.

4. Public interest law.[2]

This allocation of resources by the Foundation was also affected by the decisions and actions of other institutions. Community development, the Foundation's first priority, was supported substantially by other private and public sources. Civil rights groups also received considerable assistance from private groups and individuals, but no public money. Not so with civil rights litigation, however. (Public interest law was a new field when the Foundation entered it in 1970 and it has only gradually built up some diversity of assistance.)

Foundation grants for civil rights litigation, totaling some $16 million, reflect the following objectives: to help remove barriers to equality caused by discrimination on the basis of race, ethnic background, or sex; to help provide equal access for minorities and the poor to housing, education, jobs, and other avenues to opportunity, and to help insure fair treatment by government.

The growing importance attached to litigation is indicated by the fact that, when a reduction in Foundation giving was announced in 1975, the level of support for civil rights litigation remained essentially constant.

[2] See *The Public Interest Law Firm, New Voices for New Constituencies, and Public Interest Law, Five Years Later.* Available on request from the Ford Foundation, Office of Reports.

The Foundation's first grants in the field, in 1967, were to the NAACP Legal Defense and Educational Fund, which had a solid reputation for competence, and to the Lawyers' Committee for Civil Rights Under Law, which grew out of a 1963 White House meeting between President Kennedy and a group of prominent lawyers who were concerned about the nation's persistent problems of political, economic, and social inequity. The bulk of the grants to the Lawyers' Committee has gone to support of its office in Mississippi, where it was considered important for the committee to have a presence because of the extent of civil rights litigation in the South at the height of the civil rights movement.

Subsequently, the Foundation broadened its support of civil rights litigation to include seven other organizations, four of which the Foundation helped establish to concentrate on special problems of particular groups—the Native American Rights Fund (NARF); the Mexican American Legal Defense and Educational Fund (MALDEF), the Puerto Rican Legal Defense and Education Fund, and the Women's Law Fund. The other three, which work on various substantive issues are: the National Committee Against Discrimination in Housing; the Legal Action Center, concerned mainly with litigation on behalf of former addicts and ex-offenders, and the Center for National Policy Review, which monitors civil rights and equal-opportunity legislation and policy by federal government agencies.

During the period of Foundation assistance these organizations have brought to court and won some of the most significant civil rights cases in judicial history. The cases include reversal of attempts in the South to delay or circumvent desegregation through so-called "freedom of choice" in education; major progress toward equalizing municipal services in black and white neighborhoods; a series of equal-employment decisions on behalf of Spanish-speaking Americans, blacks, women, and exoffenders; the restoration of important rights and resources to several Indian tribes; mandated bilingual instruction for Spanish-speaking students; and protection of rights in access to housing and in law enforcement.

Although the Foundation can take credit for strengthening and increasing the effectiveness of all these groups, its support did not spell the difference between life and death for the more established ones like the NAACP Legal Defense Fund. For the newer groups like MALDEF and NARF, Foundation support was crucial.

No one asserts that litigation assures instant solutions to the problems of discrimination. But skillful use of litigation can yield results that have impact far beyond particular court proceedings. With the equal protection clause of the Constitution as their principal guidepost, organizations assisted by the Foundation have achieved such results with a relatively modest level of resources.

SUMMARY

The objectives of plaintiffs in civil rights litigation often challenge prevailing patterns accepted by the general public. Typically, relief is sought by one or more members of a disadvantaged group who can succeed only by upsetting an established practice. The uphill nature of the task is both the problem and the reward of the civil rights movement.

It is in the best tradition of American democracy to protect minority interests, whether political, religious, racial, ethnic, or sexual. When the majority is thus confronted, conflict is likely. Against this background, the champions of minority interest find it difficult to obtain financial support.

To the extent that money has been given, it was until recent years not for litigation, but mostly for projects using education or other non-litigative approaches. One reason there has been relatively little interest in providing support for litigation may be that it was considered too risky or controversial in the eyes of many funding sources. If this is so, it may be an unconscious or oblique recognition of the fact that litigation dollars have the potential for greater systemic change than money spent in more conventional ways.

When the Foundation made its major commitment to civil rights litigation in the late 1960s, it was a major effort by a private organization to look at civil rights as a whole. The decision was made not to limit support to a single group or area of minority rights; civil rights was identified as a unifying concept beyond particular categories of race, national origin, or sex. By linking these traditional criteria with substantive problems of housing, treatment of narcotics addicts and ex-offenders, and discrimination by government regulation or practice, it became possible to view civil rights as a matter of concern to all and an area where common solutions might be found to transcend the former lines of conceptual distinction.

The results have been significant. Each of the nine organizations that has received Foundation assistance has made a distinctive contribution to the total civil rights effort, and the activity of each has reinforced that of other organizations, even when their respective agendas were not directly related to each other. In short, the reach of each organization has been extended with the creation of each new organization. The weaving together of formerly separate strands has greatly strengthened the pursuit of civil rights goals in the United States.

When the Foundation led the way in making awards to civil rights litigation grantees, other philanthropic institutions found it easier to move along the same path. Thus, the Rockefeller Brothers Fund has developed a similarly broad program, and several other foundations have felt encouraged to make individual grants to particular organizations.

Private support for civil rights litigation is still not massive, but it is of sufficient size to have made a discernible impact. It is important that the level of resources now reached be sustained and that the work retain the broad scope and the conceptual focus that it has developed.

SUPPORT OF U.S. PRISONERS IN NON-FEDERAL INSTITUTIONS

Mr. HOLLINGS. Mr. President, last year the Director of the Bureau of Federal Prisons, Norman A. Carlson directed that public and private community residential programs—halfway houses—throughout the Nation be utilized to a much greater extent by the Bureau. This greater utilization served three very important purposes:

First, it relieves the overcrowed conditions in the Federal prison units.

Second, the cost of maintaining a person in community residential programs is less that at a prison, while at the same time the prisoners are working, supporting their families, paying taxes and in fact paying for part of the cost of the program in most instances.

Third, and probably the most important value of the community residential program—the men and women in the CRP's benefit from involvement with good community contracts; are provided counseling and guidance and personal vocations and financial matters; are afforded job placement and job training opportunities and, in a word, are better for reentry into our society than they would have been if released directly from prison.

There are now 400 programs, mostly privately operated that have contracted with the Bureau of Prisons to provide these services. In my own State the Alston Wilkes Society operates four programs and the Volunteers of America operates halfway houses in many States. Over the last few weeks I have heard from 19 halfway houses located in Colorado, Kansas, Louisiana, Massachusetts, Minnesota, Missouri, New Jersey, New York, North Carolina, Ohio, South Carolina, Texas, and Wisconsin of the important role of this program in penal reform.

On June 29, the Bureau of Prisons announced that due to a lack of funds no new commitments would be made to the halfway houses until September 30. Mr. Parker Evatt, the executive director of the Alston Wilkes Society in Columbia, S.C., says that the impact of this policy "Can be equated to a right cross to the jaw followed by a body blow to the solar plexis."

Earlier this year I obtained approval of a $10 million supplemental appropriation to avert a similar financial crisis in this account. This seems to be an annual situation and mainly arises from the unpredictable and largely uncontrollable inmate population. Currently the jurisdiction is split between the Bureau of Prisons and the U.S. Marshal Service over the expenditures for persons in non-Federal institutions. In the 1978 Appropriation Act we hopefully cured this situation by fixing the responsibilities for these functions and dividing the money between prisons and the marshals.

However, this year we have experienced a much larger prison population than expected and currently there are 7,300 more persons in Federal prisons than they were designed to hold. As the ranking minority member of our subcommittee, the distinguished Senator from Connecticut, Mr. WEICKER, can attest, Danbury recently had an arson-set fire which consumed five lives. The result of this curtailment is that 900 inmates—who would normally have been released to the halfway houses during this quarter and partially relieve the overcrowded prisons—still remain in the prisons.

In fact, the reason the funds for the contract agencies are exhausted is that the Bureau accelerated the commitments to the halfway houses earlier this year in order to relieve the overcrowded situation in the prisons. This is illustrated by the increase in the average population which steadily rose from 1,261 last October to a high of 2,030 in April or about double the average population budgeted for a typical month for 1977. Sooner or later something had to give and unfortunately it is the halfway houses who in good faith staffed up to meet the needs of the Bureau of Prisons and who are now left to fend for themselves until October 1.

Mr. President, this is, of course, more than an institutional problem of relieving the overcrowding and maintaining

the halfway houses. There is the human dimension of the inmates who served their prison time and found the doors shut in their faces on July 1. The shutting off of the hope of parole to the halfway houses breaks faith with those who have contritely accepted their imprisonment and have readied themselves to return to society.

I have been following this situation closely. The Bureau of Prisons advised us that an audit of their current expenditures with the District of Columbia had freed sufficient funds to resume a normal flow of commitments to the halfway houses about August 15. However, on Monday of this week I was informed that the audit results had to be reviewed and a final decision will not be made until the end of this week at the earliest. Accordingly, I prepared a stopgap amendment to allow the Bureau to use funds in the salaries and expenses appropriation, ordinarily used at this time to replenish their stocks, for the support of prisoners in non-Federal institutions. Today I was advised that sufficient funds are available from the District of Columbia audit to resume the normal flow of commitments to the halfway houses so the amendment will not have to be offered.

I want to thank the distinguished manager of the bill for his cooperation on this somewhat extraordinary amendment and am happy that things have worked out so that it is no longer necessary.

THE SELLING OF THE "SEQUOIA"

Mr. SCHMITT. Mr. President, I call attention of my colleagues to a letter I received in mid-July, from Don Blair of Santa Fe relative to a comment made by Rodger Beimer of station KOAT-TV in Albuquerque, N. Mex. His comment is in reference to the President selling the Presidential yacht *Sequoia*. It is Mr. Beimer's feeling that the President should maintain the dignity of the Oval Office and that as President he should have a few things that the common folks do not have, such as yachts and White Houses.

The letter follows:

COMMENT OF RODGER BEIMER

We try to talk about items of primary interest in New Mexico. Well, tonight I am going to jump those bounds. Something happened this past week, that I don't like, and there are a number of others who have expressed similar feelings. President Carter, who is trying to bring the presidency to the common folks, sold the Presidential yacht Sequoia. It wasn't very much, so the President decided it was time to dump it. Well, there are certain things I expect of a President. I expect him in a big black limousine, I expect him to live in the White House, and I expect him to maintain the dignity of the Office, and I expect him to have a few things us common folks don't have. And the Sequoia is one of those things. The President, trying to be one of us, can go a little too far. By auctioning off the yacht, the government has released an historic landmark, to the claws of private business and the gullible tourist. In my opinion, the President made a mistake getting rid of the Sequoia. I hope he doesn't decide to sell the White House, and move into a motel because it would be cheaper.

WE NEED MORE AGRICULTURAL ENERGY RESEARCH

Mr. BAYH. Mr. President, a few days ago, on August 1, I wrote to the Secretary of Agriculture, Robert Bergland, asking for an evaluation of the research effort being made by the USDA into areas which promise to reduce the petrochemical dependence of the American farmer. These areas include improved biological nitrogen fixation, increased use of green and animal manures, use of predator insects and bacteria to control pests, sludges as soil conditioners and fertilizers, and genetic research to develop more stress-resistant plants. I ask unanimous consent that the text of this letter be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

AUGUST 1, 1977.

Hon. ROBERT BERGLAND,
Secretary, Department of Agriculture, Washington, D.C.

DEAR MR. SECRETARY: I have been pleased to note the recent change in philosophy that the Department of Agriculture seems to have undergone particularly in the search for less energy intensive methods of agricultural production. The National Academy of Sciences recently published its *World Food and Nutrition Study* which emphasized the need for a shifting away from our present dependence on fossil fuels in agriculture toward renewable resources for farm energy and soil productivity. I am interested to learn what research is being done by the Department in seeking to find substitutes for petrochemical fertilizers and pesticides that will be energy efficient and provide quality crop production. Methods such as biological nitrogen fixation, increased use of green and animal manures, use of predator insects and bacteria to control pests, sludges as possible fertilizers and soil conditioners, and genetic research to develop more stress resistant plants are some of the areas where potential energy savings exist. In view of the intense pressures placed on the American farmer as he tries to pay an ever increasing fertilizer and pesticide bill I know you agree that the USDA must continue in its efforts to develop new areas of agricultural resources. I would like to know what funds are now available for research in these areas and what level of funding the Department intends to seek in the future.

I understand that recent research has indicated that increased biological nitrogen fixation can be expected for soybeans in the near future, with a longer range capability for nitrogen fixation in crops such as corn, wheat and rice; particularly if breakthroughs in photosynthesis research are developed.

As you are aware, there are tremendous amounts of feedlot manures that are wasted because of the costs of transporting them to cropland. Because of the fertilizer and soil conditioning value of this material there could be considerable energy savings if it were used more efficiently. The increased use of green manures and sludges could contribute toward less energy dependence by U.S. agriculture. As energy prices continue to rise these sources will become more and more cost effective and deserve serious consideration.

The *World Food and Nutrition Study* pointed out the need to develop more stress resistant crops in order to reduce dependence on chemical pesticides. The study states: "We suspect we are nowhere near the limits nature has put on plant productivity. New techniques of genetic manipulation will permit us to achieve much greater productivity." With the U.S. facing energy shortages in the near future and the growing demands placed on our farmers by a hungry world, research that seeks to maintain our high productivity with greater energy efficiency should be adequately funded and explored.

I am looking forward to receiving your analysis of the level of our present and anticipated research efforts in these directions.

Sincerely,

BIRCH BAYH,
U.S. Senator.

Mr. BAYH. Mr. President, I also wrote to EPA Administrator, Douglas M. Costle, earlier this week urging continued funding for the biological waste management program being carried out at the Beltsville Agricultural Research Center in Beltsville, Md. This project is concentrating very important research work on safe and economically valuable uses of municipal sludges. If sludges could be used safely in agriculture they could help reduce dependence on petrochemical fertilizers made from natural gas which we all know is becoming increasingly scarce.

Recently a number of studies and reports have called upon the Department of Agriculture to begin intensive research efforts in order to reduce the energy dependence of the American farmer. The ever-rising cost of petrochemical fertilizers and pesticides is a threat to world food production that should be recognized while we have the time to seek suitable alternatives. Fertilizer and pesticide costs, for example, now constitute one-half of the variable costs of growing corn. Inorganic nitrogen fertilizer is commonly applied on corn land at rates in excess of 100 pounds per acre. Between April 1973 and April 1975 the average cost of 100 pounds of anhydrous ammonia fertilizer—the most common nitrogen fertilizer used—rose from $4.30 to $14.25 in some areas. These already outrageously high prices can be expected to continue rising as petroleum and natural gas become more expensive. Rising fertilizer and pesticide costs not only raise the price of food that the consumer must pay; they have placed the farmer in a serious cost-price squeeze that is especially hard on the small farmer. Purdue University estimated that in 1976 Indiana alone used 2,342,821 tons of fertilizer in agricultural production. It is easy to see that fertilizer costs constitute a very large part of the farmer's budget.

I would like to bring to the attention of the Senate some of the recent findings concerning the dangers of petrochemical dependence by modern agriculture. The Senate and House Agriculture Committees in reporting the 1977 Agriculture Act addressed the problem of high energy use by American agriculture. The House Agriculture Committee cited the example of Nebraska where between 1970 and 1974 energy costs for corn production rose 56 percent, for wheat 60 percent, for alfalfa 62 percent, and for sorghum 100 percent. With the United States facing an acute natural gas short-

age in the immediate future, the House report noted that natural gas used for nitrogen fertilizer production consumed almost as much energy as all of the U.S. farm tractors. Technologies that are based on petroleum and natural gas will be less and less viable in the future according to the Senate Agriculture Committee which also stated:

Over these problems hangs an even more ominous cloud—the potential doubling of the world's population by the year 2000, and subsequently increased food needs.

Mr. President, Purdue University has recently published a study entitled "Energy Input-Output Relations in Midwest Crop Production," which examines present energy usage and suggests possible alternatives. The study points out that 50 percent of the energy costs for corn production come from nitrogen fertilizers. Rotations of corn and legumes, which are hosts to nitrogen producing bacteria, and the use of winter cover crops have the potential of reducing the need for such heavy chemical nitrogen input. Alfalfa, for example, has been increasing in value and could become a more major cash crop in the Midwest which would encourage its use in crop rotation. Coincidentally the Office of Technology Assessment also recently published a study which supported greater research efforts in the area of biological nitrogen fixation. Researchers are trying to improve photosynthesis efficiency in cover crops and legumes which would increase their nitrogen fixing properties.

Present methods of drying shelled corn, the Purdue study says, are also large users of natural gas and are only 40 to 50 percent efficient. The study points out:

Thus, a method of drying the corn with lower energy input is needed for improving energy efficiency in corn production. One of these future practices that needs more research and looks very promising is the possible use of part of the corn residue for drying fuel.

Solar methods for later stages of the drying process also are being studied at Purdue and promise to reduce the amount of precious gas used in corn production. I would like to see such alternatives thoroughly researched and implemented as quickly as possible.

The National Academy of Sciences has recently published its "World Food and Nutrition Study: The Potential Contributions of Research," which arose from the 1974 Rome World Food Conference. This study suggests areas where the United States should do more research to reduce agricultural energy dependence and still meet the demands of a hungry world. I think that this report should be brought to the attention of every Member of Congress and I ask unanimous consent to have printed in the RECORD at the end of my statement two articles from the Christian Science Monitor which summarize the findings of the National Academy of Sciences' study. I look forward to working with the administration and my colleagues in both Houses of Congress as we strengthen our research efforts in these critical areas of agricultural energy needs.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Christian Science Monitor, June 23, 1977]

FEEDING THE HUNGRY—DRAMATIC NEW SURVEY—U.S. STUDY SAYS FAILURE WILL HARM "HAVES," TOO

(By Robert C. Cowen)

BOSTON—The National Academy of Sciences has given the United States a stark warning: Join with the "hungry" nations to develop an agriculture that can feed all the world's people, or face serious food problems at home within the next few decades.

The academy study appears at a time when the U.S. is looking for more meaningful ways to combat hunger than just giving away food or trying to export techniques of energy-intensive farming, says James T. Grant, a member of the steering committee for the study.

After two decades of letting its agricultural research languish, the United States needs to revitalize it along lines that will produce new crops, sharing this work with developing lands and profiting from research done abroad. The academy study, Mr. Grant adds, contains a wealth of detailed suggestions on the kinds of research worth pursuing.

In short, the study warns that the challenge of world hunger translates into a domestic challenge for the U.S. that is as serious and as fundamental as the energy shortage.

This is the context in which to view the report, says Mr. Grant, also president of the Overseas Development Council. Commissioned by former President Ford as a follow-up to the 1974 World Food Conference, the study should also be seen against the background of President Carter's foreign policy, Mr. Grant notes.

In his unprecedented, special inaugural address to foreign countries, broadcast overseas last January, Mr. Carter not only pledged to work with other nations to tackle such basic problems as poverty and hunger, but was the first U.S. president to call freedom from hunger a basic human right. Since the address, American diplomats have been reinforcing this message.

The academy study, which reflects the analyses of some 1,500 experts, smashes several stereotypes that have clouded American perceptions of the world food situation. Among the findings of the study:

The vaunted productivity of U.S. agriculture is faltering. Yields per acre of major crops are no longer increasing. Indeed, they are below levels of three years ago.

The energy-intensive farming of Western nations, with its emphasis on chemical fertilizers, pesticides, and heavy irrigation, not only is unsuitable for developing nations but is no longer appropriate for industrial countries either. In the United States, it not only shows diminishing returns, but is feeding inflation as strongly as is the high price of oil.

The new breadbaskets of the world over the next 25 years are in the developing countries. They are the ones with the greatest capacity to increase food production at current prices, if they can lick the organizational problems that stand in their way.

The kind of research needed to boost food production in developing countries is the same as that which the U.S. needs to meet its own increasing food needs. This is research that emphasizes biological productivity—boosting food yields by developing crops that do not depend heavily on fertilizers, pesticides, or intensive irrigation.

SUCCESS IN 20 YEARS SEEN IN WORLD "WILL"

(By Clayton Jones)

WASHINGTON.—The worst aspects of world starvation could be ended in 20 years with the help of untapped "political will" of both rich and poor nations.

So concludes a two-year, government-sponsored study of world hunger by a panel from the U.S. academic and scientific community.

Poor nations, which will need to double food production by the year 2000, show increasing ability to use available remedies to do so, the study from the National Academy of Sciences concludes.

And developed nations, which require more and more grain to meet demands for better diets, are learning that there are return benefits in helping the hungry help themselves, while not pushing inappropriate solutions on the world's small farmers, the study adds.

The study, ordered by President Ford, is the collected response and recommendations of more than 1,500 scientists and others to the challenge posted at the 1974 World Food Conference in Rome, at which former U.S. Secretary of State Henry Kissinger pledged that "within a decade no child will go to bed hungry."

"We believe that a latent political will now exist in numerous countries which could be mobilized in a mutually supporting fashion . . .," the report states.

But for now, "the world food system is not working adequately for either poor or rich countries," says the report from a 14-member steering committee headed by Harrison S. Brown, professor of geochemistry and of sciences and government at California Institute of Technology.

"Increasing numbers of people are hungry and malnourished. Possibly as many as 450 million to 1 billion [out of 4 billion] persons in the world do not receive enough food."

"Malnutrition causes more damage than outright starvation. The loss of vitality undermines a person's capacity to savor life . . .," concludes the study.

Among the report's other conclusions:

Emergency world grain reserves should be built up, but such short-term steps should not distort goals for higher productivity on present lands, especially in some 90 less-developed nations where the hungry are concentrated.

The United States should give a high priority to 22 research topics, starting with how diet affects human performance, which foods meet certain needs, which government actions indirectly affect nutrition, how to improve nutritional awareness, and a series of ongoing scientific studies, and ending with a study of international food policies.

No action is more important for improving the world food situation than reduction of birthrates. But the study also suggests that only new social and economic changes that will increase food production are conducive to reducing fertility rates, even though they may cause a nation to experience a short-term population increase.

American technology cannot solve the hunger problems in other countries, where local research needs to be supported to come up with appropriate local solutions. "We have much to learn from their [farmers'] experience," the report says.

Addressing U.S. "decisionmakers," the report calls for several government changes such as more coordination of food policies between the White House and Agriculture Department. It asks for increased funding, now totaling about $700 million, for domestic and international research into nutrition and the social impacts of hunger and its solutions.

The $1.2 million study comes as the following actions are being taken:

Congress is in the midst of revising America's food aid program, called PL 480, and also deciding funds for international development programs for the next two years.

An April analysis from the U.S. General Accounting Office suggests the national focus

is changing from an agricultural policy reflecting an age of surplus and narrow farming interests to a food policy encompassing U.S. consumers and world nutrition.

Bob Bergland, President Carter's Agriculture Secretary, who is just finishing a world tour, wants the International Wheat Council, which begins meetings June 27 in London, to start building nationally held food reserves in case of a world shortfall and to lessen America's job of being the "world's grain elevator." Secretary of State Cyrus Vance's worldwide negotiations on human rights include a "right to be free from hunger."

HUNGARIAN MINORITY OPPRESSED IN ROMANIA

Mr. DOLE. Mr. President, although most members of the United Nations have ratified the U.N. Covenant on Civil and Political Rights which provides for the right of ethnic, religious, and linguistic minorities, not all live up to those commitments. The Romanian Government, although a signatory to the U.S. covenant as well as the Helsinki Final Act, is practicing a policy of subtitle discrimination and repression against its Hungarian minority.

As a consequence of the rearrangement of East-Central Europe's borders following World War I, 2.5 million Hungarians and 1 million other minorities now live in Romania. These nationalities are mainly concentrated in the Transylvania region, of whose population they form 40 percent.

Although its national minorities are subjected to the same general suppression of freedom as all the other inhabitants of Romania, additional systematic and increasingly aggressive policies are being implemented against the Hungarian minority.

HUNGARIAN SCHOOLS ELIMINATED

In the area of education, the elimination of independent Hungarian schools began in 1959. They have been attached to Romanian schools as sections, as a first step, and then gradually phased out altogether. In order to maintain or establish a class in a minority language, the presence of 25 students in grade school and 36 students at high school level are required. Since most villages in Transylvania often fall short of this quota, the Hungarian class must be terminated and the Hungarian language is forbidden to be spoken even during recess. Of course, these provisions do not apply to the Romanian classes where a Romanian section must be maintained, regardless of class size be it only one pupil. At the university level, similar tactics are used. The most offensive was the merging of the 378-year-old Hungarian university at Kolozsvar as a section of the Romanian Babes University.

A similar destruction of Hungarian culture is taking place in the arts. The Romanian Government is curtailing or eliminating Hungarian theaters, museums, libraries, and other cultural institutions. Today, only two independent Hungarian theaters exist, the rest having been incorporated and wholly absorbed by the Romanian theaters. In addition, historic archives of minority churches and institutions have been confiscated and removed to state warehouses.

CHURCHES CENSORED

The churches are also under severe censorship. No decision can be implemented unless thoroughly reviewed and approved by the Ministry of Cults. Any social or religious gathering, except Sunday worship, must be approved by the state. Protestant congregations are denied the right to elect their own ministers and presbyters. And while the state does approve religion classes to be held during certain prescribed hours, school authorities are instructed to organize compulsory school activities at exactly the same time. Nonattendance of them results in official reprimands of the "delinquent" child and the parents.

Hungarian-language newspapers have also been reduced in size and frequency. Six daily Hungarian newspapers were forced to curtail their distribution to a weekly newspaper. This was all done under the pretext of a "paper shortage," but only for the Hungarian-language papers.

CULTURAL GENOCIDE PRACTICED AGAINST HUNGARIANS

In effect, the Romanian Government is engaging in cultural genocide against its 2.5 million Hungarian minority, as well as the other 1 million people of German, Jewish, Ukrainian, Armenian, and other nationality backgrounds.

I am much concerned about this situation. We cannot stand by and see the heritage and freedom of these people be trampled. Romania receives commercial credits from us. But it should not expect to get them automatically while continuing to ignore the human rights of those they have sworn to upkeep and protect at Helsinki.

MAMMOTH SITE DIGGINGS IN HOT SPRINGS, S. DAK.

Mr. McGOVERN. Mr. President, in the western part of South Dakota in 1974, during preparation of land for homesites, workers unearthed a mammoth tusk. To the credit of Mr. Phil Anderson, owner/developer of the homesites, he recognized the potential importance of the discovery and ordered that further work be stopped until such time as confirmation by archeological experts could be made.

Since that time, the people of Hot Springs have engaged in a community-wide effort, on their own, to insure the protection of this important discovery. Most recently, what may be one of the most exciting finds in the two summers of digging was made. For the information of my colleagues, I ask unanimous consent that an article on the mammoth site in Hot Springs, S. Dak., which appeared in the Rapid City Journal on July 30, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MAMMOTH SITE DIGGING CONCLUDING THIS WEEKEND

(By Jan Griesenbrock)

HOT SPRINGS.—Digging at the Hot Springs mammoth site will conclude this weekend for the summer season after recording more significant finds.

Dr. Larry Agenbroad, director of the mammoth site for Chadron State College, said Thursday four mammoth skulls, 11 tusks, camel teeth and the possibility of a small human-produced hand tool.

The most recent mammoth skull was unearthed Sunday when a backhoe being used to construct a small road into nearby private property brushed the outer end of a tusk.

Digging later in the week exposed the rest of the skull with the hand tool located several inches below the tusk in a gravel layer.

"At this point without further investigations, we're treating it very conservatively. It could be a secondary introduction, which means it may have worked its way down through a crevice in the soil and gravel or dropped through an old rodent passageway," Agenbroad said.

"If man is associated here, it would have been in later phases."

The mammoth bones at Hot Springs were found in a shale-lined sinkhole that apparently trapped the large beasts that weighed 7,000–8,000 pounds. Through this year, 22 mammoths have been located at the site.

Other predators probably came to feed on the mammoth bodies, bogged down in the wet sand and silt, and also died.

Phil Anderson, who owns the land on which the mammoth remains were found, contacted Dr. Agenbroad, professor of earth science at Chadron State College, after the initial find in 1974.

The digging project has been funded through grants from National Geographic and Earthwatch.

LAW OF THE SEA

Mr. BROOKE. Mr. President, at the Law of the Sea Conference on July 11, 1977, I, along with several other members of the delegation, attended a breakfast given by Ambassador Beesley from Canada. The breakfast proved to be most useful in briefing the guests on the current Law of the Sea issues. Ambassador Beesley told me about the speech he previously gave on June 29, 1977, concerning the Law of the Sea. Now that I have read his excellent speech, I wish to enter Ambassador Beesley's remarks in the RECORD. I feel that my colleagues will find them useful in informing them of the Canadian position in regard to the Law of the Sea Conference and legislation, which are of such concern to us all.

Mr. President, I ask unanimous consent that Ambassor Beesley's speech be printed in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

REMARKS BY J. ALAN BEESLEY, Q.C. (CANADA)

Mr. Chairman, Distinguished Members of Congress, Ladies and Gentlemen:

INTRODUCTION

I am deeply honoured by your kind invitation to meet with you today together with my colleague Paul Engo, Chairman of the First Committee of the Law of the Sea Conference.

I am aware that I am here in my capacity as Chairman of the Dratfing Committee of the Conference. However, since I have the dubious distinction of being the only Chairman of a Committee which has never met, I propose to express to you today my purely personal views on the importance of the Conference and the consequences of its success or failure.

IMPORTANCE OF THE LAW OF THE SEA CONFERENCE

It is often said that the Law of the Sea Conference is the most important interna-

tional conference since that held in San Francisco when the United Nations was founded. Be that as it may, there is no doubt that the Conference is grappling with fundamental issues of tremendous importance to every nation state. It has a mandate so broad that it embraces new questions ranging from the rights of landlocked states with respect to ocean resources to traditional concepts relating to rights of passage through international straits. Thus, there is no state which would remain unaffected by the results of the Conference, whether it succeeds or fails, a basic point to which I shall return.

THE PRE-EXISTING LAW

It is essential to bear in mind the state of the law as it was when we began the Conference in order to attempt an appraisal of the progress made, the prospects of success and the consequences of failure. In simple terms, the pre-existing Law of the Sea was based on two fundamental principles of international law, namely, state sovereignty and freedom of the high seas—the principles established by Grotius nearly 350 years ago. Translated into specific terms, this has meant that for over three centuries the nation states of the world have accepted the concept of a narrow marginal part of the territorial sea over which states assert total sovereignty, subject only to the principles of innocent passage, and that the area beyond has been open to the use of states on the basis of freedom of the high seas. These principles proved adequate for their time, although it has been alleged that the principle of the freedom of the high seas gradually became translated and distorted into the right to overfish, a license to pollute and the "roving sovereignty" of the flag state. One change in the traditional law of particular relevance to our discussion today was the acceptance in 1958 of the "exploitability test" as the outer limit for coastal state jurisdiction over the continental shelf as reflected in the Geneva Convention on the Continental Shelf, another point to which I shall return.

PRESSURES FOR CHANGES IN THE LAW

Since the 1958 and 1960 Law of the Sea Conferences there have been increasing pressures for changes in the Law of the Sea to better reflect the spectrum of interests represented by all those countries which have received independence since 1958. Coincident with these demands have been an increasingly widespread recognition of the need for new rules to conserve the living resources of the sea, to preserve the marine environment and to regulate the exploitation of both the living and non-living resources of the oceans.

BACKGROUND TO THE CONFERENCE

In 1967, two important developments occurred which led directly to the creation of the Law of the Sea Conference as a means for effecting these changes in the law. It is well known that in that year Ambassador Pardo of Malta introduced into the United Nations his progressive and imaginative concept of the common heritage of mankind. It is not so widely known that in that same year the USSR canvassed a large number of countries to solicit support for an agreement upon a 12 mile territorial sea coupled with a high seas corridor through international straits. The significance of these two separate but eventually interrelated developments is as important today as it was in 1967 as indications of the basic preoccupations of the developing countries on the one hand and the major maritime powers on the other.

THE PREAMBLE OF THE CONFERENCE

The "Seabed Committee" created in 1968 as a result of the Malta initiative became transformed in 1970 into a preparatory committee for the Law of the Sea Conference. I had the honour of introducing the resolution which laid down the terms of reference of the Conference, and I can speak from personal experience in attesting to the fact that there was a widespread determination to tackle all of the interrelated issues of any Law of the Sea and a total rejection of any attempt at a "manageable package" approach, limited to a few issues. Criticisms are often made of the decision to embark upon such an ambitious undertaking. A point of fundamental significance to bear in mind in this connection is that it was argued by the major maritime powers that the operation was feasible since the basic trade-off between them and the developing countries would be recognition of resource claims in return for recognition of freedom of navigation. Presumably, no one anticipated at that time that the major developed nations of the world would later be in the forefront in the rush for resources, and, in the process, undercut the whole foundation of their bargaining position. This has already occurred with respect to the 200 mile fishing zones established by the USA, Canada, the USSR and the EEC; an example, we are told, soon to be followed by Japan. It is also proposed, as you know, that some of these same countries should take the lead in asserting unilateral jurisdiction over the resources of the deep ocean seabed in the face of strong opposition from the developing countries. The implications for any state attaching importance to freedom of navigation are obvious, but I should like to elaborate upon this question a little later.

PROGRESS MADE

How does one answer the question: How much progress has the Conference made? The answer is that it has made tremendous progress on a wide range of issues. We are light-years away from where we began. A preoccupation with remaining difficulties should not obscure this fact. Had we been embarked on a mere codification exercise, which is essentially what was entailed in the 1958 and 1960 U.N. Conferences on the Law of the Sea, when we were unable, in spite of great success on a wide variety of questions, to reach agreement on a 6 mile territorial sea and a 6 mile contiguous fishing zone, we should have long since finished our work. What we have been involved in, however, is a basic rethinking and restructuring of the law, a process which must inevitably take much longer, taking into account the number, range and complexity of the issues and the fact that over 150 nation states are involved in the exercise. You are all aware of the radically new concepts which have emerged from the Conference. Of these, amongst the most important are the economic zone; the common heritage of mankind; freedom of transit through straits; and the archipelagic state. Interestingly, the regime of the territorial sea is also being altered in an important respect.

THE ECONOMIC ZONE

The economic zone embraces, in brief, coastal state sovereign rights over fisheries and the seabed resources in an area extending out to 200 miles from shore, coupled with limited and defined coastal state jurisdiction for the purpose of preserving the marine environment and regulating marine scientific research. The origin of this concept was an attempt to find an accommodation between those countries, mainly the major maritime powers, committed to a narrow territorial sea, and those claiming a territorial sea or patrimonial sea extending to 200 miles.

THE COMMON HERITAGE

The common heritage concept, as developed in the Conference, embodies the creation of an International Authority to regulate and control the exploitation of the deep ocean seabed resources, (including in particular manganese nodules), and the establishment of an "International Enterprise" which would have the right to exploit these resources for the benefit of the "common heritage of mankind". Obviously, the proposed international area begins where national jurisdiction ends, namely, at the outer limit of 200 miles of the economic zone (or the outer limit of the continental shelf, in those cases where the land territory of the coastal state, i.e. the continental shelf, extends beyond). As Paul Engo has pointed out, we have finally achieved what I would not hesitate to call a "breakthrough" on the common heritage principle at this Session of the Conference. I refer to the widespread acceptance of "guaranteed access" permitting states and private enterprise as well as the proposed international institution to exploit the resources of the seabed.

FREEDOM OF TRANSIT

The freedom of transit concept has been developed as a direct consequence of the impact of the widespread acceptance of a 12 mile territorial sea upon those international straits which would be enfolded by the territorial sea of one or more "strait states". It means exactly what it says, namely, the right of free transit through such straits, a substantive and even radical change of the pre-existing law, based as it was, on the principle of "non-suspendable innocent passage". In brief, the new rule would provide for little or no coastal state control over vessels passing through international straits, thus maximizing freedom of navigation in such areas.

ARCHIPELAGIC STATES

The archipelagic state concept, in essence, comprises recognition by the international community that the waters within straight baselines joining the outermost islands of archipelagic states constitute territorial sea, but subject to provisions relating to freedom of navigation in "sea-lanes" through straits used for international navigation. The point of importance is that the length of the baselines has become a secondary issue and the precise rules relating to passage through sea-lanes have become the important question.

TERRITORIAL SEA

I referred to the fact that the régime of the territorial sea is, in my view, being altered in a most important respect. At the present time, the USA, the USSR and Canada all have legislation (the USA Port and Waterways Authority Act, in the case of the USA) which permits coastal states to legislate concerning the design, construction, manning and equipment of foreign vessels passing through the territorial sea of the coastal state. No state has ever alleged that this legislation is contrary to existing international law. Yet the provisions of the Revised Single Negotiating Text eliminate this right completely, and do not even permit the coastal state to pass such legislation to implement internationally agreed rules. It seems clear that unless some radical alterations are made in the RSNT, the USA Port and Waterways Authority Act will have to be amended.

If I may speak for a moment as a Canadian, I regret that the USA and Canada appear to have lost this battle to preserve the environment and that we must continue to accept the threats to our respective coastlines posed by sub-standard unseaworthy tankers loaded with oil. Even the "compromise" likely to emerge from any further negotiations is most unlikely to be of the kind which would eliminate the need to amend the legislation of our two countries. All I can tell you on that issue is that I don't intend to give up the fight.

PROSPECTS FOR THE CONFERENCE

I have attempted to give a capsule summary of the background to the Conference and of the nature of some of the changes being proposed in the pre-existing law. I would now like to turn to the question of prospects for success of the Conference and the consequences of failure. The first point

I should like to make is that there is an increasing danger in many parts of the world of a loss of interest in the Conference on the part of governments, legislative bodies and the public as a consequence of the widespread establishment of a 200 mile fishing zone, which represented a major objective for many states. The second point I should like to make is that it is no longer accurate to judge the success of the Conference by the stalemate, approaching paralysis, which had pertained for a period in Committee I on the deep ocean seabed régime. Indeed, it might now be said with some accuracy that Committee I has caught up to the work of Committee II, concerned with all the basic jurisdictional issues, and Committee III, concerned with the preservation of the marine environment, the conduct of marine scientific research and the transfer of technology. Yet, nevertheless, pressures are mounting in various countries for unilateral legislation to license deep ocean seabed mining.

What then, against this background, are the prospects for the Conference, the consequences of the success or failure and the relationship to these questions of unilateral legislation on the deep ocean seabed? I had occasion to address these questions recently in a speech I delivered in San Francisco at the Annual Meeting of the American Society of International Law, in which Ambassador Elliot Richardson also participated. The points I made were as follows:

It is impossible to make any firm predictions concerning the fate of the Conference. It seems likely that the Conference will require at least another two years to conclude its work.

No one can say with certainty whether the Conference will succeed or fail. What is certain is that there remains a good chance that the Conference can succeed, provided governments do not refuse to continue with the exercise because of the time it is taking and the costs involved, in terms not only of human and financial resources, but the self-restraint required of states on claims they wish to advance while the Conference continues. It is generally accepted that this (Sixth) Session of the Conference is likely to prove the "make or break" Session. If the basis for agreement is worked out on the seabed regime, then there will be great pressure to conclude the negotiations on the other unresolved issues. Even so, at least one further full substantive session may be required, in addition to considerable work by the Drafting Committee. It seems likely, however, that if visible progress is made at this Session, governments will be willing to continue to commit themselves to pursue the Conference to a successful conclusion.

CONSEQUENCES OF SUCCESS OR FAILURE

I have pointed out in a series of recent speeches that a successful Conference could mean agreement on over 500 treaty articles, including annexes, which would together comprise a comprehensive constitution of the oceans—an area, we are often reminded, consisting of over 70 percent of the earth's surface. These rules of law would not exist in a vacuum. They would bind states to act in new ways. They would elaborate a wholly new regime for the rights of passage through international straits. They would lay down totally new principles concerning the management of ocean space. They would, for example, oblige all states to undertake the fundamental commitment to preserve the marine environment, to conserve its living resources, and to cooperate in the carrying out of scientific research. They would establish a single twelve-mile limit for the territorial sea throughout the world. They would result in a major re-allocation of resources as between distant water fishing states and coastal states, and more importantly perhaps, from developed to developing states. They would give recognition to the concept of the archipelagic state, consisting of sovereignty over the waters of the archipelago, wth clearly defined rights of passage and over-flight through sea-lanes. They would bind states to peaceful settlement procedures on most—unfortunately not all—issues. They would, moreover, establish something new in the history of man—an international management system for a major resource of the planet earth—the seabed beyond national jurisdiction. They would reserve this area for purely peaceful purposes. They would subject it to a legal regime governed by an international institution unlike anything known either in the UN system or outside it. The international community would actually become engaged in economic development activities whose benefits would be shared by mankind as a whole. Interestingly, the UN, in the process, could engage in economic competition with states and, perhaps, private enterprise.

These new rules, if accepted by the international community and coupled with binding peaceful settlement procedures, would undoubtedly make a major contribution to a peaceful world. Of equal importance perhaps, they would lay down an essential part of the foundation for a new international economic order, since it would effect a transfer, by consent, of powers and jurisdiction on many issues from the richer and more powerful states to the poorer and less powerful.

What are the consequences of the other alternative—a failure of the Conference? As I have suggested in a series of interventions in a variety of fora, a failed Conference would mean that while the 200 mile limit has come into existence as a fact of international life, none of the safeguards embodied in the draft treaty would necessarily apply. The 200 mile concept, if left to state practice following a failed Conference, is far more likely to become a 200 mile territorial sea than a 200 mile economic zone confined, as in the RSNT, to specific jurisdiction and coupled, as it is in the RSNT, with stringent safeguards. The 12 mile territorial sea is a fact of international life, and is beyond challenge in the International Court, but its application to international straits would not be coupled, as it is in the draft treaty articles, with specific rules concerning rights of passage. That can occur only through acceptance of the treaty as a whole. New proposals concerning the delimitation of marine boundaries could have sufficient legal weight to erode the pre-existing equidistant-median line rules, but they would not be linked to binding third party settlement procedures, without which the new "equitable" approach would have little meaning. The nine years of work on the international regime and institutions to govern the seabed beyond national jurisdiction would be lost. Some developed states would almost certainly take unilateral action authorizing their own nationals and other legal entities to explore and exploit the deep seabed beyond the limits presently claimed by any state.

Certain developing states might well respond by new kinds of unilateral action asserting national jurisdiction over these same areas, basing their action on the "exploitability test" of the 1958 Geneva Continental Shelf Convention—while the developed states prove that the area is exploitable, and thus subject to such claims. Indeed, they have said they would do so. Disputes over fishing rights, environmental jurisdiction, under-sea resource rights, conflicting delimitation claims, rights of passage in straits and claims to the deep ocean seabed could "surface" all over the globe.

The conclusion which follows from the foregoing is obvious. The Law of the Sea Conference has gone too far in developing new concepts and eroding the "old international law" for it to be permitted to fall at this stage. The particular interests of individual states, be they powerful or weak, maritime or coastal, landlocked or geographically disadvantaged, merge and coalesce with the general interest of the international community as a whole in the overriding need for a successful conclusion to the Law of the Sea Conference. This is no longer merely a desirable objective. It is an international imperative.

CONCLUSIONS

As I have been pointing out, in the series of recent speeches to which I have referred, it seems clear that the international community is facing the choice, on the one hand, of a very real danger to peace and security—quite apart from the damage to the UN—should the Conference fail, or, on the other hand, of an opportunity to lay the foundations for a world order of the heights to which mankind can rise when we are prepared to look beyond our narrow immediate interests to the broader long-term interests of all. In legal terms, the Law of the Sea Conference presents the opportunity to leave behind us both the narrow 19th century concept of sovereignty, and its faithful companion, the laissez faire principle of freedom of the high seas, and to create new laws in place of each, embodying a totally new concept, an approach reflecting the need to manage ocean space in the interests of mankind as a whole. For far too long, the Law of the Sea has been based on the notion of competing rights, with little or no recognition of the need reflected in even the most primitive systems of law, whereby duties go hand in hand with rights.

Areas of the sea have been treated as subject to the assertion of sovereignty of one state or another, with no corresponding duties concerning the conservation of fisheries in such areas or the preservation of the environment itself. The oceans beyond the territorial sea have been subjected to the principle of first come first served, a régime which tended to benefit the powerful at the expense of the weak, while defended under the name of freedom of the high seas. When coupled, as it has been, with the doctrine of flag states jurisdiction, and further adopted by the device of flags of convenience, it has become a kind of "roving sovereignty" of the flag state, subject to little or no restrictions, except in the cases of piracy, slavery and narcotics control. Freedom of the high seas has meant, increasingly, the freedom to over-fish and the license to pollute. These are the freedoms which must be circumscribed, while the essential freedom of navigation for purposes of commerce and "other internationally lawful uses" (including legitimate self-defence) must be protected.

The difficulties in the way of harmonizing the conflicting uses of the oceans and the divergent interests of states in a comprehensive constitution of the oceans are immense. The dangers of failure are increasingly acute. The benefits of success, however, are tremendous. Whatever the imperfections of the proposed treaty, it offers the possibility of an orderly régime, in place of the chaotic situation which would otherwise pertain.

There is, in my view, a duty upon influential opinion-making groups such as this body to support the efforts of governments to go forward with perseverance and determination toward the resolution of those problems still besetting the Conference. The greatest danger, at this stage, may well be the possibility of unilateral action on the seabed, stemming, admittedly, from years of frustration and mounting impatience. As I see it, it is the duty of every one of us to use our best efforts to encourage our governments and our legislatures not to give up on the Law of the Sea Conference, but to go that

last nautical mile, and to make one further effort to reach the objective of a global constitution of the oceans.

In conclusion, I would like to make the following observations. Firstly, if the basis for the trade-off of freedom of navigation in return for resources has been weakened due to the fisheries resource claims already made by many major maritime states, the basis for such a compromise would be completely undermined by new resources claims to the deep ocean seabed by these same countries.

Secondly, it would be a fundamental error to draw conclusions about the consequences of such action based upon the legislation establishing the 200 mile fishing limit. That legislation, while in advance of the Conference, was based on one of the fundamental new concepts emerging from the Conference, namely the 200 mile economic zone. Unilateral legislation on deep seabed mining would be interpreted as being diametrically opposed to the other important new concept emerging from the Conference, namely the common heritage of mankind. Reactions would be quite different. In these circumstances, the legislators in countries with global strategic interest in freedom of navigation should think very seriously about passing legislation advancing additional resource claims which could have the effect of destroying the Law of the Sea Conference.

Thirdly, the situation is well past the point of no return in terms of state practice or, if you prefer, unilateral action. It is no longer possible to go back to the status quo if the Conference fails. The clock cannot be turned back. The 3 mile territorial sea cannot be resurrected. It is worth noting that the 3 mile territorial sea and, indeed, the very concept of the territorial sea—and of the freedom of the high seas—was established by state practice, that is to say, unilateral action in which other states acquiesced. Eighty-six states have now established a territorial sea of 12 miles or more. It is totally unrealistic at this stage to imagine that such states would be willing to repudiate such legislation except—in the case of claims beyond 12 miles—in the event of a Conference solution.

Fourthly, if the Conference fails, many states can protect their major interests by unilateral action. However, freedom of navigation through straits enclosed by new territorial sea claims and through the 200 mile economic zone or territorial seas established unilaterally by other states cannot be protected by the same kind of unilateral action. Perhaps it can be protected by the use of force or the threat of force or by diplomatic pressure but it cannot be protected by legislation on the part of those states attempting to assert freedom of navigation. It is essential to bear in mind that the objectives seemingly achieved by the results of the Conference to date concerning freedom of navigation cannot be taken for granted should the Conference fail. Obviously the Conference solution is not only the best answer to this problem but may be the only one.

Fifth, the situation is not one in which a state can protect its interests by refusing to ratify the Convention. Thus, even great powers have been overtaken by events—events in which they have themselves participated. I refer primarily to the development of new customary principles of international law through state practice—that is to say unilateral claims—based on the results of the Conference to date. Non-ratification would merely signify non-acquisescence in claims by other states, but it would not eliminate the legislation passed by the vast majority of the existing international community. All it would do is keep open the right to refuse to recognize such claims and dispute them (by such means, for example, as occurred between the United Kingdom and Iceland).

The sixth, and final point, I wish to make is that it is unnecessary and, indeed, counterproductive, at this stage, either to consider contingency plans should the Conference fail, or to consider non-ratification should the Conference agree upon a treaty containing provisions which are not acceptable. The Conference is still underway. The USA has a tremendous influence in that Conference. No state has a greater influence. No state had made a greater contribution to that Conference. No state is more deeply committed to a successful Conference. Surely, the conclusion is obvious.

We all need a successful outcome from the Conference on the Law of the Sea. It is unrealistic that the treaty will be wholly satisfactory to any state. Every state must accept compromises on some issues. We are too far down the pipe, however, to attempt to reverse the flow, to stop the Conference because we want to get off. We have a responsibility to see it through and the responsibility is a shared one: shared by all of the states involved in the Conference and shared by governments and legislators as well as by the public and the press. I know that the U.S. Government is playing an extremely active and constructive role in the Conference and has worked very hard for many years to achieve a successful outcome. I hope I have given you reasons to support this objective.

MOST-FAVORED NATION

Mr. HAYAKAWA. Mr. President, I was deeply disappointed with President Carter's recent recommendation to extend most-favored-nation status to Romania for another year, which was submitted to Congress on June 3, 1977. There have been some questions raised concerning the continuation of this status, especially in regard to Romania's emigration policies and the human rights situation inside that country.

Congressional hearings in the summer of 1975 and in the fall of 1976 produced evidence that the Romanian record on emigration has been less than satisfactory. In a recent letter to President Carter, 55 of our colleagues in the House of Representatives documented a precipitous drop in the number of visas issued by Romania for emigration to both the United States and Israel between July 1976 and March 1977.

Furthermore, some serious charges have been levelled against the Romanian Government's treatment of minorities, including approximately 2.5 million Hungarians. A policy of this sort undeniably violates the Helsinki agreement as well as other international covenants ratified by Romania.

It seems to me that allegations such as these were not adequately investigated by the administration before the President made his recommendation. In light of the special trading relationship which we maintain with this member of the Communist bloc, it is imperative that he do so.

LOCAL RADIO IN EMERGENCIES

Mr. SCHMITT. Mr. President, I would like to call the attention of my colleagues to two letters I recently received from constituents, Darrel K. Burns of the Los Alamos radio station KRSN and Barry S. Newberger of the Los Alamos Amateur Radio Club W5DO, relative to a tragic fire located in the northern part of my homestate of New Mexico. This fire burned for 8 days and in the process destroyed approximately 15,270 acres. In their letters, Mr. Burns and Mr. Newberger express a great concern regarding the importance of communication provided to the public in times of great need. Often small radio station and individual radio operators are thought of as nonessential modes of communication when in reality they provide the public with a valuable resource of information. The La Mesa fire is a fine example of the excellent coverage of the fire provided by a local radio station and the tremendous assistance contributed from the Los Alamos radio club to those many agencies dealing with this emergency. Unfortunately amateur radio operators are finding themselves continuously restricted by regulations and legislation. If this trend is not reversed amateur radio operators may not be in a position to provide such assistance.

I ask unanimous consent that the letters be printed in the Record.

There being no objection, the letters were ordered to be printed in the Record, as follows:

COMMUNITY BROADCASTING CO.,
Los Alamos, N. Mex.,
JULY 12, 1977.

Hon. HARRISON SCHMITT,.
New Senate Office Building,
Washington, D.C.

DEAR SENATOR SCHMITT: During the La Mesa fire we at KRSN & KRSN-FM were busy.

From our files here are copies of four of the letters we received.

Perhaps there is a tendency from time to time to be complaisant about the services of local radio stations and to consider national radio of more interest and value. An incident such as the La Mesa fire makes it obvious that local radio stations are irreplaceable.

Sincerely,

DARREL K. BURNS.

UNITED STATES ENERGY RESEARCH AND DEVELOPMENT ADMINISTRATION,
Los Alamos, N. Mex., July 7, 1977.

DARREL K. BURNS,
KRSN Radio Station,
Los Alamos, New Mexico.

DEAR DARREL: I am taking this opportunity to express my appreciation for the cooperation and dedication that was demonstrated by KRSN during the recent days and nights of the La Mesa fire.

The support and effort shown by members of your station contributed substantially in keeping local residents informed of the status of the fire. Also, it is recognized that the additional time spent at the station resulted in some of your employees being away from their homes and families for long periods of time. Therefore, please convey my sincere thanks to all of those who participated.

On behalf of the Energy Research and De-

velopment Administration, let me say: "Thank you for a job well done."

Sincerely,

KENNETH R. BRAZIEL,
Area Manager.

DARREL, we are most appreciative of the excellent coverage supplied by you and your outstanding and patient staff of the recent disastrous fire!

You are all to be complimented!! I hope other Los Alamos citizens are as proud of KRSN as are we.

Most sincerely,

MARGARET AND JIM BROWNE.

LOS ALAMOS, N. MEX.,
June 26, 1977.

Mr. DARREL BURNS,
Radio Station KRSN,
Los Alamos, N. Mex.

DEAR MR. BURNS: Fredrica and I wish to thank you and your news staff for the excellent radio coverage of the La Mesa fire. Throughout the tense weekend you provided factual information while avoiding the sensationalism that could very easily have resulted in mass panic. We are grateful to all of you who put in such very long days for our benefit.

Sincerely,

PAUL D. SMITH.

JUNE 20, 1977.

Mr. DARREL K. BURNS,
Radio Station KRSN,
Los Alamos, N. Mex.

DEAR DARREL: My congratulations to you and your staff on the very excellent coverage you have provided on the fire. Most of my years as a newspaperman were spent in regions subject to forest fires, hence I am quite aware of the many difficulties such situations present.

My wife and I have commented several times during the past several days on the factual, low-key level of KRSN's reporting, which I am sure has contributed greatly to the community's peace of mind and may well have averted panic at times.

It has also been a distinct pleasure to listen to straight news without having to endure commercials interjected after every paragraph such as the TV news seems to require. I appreciate the fact that commercials keep the place going, but I shudder when they overwhelm the news.

Keep up the good work.

Sincerely,

JOHN V. YOUNG.

LOS ALAMOS, N. MEX.,
July 6, 1977.

Hon. HARRISON SCHMITT,
U.S. Senate,
Washington, D.C.

DEAR SIR: As you are well aware, the battle against the very costly and destructive La Mesa fire near Los Alamos has now been won.

In the spirit of the Communications Act of 1934 and the FCC's test of public interest, convenience and necessity which *all* radio services must meet, we wish to call your attention to the communications service provided by the Los Alamos Amateur Radio Club through its club station W5PDO and repeaters WR5ABU, WR5AFP, WR5ARO and WR5AEQ (the last three belonging to the Santa Fe VHF Society, Jemez Mountain Repeater Association and the Caravan Club of Albuquerque, respectively.) For over eight days, the club and its volunteer members and friends provided continuous round-the-clock communications service for all the agencies involved in this emergency. The agencies served included the U.S. Forest Service, weather service and the military. All the Forest Service administrative traffic was handled through the radio club including 145 pieces of priority traffic. In addition, approximately 565 health and welfare phone patches were handled for the firefighters, many of whom had come from California, Idaho, Washington, Oregon, Montana and South Dakota and other states. These men and women in not a few instances had to leave pressing personal problems at home to help fight the fire and many would have found it difficult to resolve them without our phone patch service. We were told by many of the firefighters that they had never before had such a service provided for them and were given a substantial boost in morale for having it. (It should be noted that a commercial mobile telephone unit brought in for the purpose was unsuccessful and was removed from the base camp.) In all, fifty-five people were involved for a total of nearly 1900 man hours, using their own personal equipment.

The next time New Mexico faces a disaster of this magnitude, we amateur radio operators may not be in a position to provide such assistance. With the convening of the World Administrative Radio Conference (WARC) in 1979, and the persistent attack on the already small spectrum space that the amateurs have dedicated to them that will occur there, amateurs may find themselves without sufficient resources and flexibility to insure quality reliable communications where all others fail. The situation is exacerbated by faulty press reporting as appeared in a nationally syndicated column a few months ago.

You could do a great service to the amateur radio operators in New Mexico and across the United States by calling to the attention of your colleagues in the Senate on the floor of the Congress and in the Congressional Record the kind of help amateur radio provides to the public in times of great need and consequently the valuable resource that this country has in this body of competent, disciplined and dedicated amateur radio operators.

For the Los Alamos Amateur Radio Club, Best Regards.

BARRY S. NEWBERGER.

EQUAL EMPLOYMENT OPPORTUNITY COMMISSION

Mr. JAVITS. Mr. President, the Equal Employment Opportunity Commission since its creation by title VII of the Civil Rights Act of 1964, has been the key Federal agency charged with eradicating discrimination in employment throughout the Nation on the basis of an individual's race, color, religion, sex, or national origin. Unfortunately, the EEOC has in recent years become known more by its failures than by its successes—yet its responsibilities are enormous and vital. Particularly since 1972, when the EEOC was finally granted enforcement powers by the Congress, the Senate Human Resources Committee has conducted extensive oversight activities in an attempt to improve the effectiveness of EEOC and strengthen enforcement of the act.

Now, just a few weeks after being sworn in as the Chairperson of the Commission, Eleanor Holmes Norton has announced a sweeping reorganization of EEOC, which she aptly characterizes as a "total redesign of the Commission and its functions." I approved highly of the President's nomination of Ms. Norton to this position after her 7 distinguished years of service heading the New York City Commission on Human Rights. She has already begun to prove the confidence that I and the other members of the Human Resources Committee have in her. The important changes announced last week before the House Subcommittee on Employment Opportunities deserve the attention of the Senate.

Accordingly, Mr. President, I ask unanimous consent to have the statement of Eleanor Holmes Norton, and the accompanying charts, as she testified before the Subcommittee on Employment Opportunities in the other body, printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF ELEANOR HOLMES NORTON

Mr. Chairman, distinguished members of the Committee, I am pleased to be here today to present to you the first results of our efforts to reshape the Equal Employment Opportunity Commission. I shall be presenting a comprehensive plan—much of it already being implemented—that can only be characterized as the total redesign of the Commission and its functions. It represents the most extensive overhaul of the agency structure and processes since the establishment of the Commission in 1965. Among its purposes are to integrate the litigation powers Congress gave the Commission in 1972 with the pre-existing investigative and conciliation functions of the agency to overcome a much criticized dual agency structure where investigators work at cross purposes with lawyers instead of in partnership to fruitfully develop cases.

But I stress that the plan is much more than a reorganization or structural redesign, as important as that is. Its chief purpose is functional: to improve the enforcement of Title VII. For it is the operations of the Commission where the most serious problems exist—in case processing, litigation of significant cases, internal management and information systems, and the like. Thus, structure has been addressed only as a means of improving specific functions.

I am pleased to announce that this plan was drawn with the explicit cooperation of the sitting commissioners, Vice Chair Ethel Bent Walsh, Commissioner Daniel Leach, and the General Counsel Abner Sibal, utilizing their staffs alongside my own. The Commission unanimously approved the plan last Wednesday. The development and approval of such fundamental changes in so short a time could simply not have been accomplished otherwise. I have been at EEOC only six weeks. Only the most disciplined self-analysis drawing all parties into the process could have produced this result in that brief time. Thus, in this first important effort of my term, I believe I have reversed the long-existing situation where commissioners were inadequately informed and utilized and insufficiently involved in policy-making, a result which in the past contributed to internal conflict that has taken its toll at the agency. We believe the intensive cooperation of Vice Chair Walsh, Commissioner Leach, and General Counsel Sibal in producing this plan in itself represents a significant accomplishment. I intend to pursue reform of the agency on each and every issue in this collegial fashion.

With your permission, I should like to insert into your record a copy of the resolutions unanimously adopted by the Commission on July 20, 1977, setting the reform of the Commission in motion. The changes which we have adopted and are now implementing include: *

*While the general outline of the programs discussed here have been submitted to the Commission, detailed regulations and manual changes including some of the details discussed in this testimony will be submitted for specific approval pursuant to Paragraph VI of the Resolution of July 20, 1977.

1. Introduction of a new Rapid Case Processing System with emphasis on expanded intake procedures, face-to-face fact-finding and settlement.

2. A separate backlog case processing system to give systematic and priority attention to presently backlogged cases.

3. A "direct service" consumer oriented structure patterned after the National Labor Relations Board, introduced through a model office approach in three to five locations now being selected.

4. Integration of litigation, investigation and conciliation functions.

5. Establishment of a program to deal with systematic discrimination, addressing first those whose actions have demonstrated clear disregard for the purpose of Title VII.

6. A new Program Office to place the Commission in an affirmative posture for developing Title VII through guidelines, interpretations, and other rulings.

7. A new management accountability and information system to insure that the above programs take hold and are implemented.

8. A national training program and standards to assure that the staff will be able to effectively administer the new systems.

This set of changes was hammered out in intensive and detailed discussions during the last six weeks, but they did not spring full blown in that short period of time. Rather they build upon studies made by the staff of this Committee, by the General Accounting Office, by the Commission on Civil Rights and by other analysts over a number of years, reflecting a growing concern over the quality of the implementation of Title VII. Thus we are able to move confidently ahead knowing that these first steps follow the direction that most studies of the Commission agree are appropriate to improve the performance of the agency.

I would like to make one important point before I proceed. We are deeply concerned to mitigate problems that change will bring to our employees. The installation of new systems will inevitably involve the unfamiliar and some dislocation among staff can be expected. We have already had, and will continue to have, appropriate discussions with the representatives of the employees concerning these matters. I come to the EEOC with a record of deep respect for the rights of employees and am confident that the necessary changes can be installed with the cooperation and understanding of the present staff. This is especially important in an agency which in the past has had serious personnel problems. We will do everything possible to minimize hardship on our employees that may come out of the effort to better serve the public.

I would like to discuss the principles and the basic plan which we have adopted to reform Commission activities.

RAPID CHARGE PROCESSING SYSTEM

The first principle that has received priority is the need for expedited charge resolution. I am determined that we will no longer deny justice by delaying it. We are therefore instituting a rapid charge processing system to handle new complaints as they come in.

This will involve a much more detailed pre-charge counseling and interviewing process than took place under the old system. There has been inadequate analysis of the problems of complainants at the time they seek the aid of the EEOC. As a consequence we take many cases which are clearly outside our jurisdiction, or where detailed inquiry of the complainant would establish that he or she did not have a viable Title VII claim. For example, a Black person was rejected on the basis of his resume alone but the resume provided no direct or indirect indication of race through name, address, schools, work history, or other information. Intake officers will be trained to make meaningful referrals elsewhere to parties whose claims should not become a part of our caseload.

At the same time we fail to seek emergency relief for those complainants who may be entitled to it. The old system makes it difficult to secure temporary restraining orders in situations where an employee is about to be fired, or to be disciplined for filing a charge, or where acts of overt discrimination are continuing, or in similar situations. The new system will correct both of these problems.

The detailed intake interview with the complainant will enable the drafting of a precise charge and the preparation of a request for information from the respondent directed to the specific issues in the case. This interrogatory will be sent to the respondent along with a copy of the charge within 10 days. The respondent will be on notice as to what precisely is involved in the charge of discrimination.

In the history of the Commission, there have been periods when charges were not served in a timely manner upon respondents. Originally the practice of serving the charge only when the investigator arrived at the respondent's establishment was developed for fear of possible retaliation against those who filed charges with the Commission. Very few episodes of retaliation under Title VII have occurred. I do not believe that the delayed service of charge is any longer appropriate. Congress in 1972 indicated that employers should receive a notice of the charge within ten days of its filing. I now believe that it is appropriate to serve the charge itself as part of our rapid processing system and intend to so recommend to the Commission. Our rapid charge processing system will be possible only if respondents are promptly served with the complaint. When a respondent becomes aware that a charge has been filed, it will have the option to secure a just resolution of the grievance without further processing. The respondent will be encouraged to settle early in the process.

The importance of encouraging settlement of Title VII claims cannot be overstated. The Congressional intent to encourage settlement is clear in the statutory language mandating conciliation. But the practical imperative is even more demanding. With a filing rate this year projected at more than 80,000 charges, no formal process can avoid being swamped. Therefore if the system is to function, it must use resolution techniques which do not require exhausting the entire process. Swamping of the process harms complainants and respondents alike and threatens the very existence of charge-processing as a system.

Thus we must vigorously pursue settlement as the primary method of administrative enforcement of the law and as the only techniques which can secure a remedy for a significant number of complaints in a timely fashion. All of our procedures are being shaped with the objective of encouraging prompt and fair conciliations.

We believe that early settlement practice will produce fair results for individual complainants. During my tenure at the New York City Commission on Human Rights, almost 50% of complainants chose to settle in the first three months after the case was filed. Many of these cases could not have survived the rigor of the more formal parts of the case process and would have gotten no remedy at all if settlement had not been introduced as a possibility early and aging of the case foreclosed. At the same time, we will continue to recognize the individual right to pursue Title VII claims through litigation.

If initial attempts at settlement fail, the case moves to the next step in the process: a fact-finding conference. This is a new investigative technique for the Commission. It has been used to good effect in New York City and some other Sec. 706 deferral agencies. We believe this new technique will: 1) substantially reduce the time it takes to investigate a case; 2) improve the quality of the information which the Commission obtains; and 3) enhance the possibility of settlement. Prior to the conference, information which has been requested as a result of the initial intake interview with the charging party is supplied to an investigator by the respondent. The investigator presides at the fact-finding conference. Both charging party and respondent are present. The investigator questions both parties to develop a clear understanding of the factual background and the nature of the particular dispute. At the same time, the fact-finding conference provides a way for the parties to develop a deeper understanding of each other's position, which in turn provides a realistic atmosphere conducive to serious settlement discussions. The settlement effort may be concluded at the fact-finding conference, or within a short time thereafter. If settlement is not achieved the facts developed at the conference may be sufficient to allow an early decision that the case does not have merit or that reasonable cause should be found.

However, if the facts developed through the fact-finding conference do not clearly establish that there is "no cause" or that the respondent has violated the statute, further in-depth investigation will take place. The familiar techniques of interrogatories, field visits, witness interviews and document examination will be utilized. But the time required for this investigation will be substantially reduced because of information developed and issues defined at the fact-finding conference and at intake.

There is another matter which I wish to touch upon in connection with the new method of taking charges and conducting the investigation. In the past the Commission has tended to construe charges of discrimination broadly and has sometimes encouraged complainants to file charges that contain broad and general allegations of discrimination. The purpose of the Commission in encouraging and accepting such charges was clearly laudatory. It was to use the individual charges to secure evidence concerning possible discrimination against any employee. This was a necessary approach because the Commission did not have any other effective program to deal with systemic discrimination. Under those conditions, the broadening of the charge to deal with discrimination made sense.

History, however, has demonstrated that this approach has had an adverse effect on individual complainants. The broad investigation has turned out to be long and delayed and has contributed substantially to the build-up of aging cases in the backlog. Very few of these cases have resulted in "cause" findings, conciliation agreements, or Commission-initiated litigation. The aging of the case while the broad investigation was conducted has, in turn, made it more difficult to obtain relief for the individuals who initially filed charges.

Thus the effort of the agency to secure justice as quickly as possible to those who sought the aid of the Commission was frustrated by the long and involved investigation. Since many of these investigations did not prove fruitful, the result was that neither the complainant's interest nor the general public interest in eliminating employment discrimination was served.

We will better serve both the complainant's interest and the larger public interest in eliminating discrimination by separating insofar as possible the processing of the individual complaint and the elimination of systemic discrimination. Thus we will construe complaints as relating to the harm that

the individual has suffered. We will investigate that harm. In that investigation, of course, we will examine the extent to which the employers' restriction or exclusion of minorities or women as a class may have contributed to a particular individual employment decision. However, we will do this by a sharply focused investigation of the general statistics of the employer and the activities in the particular unit in which the discrimination is alleged to have occurred. Thus individuals will no longer be able to automatically invoke a systemic investigation by the Commission. However, individuals or organizations will be able to formally petition for a systemic inquiry. This petition will then be considered by the systemic program, which I will discuss shortly.

We realize that there cannot be a rigid separation of individual and systemic matters and that there will be circumstances in which it is desirable to expand the individual complaint investigation into "like and related" matters and conduct a full scale investigation of the respondent's operations. But this will be done only after a careful analysis and conclusion that such a step would further the overall purpose of Title VII.

This represents an important policy change. By affirmatively developing systemic or class cases we expect to maximize our impact. The Commission has been unable to deploy its resources to target the most serious instances of discrimination. Instead, it has allowed individual complainants to randomly choose targets and issues. This has diverted the use of the Commission's own expertise and policymaking responsibility to affirmatively, rationally, and fairly choose class-action targets. The result has been to dilute the impact of the Commission on discrimination against minorities and women. The decision to separate individual from class claims is therefore an important corrective.

BACKLOG CASE PROCESSING SYSTEM

The next principle that underlies this plan, one that necessarily has high priority, is to systematically reduce the backlog of cases. We will give effective priority treatment on a systematic and continuous basis to the cases that are presently in the system until the inventory is at a reasonable and manageable level. Alongside the rapid charge processing system will be an independently staffed backlog charge processing system. This new system utilizes a positive management approach to the backlog. It involves grouping files by respondent and selecting those with the largest number of charges for first review. A special management review team in each office will oversee the endeavor and will move each case forward with the next steps delineated, staff assignments made and time frames set. After special referral of cases with litigation potential, we will inquire of every charging party concerning his or her desire to proceed with the case. Some charges will be closed at this point. We will then contact by phone or visit every respondent to encourage it to engage in no-fault settlement discussions. If settlement fails, investigative interrogatories will be sent immediately with mandated follow-up to conclude the case as quickly as possible.

These cases will be processed under current Commission policies and procedures except that we will limit the scope of the case to individual matters unless we make a conscious decision that a systemic approach is required. As mentioned earlier, many charging parties whose cases are in the backlog have been denied justice in part by the very breadth of the charges which the Commission itself sometimes had encouraged them to file.

I reemphasize that this approach to the backlog will be continuous and systematic. This distinguishes this effort from the crash programs of the past that temporarily increased productivity by disposing of large numbers of charges. While certain defects in procedures were criticized, those efforts have generally been praised. Unfortunately, many of the sound management innovations were not carried over into permanent streamlining of the Commission's overall processes.

It is important to note that the backlog figure of nearly 130,000 cases is deceptive and misleading. Worse, it is useless for operational and managerial purposes. It appears that EEOC has allowed "backlog", a term meaning old cases, to be used synonymously with "inventory", a reference to all cases received. Cases that were filed years ago and cases that were filed yesterday are reported to the Congress and the public as "backlog". Current subcategories make no sense and do not measure the work of the agency. The Commission is designing a reporting-measurement system which will enable it to know the stage of the charge and how long it has been there as against how long it should be there under management goals and standards for charge processing. The information systems we have found at the Commission must be totally revised to make such information available. For example, charges categorized under "pending assignment" may have been substantially investigated but moved back into the category upon the departure or transfer of the investigator previously handling the case. We are moving to redesign this information system to reflect the location of the cases in the various processes of the agency. We will draw upon the experience of the National Labor Relations Board which uses "time in stage" standards rather than gross numbers. This approach gives precise information on the age of cases rather than lumping all cases together as part of an undifferentiated backlog.

The systematic approach to backlog through a separate charge processing system has several advantages. It allows immediate conversion to a new system with rapid charge processing staff. It assures special and priority treatment of the backlog in a systematic way. It avoids the total absorption of personnel in backlog cases allowing instead for planned allocation of staff among all the priorities of the system.

HEADQUARTERS-TO-FIELD SERVICE ORIENTED MODEL OFFICES

The third principle which has guided reform is direct service to those who have been discriminated against through a lean rather than a multi-tiered model. This will mean the adoption of direct headquarters-to-field model offices and, I would propose, the eventual elimination of intermediate regional litigation centers. In the new model offices, investigators and lawyers will work together, handling cases. We are introducing a new technique, a formal investigator-lawyer conference, to eliminate the much publicized conflict over standards between the legal and investigative staffs.

In adopting a direct service model, we have drawn heavily upon the experience provided by the National Labor Relations Board. The Board has had forty years of experience in complaint processing using a direct headquarters-to-field office system. We intend to move carefully toward such a system because it will involve all staff in service delivery, where the emphasis of our operations must be to meet mounting workload requirements.

Under the present structure cases are litigated from five regional centers while the 32 district offices are supervised by seven regional offices. Thus, there are situations in which the Commission has three separate offices—a district office, a regional office and a regional litigation center in the same city—but they often are not in the same building and too often have little communication. The difficulty of communication created by the fact that litigators are physically separated from investigators means that there is frequently a wide gap between what the investigators secure and what the lawyers require. We believe that the integration of litigation and investigation functions in a single field office will not only enable the more rapid processing of cases but will improve the ability among the staff to achieve effective enforcement.

As we establish this unified field office system we recognize that there will be many problems that cannot be foreseen and we intend to introduce the systems very carefully. We will begin in 3 to 5 offices now being selected to test the new process. As we move forward to successive offices we will build on the experience we have gained in instituting the procedures in the first set of offices.

During the period the new structure is being phased in, we will maintain the existing structure to provide continuity of management and case handling, to allow adequate planning for reassignment of staff, and to provide advance and adequate training and sufficient time to adapt to the new model.

The designation of the model offices has been put on the Commission agenda for next Tuesday, August 2, 1977.

INTEGRATION OF LITIGATION, INVESTIGATION, AND CONCILIATION FUNCTIONS

The fourth principle of reform has been that there must be an integration of the investigation and conciliation processes with the power to litigate given to the Commission by Congress in 1972. Virtually all who have studied the Commission's processes have made this recommendation, including this Subcommittee. In the last six weeks we believe we have solved the difficult technical problem of how to accomplish the integration. The integration will take place as Chart A (attached) indicates at the point of the decision that there is reasonable cause to believe that there may be discrimination.

Historically the finding of reasonable cause meant only that there was sufficient evidence to attempt to settle the case. This definition was developed when the Commission first went into operation in 1965. At that time there was a great uncertainty as to the legal concept of discrimination and hence a need for a finding by the Commission before conciliation was attempted. An attempt to settle a case without a reasonable cause finding back in 1965 would have left the parties in confusion as to what the law required. Thus it was appropriate that the standard for reasonable cause be sufficient evidence to warrant settlement efforts.

Today the vast expansion, strength, and definition of the law concerning discrimination and the widespread knowledge of Title VII among those who deal in employment matters mean that we no longer need a reasonable cause decision as a predicate for settlement efforts. The high settlement rate of the New York City Commission, discussed earlier was almost all obtained before the finding stages. It is time EEOC moved to dispose of cases before a finding to get maximum justice for complainants before cases are allowed to deteriorate through aging.

The Commission continued to define reasonable cause to mean that conciliation should be attempted even after Congress gave it the power to litigate in 1972. Since this standard required less evidence than that necessary to go to litigation, few cases in which reasonable cause was found were taken to court. This meant that the Commission did not secure leverage in settlement from the prospect of litigation, and that there was a double standard—one for conciliation and one for litigation.

As we move into our new system we will redefine reasonable cause to mean that the case is worthy of litigation. The attorneys

and investigators—now located into the same office—will participate in a litigation-investigation conference before the finding of reasonable cause. With the knowledge that the reasonable cause decision means the case is litigation-worthy, conciliation efforts will be much more successful. Those cases which do not meet the new standard of reasonable cause will be "no cause" and a notice of right-to-sue issued. We will explain that the standard of reasonable cause has been upgraded so as not to disable those whose cases are rejected from having a fair opportunity to litigate if they wish to do so.

Cases in which conciliation has failed may be taken by private attorneys or referred to the General Counsel for recommendation to the Commission for litigation. If the Commission approves the recommendation the case will be sent back to the district office and the litigation will be conducted in that office under the direction of the General Counsel.

There need be no fear that this new and tighter standard of evidence for finding reasonable cause will adversely affect remedies for complainants. Based on actual experience from other agencies, the tightened standard of reasonable cause should: 1) increase the rate of remedies at earlier stages; and 2) increase the likelihood of successful conciliation after the reasonable cause decision. Under our rapid charge processing system, cases will move much more quickly to the reasonable cause stage, and cause may be found in cases which, under the old system, would have been dismissed as stale. Thus I am confident that the Commission will do justice for more people than under the old system.

SYSTEMIC DISCRIMINATION PROGRAM

The next principle is the necessity to establish an effective program to attack discrimination. As I stated to the Senate Committee on Human Resources at my confirmation hearing, I am convinced that only by an effective attack on entire systems that discriminate can we have any significant impact on discrimination and ultimately achieve the objectives which Congress established in Title VII. Only an organized program can cope with patterns of employment discrimination. The primary vehicle for our systemic program will be use of Commissioner charges.

I am aware that the filing of a Commissioner's charge alleging discrimination will require considerable time, effort, and expense by respondents. It is only fair that the initiation of these charges of discrimination be organized on a rational basis before the government imposes such costs on respondents. We intend to develop a rational and sensible basis for proceeding on systemic discrimination matters. A first indicator will be a poor statistical profile of minorities and women. The Supreme Court in the Hazelwood School case indicated that, where relevant statistics demonstrate an employer has fallen significantly below comparable employers, there exists a prima facie case of discrimination. This decision provides support for aggressive action to correct discriminatory patterns.

We have already begun an analysis of our own statistical data to identify appropriate subjects for further inquiry. While we will emphasize the statistics, the net judgment as to whether to proceed will be based not only on the statistics but on all other information available to us and to other governmental agencies, as well as on an analysis of petitions for a systemic inquiry filed by individuals and organizations.

Settlement will be as important in systemic cases as in individual cases. At all stages we will be prepared to settle with respondents with an agreement which ends the past discrimination, to take affirmative action to assure that there will not be discrimination in the future and to provide appropriate compensation for identifiable victims of discrimination. Strict monitoring of agreements and assistance to employers in meeting Commission requirements will be important elements in the program. My experience in New York is an indication of the high impact systemic work can have. Last year in a particularly entrenched economy, the New York City Commission secured new jobs and promotions for women and minorities, of the value of $20 million dollars.

Generally, the systemic program will be developed in headquarters and executed in the district offices except for those matters which transcend district boundaries.

AFFIRMATIVE ENFORCEMENT OF TITLE VII

The next principle is that the Commission must make affirmative use of the wide range of administrative powers available to it to enforce Title VII. By advising those subject to the law of our interpretation of it, we hope to reduce dependency on the litigation of individual cases in achieving compliance with Title VII, the slowest and most arduous way to achieve conformity with law. We have already begun this process. Before the Commission secured the power to litigate, it engaged in very effective, creative administrative activities, particularly in issuing guidelines and publishing reasonable cause decisions. In this fashion, the Commission played a major role in developing the law of Title VII. For example, the Commission shaped the interpretation of the "bona fide occupational qualification" exemption and the concept that selection procedures which adversely affect minorities or women were required to be job related.

The Commission will formally establish its activities in the field of interpretations and guidelines, in order to secure wide-scale conformity to Title VII with a minimum of specific individual proceedings. We began this function on July 12, 1977 when we issued our interpretation of the decision of the Supreme Court in *Teamsters v. United States* and *Evans v. United Airlines*. To assure that this activity continues we will establish a headquarters program to support on an ongoing basis the affirmative enforcement aspects of the administrative process. This program will consider and recommend to the Commission the adoption of interpretations, guidelines and the holding of hearings, as well as other Commission-initiated activities.

MANAGEMENT ACCOUNTABILITY AND INFORMATION SYSTEM

The next underlying principle is the need for sound and careful management in order to balance the three priorities described above—the processing of old cases in the backlog, converting to a new rapid case processing system and developing a systemic program. Balancing these priorities in district offices will require a highly effective management system. That system will be modeled after the system which I installed in New York, whose results were so effective that the New York City Commission on Human Rights became the first agency in city government to win decentralized authority over important personnel and budget decisions. A system, which holds managers of all functions at the Commission accountable for their performance will be instituted. The Management System will have four major parts: a) a prioritized and detailed statement of the agency's missions and program objectives within each mission; b) a performance and resource plan with objectives and goals jointly developed by line managers and the execution director; c) a systematic way to identify and correct specific operational deficiencies with deadlines for accomplishment; and d) a system for anticipating critical issues which must be faced during each quarter, thus avoiding management by crisis. Agency managers will be held accountable for meeting the objectives of the management plan and will be evaluated accordingly.

Our computerized and manual information systems are already being revised to assure that the new case processing system is measured from the first day of implementation. Both management and planning depend on good and timely information. We have found several independent and uncoordinated information systems at the Commission, and this fragmentation makes effective planning and management virtually impossible. We are transforming them into a unified information network so that management and planning can take place effectively. Within this information network we will be able to encompass all the operations of the Commission and of the 706 deferral agencies along with as much information about private Title VII litigation as possible.

UNIFORM STAFF TRAINING AND STANDARDS

The final principle is that systematic training of staff will be necessary if the reforms I have described are to take hold and prove effective. The Commission resolution of July 20th has centralized in headquarters responsibility for training. This will facilitate the development of uniform and high quality standards of staff performance. Already in progress are ten training modules. These are to be used not only to introduce the new programs, but also to train new personnel who come to the Commission after the new programs are in effect. Thus they will afford an ongoing training capability which the Commission has not had before. They will also be available for use by state and local civil rights agencies. Examples of training modules in preparation include materials to assist lawyers and investigators in working together under the new standard of reasonable cause; to develop investigative skills necessary to conduct a fact-finding conference; and to train personnel for in-depth interviewing of complainants and the drafting of more precise charges as part of the new comprehensive intake procedures.

Progress on other issues

In addition to fundamental issues of organizational and procedural reform, which I have just discussed, I have also addressed a number of basic issues and operational matters that have long concerned this Committee and the public. I should like briefly to report on progress concerning them.

These issues include the dual set of selection guidelines, the problem of centralized line authority at EEOC, financial responsibility, vacancies and hiring control, grievance procedures, union relationships, state and local agencies, the private bar and the role of other Commissioners.

1. Selection guidelines

First, on the morning I took office on June 6th, I set in motion the process of resolving the separate and competing federal selection guidelines. This most exasperating dilemma had been under negotiation for four years, ending with an impossible situation in which employers are confronted with two sets of standards from the federal government. I am most pleased to report now that there has been excellent cooperation among the Assistant Attorney General for Civil Rights, Drew Days, Civil Service Commissioners Campbell, Poston and Sugarman and the Assistant Secretary of Labor, Don Elisberg; that the staffs of the agencies have been directed to develop unified guidelines; that an informal draft prepared by Justice and EEOC has been developed; and that comments on this draft have served to sharpen and narrow the issues, to the point where I am now hopeful that we will shortly produce draft uniform guidelines for public comment.

2. Orderly line of reporting at EEOC

Second, we have met the criticism of diffuse authority within EEOC by establishing a reporting line of command directly through my newly appointed Executive Director to me. I moved immediately on arrival to consolidate the fragmentation and the separate and often competing efforts among staff units. In the first week of my administration, headquarters offices were ordered to go through the Executive Director on all matters that were to come before the Commission, and this is being uniformly adhered to. In the second week, line authority was reestablished directly from the regional offices to the office of the Executive Director. Weekly meetings were organized with all office directors to coordinate activities, reports on new developments, and review all matters affecting more than one office.

3. Installation of new financial system

Third, I moved to clarify a tangled financial situation and to establish fiscal responsibility. Immediately upon coming to EEOC I found a difference of opinion between the financial office and the Internal Audit unit, on an over-obligation matter that had previously been raised by the General Accounting Office. A special investigation, which I ordered immediately, has now resolved the issue, revealing that there was no over-obligation, but that the former fiscal system was in such poor repair, that it was virtually impossible to make a proper accounting. An improved system, fully accountable has since been developed and we are working on the computer capability to make it functional. We have reported fully to the General Accounting Office. A copy of our final report is being made available to this Subcommittee. We are now moving on target toward a completely reliable financial system to be operational by the beginning of the new fiscal year.

4. Vacancy rate corrected

Fourth, we have corrected the situation in which we were carrying a large number of vacancies without appropriate personnel action. Today the opposite situation obtains. A new vacancy control unit has been established which is not only approving vacancies but must control them so that jobs are filled only when absolutely required and only when consonant with projected reorganization.

5. Employee use of internal grievance processes

Fifth, I am taking action on a distressing grievance situation in which an unprecedented number of compliants were brought against management either through the standard labor-management grievance machinery or through the equal opportunity discrimination apparatus.

This has produced an unfortunate climate in which some managers hesitate to make difficult decisions and evaluations. I have ordered a study of the various grievance mechanisms to see where and how this might be approached. I have also informed all managers that their job is to manage and that I will stand behind them firmly if they demand accountability and are fair in their evaluations. I believe that the climate of charge and counter-charge is already being reversed.

6. Labor-management relations

Sixth, I sought a meeting with the union at the agency during my first week in office in order to establish a relationship that will minimize tension in labor-management affairs. Any difficulties flowing from reorganization can be dealt with through open consultation and exchange of opinion. We have already begun to consult with union officials on a regular basis to provide them with information and to receive the benefit of their thinking.

7. Sec. 706. Deferral agencies, private bar, law school, and legal organizations

I am moving to use available outside resources to help the Commission in its operations. Heretofore, these groups and agencies, which receive grants from the Commission, have often had no systematic relationship to the workload of EEOC but operated entirely independently. As the 706 agencies, the law schools, the public interest legal organizations and the private bar begin to handle an increased case load, it becomes apparent that we need to view them as an integral part of the overall equal opportunity machinery. We are beginning to fashion improved and uniform standards for national intake and charge notification forms, procedures for the efficient sharing of work and a formula for a fair and rational allocation of funds. The 706 agencies will be brought into our training system, and in the next round of negotiations we will build in quality case processing standards, not contracts based on numbers of cases processed alone. Contracts with the law schools will similarly emphasize the need to produce programs responsive to, and integrated with, on-going EEOC operations.

I view the state and local 706 and 709 agencies as associates in a national anti-discrimination effort. They are neither adjuncts of the EEOC nor unrelated institutions. At our request, Congress recommended in its most recent appropriations bill for EEOC, that we establish a system of improved and uniform standards for the more expeditious processing of charges for FEP agencies. We are establishing a national case processing system with national standards, universal forms and procedures, and standardized reporting. State and local agencies will be better used in case processing. Currently over 60% of the charges filed with EEOC are deferred to these agencies. Yet they process only 22% of the annual resolutions. The reasons for the fall-off are varied. Many of these agencies are backlogged. Large numbers of charges are sent back or not filed with the local agencies, with the loss of 60 days of valuable processing time. And, the lack of clearly articulated uniform standards for investigation and charge resolution may result in the rejection of local agency findings. The EEOC has the responsibility to address these problems and is currently doing so. Of course, we will fully consult with the state agencies as these plans and programs are being worked out.

The law schools and legal organizations are another important resource which has not been used to the maximum benefit of the Commission. We are currently renegotiating all private bar funding contracts so they will contain provisions ensuring the promotion of a national litigation system.

8. Development of Collegial System to better use Commissioners in operations and policymaking

Eighth, I am working to correct the criticism of this agency that commissioners have been underutilized, thus diminishing the Commission's overall capability. I am working with the commissioners to establish new roles, specific responsibilities and a collegial decisionmaking system. I have instituted weekly briefings for commissioners and their staffs to familiarize them with issues as they emerge so that they are involved and contributing well before an issue appears on the Commission agenda. Formal commission meetings are to be used for extensive reporting on agency operations and programs to get maximum participation from commissioners in the formation of policy and programs.

CONCLUSION

We believe that structural and procedural reforms I have described here today and the work being done to meet specific problem areas will correct the major deficiencies of the Equal Employment Opportunity Commission and make the Commission the effective instrument for eliminating discrimination that Congress intended it to be. This Committee over the years has done an outstanding job in focusing on the problems of the Commission and pointing it in new directions. I welcome your oversight and suggestions. I hope you will allow me to come back on a regular basis to report on our problems and progress.

OCCUPATIONAL SAFETY AND HEALTH

Mr. DOLE. Mr. President, I would like to address a few questions to the distinguished floor manager for the pending conference report. The amendment I sponsored on OSHA consultation practices was deleted by the conference. As you know, the Dole amendment would have required OSHA to consult with any employer after the OSHA inspector had found a nonserious and nonwillful violation of OSHA regulations. If the violator corrected the problem within a reasonable time, he could not be fined or cited.

I know that the Senator from Washington and the Senator from Massachusetts strongly supported the Senate's position in the conference. I understand this amendment was one of the last items settled by the conference committee because the Senate conferees were strongly committed to the intent of the amendment. Nevertheless, because of the adamant opposition of some Members of the House delegation the amendment was deleted and report language was adopted in its place. The conferees have directed the Secretary of Labor to develop a detailed plan for provision of mandatory consultation services for all small businesses in the United States.

My amendment received a board spectrum of support from individuals and business groups across the country. These people, who have had first hand experience with OSHA's heavy handed regulations and fines, spontaneously and almost unanimously voiced their approval for the intent of my amendment. Unfortunately, one of the largest groups representing small businesses withdrew their support at the last minute and opposed my amendment in conference. The reasons are unclear for their change in heart, however, I hope that the next time I sponsor an amendment to help small businesses that I will have their complete and lasting support.

In reading the report language, I have seen one possible ambiguity. Because this language was part of a compromise on my amendment, I assume that the mandatory consultation plan the conferees intend to have developed will focus on consultation after violations have been found.

Mr. MAGNUSON. It is my understanding that is the intent of the conferees on this matter.

Mr. DOLE. The alternative interpretation would be a mandatory plan which forces employers to seek OSHA consultation. Would the Senator agree that the Secretary of Labor should not interpret the conference report as a mandate to compose a plan forcing employers to have mandatory consultation outside of the inspection process?

Mr. MAGNUSON. That is the way that I read the language. I believe the conferees intended this mandate to be interpreted in light of the Dole amendment

which addressed consultation after the normal inspection process.

Mr. DOLE. In light of the large vote for the Dole amendment in the Senate, 61 Senators in favor and 27 opposed, does the distinguished Senator from Washington intend to include the Labor Department OSHA report on the agenda for committee consideration next year.

Mr. MAGNUSON. That is why the due date of January 1, 1978 was selected, so that the report would be available for committee consideration next year.

Mr. DOLE. I thank the Senator from Washington and the Senator from Massachusetts for this clarification and for the support he gave to my amendment in the conference committee. I also want to make it clear that I intend to continue my efforts for the reforms contained in my amendment. I firmly believe that small businesses across the country are hurt unfairly by the current OSHA law. These employers simply cannot afford to obtain the technical advice needed to comply with every OSHA regulation.

The intent of the OSHA law is to make work places safer and more healthy for every American worker. The Government can never achieve this goal without the cooperation of businessmen. If no fine could be imposed when a nonserious and notwillful violation is promptly corrected, the feelings of employers toward OSHA would be vastly improved. The two-fold thrust of my amendment requiring consultation and peventing imposition of a fine if the nonserious and nonwillful violation is corrected, would be a major step toward a reform of OSHA.

LT. GEN. SAMUEL V. WILSON

Mr. HARRY F. BYRD, JR. Mr. President, the Freedoms Foundation at Valley Forge has presented its George Washington Honor Medal for the Public Address category for the Bicentennial Year to a dedicated American, Lt. Gen. Samuel V. Wilson.

The occasion for his address was a bicentennial program at Farmville, Va., on July 4, 1976.

It is an inspiring commentary on this Nation's need to pursue the basic fundamentals that have been its rock and its substance, and it suggests a vigorous future for this country if these qualities continue to endure.

General Wilson has served with distinction as Defense Attaché in Moscow, as Deputy Assistant Secretary of Defense for Intelligence and Resources Management, and now serves as Director of the Defense Intelligence Agency.

Mr. President, I ask unanimous consent that General Wilson's address be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

BICENTENNIAL PRESENTATION, INDEPENDENCE DAY, JULY 4, 1976, FARMVILLE, VA.

Some years ago, a young President of the United States, told the American people, "This generation has the power to be the best or to be the last." How much has happened since John Kennedy told us that and depending on how you measure a generation—I'm never quite sure where one begins or ends—one more may have come along—but his words are still very true—and they should be our challenge today.

The best or the last—which will it be? Maybe some of you are aware of the dire predicitions that this will be the *last* for America. Seems that before this Nation ever began as a shining example—a British historian, Alex Tyler, offered the theory that a Democracy cannot exist as a permanent form of government—that it contains within it the seeds of its own destruction. He theorized that a democracy would only last until the voters discover that they can vote themselves benefits from the National Treasury. That discovery would be followed by the election of those who promise to expand the benefits until the point is reached when the Nation goes bankrupt. Not a pleasant thought.

Now couple that with another theory—this one based on an historical research which suggests that the average life expectancy of a great civilization is right at—get this—200 years. Those who hold to these theories would turn our Bicentennial birthday party into a wake—but I hope you agree with me that the title of a DeSeversky book a number of years back still is more apropos—recall he wrote about an "America: Too Young To Die."

America has made it to 200 years—through good times and bad—in sickness and in health—through inflation and times of prosperity—in peace and in war. We have survived to celebrate this Bicentennial. But the question I keep hearing more and more—do we dare plan a Tricentennial?

Nor does the question seem to be asked in the calm of logic—or the ground of historical perspective—no, rather we hear it in the roar of the doomsayers—the loud clamor of those who think they see the end of this Nation—see it slip to number two—and then continues a downward trend. Amid this loud weeping and gnashing, it is sometimes difficult to pick out the quiet sounds of the more confident—especially the voices of those who have walked this way before—who carry with them the wisdom of days gone by. Perhaps, for a moment, at this Bicentennial celebration, we should turn the volume down on the shrill harsh screams of the present, so that we can better listen to the voices as the past speaks to us.

And those voices speak to us today. Can you hear Thomas Paine? He looked around his world and he too saw "crisis." He characterized those days as "the times that try men's souls." He forecast that there would be drop outs when he said "the summer soldier and the sunshine patriot will in this crisis shrink from the service of their country." Listen as Paine speaks to us today as he adds for all who would hang in there. "Tyranny, like Hell, is not easily conquered; yet we have this consolation with us, that the harder the conflict, the more glorious the triumph. What we obtain too cheap, we esteem too lightly; it is dearness that gives everything its value. Heaven knows how to put a proper price upon its goods; and it would be strange indeed if so celestial an article as freedom should not be highly rated." (The opening paragraph, "The Crisis," 1776).

Now eavesdrop on a conversation in Philadelphia. When the discussion of what kind of Nation America should be was over, a woman is reported to have asked Franklin, "What kind of government have you given us? And Franklin, reflecting on the frailty of the new Nation, and predicting the doomsayers heckling even to today, said, "A republic, madam, if you can keep it."

Listen to Franklin today—"A republic, ladies and gentlemen, but only if we can keep it."

Not all of our forefathers reeked of confidence that the Nation would see a centennial, let alone a Bicentennial. John Adams, close enough to the dream to have thought better, is speaking. Hear him prophesy, "There never was a democracy that did not commit suicide." Disturbing? It shouldn't be—he just presented the other side of Franklin's coin—that of the *need* for you in the USA. If the Nation is to survive, Franklin told us, it's up to us to keep it; if it is to die, it will be we who kill it—the suicide that Adams speaks of. Perhaps what those early voices are saying to us is that this happening called America cannot be taken from us—but we do have the power to give it away. You may not have thought about it, but that is a distinction the Founding Fathers didn't want to allow when they wrote the Declaration of Independence. When Jefferson penned the original draft, he wrote of *in*alienable rights, but the revision committee—Samuel Adams, Franklin and himself changed it to *un*alienable. The distinction is significant. *In*alienable means it can't be taken away without consent of the possessor, but he may sell it, abandon it, or give it away. *Un*alienable is now an archaic word, but in Jefferson's time it had a precise meaning and was commonly used. It meant that which could neither be taken away nor given away. We have to listen to those voices of the past tell us of an America that should not be able to be taken nor given away.

Other nations have not listened to their voices and their fates are well known. It is sometimes helpful for perspective to recall that when this Nation was founded, there was a Holy Roman Empire, France was ruled by a king, China by an emperor, Russia by an empress, Japan by a shogun—Germany and Italy weren't even nations—just conglomerates of bickering principalities—Venice was a republic. Now in the time it has taken for America to grow, all of those ruling regimes and scores of others have passed into history. Are we listening America? We should be.

Do we hear Zachary Taylor in 1849 sum it up beautifully when he says, "The prediction of evil prophets who formerly pretended to foretell the downfall of our institutions are now remembered only to be laughed at. The United States of America at this moment presents to the world the most stable and permanent government on earth."

No, I don't think America was listening sincerely years later as it prepared for a Centennial celebration. 1976 America—we who survived the second hundred years—listen to how it was in 1876—and draw some encouraging parallels. The Nation was still smarting from the wounds of a most decisive war—the Civil War—recalling too clearly how its military was ignobly defeated by an indigenous guerrilla force, because as the celebration began in Philadelphia, word came that Custer's entire command had been wiped out at Little Big Horn, reeling under an economic situation that saw salaries virtually slashed in half in the panic of 1876, looking for help from a government that was virtually dismantled by scandal. And when Tilden out-polled Hayes for the Presidency, Congress gave it to Hayes anyway. Lynch law was rampant. Sound familiar?

Do you think the clamor went up in that Centennial Year? Do you think there were people around this country predicting that we would ever see this Bicentennial Day? You bet there were—and there were some who would have given up—thrown in the towel—accepted what they called fate. And suppose they did—what a loss for the world—no cure for polio—no heavier than air flight—no man to the Moon—but even more important—no nation to intercede in World War I, none with the resources to defeat the Axis in World War II—none to frustrate the Communist surge of the past thirty years for world domination. In short, none to preclude slavery for the world.

Some were listening but it seems that

there have always been those who wonder "how long can it last." Can you decipher the accent as the French historian Guijot asks the American poet, James Russell Lowell how long the American Republic would last? You shouldn't have any trouble with Lowell's answer. "It will last as long as the ideals of its Founders remain dominant." And that places the burden not on outside forces—but squarely back on us. When we hear the voices they whisper one theme, "It's up to us." If we listen carefully, we can hear more recent voices. A Roosevelt speaking of nothing to fear but fear itself. More familiar voices—not from two hundred years back, but thirty-two years—not from Concord, but from Omaha Beach, on the coast of France, D-Day. We recognize those voices—and the names are in our hearts, as well as on the tablet—the men of the 166th—our sons, nephews, cousins, school-time friends who speak to us today—of confidence and courage, if, we like they, are willing to pay the price.

The message of the voices is loud and clear—and it is simply, America is alive and well—and will stay that way until Americans choose otherwise—and nobody wants to consciously make a choice like that. Perhaps one more voice we should hear in warning is that of Carl Sandburg. From his great grasp of history he wrote the poetic analysis—and it should tell us what we must do.

"When a society or civilization perishes, one condition may always be found.

They forgot where they came from.
They lost sight of what brought them along.
The hard beginnings were forgotten and the struggles.
Unity and common understanding there *had* been.
—enough to overcome rot and dissolution.
—enough to break through their obstacles.
But eventually the mockers came, and the deniers were heard.
And vision and hope faded,
And the custom of greeting one another
Became—"What's the use?"
And men whose forefathers
Would go anywhere
Holding *nothing* impossible
In the genius of man
Joined the mockers and deniers
Not knowing the past, they lost sight
Of what brought them along."

Are we listening America? Mr. Sandburg—indeed all of the voices from the past are plainly calling for a return to the fundamentals that made this Nation great.

But isn't it true, doesn't history and personal experience both tell us when a nation or an individual starts doing "pretty well," like America has been—there is a great temptation to drift from the path that was so important to success—to back off of the fervor and the spirit that was responsible for achievement—to begin to avoid what I call responsible citizenship and permit certain individual material goals to become paramount.

I am talking about a fundamental attitude that speaks of public unconcern amid personal self gratifications—resulting in less involvement in elections, less concern for the schools, less everything for the community—more for ourselves. You realize that isn't the way it all began in America—that isn't what "brought us along"—that isn't the way most of us recall it from our childhood—and I don't think that's the way we want our kids to recall it either.

There is a story you may have heard about the festival in France that is apropos. There was a little village in France that held its traditional harvest festival—a week of celebration and thanks. As each family began to gather its part of the food and drink, the villagers decided to make the filling of the wine barrel a cooperative effort. Each family was to bring its own wine, the wine they had made themselves, and put it into the community barrel. At the climax of the celebration the mayor was asked to open the barrel and begin the round of toasts. When he opened the spigot, however, and tasted the first glass, he discovered it was only water, *only water*. You see, each villager, not willing to give of themselves, had brought water—saved his own wine at home. Each one was so sure that, in so large a barrel his little water would never be noticed.

That can't be permitted to happen in this nation—and it's up to each of us to do something about it—we are going to have to give of ourselves—contribute the results of our work as a committee of ones to the community—bring our wine—not water.

For a more modern reference, consider the title of Gayle Sayer's book. The great halfback for the Chicago Bears said a lot in his title—"I am third." He was indicating that God and his fellow man came before himself. I'd suggest that our title might be an even higher number, perhaps "I'm fifth—or I'm sixth," placing at least country and community in that sequence ahead of ourselves.

Let me tell you I know a return to the fundamentals is expensive—because it costs in self—the toughest price to pay. It demands involvement, not in your own private little world, or even your family—but in the community family as well. Placing country and community ahead of self doesn't allow you to sit back with a receipt or a refund from the IRS and say smugly, "I'm paid up"—because it won't let you believe that you pay for liberty with tax money. You pay with *your* time and *your* self. You see like the folk song says, "Freedom Isn't Free, You Have To Pay the Price, You Have To Sacrifice, For Your Liberty." That hasn't changed in 200 years—and it isn't about to change now.

What we have to ask ourselves is are we still listening or have our values changed? Do we still price this Nation, and the heritage that is ours as highly as we used to or ought to—or have we allowed indifference and apathy to mark down the most priceless of gifts,, And if we say "sure we still value the Nation as highly as ever," then *we* must ask, are we willing to pay the price?

At this point, I believe you have a legitimate right to ask, "What do you want us to do?" I'd say for the most part—just keep doing what you have been doing, doing so well for so many years. But as you do, feel the burden to guarantee that your children, and their children will also continue your fine tradition. For you see, the answer to whether we get an American tricentennial really rests with them.

We pride ourselves here in this area for the great educational opportunities we give our kids—both high school and college systems.

Complacent? Probably. We have to guard against the Euphoria of apparent success with our youngsters—we can't afford to get lost in the shuffle like some schools and some parents who have lost the whole ball game are lost—on the fundamentals—the kind of fundamentals our teens need to prevent them from fumbling their lives—and this nation's future away.

It's a highly technical world. There is the need for the technical information—the physics, chemistry, mathematics and all the rest. I feel that Farmville—indeed, most high schools and universities throughout the nation—are geared to do that—and are doing it successfully. But, more is required—for example, we can get anyone to teach English, but who can we get to teach honest communication? We can get anyone to teach philosophy and study what is true and what is good, but who can we get to teach integrity? We can get anyone to teach American history, but who can we get to teach patriotism? Yet, honest communication, integrity and patriotism are fundamental to the success of this nation—vital to the continuing existence of our way of life.

And I think you understand that our way of life isn't for just anybody—you have to be something special. I used to think differently, used to believe that those fabulous precepts of Locke, Rousseau, Paine, the Adams, and my personal hero, Thomas Jefferson, were for all people—could be exported. My experiences with Vietnam and in Russia have convinced me differently. It takes a special kind of person to be able to handle it, one with special moral fiber, personal discipline, and a great deal of maturity. That isn't every man, nor is it every nation.

Let me tell you why. For our system to work properly, we have to establish the highest possible level of tolerance for dissidence, short of anarchy.

Dissension has been woven into the very fabric of the nation. And, it is the supreme virtue of our system that, rather than tearing us apart, our crises have forged us into a more cohesive people.

But we must understand that dissent is expressed only because we are a free country—our Constitution embraces dissent. In order to have progress, we must have dissent with the status quo—and we certainly do. We must express ourselves, discuss things, get them out of our system, scrub them down, go on to try to do what's right. That we do have dissent doesn't bother me—dissent can be patriotic, you see, dissent is founded in freedom—our heritage from the greatest form of government devised by man—based upon the principle of freedom under law—of respect for the dignity of each individual. But many of the dissenters are not patriots—they're anarchists. The difference is an important one—for both dissent—both seek change. But the patriot does so within the framework of the law—from which freedom and justice for all Americans is derived—he is *con*-structive—while the anarchist expresses his dissatisfaction ouside the framework of the law—he is *de*-structive. We must listen to the patriot—we must not tolerate the anarchist.

So, you have to have a special people—enlightened and responsible citizenry. One example will suffice—just look at our system of law. In order to insure the maximum protection for the innocent, sometimes the guilty go free. Now it takes a special kind of maturity to understand that—to accept it as a necessity to insure the level of protection of the innocent—to resist the temptation to take advantage of it—following the example of the evil doer—forgetting that right is right if no one is right—wrong is wrong if everybody is wrong—a fundamental we have known here since the very beginning. That is the special brand of maturity that has to be inculcated into our children.

Maybe you, like I, were frightened in the mid 60's with the demonstrated lack of this maturity on the college campuses all over the Nation—in the inner cities of Watts, Chicago, Detroit. We survived that—due in main to what I have said—the Nation can accept dissidence—to a point. So it really takes something special. Jefferson, as usual, hit the nail on the head when he said, "I know no safe depository of the ultimate powers of society but the people themselves; and if we think them not enlightened enough to exercise their control with wholesome discretion, the remedy is not to take it from them, but to inform their discretion."

So, it is an education process—and one that has to be conducted, not in the schools alone, but in church and family. You know that—have produced it for years. The best instructor is "good example"—and we are all a necessary part of that. Day-in and day-out, we must be infusing our children with the same important principles, the same understanding, the same maturity that the voices of the past have given us—that have made possible a bicentennial.

That is the red wine we bring to the barrel—and that sometimes is tough. But it

sometimes gets even tougher. As harsh as it may sound on this great day, there's another part of the understanding, the principles and the maturity we must consider. Involvement may be enough—but when those who would threaten us rise up, there is a clear call for the ultimate involvement—putting your life on the line. It may be necessary for some of us to send our sons, even as our parents sent theirs—some will have to pick up the rifle, march away, maybe not to return—even as our friends and reatives honored in marble have done. For that is the ultimate involvement, the shouldering of the burden to insure the Tricentennial. With the day-to-day red wine, there may be—God forbid it—there may be—the occasional red blood. And we will have to bear it—we can't all run off to Canada or find reason to be Four-F and still expect a Tricentennial.

You ask again, what can I do? I answer in a shorthand I hope you understand—wine and blood, in a single word, patriotism.

Now for some reason, in this country, it has never been considered manly to talk about being patriotic—only to show it. Then it became fashionable to be against even showing it. We have to turn that around. I'm not suggesting that patriotism is proclaiming you love this country with a bumper sticker, or even a flag on the holidays—you have to proclaim it with personal effort. We have to give example, provide an atmosphere that fosters love and appreciation for the Nation. Don't worry if you can't define patriotism. It's one of those ideas that is too hard to pin down. Like leadership or love—if you attempt to define it—you put a fence around it—limit its scope. It is much too complex to be imprisoned in words. All you have to remember is that patriotism is a love—a love of country—and love is something we all can grasp. It is for richer—for poorer—in good times and in bad—it is loyalty that develops an attitude to serve—to sacrifice—even your life—to protect honor and country. That is what patriotism is all about—and it's an every day affair. As I see it, those voices of the past are trying to tell us that we must return to the fundamentals that have carried this Nation through the first two hundred years—that we must practice them ourselves and devise ways to communicate them, instill them, root them deep in our young people. Are we listening?

If we hear and heed, then the doomsayers, the pessimistic heirs of those who predicted no Bicentennial for America, those who now feel there is no hope for a Tricentennial, will have their sounds drowned out by the thundering whisper of some future Americans joining voices with ours and those of the past to procaim—oh, say does that Star Spangled Banner yet wave—over the land of the free and the home of the brave.

You bet it does.

SENATOR RUSSELL LONG—CARRYING ON THE FAMILY TRADITION OF PUBLIC SERVICE WITH DISTINCTION

Mr. HUMPHREY. Mr. President, I would like to take just a moment to call to the attention of my fellow Senators a superb article on a fascinating subject—our colleague, RUSSELL LONG.

The August 1977 issue of Nation's Business has a well-researched article written by senior editor Vernon Louviere on RUSSELL which weaves the historical background of the Long family with the issues facing the Senate today.

As you know, RUSSELL is the third Long to be a Senator. Both his father and mother preceded him, serving here with distinction and honor.

RUSSELL and I have been friends a long time, longer than I care to recount in public. We attended college together at LSU in his native State of Louisiana—and that does go back a few years.

Mr. President, I ask unanimous consent to have printed in the RECORD a very fine article about a very great Senator.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SENATOR RUSSELL LONG: HE CAN INFLUENCE YOUR LIFE FOR YEARS TO COME

At 1600 Pennsylvania Avenue N.W., in the White House, Jimmy Carter ponders legislation that will affect the nation for years to come—legislation involving taxes to pay for Medicare, welfare, Social Security, and massive new health programs.

On Capitol Hill, less than two miles away along the avenue, one senator will pass judgment almost single-handedly on what President Carter gets or doesn't get in these areas.

Russell B. Long (D-La.) is chairman of the Senate Finance Committee, and, as such, his decisions influence the lives of all Americans. The man who fashions the tax policies of this nation ultimately touches us all.

Although he has almost as much power as any man in Washington, Sen. Long rarely, if ever flaunts it publicly.

NO CHIP OFF THE OLD BLOCK

The son of flamboyant, outgoing, petulant Huey P. Long, Louisiana governor who also became a U.S. senator, he is no chip off the old block. Huey Long, who was felled by an assassin at age 42, when Russell was 17, did pass on many of his traits to his son. Russell Long is clever—some say brilliant. He is a master of legislative tactics and strategy, and he is a good storyteller. But the Kingfish, as Huey Long was called, was a spellbinder before an audience. Russell is rather lackluster.

Huey Long "was more a revolutionary," Russell Long says. "I am more the evolutionary type."

Russell Long shows no outward signs of wanting to be President, as his father did. Huey Long published a book in 1935, the year he was assassinated. It was called, "My first Years in the White House."

DEFEAT FOR ROOSEVELT?

"I think he would have been elected in 1940 if he had lived," Russell says. "He would have run as a third-party candidate. President Roosevelt had polls indicating that Huey Long would get so many votes as a third-party candidate in 1936 that a Republican would run ahead of Mr. Roosevelt.

"If that had been the case, and the people had gotten four more years of the kind of government that they had under Herbert Hoover, the public would have been inclined to look toward someone like Huey Long. At that point, I think, he would have had a chance to win."

NAME TO RECKON WITH

After Huey Long came out of the scrub country of northern Louisiana in 1918 to serve in his first elected office, as a member of the old state railroad commission in Baton Rouge, the name Long became synonymous with politics in the Bayou State. It still is.

The Kingfish dominated the political scene during his years as governor and senator. Russell Long's mother, Rose, completed Huey's unexpired term in the Senate. Russell's tempestuous uncle, Earl, who took over the so-called Long political machine in 1935, twice served as governor and won a seat in the House of Representatives in 1960, but died before he could take office.

Another uncle, Dr. George Long, a dentist, served in the House. So did a distant cousin, Speedy Long. Another distant cousin, Gillis Long, is an incumbent congressman.

A SENATOR AT 30

Russell Long's own plunge into politics started early. After a colorful, hoopla-filled campaign, he was elected president of the Louisiana State University student body. He later received his law degree at L.S.U.

In 1948, at age 29, he won a special election to fill the two-year unexpired U.S. Senate term of the late John P. Overton. He had to stand aside briefly before taking the seat because the Constitution sets the minimum age for a senator at 30.

Today he is sixth in seniority in the 100-member Senate, having served half his life there. He was named chairman of the Senate Finance Committee in January, 1966, after Sen. Harry F. Byrd, Sr. (D-Va.) resigned for health reasons. At 58, Sen. Long has been a Senate committee chairman longer than all but four other chairman. Some chairmen are in their late 70's.

Sen. Long has been described as a conservative, a liberal, a populist, and a reactionary, depending on who was hanging the label on him. In an interview with a Nation's Business editor, he said of himself:

"I am a populist in some respects, and I would like to think I am a conservative in other respects. I think some of the best senators and best Presidents are both conservative and liberal by the best definition of those words. If you mean conservative because they favor keeping the good things about the existing order, I would call them conservatives. And if you mean liberal because they favor aggressive, constructive change, I favor that.

"In some respects I even regard myself as a reactionary because there were some very good things in our lives that we let get away and should try to regain. Some of the old values had much more to be said for them than some of these new values we hear so much about. Whatever it was that gave us our inner strength as a nation, we should try to recapture it."

It is easy to see why Sen. Long will be called a conservative one day and a liberal the next. He can fight for some tax laws that make him the darling of the business community and turn right around and press for extensive new social benefits, winning kudos from liberals. Over the long haul, however, he is not looked upon with favor in the vote ratings of the liberal-oriented Americans for Democratic Action. He chalks up high marks with the conservative-leaning Americans for Constitutional Action.

FRIEND OF THE OIL INDUSTRY

He has long been champion of the oil industry, which is not unexpected in view of the prominence of Louisiana oil. He also has enjoyed a comfortable income over the years from personal oil holdings.

Russell Long is one of the most popular members of the Senate. He is respected by Democrats and Republicans alike. Sen. Bob Packwood (R.-Oregon) has said of him: "He is clever, he is crafty, he is smart, he is fair."

His popularity hit a low ebb in 1967, however, when Sen. Edward Kennedy (D.-Mass.) unseated him as Senate Democratic whip. This followed a period in which Sen. Long had joined with a handful of others in defending former Sen. Thomas J. Dodd (D.-Conn.) against charges of misusing political funds. About that same time Sen. Long staged a filibuster and successfully pushed through an amendment allowing taxpayers the right to apply $1 of their tax liability to presidential campaign funds. Although the filibuster was unpopular with other senators, Sen. Long regards this as one of the great triumphs of his career.

EXPERT ON TAX CODE

His father knew Louisiana law like the back of his hand, and Russell Long has no peer when it comes to the U.S. Tax Code. He manages a tax bill on the Senate floor with the consummate skill of a star quarterback moving his team toward the goal line. Sen.

William Proxmire (D.-Wis.), who once came out on the short end of a skirmish with the Louisiana senator, said of him: "He knows the Tax Code about as thoroughly as the Pope knows the Lord's Prayer."

If Russell Long is center stage in matters affecting taxes, it was not always so. When Rep. Wilbur Mills (D-Ark.) dominated the House Ways and Means Committee, his committee got most of the public attention. Mr. Mills, who was almost an institution of government, never let Sen. Long enjoy equal status.

Today, in a sense, the tables are turned. Rep. Al Ullman (D.-Oregon), who now heads the House Ways and Means Committee, sits in Sen. Long's shadow.

The senator has played a leading role in two massive restructurings of the American tax system—the Tax Reform Act of 1969 and the Tax Reform Act of 1976. He does not take lightly the charge by his detractors that the tax system is still full of loopholes.

"I would like to make the public understand something that is not apparent to everybody," he told Nation's Business. "We want people to contribute to charity, so we allow a deduction for charitable giving. We want manufacturers to buy new equipment, start new plants, and put more people to work, so we give them tax credits and deductions for doing those things. We want those who can to give money toward education. All these things are beneficial to society.

"Is it not fair, then, to give a tax advantage to those who contribute in this fashion over those who don't? There must be incentives in the system if we are to continue to enjoy such contributions."

The easygoing senator speaks out vigorously and sometimes bitterly if he feels he is unjustly criticized for looking after special interests or for engineering "midnight loopholes" in tax revision bills.

"FALSE TAX REFORM"

Last year he took on Sens. Kennedy and Proxmire, who had leveled such accusations. In a lengthy letter to "The Washington Post," the Louisiana lawmaker said:

"If the ringleaders of the false tax reform group had their way, they would not return the revenue gains of their 'reforms' to taxpayers by lowering tax rates. They would end many of the incentives which encourage private enterprise to expand and to create new jobs, in order to plow these billions into bigger government, more bureaucracy, and ever-expanding social welfare programs.

"If that is what the American taxpayer really wants, then he should have it. But it should not be fed to him under the guise of tax reform."

Sen. Long says he appreciates the criticism that the more tax forms supposedly are simplified, the more complicated they become. He is convinced, however, that the estimated 76 percent of taxpayers who will use the standard deduction next year will find the income tax form the simplest in several decades.

Even those who file itemized deductions should be happy with the 1977 form, he says.

ADVICE FOR BUSINESSMEN

Sen. Long has advice for businessmen who feel they get shortchanged by Congress: Get organized and stop talking only with lawmakers who are friendly to business.

"The business community will have to gear itself to communicate its story to the middle in Congress," he says. "The business community could be twice as effective if it would recognize that the outcomes of these difficult debates in Congress are decided by the middle, not the fellows on the left or the right.

"The trouble with business is that it communicates too much with the people who are with it already and too little with the people who are doubtful or who may be committed to the other side. Business should try to talk with the moderates and those who are left of center in more meaningful language.

"This is not just a matter of communicating; it is a case of being a good salesman. A good salesman knows the territory. He knows how to approach the client he is trying to sell."

CONFRONTATIONS WITH CARTER

Russell Long and Jimmy Carter probably will confront each other many times in the months ahead. One such confrontation could come over the manner in which the President seeks to shore up the Social Security system, which is paying out more than it is taking in. Among Mr. Carter's proposed solutions is to divert money from general Treasury revenues until Social Security can be restored to pay-as-you-go status.

"I have grave doubts about that," Sen. Long asserts. "It suggests that we simply bail out politicians who have promised more than they are willing to tax the public to pay for. They would do this with printing-press money.

"The way to avoid this is simply to put on enough taxes or else cut back on some of the windfall benefits."

Has Social Security been so burdened with new benefits, over the years, that the saturation point has been reached?

"We haven't reached that point," the Senator says, "but we have passed the point when we can provide additional benefits merely by changing our assumptions [economic yardsticks which attempt to forecast the effects of inflation and other factors on Social Security payouts]. When I first came to the Senate, we were financing Social Security on the theory that we would build up a trust fund of more than $200 billion by the year 2000. Then we began to change the assumptions to say that we didn't need that large a fund as long as we collected more money each year than we paid out in benefits. In due course we found we weren't even keeping up."

SOCIAL SECURITY REALITIES

The senator says Congress must recognize that every new Social Security system benefit will have to be accompanied by a tax increase or paid for in some other fashion. He is skeptical about using the income tax to finance Social Security.

"Some people criticize the Social Security tax as being regressive, but keep in mind that we have an earned income credit which is paid out of general revenues to reimburse the working poor for the Social Security taxes they pay," he says.

"In view of the fact that the Social Security benefits are weighted heavily in favor of people at the lower end of the economic ladder and against people at the upper end, it seems to me there should be no complaints that an income tax is more progressive than a Social Security tax."

TAXES AT THE TOP

The senator says "many liberals and good, sincere labor leaders" contend that Social Security benefits can be broadened with money that is "provided by taxing five percent of the people in the upper income brackets without taxing the great majority of the other 95 percent." This, he says, is just so much foolishness.

"Income taxes on the average take 50 percent of the earnings of those in the top bracket. They are paying Social Security taxes for themselves and indirectly for others in the price of everything they consume. They are paying property taxes and all the consumer, state, and local taxes that the mind of man can conceive. They are paying high gift taxes, and when they die, up to 70 percent of what they own is taken in inheritance taxes."

America may have reached the point of diminishing returns as far as adding new tax burdens at upper levels of income is concerned, Sen. Long says. "If you tax these people too heavily, they will simply reduce their effort," he says. "They will not create the new jobs and opportunities that we need."

ENERGY "DISASTER"

The President and the senator are almost certain to have a major confrontation over energy legislation. A hint of this came recently when Sen. Long commented on a Mobil Corp. newspaper advertisement which suggested that the core of the energy problem is not shortage, but deliverability of domestic energy. Sen. Long said in a letter to his 99 colleagues:

"This article points out briefly and clearly what is wrong with the President's proposed energy plan: It is an unmitigated disaster on the production side.

"The conservation side of the equation must be pursued. However, the most that this aspect can accomplish in the foreseeable future is to reduce the gross rate in energy consumption.

"To get at the energy problem in a way which does not stultify and impede the growth of the American economy, this country must place far more emphasis on the production side."

WELFARE REFORM

The senator has equally strong views about correcting the welfare system, which he feels does not offer incentives that are adequate for getting the able-bodied poor to help support themselves.

He says he agrees with Labor Secretary Ray Marshall that private-sector jobs are preferable but that, when they cannot be provided, the government should step in and make jobs available.

"We are generally talking about families of two, three, or more members where at least one person is able-bodied and in a position to earn some pay," he explains. "We should offer a work opportunity sufficiently rewarding to move that family out of poverty.

"If such jobs are turned down, this kind of family should not be privileged to live on the tax money of people who are working at the same relative wage scale and are paying their fair share of taxes.

"I don't want anyone to starve, of course. But I see no reason why help should be extended to those who are able and yet reject employment opportunities."

Sen. Long thinks true welfare reform will finally come about someday. He doesn't know when.

Among the senator's proudest accomplishments is that he was able to help block adoption of President Nixon's proposed family assistance plan, which would have added low-income wage earners to welfare rolls for the first time.

"This would have doubled the number of people on welfare immediately and quadrupled the number in time," Sen. Long explains. "If this legislation had passed, our form of government could have been destroyed. There would have been so many people on welfare that the politicians could not have avoided continuing to raise benefits. And more and more people would have gone on welfare, to the point where those on welfare would have outnumbered those not on welfare.

"By defeating this legislation, we may have saved the American free enterprise system."

Does the senator see the private enterprise system as being in trouble now?

"It sure is. So many burdens are being piled on business—on an environmental basis, on a safety basis, on the basis of the government telling business how to produce its products and to whom they can be sold.

"Today's businessman must have the genius of an Einstein, the memory of an elephant, and the education of a lawyer, scientist, and educator all wrapped in one.

"If we keep adding burdens on business,

the system will fail. Businessmen simply cannot shoulder all of these burdens. We must reduce government interference in the operation of businesses and in the lives of our people in general."

SHARING THE WEALTH

When Huey Long pushed a program of heavier taxation on businesses and prosperous individuals in Louisiana, he hit on a slogan—"share the wealth"—which made him a popular figure in what was then a generally impoverished America.

Russell Long would like to share the wealth, too, but not in his father's fashion of taking from the haves and giving to the have-nots.

"My greatest hope is to see us reach a day when the great majority of our people will enjoy the good things of this country," he says. "I don't seek to redistribute the wealth as my father did in his day. I would just like to see us distribute the wealth somewhat more evenly."

He estimates that about 85 percent of today's property, money, tangible goods, etc., are owned by 15 percent of the people, while 35 percent own about ten percent and the other 50 percent have the remaining five percent.

"I would like to see this redistributed in such a fashion that 30 percent would be owned by the 15 percent of the people at the top, about 35 percent by the 35 percent in the middle, and the balance by the other 50 percent of our citizens."

He adds that he see "an America where someday everybody will live above the poverty line."

How would the senator accomplish this? He explains:

"You would need more employe stock ownership plans and expanded pension plans, and you may need some other things that I can't anticipate at this time."

Sen. Long advocates an employee stock ownership plan which, he says, is gaining popularity around the country. He sponsored a provision in the Tax Reduction Act of 1975 which cleared the way for creation of ESOP's.

When a company files for a ten percent investment tax credit, the government adds an extra one percent tax credit for setting up an ESOP trust fund. Monies accumulating in the fund are converted to shares of stock which in turn are assigned to employees. [See "How to Motivate Your Employees and Raise Capital, Too," Nation's Business, October, 1976.]

There is no question that Russell Long enjoys his work. He rarely misses a Finance Committee session and will sit through hours of tedious testimony, seemingly relishing every word.

In 1973, in a rare display of emotion, the entire Senate spontaneously applauded Sen. Long after passage of a complicated Social Security bill. For 2½ days, and well into the night, Mr. Long had been on the floor managing the bill. Dozens of amendments were debated and voted upon.

THE ULTIMATE ACCOLADE

The ultimate accolade came from then Senate Majority Leader Mike Mansfield (D-Mont.), who, when the final vote was taken rose and said:

"I commend the distinguished senator from Louisiana for doing his usual skillful managerial job on a most difficult piece of legislation.

"Speaking personally, I am glad I am not in his shoes because this is a most difficult committee to chair, and this piece of legislation, which the Senate has just agreed to, was one of the most difficult to manage through this chamber.

"When one considers all the amendments which have been offered today and one becomes aware of the skill, the knowledge, and the maneuverability of the distinguished senator, one cannot help but admire him."

ISSUES BEFORE SENATOR LONG'S COMMITTEE NOW

Here is some of the major legislation being considered this year by Chairman Russell Long's Senate Finance Committee:

Energy tax measures.—Impose a crude oil equalization tax to bring the market price of price-controlled oil up to the price of uncontrolled oil by 1980. Grant per capita tax rebates to all taxpayers and special rebates to individuals using home heating oil. Levy a two-tiered tax on industrial users of oil and natural gas who consume in excess of the equivalent of 50,000 barrels per year. Impose a tax on new cars obtaining less than 15 miles per gallon of gasoline and offer tax-credit incentives for home insulation and other conservation measures.

Public Assistance Amendments of 1977.—Expand federal support for child welfare services with particular emphasis on taking children out of foster care, either by reuniting them with their families or by arranging for their adoption. Provide an additional $200 million in child care funds and extend the federal program of supplemental security income to needy, aged, and disabled persons in Puerto Rico.

Social Security financing.—The Social Security system faces a serious long-term deficit and needs additional funding in the near future. President Carter has proposed a combination of tax increases and benefit modifications to deal with this financing problem.

Medicare and Medicaid abuses.—This bill contains a number of provisions designed to curb abuse of the Medicare and Medicaid programs by providers of medical care.

Hospital cost containment.—President Carter has proposed short-term measures to limit reimbursement to hospitals in order to save funds under major federal health programs. Other proposals pending in the committee deal with curbing hospital cost increases over the long term.

SENATOR RUSSELL LONG

Mr. TALMADGE. Mr. President, there appeared in the August issue of Nation's Business magazine an excellent article about Senator RUSSELL LONG, chairman of the Senate Committee on Finance, in which he sets forth perceptive views on legislation that is important to all Americans and the economic security of our Nation.

I do not know of any Senator, past or present, who has been harder working or a more effective chairman. He presides over the Finance Committee with an even hand and he consistently demonstrates a quick grasp of complex legislative matters involving tax laws, health care, and energy. He is respected without respect to party lines.

I bring this article to the attention of the Senate and ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SEN. RUSSELL LONG: HE CAN INFLUENCE YOUR LIFE FOR YEARS TO COME

At 1600 Pennsylvania Avenue N. W., in the White House, Jimmy Carter ponders legislation that will affect the nation for years to come—legislation involving taxes to pay for Medicare, welfare, Social Security, and massive new health programs.

On Capitol Hill, less than two miles away along the avenue, one senator will pass judgment almost single-handedly on what President Carter gets or doesn't get in these areas.

Russell B. Long (D.-La.) is chairman of the Senate Finance Committee, and, as such, his decisions influence the lives of all Americans. The man who fashions the tax policies of this nation ultimately touches us all.

Although he has almost as much power as any man in Washington, Sen. Long rarely, if ever, flaunts it publicly.

NO CHIP OFF THE OLD BLOCK

The son of flamboyant, outgoing, petulant Huey P. Long, Louisiana governor who also became a U. S. senator, he is no chip off the old block. Huey Long, who was felled by an assassin at age 42, when Russell was 17, did pass on many of his traits to his son. Russell Long is clever—some say brilliant. He is a master at legislative tactics and strategy, and he is a good storyteller. But the Kingfish, as Huey Long was called, was a spellbinder before an audience. Russell is rather lackluster.

Huey Long "was more of a revolutionary," Russell Long says. "I am more the evolutionary type."

Russell Long shows no outward signs of wanting to be President, as his father did. Huey Long published a book in 1935, the year he was assassinated. It was called, "My First Years in the White House."

DEFEAT FOR ROOSEVELT?

"I think he would have been elected in 1940 if he had lived," Russell says. "He would have run as a third-party candidate. President Roosevelt had polls indicating that Huey Long would get so many votes as a third-party candidate in 1936 that a Republican would run ahead of Mr. Roosevelt.

"If that had been the case, and the people had gotten four more years of the kind of government that they had under Herbert Hoover, the public would have been inclined to look toward someone like Huey Long. At that point, I think, he would have had a chance to win."

NAME TO RECKON WITH

After Huey Long came out of the scrub country of northern Louisiana in 1918 to serve in his first elected office, as a member of the old state railroad commission in Baton Rouge, the name Long became synonymous with politics in the Bayou State. It still is.

The Kingfish dominated the political scene during his years as governor and senator. Russell Long's mother, Rose, completed Huey's unexpired term in the Senate. Russell's tempestuous uncle, Earl, who took over the so-called Long political machine in 1935, twice served as governor and won a seat in the House of Representatives in 1960, but died before he could take office.

Another uncle, Dr. George Long, a dentist, served in the House. So did a distant cousin, Speedy Long. Another distant cousin, Gillis Long, is an incumbent congressman.

A SENATOR AT 30

Russell Long's own plunge into politics started early. After a colorful, hoopla-filled campaign, he was elected president of the Louisiana State University student body. He later received his law degree at L.S.U.

In 1948, at age 29, he won a special election to fill the two-year unexpired U.S. Senate term of the late John P. Overton. He had to stand aside briefly before taking the seat because the Constitution sets the minimum age for a senator at 30.

Today he is sixth in seniority in the 100-member Senate, having served half his life there. He was named chairman of the Senate Finance Committee in January, 1966, after Sen. Harry F. Byrd, Sr. (D.-Va.) resigned for health reasons. At 58, Sen. Long has been a Senate committee chairman longer than all but four other chairmen. Some chairmen are in their late 70's.

Sen. Long has been described as a conservative, a liberal, a populist, and a reactionary, depending on who was hanging the

label on him. In an interview with a Nation's Business editor, he said of himself:

"I am a populist in some respects, and I would like to think I am a conservative in other respects. I think some of the best senators and best Presidents are both conservative and liberal by the best definition of those words. If you mean conservative because they favor keeping the good things about the existing order, I would call them conservatives. And if you mean liberal because they favor aggressive, constructive change, I favor that.

"In some respects I even regard myself as a reactionary because there were some very good things in our lives that we let get away and should try to regain. Some of the old values had much more to be said for them than some of these new values we hear so much about. Whatever it was that gave us our inner strength as a nation, we should try to recapture it."

It is easy to see why Sen. Long will be called a conservative one day and a liberal the next. He can fight for some tax laws that make him the darling of the business community and turn right around and press for extensive new social benefits, winning kudos from liberals. Over the long haul, however, he is not looked upon with favor in the vote ratings of the liberal-oriented Americans for Democratic Action. He chalks up high marks with the conservative-leaning Americans for Constitutional Action.

FRIEND OF THE OIL INDUSTRY

He has long been a champion of the oil industry, which is not unexpected in view of the prominence of Louisiana oil. He also has enjoyed a comfortable income over the years from personal oil holdings.

Russell Long is one of the most popular members of the Senate. He is respected by Democrats and Republicans alike. Sen. Bob Packwood (R.-Oregon) has said of him: "He is clever, he is crafty, he is smart, he is fair."

His popularity hit a low ebb in 1967, however, when Sen. Edward Kennedy (D.-Mass.) unseated him as Senate Democratic whip. This followed a period in which Sen. Long had joined with a handful of others in defending former Sen. Thomas J. Dodd (D.-Conn.) against charges of misusing political funds. About that same time Sen. Long staged a filibuster and successfully pushed through an amendment allowing taxpayers the right to apply $1 of their tax liability to presidential campaign funds. Although the filibuster was unpopular with other senators, Sen. Long regards this as one of the great triumphs of his career.

EXPERT ON TAX CODE

His father knew Louisiana law like the back of his hand, and Russell Long has no peer when it comes to the U.S. Tax Code. He manages a tax bill on the Senate floor with the consummate skill of a star quarterback moving his team toward the goal line. Sen. William Proxmire (D.-Wis.), who once came out on the short end of a skirmish with the Louisiana senator, said of him: "He knows the Tax Code about as thoroughly as the Pope knows the Lord's Prayer."

If Russell Long is center stage in matters affecting taxes, it was not always so. When Rep. Wilbur Mills (D.-Ark.) dominated the House Ways and Means Committee, his committee got most of the public attention. Mr. Mills, who was almost an institution of government, never let Sen. Long enjoy equal status.

Today, in a sense, the tables are turned. Rep. Al Ullman (D.-Oregon), who now heads the House Ways and Means Committee, sits in Sen. Long's shadow.

The senator has played a leading role in two massive restructurings of the American tax system—the Tax Reform Act of 1969 and the Tax Reform Act of 1976. He does not take lightly the charge by his detractors that the tax system is still full of loopholes.

"I would like to make the public understand something that is not apparent to everybody," he told Nation's Business. "We want people to contribute to charity, so we allow a deduction for charitable giving. We want manufacturers to buy new equipment, start new plants, and put more people to work, so we give them tax credits and deductions for doing those things. We want those who can to give money toward education. All these things are beneficial to society.

"Is it not fair, then, to give a tax advantage to those who contribute in this fashion over those who don't? There must be incentives in the system if we are to continue to enjoy such contributions."

The easygoing senator speaks out vigorously and sometimes bitterly if he feels he is unjustly criticized for looking after special interests or for engineering "midnight loopholes" in tax revision bills.

"FALSE TAX REFORM"

Last year he took on Sens. Kennedy and Proxmire, who had leveled such accusations. In a lengthy letter to "The Washington Post," the Louisiana lawmaker said:

"If the ringleaders of the false tax reform group had their way, they would not return the revenue gains of their 'reforms' to taxpayers by lowering tax rates. They would end many of the incentives which encourage private enterprise to expand and to create new jobs, in order to plow these billions into bigger government, more bureaucracy, and ever-expanding social welfare programs.

"If that is what the American taxpayer really wants, then he should have it. But it should not be fed to him under the guise of tax reform."

Sen. Long says he appreciates the criticism that the more tax forms supposedly are simplified, the more complicated they become. He is convinced, however, that the estimated 76 percent of taxpayers who will use the standard deduction next year will find the income tax form the simplest in several decades.

Even those who file itemized deductions should be happy with the 1977 form, he says.

ADVICE FOR BUSINESSMEN

Sen. Long has advice for businessmen who feel they get shortchanged by Congress: Get organized and stop talking only with lawmakers who are friendly to business.

"The business community will have to gear itself to communicate its story to the middle in Congress," he says. "The business community could be twice as effective if it would recognize that the outcomes of these difficult debates in Congress are decided by the middle, not the fellows on the left or the right.

"The trouble with business is that it communicates too much with the people who are with it already and too little with the people who are doubtful or who may be committed to the other side. Business should try to talk with the moderates and those who are left of center in more meaningful language.

"This is not just a matter of communicating; it is a case of being a good salesman. A good salesman knows the territory. He knows how to approach the client he is trying to sell."

CONFRONTATIONS WITH CARTER

Russell Long and Jimmy Carter probably will confront each other many times in the months ahead. One such confrontation could come over the manner in which the President seeks to shore up the Social Security system, which is paying out more than it is taking in. Among Mr. Carter's proposed solutions is to divert money from general Treasury revenues until Social Security can be restored to pay-as-you-go status.

"I have grave doubts about that," Sen. Long asserts. "It suggests that we simply bail out politicians who have promised more than they are willing to tax the public to pay for. They would do this with printing-press money.

"The way to avoid this is simply to put on enough taxes or else cut back on some of the windfall benefits."

Has Social Security been so burdened with new benefits, over the years, that the saturation point has been reached?

"We haven't reached that point," the senator says, "but we have passed the point when we can provide additional benefits merely by changing our assumptions [economic yardsticks which attempt to forecast the effects of inflation and other factors on Social Security payouts]. When I first came to the Senate, we were financing Social Security on the theory that we would build up a trust fund of more than $200 billion by the year 2000. Then we began to change the assumptions to say that we didn't need that large a fund as long as we collected more money each year than we paid out in benefits. In due course we found we weren't even keeping up."

SOCIAL SECURITY REALITIES

The senator says Congress must recognize that every new Social Security system benefit will have to be accompanied by a tax increase or paid for in some other fashion. He is skeptical about using the income tax to finance Social Security.

"Some people criticize the Social Security tax as being regressive, but keep in mind that we have an earned income credit which is paid out of general revenues to reimburse the working poor for the Social Security taxes they pay," he says.

"In view of the fact that the Social Security benefits are weighted heavily in favor of people at the lower end of the economic ladder and against people at the upper end, it seems to me there should be no complaints that an income tax is more progressive than a Social Security tax."

TAXES AT THE TOP

The senator says "many liberals and good, sincere labor leaders" contend that Social Security benefits can be broadened with money that is "provided by taxing five percent of the people in the upper income brackets without taxing the great majority of the other 95 percent." This, he says, is just so much foolishness.

"Income taxes on the average take 50 percent of the earnings of those in the top bracket. They are paying Social Security taxes for themselves and indirectly for others in the price of everything they consume. They are paying property taxes and all the consumer, state, and local taxes that the mind of man can conceive. They are paying high gift taxes, and when they die, up to 70 percent of what they own is taken in inheritance taxes."

America may have reached the point of diminishing returns as far as adding new tax burdens at upper levels of income is concerned, Sen. Long says. "If you tax these people too heavily, they will simply reduce their effort," he says. "They will not create the new jobs and opportunities that we need."

ENERGY "DISASTER"

The President and the senator are almost certain to have a major confrontation over energy legislation. A hint of this came recently when Sen. Long commented on a Mobil Corp. newspaper advertisement which suggested that the core of the energy problem is not shortage, but deliverability of domestic energy. Sen. Long said in a letter to his 99 colleagues:

"This article points out briefly and clearly what is wrong with the President's proposed energy plan: It is an unmitigated disaster on the production side.

"The conservation side of the equation must be pursued. However, the most that this aspect can accomplish in the foreseeable future is to reduce the gross rate in energy consumption.

"To get at the energy problem in a way which does not stultify and impede the growth of the American economy, this country must place far more emphasis on the production side."

WELFARE REFORM

The senator has equally strong views about correcting the welfare system, which he feels does not offer incentives that are adequate for getting the able-bodied poor to help support themselves.

He says he agrees with Labor Secretary Ray Marshall that private-sector jobs are preferable but that, when they cannot be provided, the government should step in and make jobs available.

"We are generally talking about families of two, three, or more members where at least one person is able-bodied and in a position to earn some pay," he explains. "We should offer a work opportunity sufficiently rewarding to move that family out of poverty.

"If such jobs are turned down, this kind of family should not be privileged to live on the tax money of people who are working at the same relative wage scale and are paying their fair share of taxes.

"I don't want anyone to starve, of course. But I see no reason why help should be extended to those who are able and yet reject employment opportunities."

Sen. Long thinks true welfare reform will finally come about someday. He doesn't know when.

Among the senator's proudest accomplishments is that he was able to help block adoption of President Nixon's proposed family assistance plan, which would have added low-income wage earners to welfare rolls for the first time.

"This would have doubled the number of people on welfare immediately and quadrupled the number in time," Sen Long explains. "If this legislation had passed, our form of government could have been destroyed. There would have been so many people on welfare that the politicians could not have avoided continuing to raise benefits. And more and more people would have gone on welfare, to the point where those on welfare would have outnumbered those not on welfare.

"By defeating this legislation, we may have saved the American free enterprise system."

Does the senator see the private enterprise system as being in trouble now?

"It sure is. So many burdens are being piled on business—on an environmental basis, on a safety basis, on the basis of the government telling business how to produce its products and to whom they can be sold.

"Today's businessman must have the genius of an Einstein, the memory of an elephant, and the education of a lawyer, scientist, and educator all wrapped in one.

"If we keep adding burdens on business, the system will fail. Businessmen simply cannot shoulder all of these burdens. We must reduce government interference in the operation of businesses and in the lives of our people in general."

SHARING THE WEALTH

When Huey Long pushed a program of heavier taxation on businesses and prosperous individuals in Louisiana, he hit on a slogan—"share the wealth"—which made him a popular figure in what was then a generally impoverished America.

Russell Long would like to share the wealth, too, but not in his father's fashion of taking from the haves and giving to the have-nots.

"My greatest hope is to see us reach a day when the great majority of our people will enjoy the good things of this country," he says. "I don't seek to redistribute the wealth as my father did in his day. I would just like to see us distribute the wealth somewhat more evenly."

He estimates that about 85 percent of today's property, money, tangible goods, etc., are owned by 15 percent of the people, while 35 percent own about ten percent and the other 50 percent have the remaining five percent.

"I would like to see this redistributed in such a fashion that 30 percent would be owned by the 15 percent of the people at the top, about 35 percent by the 35 percent in the middle, and the balance by the other 50 percent of our citizens."

He adds that he sees "an America where someday everybody will live above the poverty line."

How would the senator accomplish this? He explains:

"You would need more employee stock ownership plans and expanded pension plans, and you may need some other things that I cannot anticipate at this time."

Sen. Long advocates an employee stock ownership plan which, he says, is gaining popularity around the country. He sponsored a provision in the Tax Reduction Act of 1975 which cleared the way for creation of ESOP's.

When a company files for a ten percent investment tax credit, the government adds an extra one percent tax credit for setting up an ESOP trust fund. Monies accumulating in the fund are converted to shares of stock which in turn are assigned to employees. [See "How to Motivate Your Employees and Raise Capital, Too," NATION'S BUSINESS, October, 1976.]

There is no question that Russell Long enjoys his work. He rarely misses a Finance Committee session and will sit through hours of tedious testimony, seemingly relishing every word.

In 1973, in a rare display of emotion, the entire Senate spontaneously applauded Sen. Long after passage of a complicated Social Security bill. For 2½ days, and well into the night, Mr. Long had been on the floor managing the bill. Dozens of amendments were debated and voted upon.

THE ULTIMATE ACCOLADE

The ultimate accolade came from then Senate Majority Leader Mike Mansfield (D.-Mont.), who, when the final vote was taken, rose and said:

"I commend the distinguished senator from Louisiana for doing his usual skillful managerial job on a most difficult piece of legislation.

"Speaking personally, I am glad I am not in his shoes because this is a most difficult committee to chair, and this piece of legislation, which the Senate has just agreed to, was one of the most difficult to manage through this chamber.

"When one considers all the amendments which have been offered today and one becomes aware of the skill, the knowledge, and the maneuverability of the distinguished senator, one cannot help but admire him."

APPROVAL OF THE ACCEPTANCE OF FOREIGN EDUCATIONAL TRAVEL

Mr. STEVENSON. Mr. President, as required by rule 43, paragraph 4(b), I give notice that the Select Committee on Ethics approved the following staff acceptance of foreign educational travel at its meeting of August 4, 1977:

Several Senators requested approval for the acceptance of foreign educational travel by staff under their supervision pursuant to the invitation of the Van Leer Jerusalem Foundation, Jerusalem, Israel, dated July 13, 1977, and the requirements of rule 43, paragraph 4(a) on gifts.

The responsible officer of the Department of State reports that this program of the Van Leer Jerusalem Foundation is privately funded and the Department has no reason to believe employee participation would violate any law or be contrary to the interests of the United States.

The program in which Senate staff are invited to participate is scheduled for August 24 to September 2, 1977, and will deal with political and social problems of the Middle East. The foundation will pay the necessary expenses of travel to and from Israel and incidental food and lodging while there. Each employee for whom approval is requested assists the supervising Senator on international affairs.

In accord with rule 43, paragraph 4(a): First, the committee is informed that this program's principal objective is educational, it is sponsored by an independent foreign organization, and participation in it is not in violation of any law; and second, the committee therefore finds that participation by the following Senate employees is in the interest of the Senate and the United States:

Mr. Mark Edelman, Office of Senator JOHN C. DANFORTH;

Mr. Burton Wides, office of Senator PAUL S. SARBANES;

Mr. Carl Blake, office of Senator DONALD W. RIEGLE, JR.;

Mr. Peter Fenn, office of Senator FRANK CHURCH; and

Mr. William Reinsch, office of Senator H. JOHN HEINZ III.

APPROVAL OF THE ACCEPTANCE OF FOREIGN EDUCATIONAL TRAVEL

Mr. STEVENSON. Mr. President, as required by rule 43, paragraph 4(b), I give notice that the Select Committee on Ethics approved the following staff acceptance of foreign educational travel at its meeting of August 4, 1977.

A Senator requested approval for the acceptance of foreign educational travel by a staff person under his supervision pursuant to the invitation of the Foreign Affairs Association of South Africa, Pretoria, Republic of South Africa, dated July 11, 1977 and the requirements of rule 43, paragraph 4(a) on gifts.

The responsible officer of the Department of State reports that the Foreign Affairs Association of South Africa is a private foundation and the Department has no reason to believe employee participation would violate any law or be contrary to the interests of the United States.

The program in which Senate staff is invited to participate is scheduled for August 5 to 19, 1977, and will permit the employee to confer with South African leaders in education, business, and government, as well as to travel in the country for factfinding purposes, better enabling him to assist the Senator in his work on the Foreign Relations Committee.

The foundation will pay the necessary expenses of travel to and from the Republic of South Africa and within that country and incidental food and lodging while there.

In accord with rule 43, paragraph 4(a): First, the committee is informed that the principal objective of this program is educational; it is sponsored by

an independent foreign educational organization; and participation in it is not in violation of any law; and second, the committee therefore finds that participation by the following Senate employee is in the interest of the Senate and the United States: Mr. Ralph Nurnberger, Office of Senator JAMES B. PEARSON.

CAPITAL FORMATION OPTIONS TO FINANCE POLLUTION CONTROL

Mr. HARRY F. BYRD, JR. Mr. President, as chairman of the Subcommittee on Taxation and Debt Management of the Finance Committee, I recently held hearings on the question of incentives for the future economic growth of our Nation. One of the suggestions which emerged from the hearings was that special tax preferences be given for companies which are mandated by the Government to make capital expenditures to purchase expensive pollution control equipment.

The following is an article by Prof. Scott C. Whitney of the Marshall-Wythe School of Law of the College of William and Mary in Williamsburg, Va. Professor Whitney deals with the governmental policy questions raised by environmental laws which require private companies to purchase pollution control equipment. His article was published in the Columbia Journal of Environmental Law and is entitled, "Capital Formation Options to Finance Pollution Control." Professor Whitney's work is a scholarly analysis of a difficult problem, and I ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CAPITAL FORMATION OPTIONS TO FINANCE POLLUTION CONTROL

(By Scott C. Whitney)

The economic cost of environmental pollution and the cost of implementing far-reaching corrective measures are increasingly recognized as significant national problems. Extensive effort has been expended in recent years to analyze and quantify pollution abatement and control costs and forecast capital demands that will be necessary to comply with environmental laws and regulations.

As this analysis has become more sophisticated, environmental costs have been classified into four basic categories: damage costs, avoidance costs, abatement costs, and so-called "transaction" costs. Although official concern for pollution abatement costs dates from 1972, and although increasingly frequent studies of this problem have subsequently been undertaken, it has generally been recognized that this analysis is still in its infancy.

Despite the difficulties of cost quantification and the recognition that forecast environmental costs are at best approximations, it seems clear that environmental costs will be a major factor affecting the national economy in the foreseeable future. Similarly, it is not feasible at this time to forecast with precision the capital investment that will be required by the private sector during the next decade and beyond to comply with existing federal environmental laws and regulations, and the various state and local requirements. The most recent comprehensive forecast was published by the Council on Environmental Quality (CEQ) in its 1976 Annual Report. The CEQ estimates incremental pollution control expenditures for the private sector alone during the period 1975–1984 will exceed $300 billion, of which approximately $275 billion will consist of capital investment and capital costs.

This analysis considers legislative and regulatory options available to cope with future private sector capital requirements to meet both "conventional" and environmental needs. While by no means agreed as to the precise amount of these needs, virtually all studies indicate they will be immense and will place great strain on the national economy.

Moreover, it must be recognized that these pollution abatement costs will tend to increase rather than decrease. The as yet unchecked force of inflation is of course one important factor contributing to this problem. More importantly, most existing statutory environmental abatement programs are structured in a way that progressively increases the stringency of environmental requirements and consequently their cost. For example, the incremental cost to achieve national secondary ambient air quality standards will undoubtedly significantly exceed the cost to achieve primary standards. Furthermore, the law requires that once the national ambient air quality standards are attained, they must then be maintained. This maintenance will necessitate an indefinitely ongoing comprehensive nationwide air quality maintenance program. Furthermore, compliance with the judicially enunciated goal of no significant deterioration of the air quality in regions with air cleaner than that required by secondary standards will likewise create increasing direct and indirect incremental costs.

The same cost augmentation phenomenon is built into the Federal Water Pollution Control legislation, which likewise envisions implementation of progressively more stringent standards culminating in the goal of eliminating discharges of all pollutants by 1985. Like the clean air strategy, maintenance of water quality is required once the mandated goal is achieved. Here too, this maintenance will necessitate costly continued planning and regulatory strategies to accommodate the apparently inevitable national growth while yet adhering to the no discharge requirement.

To date no environmental cost forecast methodology has evolved accurate indicia to measure this phenomenon of disproportionately increasing costs, but it is essential to consider this factor when considering what legislative, regulatory or other action is appropriate to devise effective capital formation and/or capital recovery strategies.

Before considering possible specific legal-legislative options for capital formation, two basic policy issues must be considered: first, whether it is appropriate for the federal government to assist the private sector to meet the costs of federally enacted environmental laws and regulations, and second, if it is determined that it is either necessary or desirable that the federal government assist private sector compliance, what form the assistance should take.

I. FEDERAL GOVERNMENTAL OPTIONS OR INTERNATIONALIZATION OF ABATEMENT COSTS?—A CRITICAL NATIONAL DECISION

For the private sector to be able to alter its plants and processes to comply with existing environmental laws and regulations it must develop the funds to pay for abatement. The CEQ correctly recognizes that these costs and capital needs are "incremental"; that is, expenditures are necessitated by the designated federal environmental legislation beyond those "business as usual" expenditures that would have been made absent the legislation. Consequently these incremental environmental requirements are *additional* to the so-called "conventional" capital requirements that are necessary to a growing and productive economy capable of assuring that the *other* vital national goals of adequate employment and containment of inflation are achieved. Given the forecast capital shortfall during the coming decade, there is a distinct likelihood that rival claims on existing capital supply by the productive sector of the economy versus legally mandated environmental reform may well increase the cost of capital to the point that expansion of productive capacity and economic growth may be retarded with adverse effects on employment and the ability to control inflation. The Environmental Protection Agency (EPA) notes that "this spectre is particularly troubling because of the experience of 18–30 months ago when capacity shortages in the basic materials-producing industries seemed to throttle economic growth and spur inflation with unemployment at very high levels."

Consequently, the nation is faced with the reality that *additional* capital formation methods (beyond those necessary to meet "conventional" needs) must be devised if we are to achieve the multiple national goals of a healthy economy and a protected environment.

Two basic possibilities of forming the necessary capital exist: (1) some form of federal assistance (grants, subsidies, tax incentives or "tax expenditures" of various kinds), or (2) "internalization" of environmental costs by inclusion of the environmental increment into the pricing of goods and services to the consumer.

The CEQ has considered the option of imposing effluent charges set at a sufficiently high level to compel extraction of most of the pollutant, with the effluent charge being passed on to the consumer in the form of higher prices. This option entails serious disadvantages. First, to "internalize" environment costs of the magnitude involved by passing them to the consumer in the form of higher prices would aggravate the inflationary price spiral and create further stresses between labor and management. The environmental cost increment added to the price of goods and services would undoubtedly give rise to increased wage demands and the cost would in large part redound to industry in the form of higher labor costs. Moreover, imposition of effluent charges only indirectly addresses the critical problem of how to rid the environment of pollution. If a given plant simply pays the charge and continues to pollute then the pollution is not abated. If instead, the plant chooses to install appropriate abatement equipment and avoids the effluent charge the problem of how to obtain the capital to buy the abatement equipment remains unanswered.

An additional disadvantage of internalizing environmental costs is that to do so would further weaken the United States international trade position by further pricing United States goods out of competitive markets. The "distortions" arising from unequal environmental control costs incurred by the United States private sector vis-a-vis competitors from its eleven principal trading partners constitute a major national problem which Congress sought to address in the Trade Act of 1974. Given the national commitment to contain inflation within acceptable limits, it is rather clear that the nation's pricing structure cannot be expected to absorb some 300 billion dollars of additional environmental costs.

Moreover, the CEQ concept envisions use of varying charge levels to achieve desired degrees of pollution abatement:

"Since the costs of removing any given pollutant presumably will vary as between processes, products and plants, a requirement of the same proportionate reduction, or a reduction to the same absolute level, would impose high costs on some and relatively low costs on others. The same aggregate reduction in an area could be achieved by an ef-

fluent charge which will lead to substantial or very large proportionate reductions in pollution where that could be achieved relatively inexpensively, with little reduction where it was relatively more expensive to make improvements."

To be effective, this system must produce a program of pollution abatement which results in compliance at any given time with statutory environmental standards. Coordination of a schedule of fees which might well vary from industry to industry and from plant to plant to produce pollution levels that comply with standards required by law would be extraordinarily difficult to determine accurately and costly to administer. Thus it would appear that "internalization" could not produce adequate net capital accretions and would create problems at least as troublesome as those it seeks to solve.

Finally, it seems clear that Congress by enacting the various environmental laws has elevated environmental protection to a major national policy not unlike public health (with which the environmental quality is closely related), law enforcement and national security. Consequently, whenever private sector compliance is either impossible as an economic matter, or is attainable only at the expense of major impacts on the national economy, it seems appropriate, in fact necessary, that public funds, whether in the form of so-called tax expenditures, in the form of tax incentives, or in the form of grants, guaranteed loans or subsidies, be used to achieve the national goal of environmental protection. Congress has repeatedly recognized this principle in its appropriation of grants for, *inter alia*, publicly owned treatment works, environmental planning, research and development, and monitoring systems.

II. ASSUMING FEDERAL FISCAL ACTION, WHAT FORM SHOULD IT TAKE?

Given the determination that federal fiscal action is preferable to "internalization" of environmental costs in the price structure, the *form* this federal action should take is controversial. Leaving out of account certain tax incentives devised to influence conduct that tends to have beneficial environmental consequences, Professor Stanley Surrey has identified two basic federal options:

1. "Direct government expenditure programs," a process under which programs are normally given direct and searching budget management evaluation (this would include grants, subsidies and loan guarantees).

2. "Tax subsidies" or "tax expenditures," a process by which some program or project is financed by tax liability concessions of one kind or another (this would include investment tax credits, accelerated depreciation and tax exemption).

Professor Surrey opposes "tax expenditures" because they "tumble into the law without supporting studies, being propelled instead by cliches, debating points, and scraps of data and tables that are passed off as serious evidence." Apart from this rhetoric, it appears that Professor Surrey's *substantive* objections to use of the "tax expenditure" option are:

(1) That the need for programs supported by tax expenditures receives inadequate or at least less consideration than the need for direct expenditure programs;

(2) That the costs and benefits of a program are given less or inadequate consideration when tax expenditures are employed;

(3) That program effectiveness evaluation is less likely to occur when programs are supported by tax expenditures;

(4) That program objectives of tax expenditure programs are more apt to be obscure.

Professor Surrey advocates that the antidote to ill-considered programs supported by tax expenditures is to "restate the tax program as a direct expenditure program and ask whether such a program represents a desirable policy. But even if the program when "directly" evaluated turns out to be a "desirable policy," Professor Surrey still believes that support of the program should be in the form of a direct expenditure program:

"Thus, for example, if it is decided that elimination of tax expenditures for natural resources should be accompanied by government assistance in oil and mineral exploration, the direct programs can be readily devised."

Whether some, many or all tax expenditure programs in fact "tumble into the law" without the four-fold program evaluation Professor Surrey advocates is a question that need not be resolved herein. It is elementary good government that all programs should receive such evaluation regardless of what funding process is utilized. In the ensuing portions of this analysis devoted to consideration of the various capital formation and/or recovery options available through tax legislation such direct program evaluation will in fact be undertaken. Such direct evaluation demonstrates that adoption of improved investment tax credit measures, a special environmental investment tax credit system, and improved capital recovery measures are all essential to achieve the multiple national goals of a sound economy and environmental protection.

The fundamental dispute arises over the proposition that tax expenditure programs should or must be "translated" into direct government expenditure programs to be effective and accountable.

One of the primary realities that must be recognized is that the investment tax credit and the special environmental credit are not "tax subsidies." As shown hereinafter, neither will produce any revenue dilution but rather, based on some fifteen years' experience, will stimulate treasury receipts due to the increased production of pollution abatement devices which thereby increases the private sector taxable basis.

In contrast, given the presence of perennial budget deficits, to address capital formation problems by direct grants would aggravate the federal deficit picture and necessitate further federal borrowing to obtain grant funds that would otherwise be available through tax credits without incurring interest charges. Thus a direct expenditure approach to the capital formation problem would be more costly in absolute numbers of dollars and would contribute to increasing the national deficit. Moreover, the various investment tax credit provisions are virtually self-administering, thereby obviating the cost of additional grant administration personnel.

The importance of the foregoing is underscored by the fact that the federal government is already heavily involved in direct environmental grant programs that are increasing rapidly: $5.9 billion in 1975, $7.1 billion in 1976 (estimated) and $8.6 billion in 1977 (estimated). Moreover, the federal government also expends substantial amounts to assist state and local governments in bearing their share of environmental abatement costs and programs. CEQ forecasts that the federal government will subsidize state and local governments by more than $3 billion between 1975 and 1983, quite apart from the above-noted grants.

III. CAPITAL FORMATION BY TAX LEGISLATION

A. The investment tax credit

During the period 1962 through 1975, the various investment tax credit measures have provided an important source of capital for American industry. Experimentation with the investment credit during this period has demonstrated that it is a particularly effective means of controlling the level of capital supply thereby significantly affecting productivity, employment levels, and the rate of inflation. Moreover, use of the investment credit can be made without incurring dilution of Treasury revenues. The increased productivity resulting from investment credit expenditures increases the corporate income base and thus produces corporate tax revenues to the Treasury which substantially exceed revenue dilution. This factor was implicitly recognized by the Congress in its recent enactment of the Tax Reform Act of 1976 which extended the existing investment credit until December 31, 1980 (which would otherwise have expired December 31, 1976). In addition, there is a long-lasting continued increase in budget revenues as a result of the investment tax credit.

While a four year extension constitutes some progress, it is evident that indefinite extension of investment credit provisions is a minimum essential merely to accommodate existing non-environmental capital needs. Former Secretary of the Treasury Simon recently stressed the serious effects of corporate borrowing, which has sharply increased during the past decade as internally generated corporate funds and equity financing fell short of meeting capital needs.

"One of the factors which can inhibit the future growth of needed capital formation is the financial condition of American corporations. Analysis of debt-equity ratios indicates that corporate balance sheets have shown signs of deterioration over the past decade, which is a break from the pattern which persisted in earlier periods. Debt has increased dramatically, both in absolute terms and relative assets and income. Interest costs have risen appreciably, roughly doubling over the past ten years. The combination of increased debt financing and higher interest rates has resulted in a decline in the coverage ratios reported by American corporations—that is, the ratio of earnings to interest charges. The ratio of liquid assets to debt has shrunk. As a result of these developments, there is a serious question about the potential capability of companies to be able to finance the capital investment that will be required to achieve our basic economic goals of reducing unemployment and inflation as I outlined earlier in my testimony."

The investment credit device offers significant advantages. First, the taxpayer is entitled to the credit only when the proceeds are in fact used for the designated statutory purpose thereby assuring that the purpose of the credit is achieved. It thus possesses the advantage of being for all practical purposes self-administering, unlike direct government expenditure programs.

Second, the investment credit is a highly effective means of "capital deepening" and can, over the years, contribute significantly to the capital base of the economy that will be necessary for increased productivity and employment, and containment of inflation to an acceptable rate. To achieve these goals the investment credit must be both adequate in amount and of sufficiently long duration.

As to the amount, Congress in its wisdom in the Tax Reform Act determined that 10 percent was appropriate during the period through December 31, 1980. Yet virtually every responsible economic forecaster predicts that the "capital gap" will increase during the next decade and probably for the remainder of the century. It would have been more consonant with economic realities had Congress followed the Senate bill and enacted an investment credit provision of indefinite duration. Moreover, such investment credit should be structured to increase in amount from the basic irreducible 10 percent to higher rates which would generate increasing capital necessary to maintain acceptable levels of productivity and employment. By such a system the amount of investment credit could be adjusted to keep pace with capital requirements without resort to the time-consuming process of enacting new tax legislation periodically, and in addition the long term continuity that is

essential would thereby be provided. Experience with the Tax Reduction Act of 1975 demonstrates that due to long lead times in obtaining heavy equipment, there must be a long term investment credit program if companies are to utilize the credit effectively.

The Tax Reform Act of 1976 contains other important provisions that facilitate capital formation. Congress modified the prior limitation of the investment credit to $25,000 of tax liability plus 50 percent of liability in excess of $25,000 and provided a three year carry-back and a seven year carry-forward for credits not used due to the above-noted limitations. Under this system, credits accruing in a given taxable year are applied against the tax liability for that year before any carry-overs or carry-backs of unused credits from other taxable years become applicable.

In addition, under the 1976 Act a so-called "first-in first-out" method of handling investment credits was adopted. Thus in a given taxable year the *oldest* pending credit is used first, the next oldest next, and so on. The effect of this provision is to enhance the likelihood that credits will be fully utilized by effectively extending the duration of credit eligibility. Lengthening the potential duration of earned credits likewise increases somewhat the possibility that unprofitable or marginally profitable companies may utilize such credits.

B. Environmental investment tax credit

Prior to enactment of the Tax Reform Act of 1976, federal tax provisions provided little in the way of "tax expenditures" to meet pollution control capital requirements. One such provision provides that the interest earned on industrial development bonds shall not be included in the gross income of the bondholder if he either qualifies as an "exempt person" (*i.e.*, an Internal Revenue Code Section 501(c)(3) entity exempt from tax under Section 501(a) or if substantially all of the proceeds of the bond are used, *inter alia*, (A) for sewer or solid waste disposal facilities, or (B) for air or water pollution control facilities. However, provision (A) may well (among other disadvantages and limitations) actually encourage waste disposal rather than recycling; and as to air and water pollution control facilities, most if not all bond proceeds would inure to the benefit of state or local governments rather than meeting private sector needs.

The other "environmental" provision prior to passage of the 1976 Act allows "every person" to elect five year amortization for "any certified pollution control facility" which is "a new identifiable treatment facility which is used, in connection with a plant or other property in operation . . . to abate or control water or atmospheric pollution or contamination by removing, altering, disposing, or storing of pollutants, contaminants, wastes or heat" if both the state and federal "certifying authorities" approve. By virtue of the definition of "new identifiable treatment facility" this five year amortization can be elected only as to "tangible property" (not including a building and its structural components, other than a building which is exclusively a treatment facility) which is of a character subect to the allowance for depreciation provided in section 167 "but only if the construction is completed after December 31, 1968 and placed in service before January 1, 1976. The amortizable basis of such a facility was not eligible for the investment credit.

The 1976 Act provides for two significant improvements:

1. As to qualifying facilities constructed after January 1, 1969, but before January 1, 1976, the taxpayer can elect a five year amortization plan and take one-half the investment credit provided the investment did not lead "to a significant increase in output or capacity, a significant extension of useful life, or a significant reduction in total operating costs for such plant or other property (or any unit thereof), or a significant alteration in the nature of a manufacturing production process or facility."

2. As to qualifying facilities placed in service after December 31, 1976, the taxpayer can elect both a five year amortization schedule and an investment credit not to exceed two-thirds of the 10 percent standard investment credit.

Adoption of the principle of a special environmental investment credit by the Congress is of the utmost importance. As already noted it is highly doubtful the capital formation produced by the standard investment credit provision of section 802 will be sufficient to meet future needs and, as suggested above, should be keyed flexibly to increasing capital requirements. Without special provision for an environmental investment credit to meet capital requirements created by private sector compliance with federal environmental laws and regulations, an unhealthy competition for capital would arise which would both impede productivity and related employment and thwart or delay unduly compliance with national environmental objectives. In this latter connection it should be stressed that a number of environmental statutes condition compliance and attainment of standards upon economic practicability. Hence congressional recognition of the need for special environmental investment credits is of landmark significance.

It should be further noted that were Congress to adopt the "sliding scale" approach to the regular investment credit, as advocated, the special environmental credit for qualifying facilities placed in service after December 31, 1976, which amounts to two-thirds of the regular credit would likewise escalate when the regular credit escalated to meet increased capital needs.

Although Congress in the 1976 Act expanded somewhat the definitional scope for qualifying facilities, it still remains unduly circumscribed. The credit should be available not only for pollution abatement equipment and buildings that are entirely pollution abatement facilities, but for other buildings and structures as well. The credit should extend to environmentally designed production facilities and processes as well if reform objectives are to be realized. In future years when the national air and water quality goals have, hopefully, been reached, then the predominant regulatory objective will be the maintenance of these standards. Necessarily, with anticipated growth in population and industrial activity, air and water quality maintenance objectives will be feasible only by fundamental redesign of many plants and processes. Extension of investment credits for plants would provide a needed stimulus to phase out existing operations which are costly and not optimally feasible to modify, and to replace these with environmentally designed plants better capable of achieving future standards at acceptable maintenance and operation cost levels. It is widely recognized that the incremental cost of achieving higher levels of environmental purity mounts steeply as stricter goals are met and maintained. In the long run it will thus be cheaper to convert to plants and processes which have been designed to achieve a high degree of environmental protection rather than continue to "fix," or modify or retrofit, existing plants to meet and maintain increasingly stricter standards.

To be fully effective, tax incentives should be available for *any* control facility or abatement procedure required by federal, state or local environmental laws or regulations. Accordingly, existing law should be amended to include a broad tax incentive definition, such as:

"The term 'pollution control facility' means any facility (including buildings and equipment) the primary purpose of which is to abate, control or prevent actual or potential environmental pollution."

While air and water pollution control at present appears to comprise the major portion of forecast environmental cost, Congress has enacted extensive legislation addressed to other kinds of pollution. Abatement strategies for stripmining, solid waste, pesticides, oil spills, ocean dumping and other categories are in their infancy. As regulatory programs in these areas are developed, significant additional costs will undoubtedly result. Congress, therefore, should provide for comprehensive environmental tax incentives keyed to the full range of environmental protection and reform programs that it has enacted.

While there has as yet been no actual experience with implementation of the environmental tax credit, available data suggests it will offer all the same advantages that the conventional credit provides. Like the conventional credit, the environmental credit program is self-administering and avoids the cost of grant administration personnel. Furthermore, recent CEQ economic studies conclude that funds spent on environmental abatement will not only significantly enhance the productivity of existing firms that manufacture or build abatement equipment and facilities but will attract new private sector activity as well.

While these CEQ studies do not undertake to quantify the amount by which Treasury tax receipts are increased by the new economic activity stimulated by the "environmental industry," CEQ does estimate "that approximately 300,000 people are now employed who would not otherwise be." CEQ adopted a rule-of-thumb indicator that a billion dollar expenditure generates directly or indirectly about 70,000 jobs. Thus given the expenditure of the forecast private sector environmental capital requirements during the period 1975–1984, it is evident that the federal tax base will be expanded enormously, and such expansion will increase the Treasury tax revenue yields as well. Thus there is every reason to conclude that the revenue yield history of the conventional investment credit will also hold true for the environmental tax credit.

Moreover, since it is virtually universally conceded that a protracted period of capital shortage will prevail, it is evident that without the environmental tax credit, every investment dollar diverted from "conventional" production activity to meet legally mandated environmental requirements will thereby increase the expected capital gap and so contribute to less productivity, lower employment and, correspondingly, less tax revenues.

Finally, to the extent that the special environmental credit contributes to the ability of United States industry to compete effectively costwise with our eleven leading trade partners, the credit will contribute to solution of the "distortion" problem arising from unequal United States versus foreign environmental costs without recourse to import relief measures.

C. Accelerated capital recovery

As with investment credits, United States policy with respect to capital recovery provisions must take into account both the so-called conventional needs of the economy to achieve increased productivity and employment and the special demands resulting from environmental pollution abatement. Despite the recent upturn in the United States economy, certain basic long-term indicators suggest that major increases in investment will be necessary to restore its vitality. The United States has lagged significantly behind other industrialized nations in terms of productivity growth during the period 1960–1973. This trend is particularly ominous because in the past the United States has been able to preserve viable

market shares against foreign competition despite price disadvantages by virtue of superior worker productivity.

A similarly bleak trend is evident in the comparative real gross national products (GNP) per employed civilian of several nations during the period 1950–1972. The declining worker productivity in the United States has produced a condition in which the GNP per worker in the United States has fallen below that enjoyed by such nations with troubled economies as Great Britain, France and Italy. Given the well-established relationship between the level of investment and growth, it is clear that expanded capital recovery provisions are necessary to augment capital supply and production investment to counter these trends. It is no coincidence that virtually all of the industrialized nations have more liberal capital recovery provisions than those presently in force in the United States under the Asset Depreciation Range (ADR) System. These facts suggest the immediate need to increase the permissible range under the ADR System for depreciating capital assets from 20 percent to a significantly higher level.

A further important corrective measure would be the elimination of the salvage increment in depreciation schedules. During periods of inflation, depreciation allowances based on original cost fail to recover capital adequate to finance facilities having significantly higher replacement costs. Moreover, during such inflationary periods corporate profits, unless adjusted for inflation, are overstated. It has heretofore been noted that the inability to generate sufficient capital from corporate profits has weakened the economy by creating increasing dependence on debt financing with resultant deterioration of debt-equity ratios. This shortfall in capital recovery during a period of higher replacement costs and declining profits is aggravated by inclusion of a salvage factor in depreciation schedules. It must be recognized that the salvage increment is a holdover from the archaic policy of gearing depreciation schedules to the actual life of assets. Retention of such anomalies in the tax law impedes attainment of adequate capital supplies and is thus counterproductive.

Given the magnitude of capital requirements to increase productivity and employment, the additional drain on capital funds created by environmental requirements mandates special treatment. Pollution control costs have increased and are forecast to continue to increase dramatically. The CEQ study notes that expenditures for pollution control totalled $12.3 billion for capital expenditures in 1974, and that these are forecast to reach $27.5 billion for operating and maintenance and $27.8 billion for capital expenditures in 1983. In view of the increasingly high incremental cost of attaining progressively stricter goals that are structured into major existing environmental laws, these estimates may indeed be low.

IV. CONCLUSION

For at least the remainder of this century the United States faces uniquely complex and difficult challenges. It must cope with already well-established trends of declining productivity, inflation and unemployment. To do so, adequate domestic energy resources must be developed at economically viable levels and industrial productivity must be expanded. Both goals also involve major impacts on the environment which will be increasingly costly to control within acceptable limits. What constitutes acceptable limits has been defined by Congress in terms of legal deadlines established by comprehensive legislative and regulatory programs. These programs were structured by Congress to impose progressively more stringent standards which will become increasingly costly to achieve.

Moreover, environmental control programs are likely to expand—*e.g.*, to protect more effectively ocean, outer continental shelf and coastal resources. Significant additional effort will be required in the areas of research, planning and environmental design

All of these efforts must be undertaken and implemented contemporaneously. Consequently, the government must devise capital formation and recovery provisions capable of financing *all* of these deeply interrelated activities. At a minimum the following program appears to be indispensable:

1. Continuation on an indefinite basis of existing investment credit provisions amended to provide sliding scale adjustments to reflect changes in capital requirements.

2. Adoption of the perfecting amendments to existing investment credit provisions.

3. Continuation of the special investment credit for environmental control expenditures keyed to the level of the standard investment credit as adjusted by the sliding scale procedure.

4. Reform of existing capital recovery provisions for non-environmental investment.

5. Expensing in the year invested rather than depreciating facilities installed pursuant to environmental requirements.

Anything short of this multi-dimensional program will seriously jeopardize the prospects for attaining one or more indispensable national goals: With the exception of certain suggested improvements the validity of all of the foregoing has been recognized in principle by the Congress in the Tax Reform Act of 1976. These measures have in fact been carefully scrutinized, their costs and benefits weighed, and the ultimate program objectives considered. Important improvements and refinements remain to be made but it is clear that the tax legislative approach is a far sounder method of coping with capital formation requirements and offers many more advantages than the direct government expenditure alternative.

ANNOUNCEMENT OF HEARINGS

Mr. McINTYRE. Mr. President, the Research and Development Subcommittee of the Armed Services Committee will meet in executive session on August 24 to continue hearings on the fiscal year 1978 supplemental military authorization bill. Witnesses will include Gen. Richard H. Ellis, Commander and Chief of the Strategic Air Command, and other representatives of the Departments of Defense and Energy. The hearing will be held in room 224 of the Russell Senate Office Building. The time will be announced at a later date.

STATEMENT FOR SENATOR JACKSON

Mr. President, I wish to announce for the information of the Senate and the public that the following hearings and business meetings have been scheduled before the Committee on Energy and Natural Resources beginning on September 6, 1977:

September 6, Parks and Recreation Subcommittee, 9 a.m., room 3110, hearing, S. 1976, Redwood National Park bill.

September 7, Parks and Recreation Subcommittee, 9 a.m., room 1114, hearing, S. 1976, Redwood National Park bill.

September 7, Energy Conservation and Regulation Subcommittee, 10 a.m., room 3110, hearing, part E, utility rate reform, of S. 1469, the National Energy Policy Act.

September 8, Energy Conservation and Regulation Subcommittee, 8 a.m., room 3110, hearing, part E, utility rate reform, of S. 1469, National Energy Policy Act.

September 8, full committee, 10 a.m., room 3110, business meeting, part D, natural gas pricing, of S. 1469, National Energy Policy Act.

September 9, Energy Conservation and Regulation Subcommittee, 8 a.m., room 3110, hearing, part E, utility rate reform, of S. 1469, National Energy Policy Act.

September 9, full committee, 10 a.m., room 3110, business meeting, part D, natural gas pricing, of S. 1469, National Energy Policy Act.

September 12 through 16, full committee, 10 a.m., room 3110, business meeting, pending calendar business.

September 19 and 20, Public Lands Subcommittee, 10 a.m., room 3110, hearing, S. 2053, deep seabed mining legislation.

September 21, full committee, 10 a.m., room 3110, business meeting, pending calendar business.

September 22, Public Lands and Resources Subcommittee, 10 a.m., room 3110, hearing, S. 473; S. 553; S. 624; S. 688; S. 824; S. 917; S. 920; S. 1000; S. 1318; S. 1403; S. 1744; S. 2033; S. 2041; H.R. 1403; H.R. 2501; H.R. 2527; H.R. 4974, land conveyance bills.

September 23, Parks and Recreation Subcommittee, 10 a.m., room 3110, hearing, S. 1791, Chattahoochie River National Recreation Area legislation, and S. 1156, to establish San Antonio Mission National Historical Park bill.

HEARING NOTICES

September 13, 9 a.m., Governmental Affairs Subcommittee on Civil Service and General Services. To hold hearings on S. 386, S. 865 and S. 1133 to repeal the requirement relating to apportionment in the civil service in the District of Columbia among the states. 457 Russell Building.

September 14, 9 a.m., Governmental Affairs Subcommittee on Civil Service and General Services. To hold hearings on H.R. 2931 to establish uniformity in Federal employee health benefits and coverage provided pursuant to contracts by pre-empting state or local laws inconsistent with such contracts. 1202 Dirksen Building.

September 15, 9 a.m., Governmental Affairs Subcommittee on Civil Service and General Services. To hold hearings on S. 666 to allow Federal employment preference to certain employees of the Bureau of Indian Affairs and of the Indian Health Service who are not entitled to the benefits of or who have been adversely affected by the application of, certain Federal laws allowing employment preference to Indians. 6202 Dirksen Building.

THE NECESSITY OF EARLY ENACTMENT OF S. 1882, THE ARSON CONTROL ASSISTANCE ACT OF 1977

Mr. GLENN. Mr. President, on July 19 I introduced S. 1882, the Arson Control Assistance Act of 1977. My bill is designed to combat the astonishing growth of arson for profit. This vicious crime is terrorizing and devastating many of our urban centers while going virtually unchecked.

S. 1882 does two things, that, taken together, will strengthen the enforcement effort against arson. First, it reclassifies arson from a "part two" to a "part one" major crime under the FBI's Uniform Crime Reports System. Second, it gives specific authority to LEAA to make grants that assist localities in developing programs designed to combat arson. Only by properly declaring arson a major crime can we begin to collect accurate data and focus proper national attention and awareness on this crim-

inal activity that, by some estimates, has grown by over 300 percent over the past decade. Increased technical assistance and training programs will also serve to further increase law enforcement "heat" on the arson-for-profit criminal.

Mr. President, Senators MOYNIHAN and FORD have joined as cosponsors of S. 1882. Additionally, since introduction of S. 1882 last month, there have been several major newspaper stories further documenting the epidemic of arson for profit in various forms as well as community efforts to fight the spread. I urge my colleagues to read these materials and I ask unanimous consent that they be printed in the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[From the National Underwriter, Property & Casualty Insurance edition, July 29, 1977]

FIRED UP OVER ARSON

The upsurge in arson activity over the past several years, with its attendant severe toll in economic as well as human terms, has been duly reported in this and other publications on many occasions.

However, developing effective methods to reduce or curb the incidence of arson and to bring to justice those responsible for commission of that act is a problem whose solution, we feel, should be of paramount importance to insurers.

The absence of reliable arson statistics is a severe stumbling block to reducing or controlling the crime, in the opinion of John Wrend, vice president of the Chicago-based Property Loss Research Bureau.

In a recent talk at the annual meeting of the National Crime Prevention Assn. in Washington, D.C., Mr. Wrend said that to a great extent nobody really knows what are the dimensions of the arson problem, and one reason for the mystery is that data on arson is "sketchy, inexact and largely unsubstantiated."

One key step that can be taken to upgrade arson data is to bring about a reclassification of arson in the ranking of crimes by the FBI, the recognized source of crime statistics in the U.S. and whose reports greatly influence the crime-fighting efforts of states and municipalities.

Mr. Wrend notes that currently arson is listed by the FBI as a Part II crime much in the same class with such relatively minor offenses as vagrancy, drunkenness and disorderly conduct. To bring this into focus, Mr. Wrend said, "If an individual steals a bicycle he's guilty of having committed a Part I crime. On the other hand, if that same person torches a building which results in a multi-million-dollar loss, he would be guilty of having committed a Part II crime.

Mr. Wrend predicted that reclassifying arson as a Part I crime, and thus boosting it to the same level of severity as murder, rape and theft, would produce much more significant data than is now required for Part II crimes, for which the FBI demands minimal statistics.

Reclassification, in the words of Mr. Wrend, "would exert a tremendous influence in jolting the public, legislators, prosecutors, judges and our own industry into a greater awareness of the arson problem."

It seems amazing to us that arson should have ever been classified as a Part II crime by the FBI. Indeed, one wonders who was the bureaucratic boob who ranked such a serious offense alongside of such innocuous offenses against society as vagrancy or drunkenness.

And it also seems to us that the insurance industry should assume a more active and persistent role in demanding better statistics with which to work toward developing approaches to control the incidence of arson.

To paraphrase an Illinois judge, arson is not only a fraud against the insurance industry, it is also a fraud on members of the community who must share the cost of fraudulently induced insurer payouts.—D.C.J.

BROOKLYN WELFARE FAMILY LINKED TO $40,000 ARSON-FOR-PROFIT PLOT

(By Molly Ivins)

A Brooklyn family has engaged in "arson for profit" for more than seven years and received more than $40,000 in special welfare benefits for relocation and replacement costs, according to a report by the State Office of Welfare Inspector General.

The report, made public yesterday, accuses New York City's Human Resources Administration of "an unbelievable degree of laxity bordering on dereliction." Ralph A. Cipriani, acting Inspector General, said 13 fires had occurred in the apartments of one woman welfare client and one of her grown daughters. Ten of the fires have occurred since 1974, he said.

In each case the family was reimbursed for loss of furniture, even though in five of the fires there was some evidence that the furniture had been removed before the fire started, the report said.

LACK OF EVIDENCE REPORTED

A spokesman for the city's H.R.A. said: "The case he's talking about was investigated by the H.R.A.'s Inspector General with the cooperation of the Fire Marshal. There was suspicion of arson, but the Marshal concluded there was not enough evidence to refer to the District Attorney's office. As you know, arson is especially hard to prove, because the evidence goes up in smoke. We consider Mr. Cipriani's charges uncalled for."

Fire Commissioner John T. O'Hagan said: "We have long been aware of the problem of arson to obtain social support payments. We have alerted H.R.A. and requested them to discontinue the profit factor long before Mr. Cipriani became interested in this."

The Fire Commissioner said that H.R.A. officials had told him they believed arson is a factor in only "a relatively small percentage of cases."

"I am at a loss to influence the H.R.A.," Mr. O'Hagan went on, adding that he believed the city agency should refuse to pay for new furniture and moving expenses after one fire.

The family described in the report by the Office of the Inspector General is headed by a 42-year-old South Carolina woman who has been on the city's welfare rolls since 1954. Five children from 7 to 16 live with her, and two older daughters, 23 and 24, have moved out and have four children of their own. They are also on welfare. The family has lived at various times in the arson-prone areas of Bushwick, Williamsburg, Bedford-Stuyvesant and Brownsville.

FAMILY NAMES NOT GIVEN

The names of the family members are not being released "pending action by the city," the state report said.

Mr. Cipriani said a copy of the report had been sent to District Attorney Eugene Gold of Brooklyn. Commissioner O'Hagan said: "He hasn't shared his records with us."

The first fire occurred in December 1969, and the mother was given $1,751 to replace furniture, clothing and food. Three months later, on March 20, 1970, another fire occurred in the same apartment. This time the family was put up in a hotel until mid-November at a cost of $20,114—about $10,000 in special grants, $6,270 for hotel rooms and $3,844 for food. Such funds are 50 percent Federal, 25 percent state and 25 percent city.

Sometimes social workers who visited the scene of the fires noted that there was little furniture in the apartments, but according to the Inspector General's reports, other workers apparently did not bother to go out to investigate the scene. In three of the fires, no "fires and disasters" report was made by the H.R.A., in violations of H.R.A. procedures, according to the report.

[From the Washington Post, July 25, 1977]

ARSON SUSPECTS GOT FIRE AID

NEW YORK, July 25.—Members of a Brooklyn family who received at least $250,000 in welfare since 1969 may have set fire to several of their homes and collected an additional $40,000 in relocation costs, according to a report released today.

The report, by State Comptroller Arthur Levitt, said that the city's Human Resources Administration "exercised an unbelievable degree of laxity bordering on dereliction" in handling the case of the unnamed family.

It noted that the fire department had filed investigative reports for only half the fires, although family members were allegedly well-known as suspects in "arson for profit."

Hearings conducted by the welfare inspector general also "disclosed a history of 13 fires since 1969, of which 10 occurred since 1974."

The family lived in various sections of Brooklyn. It includes a 42-year-old grandmother on welfare since 1954, five of her children from 7 to 16 years of age, two older daughters, 23 and 24, and four of their children.

Relocation funds were paid for furniture and clothing allegedly lost in the fires and for hotel rooms and meals while living quarters were found for the family, even though, on five occasions, "there were sufficient evidence to indicate that the fires were set after removal of furniture," the report said.

The report recommended that the Department of Social Services submit a report to Brooklyn District Attorney Eugene Gold.

COMMITTEE TO REWARD SUPPRESSION OF ARSON

COLUMBUS, OHIO.—A $10,000 arson reward fund has been established to help Ohio public officials fight the crime of arson. Rewards from the fund will be part of a citizen-participation program announced by the Blue Ribbon Arson Committee of the Ohio Fair Plan Underwriting Association.

Gene L. Jewell, committee chairman and chief of the Ohio State Fire Marshal's Arson Bureau, said public-spirited citizens who help to suppress arson in their communities will be eligible for cash rewards from the fund. Persons who provide information to a fire chief, police chief, prosecuting attorney or any member of their staffs may be nominated for a reward if that information aids in supressing a case of arson to property in Ohio.

Information on fires that occurred on or after January 1, 1977, are eligible for nominations, but the program itself will run from August 1, 1977 to August 1, 1978. All nominations will be reviewed, award amounts determined and rewards will be presented in August, 1978.

The fund was subscribed by major property insurance companies in Ohio, and anyone connected with the program will not be eligible to receive an award. Ineligibles include members of Jewell's committee, staff of the Ohio Fair Plan, insurance industry employees, public officials, law enforcement and prosecuting personnel and their families.

Jewell said the conviction rate for arsonists is lower than the rate for any other crime: "Studies show that only about one percent of suspected arsonists are convicted. Fire and law enforcement officials want to reverse that figure, but we need community help and citizens' participation."

[From the New York Times]

ARSON, A DEVASTATING BIG-CITY CRIME

(By Joseph P. Fried)

Several factors have combined in recent weeks to heighten public consciousness of arson; the fires that accompanied the July blackout and Mayor Beame's decision, apparently under pressure of his re-election campaign, to emphasize New York City's efforts to combat incendiarism. But as exhausted firemen, frightened residents and dismayed community leaders can testify, in the city and elsewhere in the region from Rochester, N.Y. to Elizabeth, N.J., arson is a phenomenon that has been around—and growing—for more than the last few weeks.

The exact dimensions of the phenomenon are difficult to determine, partly because "a good arsonist destroys the evidence," as Francis Cruthers, chief of operations of the New York City Fire Department, puts it. But there are sufficient clues for Chief Cruthers and other officials to conclude that arson is common. The evidence includes the recurrence of fires in abandoned buildings and the tendency for numerous fires to erupt in the same, usually declining, neighborhoods.

Bushwick and the West Bronx are among the latest New York City neighborhoods to be victimized by arsonists, joining the South Bronx and Brownsville and East New York in Brooklyn. Chief Cruthers estimates that 25 to 40 percent of the building fires in New York City are deliberately set. Because the limited staff of fire marshals cannot investigate all blazes, the official arson figures are much lower than that. The number of structural fires in the city has risen steadily, from 48,000 in 1972 to 56,000 last year, but the number proven by investigators to be arson has hovered at around 4,000 annually.

In Yonkers, fire investigators report 203 fires examined for suspected arson so far this year. At that rate, the annual total would greatly exceed the 269 of last year. Mount Vernon recently recalled its retired fire chief, Alexander Leggatt, to active duty as a full-time arson investigator. The city has suffered more than 80 suspicious fires this year, primarily in its black neighborhoods. Officials in the upstate cities of Rochester and Albany also report significant increases in arson.

In New Jersey, Newark has long had substantial arson in some of its neighborhoods, and "there is a sign of it in the past year or two" in Elizabeth, according to that city's fire chief, Edward Sisk.

In the United States as a whole, fire-protection specialists estimate the arson rate has tripled in the last 15 years to about 15,000 annually. The damage and loss amount to about $1 billion.

Fire officials in New York City and elsewhere attribute part of the increase to businessmen or property owners seeking to collect on their insurance policies. The "arson for profit" owners may be slumlords who see no value in their decaying buildings other than the insurance money. Although many of these owners may be driven by desperation, one former city prosecutor insists that at least some are avaricious entrepreneurs who buy decrepit buildings solely to arrange a profitable fire.

Other suspected arsonists are slum residents who, fire officials say, ignite their own apartments to obtain higher priority for relatively few public housing vacancies or to get emergency benefits, such as relocation allowances, that New York City offers to welfare families. A welfare family consisting of the parents and three children, for example, can obtain up to $2,000 if city officials determine that a fire has made the family's apartment uninhabitable and destroyed its furniture and clothing.

Real estate officials argue that landlord arson has been exaggerated. Some welfare officials and community leaders insist that tenant arson has also been exaggerated and that, given the cost of moving and buying new clothing and furniture, there is not much to gain by burning one's apartment.

Still other arsonists are said to be "building strippers" and scavengers who find that a fire is the quickest way to empty a building and gain access to plumbing, appliances and other objects that can be sold for scrap. There are also youngsters who, if they are not being paid to "torch" a building for an owner, set fires for sheer excitement. People of all ages, moreover, are sometimes moved to arson by the desire for revenge.

Federal, state and local officials have acted recently to deal with arson in New York City. The city formed a 100-member team of fire marshals and police officers to concentrate on the most affected neighborhoods. In the past, though, police and fire officials have not worked well together on arson-suppression teams, one fire official has acknowledged.

At the state level, Governor Carey last week signed into law a bill designed to take the profit out of arson by permitting cities to collect delinquent taxes and other payments from landlords' insurance proceeds. And a Federal grand jury recently started an investigation into arson for fraud in the Bronx and northern Manhattan.

To many urban specialists, however, these steps, although important, are not regarded as the ultimate answer. They believe that as long as urban decay continues to spread as rapidly as in recent years, arson will continue.

[From the New York Times, July 21, 1977]

ARMED CITIZENS PATROL BUSHWICK, SAYING THE POLICE DO NOT DO JOB

(By Pranay Gupte)

Late every evening, when the sun has disappeared behind the decaying tenements in the Bushwick section of Brooklyn, William Johnson brings out his shotgun, coaxes his two German shepherd dogs out of their kennels and starts patrolling his block.

The block, between Granite and Furman Avenues, has, like other areas in Bushwick, been repeatedly struck by arsonists in the last few months. And so now, contending that the New York City Police Department has failed to monitor the area properly, Mr. Johnson and other residents of the neighborhood have formed a citizens' vigilance group.

"We have no choice but to take on this responsibility," said Mr. Johnson, who is licensed to possess a shotgun. He lives at 1501 Bushwick Avenue.

His house, a three-story frame structure, stands next to two other similar type of buildings that were attacked by arsonists several months ago. The debris from the fire still has not been cleared away, and neighbors fear that if there is another fire on the premises, the blaze could well sweep the entire block, because all the houses are connected.

The residents of this block say their apprehensions are aggravated because a sudden, sweeping fire—caused by arsonists, according to the police—spread through a seven-block area last Monday not far away from this neighborhood. That fire destroyed 23 buildings and displaced more than 250 people.

Yesterday, District Attorney Eugene Gold of Brooklyn announced the arrests of three youths from the borough on charges that they started the fire, which raged for several hours.

Mr. Gold identified two of the suspects as John Damico, 18 years old, of 1358 DeKalb Avenue, and John Rivers, 16, of 135 Irving Avenue. They have been charged with arson. The identity of the third suspect—all the suspects were arrested late Tuesday night—was not disclosed because of his juvenile status. He is 12 years old, Mr. Gold said, and he has been charged with juvenile delinquency.

The police said that the suspects, who lived several blocks from where the fire began, set it to destroy evidence of the glue they had been sniffing.

Yesterday another fire hit the Bushwick section of Brooklyn. It was a three-alarm blaze that occurred in a vacant five-story brick factory at Lexington and Lewis Avenues, about 10 blocks from Monday's fire, which started in an abandoned knitting plant at the corner of Myrtle and Knickerbocker Avenues.

The fire yesterday began shortly after 1 a.m., and two firemen were reported slightly hurt extinguishing it.

Fires like these have made Mr. Johnson and his neighbors extremely wary.

Gwendolyn Hart, who lives at 1473 Bushwick Avenue, said she feared that if something was not done to prevent such fires, there would soon be no homes left in Bushwick.

"Where are our officials?" Miss Hart asked yesterday. "What do they do to help us? We want a decent neighborhood, but the city government is systematically ruining us by its neglect."

Both she and her mother, Pearl Hart, recalled the time when they first moved into the neighborhood, 20 years ago. There were mostly Germans and Italians here then, they said, and there was harmony between them and the few blacks in the area.

A CHANGE FOR THE WORSE

Sanitation pickups were regular and crime was minimal, Miss Hart said. Now, she said, the garbage is collected only infrequently and the crime rate is high—not unlike other low-income areas around the city.

And Kareen Wilson, who lives near the Harts, remembered the elms that lined Bushwick Avenue 18 years ago when she and her parents came here. Miss Wilson, a Brooklyn College sophomore, was 5 years old at the time, and she spoke of how residents would rest or picnic under the shady trees on warm summer afternoons.

But the elms are gone now, victims of a tree disease that struck the area a few years ago. The whites are gone, too—to the suburbs, for the most part, or to neighborhoods where crime is not so high. Now most of the residents are black and nearly all own the houses they live in. They say that fear characterizes their lives now.

"This whole neighborhood is dead," Miss Wilson said. "There is no protection for us—no one cares for Bushwick."

Why, then, do people stay?

"Where are we going to run to?" Miss Hart said.

NOTICE CONCERNING NOMINATION BEFORE THE COMMITTEE ON THE JUDICIARY

Mr. EASTLAND. Mr. President, the following nomination has been referred to and is now pending before the Committee on the Judiciary:

Bernal D. Cantwell, of Kansas, to be U.S. marshal for the district of Kansas for the term of 4 years vice Jack V. Richardson.

On behalf of the Committee on the Judiciary, notice is hereby given to all persons interested in this nomination to file with the committee, in writing, on or before Friday, August 12, 1977, any representations or objections they may wish to present concerning the above nomination with a further statement whether it is their intention to appear at any hearing which may be scheduled.

NOTICE CONCERNING NOMINATIONS BEFORE THE COMMITTEE ON THE JUDICIARY

Mr. EASTLAND. Mr. President, the following nominations have been referred to and are now pending before the Committee on the Judiciary:

Hubert H. Bryant, of Oklahoma, to be U.S. attorney for the northern district of Oklahoma for the term of 4 years vice Nathan G. Graham, resigned.

Carl W. Gardner, of Oklahoma, to be U.S. marshal for the northern district of Oklahoma for the term of 4 years vice Harry Connolly.

On behalf of the Committee on the Judiciary, notice is hereby given to all persons interested in these nominations to file with the committee, in writing, on or before Friday, August 12, 1977, any representations or objections they may wish to present concerning the above nominations with a further statement whether it is their intention to appear at any hearing which may be scheduled.

REFERRAL OF A BILL—S. 897

Mr. GLENN. Mr. President, I have a further unanimous-consent request. I ask unanimous consent to amend the referral of S. 897 and amendment No. 745 thereto to provide that the bill and the amendment be jointly referred to the Committee on Governmental Affairs, the Committee on Foreign Relations, and the Committee on Energy and Natural Resources, with the proviso that the Energy and Natural Resources Committee shall be limited in its consideration of the bill and amendment to sections 102, 103, 104, 105, 202, 501, 502, and 503 of the amendment, and that the Committee on Energy and Natural Resources shall complete its consideration of such sections not later than September 20, 1977, and further that such committees shall report their recommendations to the Senate not later than September 23, 1977.

This has been cleared with the chairmen and ranking members of the Committees on Foreign Relations, Energy, and Governmental Affairs.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

ORDER FOR CERTAIN ACTIONS DURING ADJOURNMENT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Secretary of the Senate may be authorized to receive messages from the President of the United States and to appropriately refer them during the adjournment of the Senate over to 12 o'clock noon on September 7.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Vice President of the United States, the President of the Senate pro tempore, the Acting President of the Senate pro tempore, and the Deputy President of the Senate pro tempore may be authorized during the adjournment of the Senate over to 12 noon on September 7 to sign all duly enrolled bills and joint resolutions.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Secretary of the Senate may be authorized during the adjournment of the Senate to receive messages from the House of Representatives and to appropriately refer them if it is necessary to do so.

The PRESIDING OFFICER. Without objection, it is so ordered.

AUTHORIZATION TO APPOINT A SPECIAL DELEGATION

Mr. ROBERT C. BYRD. Mr. President, I send to the desk on behalf of myself and the distinguished minority leader a resolution and ask for its immediate consideration.

The PRESIDING OFFICER. The resolution will be stated.

The legislative clerk read as follows:

Resolved, That the President of the Senate is authorized to appoint a special delegation of not to exceed 12 members of the Senate upon the recommendation of the Majority and Minority Leaders to visit certain countries in the Middle East and other areas as needed to conduct a study on United States economic and security interests in those areas.

SEC. 2. (a) The expenses of the delegation, including staff members designated by the chairman or co-chairman to assist said delegation, shall not exceed $45,000, and shall be paid from the contingent fund of the Senate upon vouchers approved by the chairman or co-chairmen of the said delegation.

(b) The expenses of the delegation shall include such special expenses as the chairman or co-chairmen may deem appropriate, including reimbursements to any agency of the Government for (1) expenses incurred on behalf of the delegation (2) compensation (including overtime) or employees officially detailed to the delegation, and (3) expenses incurred in connection with providing appropriate hospitality.

(c) The Secretary of the Senate is authorized to advance funds to the chairman or co-chairmen of the delegation in the same number provided for committees of the Senate under the authority of Public Law 118, Eighty-first Congress, approved June 22, 1949.

The PRESIDING OFFICER. Is there objection to its immediate consideration?

There being no objection, the Senate proceeded to consider the resolution.

The PRESIDING OFFICER. The question is on agreeing to the resolution.

The resolution (S. Res. 256) was agreed to.

EMERGENCY RUNOFF RETARDATION AND SOIL EROSION PREVENTION PROGRAM

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar Order No. 344, S. 1462

The PRESIDING OFFICER. The bill will be stated by title.

The assistant legislative clerk read as follows:

A bill (S. 1462) entitled Emergency Runoff Retardation and Soil Erosion Prevention Program.

The PRESIDING OFFICER. Is there objection to the request of the Senator from West Virginia?

Mr. BAKER. Mr. President, reserving the right to object.

The PRESIDING OFFICER. The Senator from Tennessee reserves the right to object.

Mr. BAKER. And I shall not object.

I simply inform the Chair that the majority leader and I have discussed this matter previously, and I have assured him that it is cleared for consideration and passage at this time on this side.

There being no objection, the Senate proceeded to consider the bill (S. 1462) which had been reported from the Committee on Agriculture, Nutrition, and Forestry, with an amendment to strike out all after the enacting clause and insert the following:

That the Secretary of Agriculture is hereby authorized to undertake such emergency measures for runoff retardation and soil-erosion prevention, in cooperation with landowners and land users, as he deems necessary to safeguard lives and property from floods, drought, and the products of erosion on any watershed whenever fire or any other natural occurrence has caused a sudden impairment of that watershed.

SEC. 2. There is hereby authorized to be established and maintained in the United States Treasury an emergency fund to carry out emergency activities pursuant to this Act. The fund shall be available to the Secretary of Agriculture wtihout fiscal year limitation.

SEC. 3. There are hereby authorized to be appropriated such sums as Congress may determine necessary for the establishment and maintenance of the emergency fund authorized under section 2 of this Act.

SEC. 4. The Secretary of Agriculture is authorized to prescribe such regulations as he determines necessary to carry out the provisions of this Act.

SEC. 5. The provisions of this Act shall become effective October 1, 1978.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 95–372), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

SHORT EXPLANATION

S. 1462 authorizes the Secretary of Agriculture to undertake emergency measures to safeguard lives and property from floods, drought, and erosion whenever fire or any other natural occurrence has caused a sudden impairment of a watershed. The bill authorizes the establishment of an emergency fund in the U.S. Treasury for the use of the Secretary in carrying out such measures, and the appropriation to the fund of such sums as may be necessary.

The provisions of the bill would become effective October 1, 1978.

BACKGROUND AND NEED

Section 7 of the Act of June 28, 1938 (52 Stat. 1215, as amended; 33 U.S.C. 701b–1), authorizes the Secretary of Agriculture to provide emergency assistance similar to that authorized in S. 1462, with a funding limit of $300,000 annually. After the $300,000 is obligated, additional emergency assistance is dependent upon supplemental appropriations. The present $300,000 limitation has been in effect for some 25 years. During that time, several emergencies have occurred which resulted in a need for Federal assistance in an amount greater than $300,000.

During the last 7 years, supplemental appropriations were approved as follows: $4 million in fiscal year 1969; $3.7 million in fiscal year 1970; $16.5 million in fiscal year 1972; $20 million in fiscal year 1973; $22.5 million in fiscal year 1973; $22.5 million in fiscal year 1974; and $65.8 million in fiscal year 1976.

When supplemental appropriations are needed, the installation of emergency measures is often delayed for long periods and in some instances is never accomplished. As a result, persons are subjected to greater hardships, and the environment is subject to additional degradation.

S. 1462 will help alleviate this problem by making funds available to enable the Secretary of Agriculture to respond to emergency situations in a more timely manner. Passage of this bill will not affect the total funds needed, since the total amount of funds expended in any one year is solely dependent on actual emergency needs created by fire or natural occurrence such as floods, drought, erosion or sedimentation.

COMMITTEE CONSIDERATION

The Committee on Agriculture, Nutrition, and Forestry, meeting in Executive Session on June 28, 1977, amended S. 1462 to make the provisions of the bill effective beginning October 1, 1978. The Committee also made several minor technical amendments to S. 1462 and ordered the bill reported to the Senate.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

The title was amended so as to read:

A bill to authorize the Secretary of Agriculture to undertake an emergency runoff retardation and soil-erosion prevention program, and to establish an emergency fund to carry out the program.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. BAKER. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

TRANSFER OF MEASURE TO UNANIMOUS CONSENT CALENDAR

Mr. ROBERT C. BYRD. Mr. President, there is a bill on the calendar which has been cleared for passage by unanimous consent. It is Calendar Order No. 359, S. 1752, a bill to extend certain programs under the Elementary and Secondary Education Act of 1965 for 1 year, and for other purposes.

I ask the clerk to transfer that bill to the Unanimous Consent Calendar.

The PRESIDING OFFICER. It will be so transferred.

SMALL BUSINESS DEVELOPMENT CENTER ACT OF 1978

Mr. ROBERT C. BYRD. Mr. President, there is a bill at the desk, S. 972, that has been reported from the Small Business Committee. I ask unanimous consent for its consideration.

The PRESIDING OFFICER. The bill will be stated by title.

The legislative clerk read as follows:

A bill (S. 972), to authorize the Small Business Administration to make grants to support the development and operation of small business development centers in order to provide small business with management development, technical information, product planning and development, and domestic and international market development, and for other purposes.

The PRESIDING OFFICER. Is there objection to the request of the Senator from West Virginia?

There being no objection, the Senate proceeded to consider the bill (S. 972) which had been reported from the Committee on Small Business with an amendment to strike out all after the enacting clause and insert the following:

SHORT TITLE

SECTION 1. This Act may be cited as the "Small Business Development Center Act of 1978".

FINDINGS AND PURPOSE

SEC. 2. (a) The Congress finds that—

(1) small business concerns rarely have access to useful and practical advice, information, and services of the types which are available to large business concerns or, through the Department of Agriculture extension service, to farmers and agricultural business concerns;

(2) small businesses would benefit from having a local, single source of assistance which would interpret, analyze and counsel on matters such as management, marketing, product development, manufacturing, technology development and exchange, finance, government regulations and policies and other similar problem or policy areas; and

(3) Universities are aware of local small business problems and are better equipped than the Federal Government to develop and establish management and technical assistance programs designed to aid small business concerns in such local communities.

(b) It is the purpose of this Act to expand the small business sector, to stimulate economic diversity, and to foster competition by encouraging the development of Small Business Development Centers through a grant program giving States wide flexibility in developing and establishing Centers to aid in the development and growth of existing and new small business concerns.

DEFINITIONS

SEC. 3. As used in this Act—

(1) the term "Administration" means the Small Business Administration;

(2) the term "Center" means State Small Business Development Centers and regional Small Business Development Centers established or operated with assistance furnished under this Act;

(3) the term "Board" means the Small Business Development Center Advisory Board;

(4) the term "University" means any public or private nonprofit institution of higher education which is located in any State; and

(5) the term "State" means a State of the United States, the District of Columbia, or any territory, possession, or commonwealth of the United States.

GRANTS

SEC. 4(a). The Administration, upon the advice of the Board, acting through the Associate Administrator for Management and Technical Assistance, is authorized to make grants to States to assist Universities within the States in developing and operating a Center program that furnishes small businesses with a broad range of advice, information, and assistance, as described in section 6 of this Act.

(b) A grant may be made to finance 75 percent of the cost of developing and operating a State Center program. Assistance made available pursuant to this Act may be used only to support activities described in section 6 of this Act and for such other comparable activities as are approved by the Administration which are designed to benefit small business concerns by providing direct information and assistance or by providing access to business analysts who can refer small business concerns to available experts or consultants.

(c) The Administration may make a grant to finance 100 percent of the cost of developing and operating regional Center activities described in section 6 or other such comparable activities as are approved by the Administration.

STATE PLANS

SEC. 5. (a) A State may apply to participate in the Center program by submitting to the Administration for approval a plan naming:

"the Universities within the State that would participate in the program, the geographic area to be served by each University, the services that each University would provide, the method for delivering services by each participating University, the budget for each University, and any other information and assurances the Administration may require to insure that the State will carry out the activities eligible for assistance under this Act."

(b) Assistance shall be made available through the States to a University only if that University is included in that State's plan which has been approved by the Administration.

CENTERS

SEC. 6. (a) State and regional Centers receiving grants under this Act shall assist small businesses in solving problems concerning operations, manufacturing, engineering, technology exchange and development, personnel administration, marketing, sales, merchandising, finance, accounting, business strategy development, and other disciplines required for small business growth and expansion, innovation, increased productivity, and management improvement, and for decreasing industry economic concentrations.

(b) A State Center shall provide services as close as possible to small businesses by providing extension services and utilizing satellite locations when necessary. It shall also, to the extent possible, make full use of other Federal and State Government programs that are concerned with aiding small businesses. A State Center shall have:

(1) a full time staff including a State director to manage the program activities;

(2) business analysts to counsel, assist, and inform small business clients;

(3) technology transfer agents to provide state of the art technology to small businesses through coupling with national and regional technology data sources;

(4) information specialists to assist in providing information searches and referrals for small businesses;

(5) access to part-time professional specialists to conduct research or to provide counseling assistance whenever the need arises; and

(6) access to laboratory and adaptive engineering facilities.

(c) Services provided by a State Center shall include, but shall not be limited to:

(1) furnishing one-to-one individual counseling to small businesses;

(2) assisting in technology transfer, research and coupling from existing sources to small business concerns;

(3) maintaining current information concerning Federal, State, and local regulations that affect small businesses and counsel small businesses on methods of compliance. Technology development shall be provided when necessary to help small businesses find solutions for complying with environmental, energy, health, safety, and other Federal, State, and local regulations;

(4) coordinating and conducting research into technical and general small business problems for which there are no ready solutions;

(5) providing and maintaining a comprehensive library that contains current infor-

mation and statistical data needed by local small businesses;

(6) maintaining a working relationship and open communications with the financial and investment communities, legal associations, local and regional private consultants, and local and regional small business groups and associations in order to help address the various needs of the small business community; and

(7) conducting in depth surveys for local small business groups in order to develop general information regarding the local economy and general small business strengths and weaknesses in that locality.

(d) A State Center shall continue to upgrade and modify its services, as needed, in order to meet the changing and evolving needs of the small business community.

(e) Regional Centers shall be established to support State Centers when the Administration, with the advice of the Board, determines a need for providing assistance and information on technical or specialized problems that may require capital intensive research and which transcend State boundaries. Regional Centers shall be provided a specific charter and staff according to the services they will be expected to provide. Their assistance shall be available to all State Centers participating in the program.

(f) Laboratories operated and funded by the Federal Government are authorized and directed under this Act to cooperate with Centers participating in this program. Laboratories shall make facilities and equipment available as an aid in providing experiment station capabilities in adaptive engineering; provide library and technical information processing capabilities; and provide professional staff for consulting. Centers shall reimburse the laboratories for necessary expenses.

PROGRAM MANAGEMENT

SEC. 7. (a) There is hereby established in the Small Business Administration a division to be known as the Small Business Management and Technical Assistance Division. The Division shall be headed by an Associate Administrator for Management and Technical Assistance who shall be appointed by the Administrator, and shall receive compensation at the rate provided by law for other Associate Administrators of the Small Business Administration.

(b) The Administrator shall appoint a Deputy Associate Administrator for Management and Technical Assistance who will report to the Associate Administrator for Management and Technical Assistance and who shall serve without regard to the provisions of title 5, United States Code, governing appointments in the competitive service, and without regard to chapter 51, and subchapter III of chapter 53 of such title relating to classification and General Schedule pay rates, but at a rate not less than the rate for GS–17 of the General Schedule.

(c) The sole responsibility of the Deputy Associate Administrator for Management and Technical Assistance shall be to administer the Small Business Development Center Program. Duties of the position shall include, but are not limited to establishing the annual program budget, reviewing the annual budgets submitted by each State, establishing appropriate funding levels therefore, selecting States to participate in this program under this Act, establishing policies implementing the provisions of this Act, reviewing applications for research grants under section 8 of this Act, maintaining a clearinghouse to provide for the dissemination and exchange of information between Centers, disseminating information obtained under section 8 of this Act, and conducting audits of recipients of grants under sections 4 and 8 of this Act. The Deputy Associate Administrator for Management and Technical Assistance shall confer with and seek the counsel of the Board in carrying out the responsibilities described in this section.

(d) (1) There is established a National Small Business Development Center Advisory Board which shall consist of 17 members, 12 of whom are to be appointed from civilian life by the President, by and with the advice and consent of the Senate, and shall be persons of outstanding qualifications known to be familiar and sympathetic with small business needs and problems. Of the 12 members so appointed, no more than 3 shall be from Universities or their affiliates and 9 shall be from small businesses or associations representing small business. At the time of the appointment of the Board, the President shall designate at least one third of the members and at least one from each category whose term shall end in two years from the date of appointment, and a second third whose term shall end in three years from the date of appointment, and the final third whose term shall end in four years from the date of appointment. Succeeding Boards shall have three year terms, with one third of the Board changing each year. The other members of the Board shall be the National Science Foundation Director of the Office of Small Business Research and Development, Director of the Energy Extension Service of the Department of Energy, Assistant Secretary of Commerce for Science and Technology, Deputy Assistant Secretary of Defense for Material Acquisitions and the Assistant Administrator for Industry Affairs and Technology Utilization of the National Air and Space Administration.

(2) The Board shall elect a chairman and advise, counsel and confer with the Deputy Associate Administartor for Management and Technical Assistance in carrying out the duties described in section 7 (c) of this Act. The Board shall meet at least quarterly and at the call of the chairman of the Board. Each member of the Board, other than representatives of the Federal Government, shall be entitled to be compensated at the rate not in excess of the per diem equivalent of the highest rate of pay for individuals occuping the position under GS–18 of the General Schedule for each day he is engaged in activities of the Board and shall be entitled to be reimbursed for his expenses as a member of the Board.

(e) Regional and State Centers shall establish advisory boards which shall consist of a majority of members from small businesses and which shall include members from Universities and members from State and local governments. State Center Board members shall be appointed by the Governor not regional Center Board members shall be appointed by the Administrator of the Small Business Administration and persons selected for both boards shall have outstanding qualifications and known to be familiar and sympathetic with small business needs and problems.

RESEARCH GRANTS

SEC. 8. The Administration, upon the advice of the Board, acting through the Associate Administrator for Management and Technical Assistance, is authorized to make grants to Universities, public and private organizations, and business concerns to undertake research to identify and solve managerial, economic, financial, operational, technological, or other problems which affect small business concerns. The Deputy Associate Administrator for Management and Technical Assistance, with the advice of the Board, shall develop criteria to insure that all research projects are coordinated and that they address the need for relevant and meaningful small business data and information.

AUTHORIZATION

SEC. 9. There is authorized to be appropriated for grants under section 4 of this Act not to exceed $8,000,000 for fiscal year 1979 and $15,000,000 for each fiscal year from 1980 through 1982 and under section 8 of this Act not to exceed $5,000,000 for each fiscal year from 1979 through 1982. Salaries and expenses of the Administration and the Board under section 7 of this Act shall not exceed 5 percent per annum of the per annum authorization.

EVALUATION

SEC. 10. The Administration, with the advice of the Board, shall establish a plan for evaluation of the Center program which may include the retaining of an independent concern to conduct such an evaluation. The evaluation shall be both quantitative and qualitative and shall determine:

(1) the impact of the Center program on small businesses and the socio-economic base of the region it served; and

(2) the multi-disciplinary resources the Center program was able to coordinate to assist small businesses. For the purpose of these evaluations, the Administration is authorized to require any Center or party receiving assistance under section 8 of this Act to furnish it with such information annually or otherwise as it deems appropriate. The first such evaluation must be completed and submitted to the Senate Select Committee on Small Business and the Committee on Small Business of the House of Representatives no later than the third year after the date of enactment of this Act and each year thereafter.

ASSOCIATE ADMINISTRATOR

SEC. 11. (a) Section 4(b) of the Small Business Act is amended by striking the world "four" and inserting in lieu thereof the word "five".

(b) Section 5316 of title 5, United States Code, is amended by striking from paragraph (11) the figure "(4)" and by inserting the figure "5".

Mr. BAKER. Mr. President, I rise only to advise the majority leader that we are aware of this bill. It has been cleared on the minority side, and we have no objection to its passage.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 95–404), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE

The Small Business Development Center Act of 1978 would expand the small business sector, stimulate competition, and aid in the development and growth of new and existing small businesses by providing assistance, interpretation, analysis and counseling to small businesses on matters involving manufacturing, technology development, marketing, sales, finance, accounting, planning, strategy development, personnel, administration, government regulatory compliance, and other related business functions. Rural and urban small businesses, including those engaged in agricultural activities, would all be assisted by this measure.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

The title was amended so as to read:

A bill to authorize the Small Business Administration to make grants to support the development and operation of small business development centers in order to provide small businesses with advice and counseling on management development, technical information, product planning and development and for other purposes.

Mr. ROBERT C. BYRD. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. BAKER. I move to lay that motion on the table.

The motion to lay on the table was agreed to.

APPOINTMENT BY THE VICE PRESIDENT

The PRESIDING OFFICER (Mr. MATSUNAGA). The Chair, on behalf of the Vice President, pursuant to Public Law 95-45, appoints the Senator from Vermont (Mr. STAFFORD) to the 64th Fall Conference of the Interparliamentary Union, to be held in Sofia, Bulgaria, September 20-30, 1977.

QUORUM CALL

Mr. ROBERT C. BYRD. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

ADJOURNMENT

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the Senate stand in adjournment for 30 seconds.

There being no objection, the Senate, at 9:18 p.m. on Friday, August 5, 1977, adjourned until the hour of 9:18 and 30 seconds p.m. the same day.

AFTER ADJOURNMENT

FRIDAY, AUGUST 5, 1977

The Senate met at 9:18 and 30 seconds p.m., pursuant to adjournment, and was called to order by Hon. SPARK MATSUNAGA, a Senator from the State of Hawaii.

THE JOURNAL

Mr. ROBERT C. BYRD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of this legislative day be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

THE FIRST 7 MONTHS—SENATE ACCOMPLISHMENTS OF THE 95TH CONGRESS, JANUARY 4-AUGUST 5, 1977

Mr. ROBERT C. BYRD. Mr. President, the accomplishments of the Senate during the first 7 months of the 95th Congress are impressive. Senators have worked assiduously on a variety of issues both in committee and on the floor. We have made changes to the rules of the Senate which have resulted in greater efficiency of the Senate and greater effectiveness of Senators. We have passed 12 of the 13 regular appropriation bills well in advance of the beginning of the approaching fiscal year. We have come to grips with issues ranging from farm prices to the B-1 bomber which affect the well-being of every American and the security of the Nation. We have acted expeditiously on two extremely important programs which were left from last year—strip mining controls and air quality standards.

The Congress finally prevailed in establishing a Federal program to minimize the degradation of the environment by surface mining. Two previous Republican Presidents thrice vetoed our initiatives to set up uniform minimum strip mining and reclamation standards. President Carter, however, supported our efforts and signed the Surface Mining Act into law on Wednesday.

The Senate is continuing to give President Carter's legislative proposals thorough study and consideration, as illustrated in a status report on his major recommendations which will be included at the conclusion of my remarks.

In response to the priority concern of this Congress, the Senate has already passed 21 energy-related measures. Senate action ranges from giving the President special authority to deal with the natural gas shortage during the record cold winter to passage more recently of a measure which will facilitate the expeditious and orderly development of the energy resources on the Outer Continental Shelf. Eight energy-related bills have become law including an act creating a Department of Energy. Two await the President's signature while one other is in Senate-House conference. Ten await passage by the House as listed below:

ENACTED

Deepwater Ports Extension (H.R. 6401, Public Law 95-36).

Department of Energy (S. 826, Public Law 95-91).

ERDA Nonnuclear Authorization, 1977—Civilian (S. 36, Public Law 95-39).

Export Control—Arab Boycott (H.R. 5840, P.L. 95-52).

FEA Authorization (S. 1468, Public Law 95-70).

Natural Gas Emergency (S. 474, Public Law 95-2).

Urgent Power Supplemental Appropriation (H.J. Res. 227, Public Law 95-3).

Strip Mining (H.R. 2, Public Law 95-87).

SENT TO PRESIDENT: 2

Public Works—Energy Research Appropriation (H.R. 7553, P.L. 95-).

Clean Air (H.R. 6161, P.L. 95-).

IN CONFERENCE: 1

Mine Safety (S. 717).

PASSED SENATE, NOT HOUSE

Alaska Pipeline Destruction (S. 1496)

Educational Institution Energy Saving Grants (S. 701)

ERDA Nonnuclear Authorization, 1978—Civilian (S. 1340; H.R. 6796 on House Union Calendar)

ERDA Nuclear Authorization—Civilian/Military (S. 1341)

ERDA Nuclear/Nonnuclear Authorization—Civilian (S. 1811)

ERDA Nuclear Authorization—Military (S. 1339; H.R. 6566 on House Union Calendar)

ERDA Synthetic Fuel Loan Guarantee Program (S. 37)

Outer Continental Shelf (S. 9; H.R. ordered reported 7/27)

Pipeline Destruction (S. 1502)

Radiation Exposure (S. 266)

Aside from these 21 bills which we have considered on the Senate floor, our committees have already spent many hours hearing witnesses and examining the numerous components of the President's omnibus energy package. Senators are to be congratulated on the important committee work they have already done so that the full Senate will have this urgent matter for consideration in September.

The leadership is grateful to all Members of the Senate for their cooperation in writing this record of achievement of which we can all be proud.

A more detailed accounting of the measures the Senate has passed the year is contained in a report prepared by the staff of the Democratic Policy Committee. I ask unanimous consent that this report and other relevant material be inserted in the RECORD at this point.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

LEGISLATIVE DIGEST

(January 4-August 5, 1977)

ENERGY-ENVIRONEMENT

Emergency Natural Gas.—Congress enacted early this year a measure giving the President special emergency authority to deal with the natural gas shortage during the winter months.

Department of Energy.—Congress has written into law provisions creating a cabinet-level Department of Energy incorporating some 50 energy-related agencies including FEA, ERDA and the FPC. The Senate has confirmed the President's nomination of of James R. Schlesinger to become its first Secretary only minutes after the President signed the bill into law.

Strip Mining.—Congress has enacted a program to minimize the degradation of the environment by requiring minimum uniform standards for mining and reclamation.

Export Control—Alaskan Oil.—Congress has enacted a measure prohibiting the export of Alaskan oil except for mutually beneficial exchanges or for national security reasons.

Clean Air.—Congress has sent the President a measure setting final auto emission standards in 1981, and requiring other measures to improve air quality.

Public Works—Energy Research Appropriations.—We have cleared for the President an appropriation of $10.4 billion of which $5.9 billion is for energy research.

Clean Water.—In Senate-House conference is a $26.5 billion 5-year authorization for Federal grants to local municipalities for construction of sewage treatment plants. It also severely limits the use of phosphates in detergents sold in States bordering the Great Lakes.

Mass Transit.—The Senate has approved $5.3 billion in new funds to help cities and States pay for urban mass transit programs.

ERDA.—The Senate has authorized $5.2 billion for nuclear and nonnuclear energy research and development and $3.8 billion for ERDA programs which have military applications.

Outer Continental Shelf.—The Senate has passed a measure which will facilitate the environmentally-safe development of oil and other resources on the Outer Continental Shelf.

Energy Saving Grants for Schools.—The Senate has authorized matching grants to schools to help them meet the high costs of fuel and to encourage energy conservation measures.

Pipeline Destruction.—The Senate has passed provisions making it a Federal crime to willfully destroy the Trans Alaska pipeline or any interstate pipeline system transporting gas or oil.

Alaska Pipeline Treaty.—The Senate voted to ratify a treaty with Canada to insure that present and future pipelines across Canadian territory will be free from interruptions in flow and from discriminatory taxation.

ECONOMY-UNEMPLOYMENT

Tax Cut.—Congress has enacted a 3-year $34 billion tax cut. Forty-six million Americans—90% with incomes less than $20,000—will pay less taxes. Corporations will be allowed a tax credit on hiring new employees. Ninety-six percent of all taxpayers will have a simpler method of computing their taxes.

Economic Stimulus Appropriations.—Congress has enacted a measure providing $20.1 billion to create 415,000 new CETA jobs in implementing the President's economic stimulus proposals. Includes funds for public works projects, public service employment, and countercyclical revenue-sharing to help State and local governments continue their basic services and to target employment and training programs to youth, veterans and unskilled workers.

Public Works Employment.—Congress has enacted a measure authorizing $6 billion for local public works projects which provide jobs through construction in places with the most distressing levels of unemployment.

Unemployment Compensation.—Congress has extended the unemployment compensation program until October 31 to aid those temporarily unemployed with an income to meet their day-to-day living expenses.

Youth Employment.—We have sent the President a bill adding a new title to CETA to put 200,000 unemployed youths to work on neighborhood improvement, public facilities, parks and other projects in an effort to enhance job prospects and career opportunities for youths.

Housing and Community Development.—Under consideration by Senate and House conferees is a $14.6 billion multi-year authorization for housing assistance and community development.

INTERNATIONAL

Arab Boycott.—We have enacted provisions attacking the most repugnant aspects of the Arab boycott against Israel and generally improving export administration.

Rhodesian Chrome.—Congress acted early this year to halt the importation of chrome from Rhodesia which was in violation of U.N. sanctions against trade with that country.

Foreign Corporate Bribes.—The Senate passed a measure to make it a crime for U.S. companies to bribe foreign officials and to remove the means of concealing bribes by falsification of corporate records.

Intelligence Activities.—For the first time in history, the Senate voted on a separate bill authorizing the budget for the intelligence activities of the U.S. Government including specific amounts for the CIA and the DIA.

Transfer of Prisoners in Mexican/Canadian Jails.—The Senate has agreed to a resolution of ratification of treaties with Mexico and Canada to allow American convicted prisoners in those countries to return to the U.S. to serve out their prison terms.

HEALTH

Black Lung.—The Senate has concluded debate on a measure to improve the benefits program to miners disabled from Black Lung disease and awaits passage of the House bill.

Clinical Laboratories.—The Senate has voted to expand the program of mandatory licensure to all laboratories except military and veterans hospitals.

Health Research.—Congress enacted a $3.3 billion authorization for the major public health programs.

Mine Safety.—The Senate has voted to strengthen the national mine safety and health program by providing uniform administration and enforcement for the entire mining industry under a single Act administered by the Department of Labor.

OTHER

Presidential Reorganization Authority.—Congress has enacted a 3-year extension of the President's authority to submit to Congress plans to reorganize Executive branch agencies.

Defense Funds.—In conference is a measure appropriating $109 billion for the Department of Defense. As recommended by the President, the Senate omitted funding for procurement of the B–1 bomber.

Omnibus Farm Bill—Food Stamps.—The Senate and House have agreed to extend the basic price support programs for major commodities and the Food for Peace (P.L. 480) program. This bill also makes important revisions in these programs as well as needed reform to the Food Stamp program which is extended for two years.

Senate Committee Reorganization and Code of Ethics.—At the beginning of the session, the Senate reduced the number of Senate committees and realigned jurisdictions into a more rational order. It agreed to numerous other changes to spread legislative responsibilities more equally among all Senators. The Senate also adopted an official code of conduct for Senators and staff which requires extensive financial disclosure.

Ethics in Government.—The Senate has passed a bill requiring extensive financial disclosure by top officials and employees throughout the Federal Government and providing for the appointment of a special prosecutor who would be responsible for investigating any wrongdoing of top government officials.

Waterway User Fee.—The Senate has voted to establish, for the first time in our history, a system of commercial user charges to pay for the maintenance and improvement of the inland waterways.

Insecticides (FIFRA).—The Senate has passed a measure designed to improve the operation of the Federal pesticide registration program and to protect the public against health and environmental hazards from pesticides.

Omnibus Judgeships.—The Senate passed a bill providing for the appointment of 110 additional permanent district court judges to permit the judicial system to keep pace with increased cases.

Campaign Financing.—The Senate has passed a measure simplifying the reporting requirements for candidates and generally improving the administration of the present law.

STATUS OF MAJOR MESSAGES AND COMMUNICATIONS OF THE PRESIDENT, 95TH CONG., 1ST SESS. BY SENATE DEMOCRATIC POLICY COMMITTEE, ROBERT C. BYRD, CHAIRMAN, AUG. 5, 1977

Message or communication title, bill No.	Senate action	House action	Conference or other action	Date approved	Public Law No.
Presidential Message No. 21 (Jan. 17, 1977): Budget rescission ($452,600,000 for Nimitz-class nuclear carrier and Aegis), H.R. 3839.	Passed Senate, Mar. 15, 1977	Passed House, Mar. 3, 1977		Mar. 25, 1977	95–15
Presidential Message No. 22 (Jan. 17, 1977): Top level exceutive, legislative and judicial salary increases.	Senate tabled Allen, et al. amendment to S. Res. 4 disapproving pay recommendation Feb. 2, 1977; vote Mar. 3, 1977, against repealing increase.	House twice objected to request to consider disapproval resolution, H. Res. 115, Feb. 16, 17; voted June 29, 1977, to reject amendment to H.R. 7932, 1978 legislative branch appropriations, delaying funds for Mar. 1 increases.		Feb. 20, 1977 became effective.	
Presidential Message No. 22 (Jan. 17, 1977); Ethics Code.	S. Res. 110 (Senate Ethics Code), passed Senate Apr. 1, 1977.	H. Res. 287 (House Ethics Code). Passed House, Mar. 2, 1977.		House code became effective Mar. 2, 1977, Senate code became effective Apr. 1, 1977.	
Executive Communication No. 441 (Jan. 26, 1977): Emergency Natural Gas Act S. 474 (administrative bill).	Passed Senate, Jan. 31, 1977	Passed House, amended Feb. 2, 1977	Conference report agreed to Feb. 2, 1977, in Senate; Feb. 2, 1977, in House.	Feb. 16, 1977	95-2
Presidential Message No. 32 (Jan. 31, 1977): Economic recovery:					
(a) Economic stimulus appropriations (public works jobs, revenue sharing, and public service empolyment, H.R. 4876.	Passed Senate, amended May 2, 1977	Passed House, Mar. 15, 1977	Conference report agreed to May 4, 1977 in House; May 5, 1977 in Senate.	May 13, 1977	95–29
(b) Public works jobs ($4,000,000,000 increase), H.R. 11.	Passed Senate, amended Mar. 10, 1977	Passed House, Feb. 24, 1977	Conference report agreed to Apr. 29, 1977 in Senate; May 3, 1977 in House.	do	95–28

STATUS OF MAJOR MESSAGES AND COMMUNICATIONS OF THE PRESIDENT, 95TH CONG., 1ST SESS. BY SENATE DEMOCRATIC POLICY COMMITTEE, ROBERT C. BYRD, CHAIRMAN, AUG. 5, 1977—Continued

Message or communication title, bill No.	Senate action	House action	Conference or other action	Date approved	Public Law No.
(c) Countercyclical revenue sharing	Passed Senate, as amendement to H.R. 3477, Apr. 28, 1977.	H.R. 6810, passed House, Apr. 13, 1977	Conference report contained 1-yr extension of program instead of 5 yr as requested by President.	May 23, 1977	95-30
(d) Tax reform and simplification for individuals and business (tax rebate withdrawn, H.R. 3477.	Passed Senate, Apr. 29, 1977	Passed House, Mar. 8, 1977	Conference report agreed to May 17, 1977 in House and Senate.	do	95-30
Presidential Message No. 33 (Feb 4, 1977): Presidential Reorganization Authority ,S. 626.	Passed Senate, Mar. 3, 1977	Passed House, amended Mar. 29, 1977	Senate agreed to House amendments Mar. 31, 1977.	Apr. 6, 1977	95-17
Presidential Message Nos. 40 (Feb. 21, 1977) and 57 (Mar. 24, 1977): Water development projects:	Senate adopted Johnston amendment expressing sense of Congress to continue funding for water projects.			May 13, 1977	95-28
H.R. 11 (public works jobs)					
H.R. 7553 (public works appropriations, 1977).	Passed Senate, amended Jul. 13, 1977 (Senate bill funds 9 of 18 water projects opposed by President).	Passed House, June 14, 1977 (House bill funds 17 of 18 opposed by President).	Conference report agreed to Jul. 25, 1977 in House and Senate funding 9 of 18 water projects.		95-
Presidential Message No. 41 (Feb. 22, 1977): 1978 budget revisions, S. Con. Res. 19.	Passed Senate May 4, 1977	Passed House amended May 5, 1977	Conference report agreed to with amendment May 16, 1977 in Senate; House agreed to Senate amendment May 17, 1977.	Action complete	
Presidential Message No. 42 (Mar. 1, 1977): Creates Cabinet Department of Energy, S. 826.	Passed Senate May 18, 1977	Passed House amended June 3, 1977	Conference report agreed to Aug. 2, 1977 in House and Senate.	Aug. 4, 1977	95-91
Presidential Message No. 45 (Mar. 4, 1977): Airline deregulation.	Commerce Committee markup on staff draft proposal which combines S. 292 and S. 689, June 21, 30, July 12, 14, 19-21, 26, 28, Aug. 2, 4.	Public Works Subcommittee on Aviation hearings April 18; field hearings in Pennsylvania June 17, 18, in Chicago July 30.			
Presidential Message No. 47 (Mar. 9, 1977): Youth unemployment:					
(a) $342,000,000 increase for Job Corps.				In H.R. 4876, Economy stimulus appropriation, Public Law 95-29.	
(b) New Youth title to CETA, H.R. 6138.	Passed Senate, amended May 26, 1977	Passed House May 17, 1977	Conference report agreed to July 19, 1977 in House; July 21, 1977 in Senate.	Aug. 5, 1977	95-
(c) 1-yr extension of CETA, H.R. 2992.	Passed Senate, amended May 25, 1977	Passed House Mar. 29, 1977	House agreed to Senate amendment June 3, 1977.	June 15, 1977	95-44
Presidential Message No. 51 (Feb. 17, 1977): Foreign Aid:					
(a) Multilateral development assistance (financial institutions), H.R. 5262.	Passed Senate, amended June 14, 1977	Passed House Apr. 6, 1977	Conference report agreed to July 27, 1977 in Senate.		
(b) Bilateral development assistance ($1,300,000,000)—Public Law 480 program changes, H.R. 6714.	Passed Senate, amended June 15, 1977	Passed House May 12, 1977	Conference report agreed to July 21, 1977 in House; July 22, 1977 in Senate.	Aug. 3, 1977	95-88
(c) Public Law 480 program extension, S. 275.	Passed Senate May 24, 1977	Passed House, amended July 28, 1977	In conference		
(d) Security assistance, H.R. 6884	Passed Senate, amended June 15, 1977	Passed House May 24, 1977	Conference report agreed to July 21, 1977 in House; July 22, 1977 in Senate.		95-
Presidential Message No. 52 (Feb. 17, 1977): Oil tanker spills.	S. 682 (tanker safety) passed Senate May 26 1977. Commerce Committee ordered new bill reported in lieu of S. 687 (oil pollution) Aug. 4; to be referred to Environment Committee.	Merchant Marine and Fisheries reported H.R. 6803 (H. Rept. 95-340) May 16.			
Presidential Message No. 55 (Mar. 22, 1977): Election reform:					
(a) Voter registration	S. 1072 on Senate Calendar (Cal. No. 144).	H.R. 5400 on Union Calendar (Cal. No. 162).			
(b) Public financing	Senate agreed to Allen amendment to S. 926 deleting public financing for Senate elections Aug. 2.	Administration Committee hearings on campaign reform completed July 12; markup to be scheduled after Sept. 7.			
(c) Campaign Act amendments	S. 926, passed Senate Aug. 3, 1977	do

Days in session	121
Hours in session	746:17
Total measures passed	440
Private laws	5
Public laws	92
Treaties	4
Confirmations	43, 433
Record votes	346

Symbols: (VV)—Passed by Voice Vote; numbers in parenthesis indicate number of record vote on passage, conference report, or reconsideration.

Agriculture

Federal Crop Insurance Corporation capital.—Amends the Federal Crop Insurance Act to increase the authorized capital stock of the Federal Crop Insurance Corporation from $100 million to $150 million in order to replenish its operating capital which was nearly exhausted as a result of indemnity payments to insured farmers for crop losses during the 1976 drought and harsh winter of 1977. S. 955—Public Law 95–47, approved June 16, 1977. (VV)

FIFRA.—Extends through fiscal year 1979 the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and authorizes therefor $54.5 million for fiscal 1978 and such sums as necessary but not to exceed $70 million for fiscal 1979; limits the scope of the prohibition against the use of a pesticide in a manner inconsistent with its labeling by providing four specific exceptions; amends the provision relating to the use of data submitted by an applicant for registration of a pesticide which relies on the test data submitted by another applicant by extending to the data owner a right to compensation for use of the data for 7 years after its original submission and establishes a procedure for settling compensation disputes by binding arbitration; eliminates the prohibition against the use of data submitted to the Environmental Protection Agency in order to obtain registration which contains "trade secret" information in processing the application of another person for the registration of a similar pesticide; establishes procedures governing the generation of data needed to maintain existing pesticide registration, including provisions requiring all registrants of a pesticide to take appropriate steps to secure the necessary additional data, arrangements by which the necessary data can be submitted, jointly by the registrants to avoid the waste involved in duplicative testing, and the settling of disputes over cost-sharing arrangements by binding arbitration;

Authorizes "generic" registration of pesticides; directs the Administrator to establish a simplified system for registering pesticides and exempts applicants who purchase registered technical-grade or manufacturing-use pesticides for formulation into end-use products from requirements pertaining to the submission of data to determine safety and from the obligation to pay compensation for use of the data; authorizes the Administrator of EPA to waive registration requirements pertaining to the submission of data relating to the efficacy of pesticides in considering an application for registration; authorizes the conditional registration of pesticides during the period in which data needed for complete registration are being generated if the conditional registration would not significantly increase the risk of any unreasonable adverse effect on health or the environment; permits the Administrator to classify all pesticides prior to the completion of the reregistration required by the 1972 amendment, in order that States may proceed with programs for the training and certification of applicators; permits the Administrator to conduct programs for the certification of applicators of pesticides in States which do not have an approved State plan by October 20, 1977; directs the Administrator to consider restricting a pesticide's use or uses as an alternative to cancelling a registration; requires the Administrator to issue a notice of intent to cancel a conditional registration if the condition upon which the registration was based had not been satisfied within

the time provided; requires the Administrator to submit an annual report by February 15 of each year beginning with fiscal 1979 on the total number of applications for conditional registration, those approved, and the conditions upon which they were approved; limits the prohibition against public disclosure of "trade secret" information only to data relating to the manufacturing process or the identity or percentage quantity of inert ingredients which data could nonetheless be made public if necessary to protect against an unreasonable risk of injury to health or the environment;

Modifies the civil penalty provisions of the act and authorizes the Administrator to issue a warning in lieu of a civil penalty in certain cases; gives the States primary enforcement responsibility with Federal enforcement permitted only if the State is not carrying out regulation and enforcement provisions in accordance with the act; authorizes cooperative agreements with Indian tribes and clarifies the provision relating to the use of the services of the Cooperative State Extension Services to inform and educate all pesticide users of the provisions of the Act; extends to January 1, 1981, the Scientific Advisory Panel; establishes "professional applicators" as a class to which provisions of the Act apply and defines the term as an applicator who applies pesticides for hire; requires applicators to keep certain records and includes their business premises among the establishments subject to inspection by designated agents of the Administrator; provides that a non-registered pesticide or device intended for export would be misbranded if the label did not contain the phrase "Not Registered for Use in the United States"; requires the registration of establishments that produce pesticides or active ingredients from which they are produced for export; and requires the Administrator, within nine months, to submit a report to the Congress on the feasibility of assessing and collecting fees to cover the costs of the pesticide registration program. S. 1678—Passed Senate July 29, 1977. (VV)

Grain inspection.—Amends the United States Grain Standards Act to facilitate and improve the implementation of the amendments made in 1976 (Public Law 94–582); establishes a temporary 12-member committee (representing farmers, consumers and all segments of the grain industry) to advise the Administrator of the Federal Grain Inspection Service (FGIS) on the implementation of the 1976 act, and provides for its termination 18 months after the date of enactment; eliminates the requirement that grain merchandisers and elevator operators using grain inspection or weighing services maintain certain itemized types of records of their operations for a five-year period and requires them instead to keep only such records as the Administrator may prescribe for administration and enforcement; repeals, effective October 1, 1977, the authority for the charging of fees for Federal supervision of grain inspection and weighing and provides instead for funding of these activities through the regular appropriations process; makes several technical amendments; and prohibits effective May 1, 1977, subclassing of the hard red winter wheat on the basis of color, kernel content, or percentage of dark, hard and vitreous kernels. S. 1051—Passed Senate March 30, 1977. Note: (Provisions contained in S. 275, Omnibus Farm Bill, which passed the Senate May 24, 1977.) (88)

Great Plains Conservation.—Amends effective October 1, 1978, section 16(b) of the Soil Conservation and Domestic Allotment Act, which provides for a Great Plains conservation program by (1) striking the provisions in current law that no new conservation contracts may be entered into after December 31, 1981, thus making the Great Plains conservation program permanent; (2) making the program available to all farmers in eligible States, not just those in counties classified as "semi-arid"; and (3) amending the authorization to carry out the program by deleting the current $300 million limitation on total appropriations and $25 million limitation on annual appropriations and authorizing instead, such sums as necessary. S. 896—Passed Senate August 3, 1977. (VV)

Land and Water Resources Conservation.—Establishes a mechanism for making long-range policy to encourage the wise and orderly development of the Nation's soil and water resources; requires the Secretary of Agriculture to (1) prepare an appraisal of the Nation's land, water and related resources and (2) develop a national land and water conservation program setting forth the direction for future soil and water conservation efforts on the Nation's private and non-Federal lands by December 31, 1979, and to update them each fifth year thereafter; requires that the appraisal and the program together with a detailed statement of policy intended to be used in framing budget requests for Soil Conservation Service activities be transmitted to Congress on the first day it convenes in 1980 and at each 5-year interval thereafter; requires that programs established by law be carried out in accordance with the statement of policy unless either House adopts a disapproval resolution within 90 days of receipt; provides that Congress may revise or modify the statement of policy, and that the revised or modified statement of policy shall be used in framing budget requests; requires, beginning with the fiscal 1982 budget, that requests sent by the President to Congress governing Soil Conservation Service activities express the extent to which the projected programs and policies meet the statement of policy approved by Congress; requires the President to set forth reasons for requesting Congress to approve a lesser program or policy where budget recommendations fail to meet the established policy; and requires the Secretary to submit to Congress beginning with fiscal 1982, an annual report evaluating the program's effectiveness. S. 106—Passed Senate March 23, 1977; Passed House amended June 6, 1977. (VV)

Omnibus farm bill.—Extends for 5 years through fiscal year 1982 the basic price support programs for wheat, feed grains, cotton, rice, and wool; extends, with major changes, the food stamp program through fiscal year 1979; extends through 1982 the Food for Peace Program (P.L. 480) with some changes; and establishes a new charter and clearer direction for the Federal role in agricultural research;

Payments limitation.—Places a limitation of $50,000 on the total payments which a person may receive annually under one or more of the programs for wheat, feed grains, upland cotton, extra long staple cotton, and rice instead of the present $20,000 limitation and the separate $55,000 limitation on rice;

Commodity programs.—Milk—sets the price support at 80 percent of parity adjusted semi-annually but reviewed quarterly; extends for 5 years the Class I base plans, seasonal base excess plans, and seasonal takeout—payback plans for 5 years; Wool—updates the support levels to 90 percent of the formula; Wheat—sets the target price in 1977 at $2.90 per bushel and the target price for 1978 at $3.10 per bushel and an increase thereafter if the cost of production exceeds that level; Feedgrains—sets the target price levels for corn at $2.28 per bushel in 1978 and any increases thereafter will be based on cost of production, and ties the target level for other feedgrains to corn; Cotton—establishes a target price of 51.1 cents per pound for 1978 to increase in subsequent years in relation to cost of production increases; Peanuts—establishes a national acreage allotment and a minimum national poundage quota; sets up a price support program for producers through loans, purchases or other operations; Soybeans—requires price support loans for producers on the 1978 through 1982 crops at not less than $4 per bushel;

Grain reserves.—Requires the Secretary to formulate a producer storage program on original or extended price support loans for wheat and feedgrains at the same support level as provided by the 1949 Act, as amended; authorizes the President to negotiate a system of food reserves for humanitarian food relief and to maintain such a reserve of food commodities as a contribution of the United States to the system; expands the authority of the Secretary to acquire commodities for disposition in the event of national disasters; makes the following changes in the farm storage facility loan program: authorizes the Secretary of Agriculture to use guarantees on secured loans as well as direct loans as a means of assisting farmers to construct or purchase onfarm facilities; permits the making or guaranteeing of loans for the construction of facilities to store high moisture grain and forage crops, as well as dry grain; and requires, with respect to direct loans, that the borrower put up security for the loan and base the interest rate charged to farmers on the rate charged the Commodity Credit Corporation;

Food for peace program (P.L. 480).—Extends the program through 1982 and increases the annual authorization to $750 million (with the understanding that the committee's suggested reform would become a part of S. 1520, the foreign aid authorization bill);

Food stamp reforms.—Extends the program for 2 years; eliminates the purchase requirement and establishes a single benefit reduction rate at 30 percent of net income; limits participation to households at or below official Federal poverty levels; replaces current itemized deductions with standardized deductions; requires unemployed participants to seek employment; requires a 60-day period of ineligibility for a household whose head voluntarily terminates employment; eliminates automatic, categorical eligibility of welfare recipients; gives Indian tribal organizations greater authority over food distribution programs on reservations; increases incentives for States to root out program abuse and improve administration; authorizes pilot projects to improve administration; and extends authority to purchase commodities and establishes the Federal share of administrative costs for the Commodity Supplemental Food Program;

Food and agricultural research.—Expands support for research programs, improved dissemination of research findings, increased efficiency and coordination of Federally-funded food and agricultural research including nutrition research and animal health research; creates three interrelated advisory panels to improve coordination; provides for a program of competitive grants within the Department to initiate high priority research activities; authorizes the Secretary to make grants to agriculture experiment stations and land-grant universities to support the Federal-State cooperative research program; authorizes research on solar energy as applied to agriculture; directs the Secretary to develop and implement a national nutrition research and extension program;

Grain inspection.—Adds the language of S. 1051, the Federal Grain Inspection and Weighing Program Improvements bill as earlier passed by the Senate, which amends the United States Grain Standards Act with respect to recordkeeping requirements and supervision fees, and establishes an advisory committee to provide advice to the Administrator of the Federal Grain Inspection Service;

Other provisions.—Amends the authorizations for several existing rural development and conservation programs and contains other provisions including those relating to the inclusion of aquaculture and human

nutrition as functions of the Department of Agriculture, beekeepers indemnity, and the importation of filberts. S. 275—Passed Senate May 24, 1977; Passed House amended July 28, 1977; In conference. (169)

Rabbit meat inspection.—Makes rabbit meat inspection mandatory at Federal cost, by extending, with certain exceptions, the provisions of the Poultry Products Inspection Act to rabbits and rabbit products, effective October 1, 1978. H.R. 2521—Passed House March 29, 1977; Passed Senate amended July 25, 1977. (VV)

Soil erosion prevention.—Authorizes the Secretary of Agriculture to undertake emergency measures to safeguard lives and property from floods, drought, and erosion whenever fire or any other natural occurrence has caused a sudden impairment of a watershed; authorizes the establishment of an emergency fund in the Treasury for the use of the Secretary in carrying out these measures and authorizes therefor such sums as necessary; and makes the bill effective October 1, 1978. S. 1462—Passed Senate August 5, 1977. (VV)

Tobacco quotas.—Amends the Agricultural Adjustment Act of 1938 to increase from 50 percent to 80 percent the amount of the farm acreage allotment for Fluecured tobacco which must be planted on farms desiring to lease acreage-poundage quotas after June 14 of any year. H.R. 3416—Public Law 95–54, approved June 25, 1977. (VV)

Tomato standards.—Amends section 8e of the Agricultural Adjustment Act of 1933, as reenacted and amended by the Agricultural Marketing Agreement Act of 1937, to require that imported tomatos conform with pack-of-container standards imposed on domestic tomatos under marketing orders. S. 91—Passed Senate July 25, 1977. (VV)

Western States conservation.—Amends, effective October 1, 1978, section 16(b) of the Soil Conservation and Domestic Allotment Act, which provides for a Great Plains conservation program in the States of Colorado, Kansas, Montana, Nebraska, New Mexico, North Dakota, Oklahoma, South Dakota, Texas, and Wyoming by (1) extending the program into all 22 contiguous States west of the Mississippi River; (2) authorizing farmers and ranchers participating in the program to utilize program funds to improve irrigation systems to conserve water; and (3) adding a condition to cost-sharing contracts under the program that farmers or ranchers who destroy permanent conservation measures installed on farms or ranches under the program forfeit all rights to Federal disaster payments for farm production losses. S. 1614—Passed Senate August 3, 1977. (VV)

Wheat and feed grains loan levels.—States as the sense of the Senate that the Secretary of Agriculture should exercise his authority under existing law to increase the loan levels for the 1977 crops of wheat and feed grains. S. Res. 193—Senate agreed to June 22, 1977. (VV)

Wheat producers assistance.—Provides temporary emergency assistance to wheat producers who planted prior to January 1, 1977, in order to prevent further increases in carryover stocks resulting from record U.S. wheat production and decreasing U.S. exports: requires the Secretary of Agriculture to carry out, through the Commodity Credit Corporation, a special wheat acreage grazing and hay program for the 1977 crop whereby a wheat producer who elects to participate may designate an acreage of cropland on his farm, of not to exceed 40 percent of the wheat allotment, for grazing purposes or hay production only: requires that the producer designate the specific acreage on the farm to be so used; directs the Secretary to pay any participating producer an amount determined by multiplying the number of acres placed in the program times the projected yield established for the farm times $1; makes the producer ineligible for any other payments or price supports, including deficiency payments and disaster payments under section 107 of the Agricultural Act of 1949, on that portion of the wheat allotment placed in the program; provides that such acreage shall be deemed to have been planted for harvest for the purposes of wheat acreage history; and authorizes the Secretary to issue the necessary regulations to carry out this act. S. 650—Passed Senate March 16, 1977. (60).

Wheat referendum.—Defers the wheat marketing quota referendum for the 1978 crop, which by law must be held no later than August 1, until 30 days after the adjournment of Congress or October 15, whichever is earlier, in order to provide additional time for enactment of legislation, presently being considered by Congress, for the 1978 and subsequent wheat crops which would eliminate the need for a referendum. S. 1240—Public Law 95–48, approved June 17, 1977. (VV)

APPROPRIATIONS

Fiscal 1977

Continuing.—Extends the continuing resolution (Public Law 94–473) which expires on March 31, 1977, until April 30, 1977, to provide financing authority for the following programs traditionally funded under the Departments of Labor, and Health, Education and Welfare Appropriations Act: higher education; National Health Service Corps; home health services; emergency medical services; library resources; teacher corps; alcohol abuse and alcoholism prevention, treatment and rehabilitation; health professions educational assistance; D.C. medical and dental manpower; activities under title VI of the Comprehensive Employment and Training Act; vocational education; and National Institute of Education; and amends the resolution to provide such amounts as necessary for the calendar quarter ending March 31, 1977, for general revenue sharing payments to State and local governments. H.J. Res. 351—Public Law 95–16, approved April 1, 1977. (VV)

Economic stimulus.—Makes economic stimulus appropriations in the total amount of $20,101,484,000 in new budget obligational authority for fiscal year 1977; includes the following to implement the economic stimulus proposals recommended by the President in his message of January 31, 1977:

Public Works Projects—$4 billion for acceleration of local public works projects;

Revenue Sharing Program—$4,991,085,000 for revenue sharing payments for the last three quarters of fiscal 1977:

Antirecession Financing—$632.5 million for increased antirecession payments under Public Law 94–369 to States and local governments in areas of high unemployment to assist them in maintaining basic services;

Public Service Employment—$7.987 billion for public services jobs which will expand the present Comprehensive Employment and Training Act (CETA) public service programs from the current 310,000 jobs to 600,000 jobs by September 30, 1977, and 725,000 jobs by December 31, 1977;

Targeted Employment and Training Programs—$1.438 billion for programs targeted to youth, veterans and those in need of new skills; and

Older Americans—$59,400,000 for an additional 14,800 jobs for community service employment for Older Americans;

In addition, includes the following appropriations: $95 million for production of NASA's third shuttle orbiter; $300 million for the construction grants reimbursement program for sewage treatment plants; $175 million for a drought assistance program contingent upon enactment of authorizing legislation; $35 million increase in the obligation limitation on airport development grants; $366 million for various programs authorized under the Federal-Aid Highway Act; $50 million for the Northeast Corridor improvement program to speed up construction currently underway; and $2 million for IRS accounts collection and taxpayer service. H.R. 4876—Public Law 95–29, approved May 13, 1977. (130)

Supplemental.—Makes supplemental appropriations in the total amount of $28,923,859,260 for the fiscal year 1977 for almost every department and agency of the Federal Government including appropriations to cover costs associated with the October 1, 1976, general government pay raise. H.R. 4877—Public Law 95–26, approved May 4, 1977. (98)

Urgent disaster supplemental.—Makes urgent supplemental appropriations of $200 million for fiscal year 1977 for disaster relief activities resulting from the severe weather conditions prevalent throughout the nation. H.J. Res. 269—Public Law 95–13, approved March 21, 1977. (VV)

Urgent power supplemental.—Makes urgent power supplemental appropriations of $6.4 million for fiscal year 1977 for the Department of the Interior, Southwestern Power Administration, for power purchases caused by critically low stream flow conditions in the area served by the Administration; and removes the restrictions in Public Laws 94–355 and 94–373 which limit the use of funds appropriated to ERDA subject to enactment of authorizing legislation to assure the continued funding of essential energy research development and demonstration programs. H.J. Res. 227—Public Law 95–3, approved February 16, 1977. (VV)

Fiscal 1978

Agriculture.—Appropriates $12,749,378,000 in new budget authority for the Department of Agriculture and related agencies for fiscal year 1978; includes $441,202,000 for the Animal and Plant Health Inspection Service and $1 million for the Farmers' Home Administration for planning and evaluation of housing program; contains funding for domestic food programs; appropriates $50 million for fiscal year 1977 to be immediately available for the Agricultural Conservation Program in drought areas in the Southeast; and contains other provisions. H.R. 7558—Public Law 95– , approved 1977. (VV)

Defense.—Appropriates $109,805,080,000 for the Department of Defense for fiscal year 1978 including the pay, allowances, and support of military personnel, operation and maintenance of the forces, procurement of equipment and systems, and research, development, test and evaluation; omits funding for procurement of the B–1 bomber; commissaries; bars the use of funds to consolidate undergraduate helicopter pilot training; requires military personnel in nonappropriated fund activities such as post exchanges and officers' clubs to be returned to military duties; limits the number of enlisted aides for general flag officers to a total of 150 for the Department of Defense; limits payments to hospitals under the Civilian Health and Medical Program of the Uniformed Services (CHAMPUS) which pay for medical care for military dependents; and prohibits pay raises that would cause pay of wage board employees to exceed prevailing rates in the private sector but stipulates that no employee's pay shall be reduced from current levels. H.R. 7933—Passed House June 30, 1977; passed Senate amended July 19, 1977; conference report filed. (308)

Foreign aid appropriations, 1978.—Appropriates a total of $6,851,854,000 for foreign assistance and related programs for fiscal year 1978 including funds for foreign economic and military assistance, foreign military credit sales and the Export-Import Bank; appropriates $13 million for disaster assistance to Romania for fiscal year 1977; increases by 10 percent the U.S. contribution to the United Nations Development Program; appropriates $50 million for the Sahel Development Program and limits U.S. assistance to 10 percent of total cash contributions to

this drought-stricken area; includes security supporting assistance in the amount of $785 million for Israel, $750 million for Egypt, $300 million for Portugal, $80 million for Southern Africa Special Requirements Fund, $20 million for Lebanon, and $15 million for Cyprus; provides $2 billion for international development banks which is a billion dollar increase above fiscal year 1977; states sense of the Senate establishing appropriate levels for the "U.S. share" of future contributions to the internat onal development banks; states sense of the Senate language regarding human rights considerations in U.S. voting in international financial institutions; and limits the 1978 contribution to international banks until U.S. Executive Directors' salaries now ranging from $78,820 to $83,830 are reduced to $50,000, the salary of the Assistant Secretary of the Treasury. H.R. 7797—Passed House June 23, 1977; passed Senate amended August 5, 1977; Senate requested conference August 5, 1977. (346)

HUD.—Appropriates a total of $67,648,491,000 in new budget authority for fiscal year 1978 which includes $35,655,781,000 for the Department of Housing and Urban Development; $39,144,000 for the Consumer Product Safety Commission; $843,203,000 for the Environmental Protection Agency; $4,017,940,000 for the National Aeronautics and Space Administration; $43,970,000 for the National Science Foundation; and $17,194,882,000 for the Veterans' Administration; contains a provision to prohibit the use of government vehicles to drive Federal officials other than the Secretary of Housing and Urban Development between home and work; and provides that no government consultants shall be paid in excess of the rate paid a GS–18 civil servant. H.R. 7554—Passed House June 15, 1977; Passed Senate amended June 24, 1977; House agreed to conference report July 19, 1977. (237)

Interior.—Appropriates a total of $10,026,349,000 for the Department of the Interior and related agencies for fiscal year 1978; includes significant increases in natural resources program, the Department's energy and minerals programs directed at the safe and environmentally sound development of energy resources both onshore and on the outer continental shelf, and the Forest Service; contains increased funding for energy programs outside the Interior Department with the major part directed to the Strategic Petroleum Reserve and programs benefiting American natives that are administered by Interior and HEW with emphasis on health, educational, and economic opportunities and the wise management of their natural resources; expands support for programs enhancing the Nation's cultural resources and for specific programs for the arts and humanities, historic preservation, the Smithsonian Institution, and others; and contains other provisions. H.R. 7636—Public Law 95–74, approved July 26, 1977. (221)

Labor-HEW.—Authorizes a total of $60,168,561,000 in new budget authority for fiscal year 1978 with $5,679,187,000 for the Department of Labor, $53,185,557,000 for the Department of Health, Education and Welfare. and $1,303,837,000 for related agencies;

Makes significant increases over the Administration's budget requests for the following: employment and training assistance programs, with primary emphasis on creating jobs for unemployed youths; the Occupational Health and Safety Administration to provide for an additional 100 Federal compliance staff members; health programs for community health services, preventive medicine, research and training; elementary and secondary education programs to provide title I grants to disadvantaged students, impact aid for schools in Federally aeffcted areas, and emergency school aid to help school districts encountering special desegregation problems; higher education programs, particularly the basic opportunity grant, the direct student loan programs and a one-time demonstration project for law school clinical experience programs; the Head Start program; aging programs; rehabilitation programs; community service programs; and the Corporation for Public Broadcasting;

Makes significant decreases in the administration's budget requests for the Bureau of Labor Statistics, public assistance, and the Social Security Administration;

Contains funds restricting the use of public funds for abortions; and requires the use of funds appropriated by this act to require the transportation of students, reorganization of school grade structures, pairing of schools, or clustering of schools for the purpose of achieving racial desegregation. H.R. 7555—Passed House June 13, 1977; Passed Senate amended June 29, 1977; House agreed to conference report August 2, 1977; Senate agreed to conference report August 4, 1977, with House amendment on the abortion provision remaining in disagreement and requested further conference with House. (266)

Legislative.—Appropriates a total of $990,067,800 for the Legislative Branch for fiscal year 1978; includes $653,395,000 for Congressional operations and $336,672,200 for related agencies totalling $20,520,700 for Congressional operations and related agencies; deletes $55 million for the extension of the West Front of the Capitol and includes language instructing the Architect of the Capitol to ascertain which operations currently housed in the Capitol could be relocated to the office buildings and to prepare plans and drawings in detail with cost estimates for restoration of the West Front; provides that virtually all 1977 costs associated with the March 1, 1977, pay raise be absorbed through savings; includes changes in Senatorial allowances, as mandated by the Official Code of Conduct Amendments of 1977, S. Res. 110, and reduces the 1978 budget request for Sente activities by $12 million; consolidates the clerk-hire and the so-called S. Res. 60 allowances into a single allowance which will afford maximum flexibility to Senators in utilizing funds authorized for employment; retain the S. Res. 60 provisions for accessibility to committee files and meetings and certain reductions for committee chairmen and ranking minority members effective October 1, 1977; revises the current Consolidated Office Expense Allowance to provide more flexibility to Senator and to create a fixed allowance for each State; adds to the categories of expenses for which Members may be reimbursed: per diem and travel for Members and staff in the U.S. on official business, travel on official business in Washington, D.C. and in the vicinity of the home State office; and sets aside one-tenth of each Member's allowance to meet any other official office expense; makes each Senator eligible for two WATS telephone lines to be paid out of the contingent fund of the Senate; increases allowances by 10 percent although the consumer price index has risen 42.5 percent since last adjustment; allows an employee to be on the payroll of more than one Senator; directs that a supplement to the Congressional Directory be printed during second sessions rather than a new edition; reduces from 100 to 50 the number of recipients per Senator of free copies of the Congressional Record and requires publication of their names on the Record; eliminates a requested $250,000 subsidy for the Senate Restaurant with the intent of balancing the budget through price increases and improved management; phases out the 34 elevator operator jobs on automatic elevators at a savings of $292,000; and contains other provisions. H.R. 7932—Public Law 95– , approved 1955. (296)

Military construction.—Appropriates $2,977,720,000 for military construction for the Department of Defense for fiscal year 1978 which provides the necessary funding for the planning, design, construction, alteration and improvement of military facilities worldwide, both for active and Reserve forces, including military family housing; provides certain types of community impact assistance as well as assistance to members who face loss on the sale of private residences due to installation realignments; includes $8.5 million for an energy consumption metering program; and provides for the U.S. share of NATO infrastructure construction costs. H.R. 7589—Public Law 95– , approved 1977. (vv)

Public Works—Energy research.—Appropriates $10,350,669,000 for public works for water and power development and energy research for fiscal year 1978; provides $5,978,155,000 for the Energy Research and development Administration (except for fossil fuel and certain conservation programs) in title I; provides $2,728,242,000 water resources development programs (including power) and related activities of the Department of the Army, civil functions—Army Corps of Engineers' civil works program; provides $785,168,000 for the Department of the Interior's Bureau of Reclamation and Power agencies; provides $802,849,000 for related independent agencies and commissions including the Appalachian Regional Commission and Appalachian regional development programs, the Federal Power Commission, the Nuclear Regulatory Commission, the Tennessee Valley Authority; and the Water Resources Council in title IV; includes funding for 9 water resources projects which the President had removed from the budget and omits new construction starts of such projects; omits funds for the Clinch River Breeder Reactor; bars production of enhanced radiation weapons until the President certifies to Congress that production of these weapons is in the national interest, with the proviso that the Congress, by concurrent resolution, may disapprove such production within 45 days following Presidential certification. H.R. 7553—Public Law 95– , approved 1977. (284)

State-Justice-Commerce.—Appropriates a total of $7,709,432,000 in new budget authority for fiscal year 1978 including $1,234,970,000 for the Department of State; $2,300,619,000 for the Deartment of Justice; $1,923,275,000 for the Department of Commerce; $444,318,000 for the Judiciary; and $1,806,250,000 for related agencies including the Arms Control and Disarmament Agency, the International Trade Commission, the Small Business Administration, the Equal Employment Opportunity Commission, and the Legal Services Corporation; makes fiscal year 1977 supplemental appropriations totalling $211,515,000 for certain agencies with the major portion of the appropriation to replenish the Small Business Administration's disaster loan fund; and prohibits the use of funds for implementation of the President's pardon program for Vietnam-era draft resisters. H.R. 7556—Public Law 95–86, approved August 2, 1977. (242)

Transportation.—Appropriates $6,196,609,023 for fiscal year 1978 for the Department of Transportation (including the Coast Guard, Federal Highway Administration, National Traffic Safety Administration, Federal Railroad Administration, Urban Mass Transportation Administration, and Materials Transportation Bureau) and for related agencies (including the National Transportation Safety Board, Civil Aeronautics Board, Interstate Commerce Commission, Panama Canal Zone Government, United States Railway Association, Washington Metropolitan Area Transit Authority, and the National Transportation Policy Study Commission. H.R. 7557—Public Law 95–85, approved August 2, 1977. (230)

Treasury-Postal Service.—Appropriates a total of $7,478,254,000 in new budget obligational authority for fiscal year 1978 of which $2,842,714,000 is for the Treasury Department,, $1,695,540,000 is for the Postal

Service, $71,697,000 is for the Executive Office of the President, and $2,868,303,000 is for certain independent agencies; contains reductions in the number of permanent personnel positions in the Treasury Department based on the Presidential memorandum of March 1, 1977, restricting hiring until new personnel ceilings have been established and provides that if the ceilings established are lower than the committee recommendations the funds may not be used for other purposes without approval of the Appropriations Committees; and directs the Secretary of the Treasury to study the practice by Treasury Department agencies relating to the use of official Government vehicles by personnel and report to the committee by January 1, 1978. H.R. 7552—Public Law 95–81, approved July 31, 1977.

ATOMIC ENERGY AND NASA

NASA authorization.—Authorizes $4,049,429,000 for the National Aeronautics and Space Administration for fiscal year 1978 of which $3,041,500,000 is for research and development, $160,940,000 is for the construction of facilities, and $846,989,000 is for research program and management; includes funds to support the following new programs: (1) 5 space shuttle orbiters, (2) development of the shuttle-launched space telescope for research in astronomy, (3) a third generation earth resources survey spacecraft, Landsat-D, to carry an advanced scanning instrument, (4) initiation of a search and rescue satellite system in cooperation with Canada, and (5) initiation of a Jupiter orbiter probe mission; provides continued funding of the Space Shuttle; and includes the second funding increment for a fuel efficient aircraft technology development program designed to decrease fuel consumption of commercial jet transports by 50 percent. H.R. 4088—Public Law 95–76, approved July 30, 1977. (VV)

Nuclear Regulatory Commission authorization.—Authorizes $299,640,000 for fiscal year 1978 for the Nuclear Regulatory Commission; includes $41,480,000 for nuclear reactor regulation, $12,130,000 for standards development, $36,050,000 for inspection and enforcement, $22,090,000 for nuclear materials safety and safeguards, $148,400,000 for regulatory research, $10,180,000 for program technical support, and $29,310,000 for program direction and administration; provides for a reduction in appropriations if (1) the Clinch River Breeder Reactor project is cancelled or indefinitely deferred, (2) the license application is withdrawn or further construction is cancelled for the fuel reprocessing plant at Barnwell, S.C., and (3) plans for commercial fuel reprocessing and plutonium recycle are cancelled; and directs the Administrator of the General Services Administration to study and report to the Environment Committee by June 15, 1977, on the feasibility of consolidating the NRC which is presently housed in nine buildings throughout the Washington metropolitan area. H.R. 3733—Passed House May 17, 1977; Passed Senate amended May 25, 1977. (VV)

BUDGET

Rescissions.—

Helium Purchases.—Rescinds $47.5 million in contract authority for helium purchases under Public Law 87–122 as recommended by the President in his message of September 22, 1976, for which purchase contracts were terminated by the Interior Department in 1973 and the contract authority therefore is no longer needed. H.R. 3347—Public Law 95–10, approved March 10, 1977. (VV)

Second budget rescission. Rescinds $664,050,000 of the $941,278,000 in budget authority recommended by the President in his message of January 17, 1977, as follows: Department of Defenses—Military—$143.6 million in retired pay, $452.6 million in Naval shipbuilding and conversion because of the decision not to procure the fourth nuclear powered aircraft carrier (CVN–71) or convert the nuclear powered cruiser USS Long Beach to the Aegis air defense weapons system, and $145.35 million for Air Force procurement because of termination of the Advanced Logistics System (ALS): $41.5 million in funds appropriated to the President for foreign military credit sales; and $12 million for the Department of State contributions for international peacekeeping activities because of the lower budget levels established by the U.N. General Assembly; and disapproves $277,228,000 as follows: Department of Commerce—$525,000 for salaries and expenses of the U.S. Travel Service and $1.5 million for operations, research and facilities of the National Oceanic and Atmospheric Administration to continue surveys, mission and cost analysis and initiation of design and engineering studies for OCEANLAB; and $6,803,000 for the Department of Transportation for retired pay for the Coast Guard. H.R. 3839—Public Law 95–15, approved March 25, 1977. (VV)

Resolutions:

Third budget resolution, 1977.—Revises the Second Budget Resolution (S. Con. Res. 139) for fiscal year 1977 setting the level of revenues at $347.7 billion, outlays at $417.45 billion, deficit at $69.75 billion, budget authority at $472.9 billion and public debt at $718.4 billion; contains an adequate funding level to permit enactment of up to $13.8 billion in tax legislation stimulus as proposed by the administration and $3.7 billion in increased outlays to produce jobs in areas of high unemployment; sets a level of budget authority at $1.1 billion and outlays at $760 million for EPA construction grants, railroad and highway construction and improvement in recreational facilities; sets the following levels of funding for the relief of individuals and families hard hit by the recession and the harsh winter: (1) 1.8 billion in budget authority and outlays for direct payments to recipients of social security, SSI, and railroad retirement, or any similar stimulus proposals, (2) $508 million in budget authority and $508 million in outlays to extend the Federal supplemental benefits program for the unemployed, and (3) $200 million in budget authority and $200 million in outlays for Federal assistance to low- and moderate-income families to help them meet fuel costs during the winter emergency; includes adequate levels of budget authority for housing to support increased reservations for a total of 360,000 dwelling units for low- and moderate-income families; and makes the following revisions to the totals for budget authority and outlays contained in the Second Budget Resolution to reflect savings which have been achieved and additional costs which have arisen under existing programs (in billions of dollars):

National Defense—BA: $108.8 instead of $112.1, O: $100.1 instead of $100.65;

International Affairs—BA: $7.9 instead of $8.9, O: $6.8 instead of $6.9;

General science, space, and technology—BA: $4.5 instead of $4.6, O: $4.4 instead of $4.5;

Natural resources, environment, and energy—BA: $18.7 instead of $18.2, O: $17.2 instead of $16.2;

Agriculture—BA: $2.3 instead of $2.1, O: $3.0 instead of $2.2;

Commerce and transportation—BA: $17.3 instead of $17.2, O: $16.0 instead of $17.4;

Community and regional development—BA: $14.8 instead of $9.55, O: $10.55 instead of $9.05;

Education, training, employment and social services—BA: $30.4 instead of $24.0, O: $22.7 instead of $22.2;

Health—BA: $40.6 instead of $40.5, O: $39.3 instead of $38.9;

Income Security—BA: $170.9 instead of $155.9, O: $141.3 instead of $137.2;

Veterans benefits and services—BA: $18.9 instead of $20.3, O: $18.1 instead of $19.5;

Law enforcement and justice—BA: $3.5, O: $3.6;

General Government—BA: $3.5 instead of $3.6, O: $3.5;

Revenue sharing and general purpose fiscal assistance—BA: $7.6, O: $7.7;

Interest—BA: $38 instead of $39.6, O: 38 instead of $39.6;

Allowances—BA: $0.8 instead of $0.7, O: $0.8;

Undistributed offsetting receipts—BA: —$15.6 instead of —$16.8, O: —$15.6 instead of —$16.8. S. Con. Res. 10—Action complete March 3, 1977. (38)

First budget resolution, 1978.—Sets the level for total budget outlays for fiscal year 1978 at $460.95 billion, estimated revenues at $396.3 billion, new budget authority at $503.45 billion, and the estimated deficit at $64.65 billion as compared to the President's estimates of $462.6 billion in budget outlays, $404.7 billion in revenues, $506.2 billion in new budget authority, and a proposed deficit of $57.9 billion; sets the appropriate level of the public debt at $784.9 billion and the amount by which the statutory amount may be increased at $83.6 billion; for estimated revenues (1) assumes the level of fiscal stimulus in fiscal 1978 provided in the Tax Reduction and Simplification Act as agreed to by House and Senate conferees; (2) accepts a $65 million allowance for miscellaneous tax and tariff legislation; (3) considers the entire cost of the earned income credit as a reduction of revenue; and (4) postpones the treatment of tax credits in excess of recipients tax liabilities until development of the second budget resolution; recommends outlays for budget programs by function for fiscal year 1978 as compared with the President's proposed budget outlays as follows:

National Defense: $110.0 billion as compared to $112.8 billion;

International Affairs (conduct of foreign affairs, foreign information and exchange activities, the Peace Corps, Food for Peace, and non-military foreign assistance): $7.3 billion as compared to $7.2 billion;

General Science, Space and Technology: $4.7 billion, which is the same estimate submitted by the President;

Natural Resources, Environment, and Energy: $20.0 billion as compared to $20.9 billion;

Agriculture: $4.35 billion as compared to $4.4 billion;

Commerce and Transportation: $19.4 billion as compared to $19.9 billion;

Community and Regional Development: $10.8 billion as compared to $9.9 billion;

Education, Manpower, and Social Services: $27.2 billion as compared to $27.0 billion;

Health: $44.3 billion as compared to $44.6 billion;

Income Security (social security and unemployment insurance, retirement systems for Federal and railroad employees and assistance programs for the needy): $146.7 billion as compared to $148.7 billion;

Veterans Benefits and Services: $20.2 billion as compared to 18.8 billion;
lion as compared to $18.8 billion;

Law Enforcement and Justice: $3.85 billion as compared to $3.8 billion;

General Government: $3.85 billion as compared to $4.0 billion;

Revenue Sharing and General Purpose Fiscal Assistance: $9.7 billion, which is the same estimate submitted by the President;

Interest: $43.0 billion as compared to $40.9 billion;

Allowances (includes Federal pay increases for civilian agencies and other expenditures which cannot be reasonably assigned to other functions): $1.9 billion as compared to $1.2 billion; and

Undistributed Offsetting Receipts (includes receipts from rents and royalties on leases on the Outer Continental Shelf and other deductions from outlays which cannot be reasonably assigned to other functions):

$16.3 billion in undisturbed offsetting receipts in the Congressional budget as compared to $16.0 billion in the President's budget. S. Con. Res. 19—Action completed by both Houses May 17, 1977. (137,142)

CONGRESS

Capitol Grounds extension—Amends the act of July 31, 1946, as amended, to include certain specified areas and portions of streets within the U.S. Capitol Grounds in order to strengthen Capitol Police jurisdiction over traffic and other matters for security purposes. S. 1859—Passed Senate July 20, 1977. (VV)

Congressional Campaign Committee employees retirement credit.—Amends title V, U.S.C., to provide that a congressional employee may credit not to exceed 10 years of service as an employee of the Democratic Senatorial Campaign Committee, the Republican Senatorial Campaign Committee, the Democratic National Congressional Committee or the Republican National Congressional Campaign Committee for Civil Service Retirement purposes provided the required deposits for such service are made to the fund; and makes the provisions of this act, applicable to an employee who retires on or after the date of enactment. S. 992—Passed Senate March 5, 1977. (VV)

Ernest Gruening statue.—Accepts, in the name of the United States, the statue of the late Senator Ernest Gruening, presented by the State of Alaska, for the National Statuary Hall collection; expresses the appreciation of the Congress for the contribution; and provides for the temporary placement of the statue in the rotunda of the Capitol with appropriate ceremonies to mark the occasion. S. Con. Res. 25—Senate agreed to July 15, 1977. (VV)

Joint Committee on Atomic Energy Abolishment.—Abolishes the Joint Committee on Atomic Energy and provides for the disposition of its staff and the transfer of its statutory functions and authority to other congressional committees having jurisdiction over the development, utilization or application of atomic energy. S. 1153—Public Law 95– , approved , 1977. (VV)

Provides for transitional accommodations for the Joint Committee on Atomic Energy. S. Res. 252—Senate agreed to August 5, 1977. (VV)

Joint Committee on Congressional Operations Abolishment.—Abolishes the Joint Committee on Congressional Operations effective September 30, 1977, and transfers its duties and responsibilities to the Senate Committee on Rules and Administration. S. 1608—Passed Senate July 12, 1977. (VV)

Joint Economic Committee Study.—Directs the Joint Economic Committee, or any of its subcommittees, to investigate past and prospective changes in the United States and world economies and their impact on the economies of the United States and other nations and to report to Congress their recommendations for meeting the economic policy requirements of the United States; authorizes the Committee to hire expert professional staff and supporting assistants as well as individual consultants and organizations and to sit and act during sessions of the present Congress whether or not either House is recessed or adjourned; and authorizes therefor $900,000 for the period July 1, 1977, through December 31, 1978, of which not to exceed $250,000 may be expended prior to December 31, 1977. H. Con. Res. 248—Action completed by both Houses July 18, 1977. (VV)

State taxation of Members of Congress.—Adds a new section 113 to title 4, U.S.C., effective with respect to all taxable years, which provides that no State in which a Member of Congress maintains a place of residence to attend sessions of Congress may for State income tax purposes treat the Member as a resident or domiciliary or treat his Congressional salary as income for services performed within or from sources within that State unless the Member represents the State. H.R. 6893—Public Law 95–67, approved July 19, 1977. (VV)

CONSUMER AFFAIRS

Debt collection practices.—Amends the Consumer Credit Protection Act to add a new title entitled the "Fair Debt Collection Practices Act" to protect consumers from a host of unfair, harassing, and deceptive debt collection practices; prohibits a debt collector from: (1) contacting third parties other than to obtain location information except the consumers attorney, a credit reporting agency, the creditor, the creator's or debt collector's attorney, or any other person to the extent necessary to effectuate a post-judgment judicial remedy; (2) engaging in any conduct which harasses, oppresses or abuses any person; (3) using any false, deceptive or misleading representations; (4) using any unfair or unconscionable means; (5) attempting to collect a disputed debt until the consumer receives verification of the debt; and (6) applying payments to disputed debt; provides that if a consumer notifies a debt collector in writing that he refuses to pay a debt or wishes the debt collector to cease further contacts the debt collector must cease further contacts, the debt collector must so cease except to notify the consumer of the debt collector's or creditor's further actions; requires that actions on real property be brought in the judicial district in which the property is located and actions on personal suits be brought either where the contract was signed or where consumer resided; provides that a debt collector who violates the act is liable for actual damages plus costs and reasonable attorney's fees; permits the court to award up to $1,000 in individual actions, and up to $500,000 or 1 percent of the debt collections net worth, whichever is less in class actions; provides the following two defenses; (1) good faith reliance on an FTC advisory opinion and (2) bona fide error notwithstanding procedures to avoid the error; provides that a court may award reasonable attorney's fees to a defendant if it finds that the consumer brought a suit in bad faith for harassment; sets a 1-year statute of limitation on bringing actions; places enforcement of the act with the FTC and the Federal bank regulatory agencies; prohibits the promulgation of any additional rules or regulations pertaining to debt collectors; requires the FTC to report annually to the Congress on the Act's effectiveness and administrative enforcement; annuls state laws only if inconsistent to Federal; allows the FTC to exempt any collection practices within any State if they are subject to substantially similar requirements; and provides that the act shall take effect within 6 months of enactment. H.R. 5294—Passed House April 4, 1977; Passed Senate amended August 5, 1977. (VV)

CRIME-JUDICIARY

Daughter of the Confederacy patent renewal.—Extends for 14 years design patent number 29,611 which is the insignia of the United Daughters of the Confederacy. S. 810—Passed Senate May 13, 1977. (VV)

Drug Enforcement Administration.—Amends the Comprehensive Drug Prevention and Control Act of 1970 to extend for 2 years through fiscal 1979, the Drug Enforcement Administration at an annual authorization of $182 million plus such additional amounts as necessary for salary increases and other employee benefits authorized by law. S. 1232—Passed Senate June 6, 1977. (VV)

Federal Rules of Criminal Procedure.—Approves with modifications certain amendments to the Federal Rules of Criminal Procedures proposed by the Supreme Court on April 26, 1976, and disapproves other such amendments;

Changes rule 6(e), which deals with the secrecy of grand jury proceedings, to allow disclosure information of grand jury proceedings to personnel deemed necessary by an attorney for the government to assist in the performance of his duty to enforce Federal criminal law; changes rule 23(b), which deals with cases tried by juries or less than 12 persons, to allow the parties to stipulate that a valid verdict may be returned by a jury should the court find it necessary to excuse one or more jurors after the trial commences, and changes rule 23(c), which deals with cases tried without a jury, to require that a request for a special finding be made prior to the general finding and to allow findings to be made orally; disapproves the Supreme Court's proposed changes to rule 24 which deals with the number of peremptory challenges to prospective jurors; changes rule 41(c), which deals with the issuance of search warrants, to provide for a telephone search warrant procedure; amends the present removal to Federal Court statute to minimize the disruption and unnecessary delay in State criminal procedures that can result from delatory petitions for removal; and specifies the effective dates of the proposed modifications. H.R. 5864—Public Law 95–78, approved July 30, 1977. (VV)

Jefferson F. Davis citizenship.—Restores posthumously full rights of citizenship to Jefferson F. Davis effective December 5, 1968. S.J. Res. 16—Passed Senate April 27, 1977. (VV)

Juvenile justice.—Strengthens and extends for 3 years, the program established by the Juvenile Justice and Delinquency Prevention Act of 1974 with authorization levels of $150 million, $175 million, and $200 million for fiscal years 1978, 1979, and 1980, respectively; extends the definition of "juvenile delinquency program" to include programs for all youths who would benefit from services designed to reduce delinquent conduct; reaffirms Congressional intent that the provisions of the act are to be administered through the Office of Juvenile Justice and Delinquency Prevention; changes the title of the head of the Office from Assistant Administrator to Associate Administrator and upgrades the position to the Executive Schedule, Level 5, to emphasize the importance of the position; affirms the authority of the Associate Administrator of the Office to administer LEAA juvenile justice funds subject to delegation and direction by the Administrator of LEAA; retains the Office's National Institute for Juvenile Justice and Delinquency Prevention and strengthens the scope of its activities particularly in the area of training;

Gives increased emphasis and recognition to the proper roles of the National Advisory Committee for Juvenile Justice and Delinquency Prevention and the Coordinating Council on Juvenile Justice and Delinquency Prevention; provides for the addition of the Commissioner of the Office of Education and the Director of Action to the statutory membership of the Council, and states that the Director of the Special Action Office for Drug Abuse Prevention shall be replaced on the Council by the Director of the Office of Drug Abuse Policy; expands the scope of representation on the advisory committee and requires that future appointments to the committee include at least three youth members who have been under the jurisdiction of the juvenile justice system; provides for more significant input at all levels from persons who, by virtue of their training or experience, have special knowledge concerning the prevention and treatment of juvenile delinquency and the administration of juvenile justice; makes changes to the formula grant program intended to fine tune this modified grant program, to clarify ambiguous language in the 1974 act, and to assist States to more effectively expand formula grant funds according to priority areas identified in the States' juvenile justice plan; requires that,

beginning in fiscal year 1979, not more than 7.5 percent of a State's total formula grant allotment may be used to cover the costs of planning, administration, or any pre-award activities, and that any grant funds used for these purposes must be matched on a dollar-for-dollar basis from State or local funds; provides that formula grant program funds will cover 100 percent of the approved cost of any program or activity effective October 1, 1978; extends eligibility for State formula grant pass-through funds to local private agencies which have applied to the appropriate units of local governments for funding and have been denied; provides one additional year for States to comply with the deinstitutionalization requirements of the program; requires that all facilities for juveniles be monitored in order to determine whether they are properly classified as juvenile detention and correctional facilities or as other types of facilities where status offenders may be placed; provides that participating States shall provide the Associate Administrator with a review of the extent of compliance with deinstitutionalization requirements; provides that States in compliance with the deinstitutionalization requirement shall have preference for reallocated formula grant funds;

Provides that 25 percent, rather than 25-50 percent, of Part B funds be allocated for the special emphasis program, and expands its scope to include activities to help prevent school violence and vandalism, to promote youth advocacy, and to assist State legislatures to develop legislation to achieve State compliance with the act; increases the minimum private agency share of special emphasis funding from 20 to 30 percent;

Prohibits the use of formula grant funds to match other LEAA funds, but allows the formula grant funds to be used as match for other Federal juvenile delinquency program grants; provides that the Administrator's authority to require a matching contribution extends to grants for the concentration of Federal efforts and programs of the National Institute for Juvenile Justice and Delinquency Prevention, but not to grants for special emphasis programs; requires that program records be kept confidential; authorizes funding at the level of $25 million for fiscal years 1978, 1979, and 1980 for the extension of the Runaway Youth Act to enable the Secretary of HEW to increase assistance to local groups which operate temporary shelter care programs in areas where runaways tend to congregate; and contains other provisions. H.R. 6111—Passed House May 19, 1977; Passed Senate amended June 21, 1977; Senate agreed to conference report July 28, 1977. (VV)

Mississippi court terms.—Amends section 104(a)(1), title 28, U.S.C., to provide for holding terms of the U.S. District Court for the Eastern Division of the Northern District of Mississippi at Aberdeen, Ackerman, and Corinth. S. 662—Passed Senate April 7, 1977. (VV)

North Dakota Judicial District.—Amends title 28, U.S.C., to realign the judicial districts of North Dakota by transferring Bottineau, McHenry, and Pierce Counties from the Northeastern Division to the Northwestern Division and transferring Sheridan and Wells Counties from the Southeastern Division to the Northwestern Division in order to reduce the average distance which litigants, attorneys, and jurors in these counties must travel to the nearest place of holding court by approximately 100 miles S. 195—Passed Senate May 24, 1977. (VV)

Omnibus judgeships.—Provides for the appointment of 110 additional permanent district court judges in 65 specified judicial districts; creates three temporary district court judgeships, for a minimum of 5 years, in the Eastern District of Kentucky, Southern District of West Virginia, and Southern District of Florida; divides the fifth circuit into a new fifth circuit consisting of Alabama, Florida, Georgia, and Mississippi which would have 14 judges, and a new eleventh circuit consisting of Louisiana and Texas which would have a total bench of 12 judges; creates a total of 35 new circuit court judgeships distributed as follows: one new judgeship in the first circuit; two in the second circuit; one in the third circuit; three in the fourth circuit; five for the revised fifth circuit; two for the sixth circuit; one for the seventh circuit; one for the eighth circuit; ten for the ninth circuit; one for the tenth circuit; and six for the new eleventh circuit; contains a "report back" provision which requires the Judicial Council of the Ninth Circuit Court to make recommendations for a solution to the unique problems of that circuit within one year of the date on which the tenth new judge is appointed; authorizes the Administrative Office of the United States Courts to upgrade and reclassify eight employee positions; and amends existing law to require that actions brought against rail or motor carriers on claims for damage or delay to shipments be subject to a minimum jurisdictional amount of $10,000 for each bill in lading, in order to prevent abuse of the Federal judicial process by persons bringing such actions simply as a means of tolling the statute of limitations while settlement negotiations are undertaken. S. 11—Passed May 24, 1977. (VV)

U.S. magistrates.—Enlarges and amends the current jurisdictional provisions for U.S. magistrates in order to improve access to the Federal courts for the less advantaged;

Allows magistrates to finally determine civil cases, upon the consent of the parties involved; authorizes a magistrate to "conduct any or all proceedings in any jury or nonjury civil matter"; specifies appeal and review procedures available to an aggrieved party in a civil matter decided by a magistrate;

Qualifies the existing discretion of district courts to select and appoint magistrates by: directing the Judicial Conference to promulgate standards for qualification and selection procedures of magistrates; requiring that all subsequent magistrate appointments must conform to these standards; providing that the qualifications of full-time magistrate appointees must also be approved by the judicial council of the circuit before the appointment takes effect; and requiring that all magistrates must have been admitted to practice of law for at least five years; extends statutory prohibitions on outside activities to all full-time and part-time magistrates who exercise the new case-dispositive jurisdiction provided for in the bill; extends the existing provisions for payment of certain litigation expenses for indigents in proceedings before a district judge to proceedings before a magistrate;

Expands jurisdiction of magistrates to try minor criminal offenses to include all misdemeanors; eliminates the requirement for defendant consent to a magistrate conducting the trial in a petty offense case; allows the conduct of jury trials in misdemeanor cases before a magistrate where the court has specifically designated the magistrate to proceed in that manner; permits magistrates to sentence young adults and youthful offenders if the commitment imposed does not exceed the maximum term for an adult convicted of the same offense; provides that the procedural requirements of the Juvenile Delinquency Act do not apply to single petty offense cases in which terms of commitment or imprisonment are not usually imposed; and contains other provisions. S. 1613—Passed Senate July 22, 1977. (VV)

DEFENSE

Coast Guard authorization.—Authorizes $1,262,521,000 for fiscal year 1978 for the Coast Guard for the procurement of vessels and aircraft, construction and improvement of shore and offshore facilities, alteration and removal of obstructive bridges, aids to navigation, pollution abatement, administrative expenses, and operating expenses; authorizes a year-end strength for active duty personnel of 39,145; authorizes an average military student load of 5,506; includes funds for the recent Presidential program of boarding and inspecting oil tankers, reactivation of Coast Guard cutters to be used as back-up vessels in the enforcement of the 200-mile Fishery Conservation Zone, enforcement of the Fishery Conservation and Management Act of 1976, a search and rescue mission capability at the Portage, Mich., Coast Guard station, two additional icebreaking tugs and one large icebreaker, procurement of 2 short-range recovery helicopters for the search and rescue station at Cordova, Alaska, the procurement of radar and other equipment for a continuation of various vessel traffic systems, and the study of oil spill containment in high seas or fast rivers; restores funds which the Coast Guard expended as a result of the unanticipated winter storm damage; adds a new section which permanently authorizes the Coast Guard to continue its present accounting procedure of merging prior year "Operating Expenses" and "Reserve Training" appropriations with current year appropriations for the same purpose; authorizes the Coast Guard to contribute funds to the North Marin County Water District in California for the construction of a sewage treatment plant; authorizes the Coast Guard to accept money from the city of Baltimore, Maryland, for use in replacing Coast Guard facilities which will be removed by the city incident to a road improvement project; reextends an exemption from Coast Guard inspection for fishing tender and cannery tender vessels in the States of Alaska, Oregon, and Washington and authorizes the commandant of the Coast Guard to assist HEW in providing medical emergency helicopter transportation services to civilians. H.R. 6823—Public Law 95-61, approved July 1, 1977. (VV)

Defense production extension.—Extends for two years, through fiscal 1979, the titles of the Defense Production Act of 1950, as amended, which contain the sole authority for a number of programs designed to maintain the national defense production base in peacetime, prepare for mobilization, provide a pool of trained manpower for war production management, provide uniform cost accounting standards for negotiated defense contracts, provide for the examination of national policy with regard to material supplies and shortages, and continue the Joint Committee on Defense Production. S. 853—Public Law 95-37, approved June 1, 1977. (VV)

Deputy and Under Secretaries of Defense.—Eliminates one of the two positions of Deputy Secretary of Defense and establishes the position of Under Secretary of Defense for Policy; and changes the title of the Director of Defense Research and Engineering to that of Under Secretary of Defense for Research and Engineering. S. 1372—Passed Senate June 9, 1977. (VV)

Military construction authorization.—Authorizes $3,724,718,000 for construction and other related authority for the military departments, and the Office of the Secretary of Defense within and outside the United States; contains authority for the construction of new projects which will create an estimated 50,000 jobs in the construction industry and to operate and maintain the current inventory of military family housing; contains funds for upgrading the chemical weapons storage sites; contains nearly $200 million for selected projects designed to conserve energy and to control pollution at military installations; encourages the utilization of solar energy where practical and economically feasible for projects authorized by this act; includes $70 million for a test program which will meter energy consumed in individual

military family housing units in order to establish, once feasibility is demonstrated and after Congressional review, reasonable energy consumption ceilings and to assess occupants for any consumption in excess of the established ceiling; specifies the guidelines which should be included in the program; includes $7.3 million for construction of support facilities for personnel stationed at Diego Garcia; increases from $400,000 to $500,000 DOD authority for new minor construction projects without specific authorization; establishes permanent procedures for accomplishing base realignments at military installations employing more than 500 civilian personnel; makes these procedures applicable to relocating functions and civilian personnel positions if the authorized level of such personnel is to be reduced by 1,000 or 50 percent of the authorized strength, whichever is smaller, except if the reductions result from work load adjustments or other similar causes; requires that DOD notify Congress of any proposed action, comply with the provisions of the National Environmental Policy Act of 1969, submit a detailed justification for any final decision, and defer implementation for 60 days following notification of the final decision; authorizes the Secretary to enter into contracts for periods not to exceed 10 years for the purchase of fuel derived from waste products; provides that commissary surcharge funds may be used to provide new commissaries and renovate existing commissaries anywhere in the world; authorizes $2 million for the construction of visitors facilities for the U.S.S. Arizona memorial in Hawaii; and contains other provisions. S. 1474—Public Law 95–82, approved August 1, 1977. (VV)

Military enlistment and reenlistment bonuses.—Amends chapter 5, title 37, U.S.C. to extend for 15 months, from June 30, 1977, to September 30, 1978, present law authorizing the armed services to pay enlistment and reenlistment bonuses to selected enlisted personnel who possess a critical skill or to those who enlist for service in a critical skill including the combat arms; and adds a provision whereby a member would forfeit his bonus if he becomes technically unqualified in the skill for which the bonus was paid unless it is the result of an injury, illness, or other impairment which is not a result of his own misconduct. H.R. 583—Public Law 95–57, approved June 29, 1977. (VV)

Military procurement authorization.—Authorizes a total of $36.1 billion for fiscal year 1978, for procurement of aircraft, missiles, naval vessels, tracked combat vehicles, torpedoes, and other weapons, and research, development test, and evaluation for the Armed Forces; continues funding of submarine-based missiles, land-based ICBM's and manned bombers to maintain the strategic balance with the Soviet Union; increases funds for Naval shipbuilding including several new initiatives; contains funds to improve the deterrent and fighting capabilities of NATO without increasing the commitment of American ground forces; establishes a Naval Shipbuilding Commission to study and report to the President and Congress on current naval policies and procedure together with its recommendations on a more efficient and cost-saving means of procuring vessels; prohibits the use of funds after fiscal 1980 for the development of procurement of any main battle tank, mechanized infantry combat vehicle, armored personnel carrier, armored self-propelled artillery vehicle, or armored self-propelled air defense artillery vehicle which does not possess collective system protection for all occupants against chemical and radiological agents; sets the end-strength for active duty personnel at 2,085,100, the average strength of the Selected Reserve at 868,900, the end strength of civilian personnel at 1,018,600 with authority for the Secretary to exceed the limit of 1¼ percent, and the average military student load at 248,894; sets at $313.20 the monthly pay for a cadet or midshipman; directs the Secretary to expand the job classifications to which female members of the Armed Services may be assigned; authorizes a test educational bonus program for the Selected Reserve and requires quarterly reports to Congress; requires the Secretary to maintain at least one ROTC unit in each State; includes $95,250,000 for programs of the Defense Civil Preparedness Agency; provides that females who become members of the Armed Forces will incur the same 6-year statutory obligation as males; eliminates the requirements for annual inspections of National Guard units and for quadrennial physical examinations for members of the Fleet Reserve and the Fleet Marine Corps Reserve; extends the authority to provide financial assistance of $100 a month to officer candidates under the Marine Corps Platoon Leaders Class program; extends to October 1, 1979, the President's authority to transfer to Israel by sale, credit sale, or guaranty aircraft and equipment to counteract military assistance provided to other countries in the Middle East, and authorizes the Secretary to restock Armed Forces inventories with equivalent aircraft and equipment; requires the Secretary to submit to the Armed Services Committees by October 1 of each year a full accounting of all experiments and studies conducted by DOD in the preceding 12-month period which involved the use of human subjects for testing chemical or biological agents and requires the Secretary to notify the Committees 30 days after final approval and 30 days prior to initiation of plans to conduct such tests; prohibits such experiments involving civilians unless local officials are notified in advance and a period of 30 days has expired; prohibits DOD from increasing the percentage of funds allocated to private research and development contracts pending submission of a study to Congress or March 15, 1978; prohibits the use of funds for advertising the Special Discharge Review Program for certain Vietnam-era individuals; reduces the authorized levels of generals and admirals to 1,073 over a 3-year period beginning fiscal 1978 and provides for a like reduction in the number of civilian personnel grades GS 13–18; requires the Secretary to submit a report with the fiscal 1979 authorization request on the required number of general officers as well as any justification for deferring the proposed reductions; provides for congressional consideration of modifications in U.S. Strategic Arms Programs which the President may recommend to facilitate negotiation or agreement in the Strategic Arms Limitation Talks; requires the Secretary to report to Congress on the proposed sale or transfer of defense articles from active forces' inventories or current production valued at $25 million or more; and provides that retiring military and civilian personnel (of Grade GS–13 or above) in the procurement field may submit written suggestions for methods to improve procurement policy H.R. 5970—Public Law 95–79, approved July 30, 1977. (144)

DISASTER ASSISTANCE

Disaster relief programs.—Amends the Disaster Relief Act Amendments of 1974 to extend the authorizations for the Federal disaster assistance programs of the Federal Disaster Assistance Administration, which expire on June 30, 1977, through fiscal year 1980. H.R. 6197—Public Law 95–51, approved June 20, 1977. (VV)

Drought emergency authority.—Provides temporary authorities to the Secretary of the Interior to facilitate emergency actions to mitigate the impacts of the 1976–77 drought conditions affecting irrigated lands in the western States; authorizes the Secretary, acting through the Bureau of Reclamation and the Bureau of Indian Affairs, to: (1) study available means to augment, utilize, or conserve Federal reclamation and Indian irrigation projects water supplies and to undertake construction (which must be completed by November 30, 1977), management, and conservation activities to mitigate drought damage, (2) acquire water supplies by purchase from willing sellers and redistribute the water to users based upon priorities he determines, and (3) undertake evaluations and reconnaissance studies of potential facilities to mitigate the effects of a recurrence of a drought emergency and make recommendations to the President and Congress; provides that payment for water acquired from willing sellers be at negotiated prices; directs the Secretary to determine the priority of need in allocating the acquired or developed water; authorizes the Secretary to defer without penalty, the 1977 installment charge payments, including operation and maintenance costs, owed to the U.S. on Federal reclamation projects, with the costs to be added to the end of the repayment period which may be extended if necessary; requires that this program be coordinated, to the extent practicable, with emergency and disaster relief operations conducted by other Federal agencies under existing provisions of law; requires the Secretary to report to Congress by March 1, 1978, on all expenditures made under this act; authorizes the Secretary to make interest-free five year loans to individual irrigators for construction, management and conservation activities or acquisition of water; authorizes $100 million to carry out the water purchase and reallocation (water bank) program of which 15 percent shall be available to carry out other programs authorized by this act; and provides that up to 15 percent of fiscal 1977 funds available to the Secretary for the Emergency Fund Act may be used for non-Federally financed irrigation projects, 5 percent for State Government drought emergency programs, and $10 million for the purchase of water. S. 925—Public Law 95–18, approved April 7, 1977. (54)

Amends Public Law 95–18 to remove constraints on the allocation of funds for drought assistance and permit the use of funds already appropriated for the programs authorized in a more effective and timely manner, and permits the Secretary to waive all or any portion of the repayment of loans made if the recipient agrees to undertake a program of water conservation. S. 1935—Public Law 95– , approved 1977. (VV)

Drought emergency relief.—Authorizes $225 million in grant and loan authority to the Economic Development Administration for assistance to States, Indian tribes or units of local government with a population of 10,000 or more for drought-related projects; includes among the permissible activities for which grants may be made the improvement or expansion of existing water supply facilities, construction of new facilities, well drilling or impoundment where appropriate, transportation of water by pipeline, and purchase of water if it is the most economic method of providing the needed supply; gives the Secretary of Commerce authority to designate areas eligible for assistance; limits grants to 50 percent of the cost of any project and provides that loans shall be at 5 percent interest for not to exceed 40 years and at terms determined by the Secretary; directs the Secretary to consider the relative needs of the applicants giving priority to communities facing the most severe problems; permits obligation of funds for drought impacted projects conducted by eligible applicants during fiscal year 1977 if they are compatible with the purposes of the act; permits funds to be obligated to December 31, 1977, and requires that projects be completed by April 30, 1978; and extends the time allowed for convening the White House Conference on Balanced Growth and Economic Development from 12 to 18 months after the date of enactment of Public Law 94–487. S. 1279—Public Law 95–31, approved May 23, 1977. (VV).

DISTRICT OF COLUMBIA

D.C. Armory Board.—Amends the Home Rule Act to allow the Armory Board of the District of Columbia, which manages Robert F. Kennedy Stadium and the D.C. Armory, to operate under a fiscal year coinciding with the calendar year, rather than the October 1–September 30 fiscal year required of all city government agencies in order to accommodate the special seasonal nature of the revenues earned by the concerns, and changes the filing date for the Board's annual reports from January to July. S. 1062—Passed Senate May 26, 1977. (VV)

D.C. bonds.—Adds a new subsection to the section of the Home Rule Act authorizing the issuance of revenue bonds to provide that payments made pursuant to acts authorizing such bonds may be made without further authorization or approval. S. 1063—Passed Senate May 26, 1977. (VV)

D.C. borrowing authority.—Amends the Home Rule Act to extend until October 1, 1979, the District's interim authority to borrow from the Treasury of the United States to finance the District's capital improvements projects; changes from November 1 to February 1 of each fiscal year the date by which the Mayor must submit to the Council of the District a complete financial statement and report for the preceding fiscal year; and makes procedural and technical changes to the act respecting qualifications for appointment to the Commission on Judicial Disabilities and Tenure, and to the Judicial Nomination Commission. S. 1061—Passed Senate June 13, 1977. (VV)

D.C. reciprocal tax collection.—Authorizes any State, territory or possession to bring suit in the Superior Court of the District of Columbia to recover any tax lawfully due and owing to it, if a reciprocal right is accorded to the District by the State, territory or possession. S. 1103—Passed Senate May 26, 1977. (VV)

Federal water, and sewer payment.—Allows the District of Columbia to collect the amount of money owing from the Federal Government for water and sewer services in its next fiscal year's budget. S. 1322—Passed Senate June 7, 1977. (VV)

George Washington University.—Restates completely the charter of The George Washington University, substituting a more adequate, flexible and modern document for the cumbersome and antiquated original charter granted in 1921; changes the name from George Washington University to The George Washington University; cites the schools purposes and states explicitly that a policy of nondiscrimination must govern its pursuit of those objectives; enumerates the specific powers of the University to control and direct its operations; provides for the creation of a board of trustees and its executive committee; vests in the board the powers to control and direct the operation of the university, in addition to authority over school personnel and the bylaws; empowers the trustees to merge the university with other nonprofit organizations; and ensures the continuity of the school's corporate status. S. 1060—Passed Senate May 26, 1977. (VV)

ECONOMY-FINANCE

Export Administration—Arab boycott.—In title I, authorizes $14,033,000 for the extension to the Export Administration Act of 1969, through fiscal year 1979; requires a review of the export control lists, rules, and regulations issued under the Act, to be submitted not later than December 1, 1978; authorizes the Secretary of Defense to recommend his approval of an export license application whenever he determines that the export would be detrimental to U.S. national security; exempts agricultural commodities purchased for export and stored in the United States from subsequent export restrictions if such storage will not have a serious domestic inflationary impact; requires a study of the national security impact of the export of technical information to restricted countries within 6 months of enactment and adds other reporting and notification requirements of the act;

Excludes petroleum products refined in the U.S. foreign trade zones or in Guam from any quantitative limitations imposed for short supply purposes unless the Secretary of Commerce limits such exports; prohibits export of Alaskan oil except (1) for exchanges of crude oil in similar quantity, for convenience or increased efficiency in transportation, with governments of adjacent foreign states, or for oil that is temporarily exported for increased efficiency of transportation across part of an adjacent foreign state and reenters the United States, or (2) where the President publishes and submits to Congress 60 days prior to export an express finding that the export of such oil is in the national interest and in accord with the provisions of the Export Administration Act of 1969; allows a 60-legislative-day period for any such action to be vetoed by either House of Congress prior to any export; provides that any contract for the export of such oil may be terminated any time that U.S. petroleum suppliers are seriously threatened;

Reaffirms Congressional intent that the secrecy provisions of the act do not abridge the inherent right of Congress to acquire information obtained under the act; directs the Secretary of Commerce to undertake a review or unilateral and multilateral export controls and to submit the results to Congress by December 31, 1978; requires that monitoring of exports for short supply purposes commence at a time adequate to insure that sufficient data will be available to permit achievement of the act; increases the penalties applicable to violations of the Export Administration Act and otherwise improves the administration of U.S. export controls;

In title II, seeks to prevent most forms of compliance with foreign boycotts; prohibits refusal to do business with blacklisted firms and boycotted friendly countries pursuant to foreign boycott demands; prohibits discrimination against any U.S. person on the grounds of race, religion, sex, or national origin in order to comply with a foreign boycott; prohibits U.S. persons from furnishing information about any person's race, religion, sex or national origin for foreign boycott enforcement purposes; provides for public disclosure of requests to comply with foreign boycotts; requires domestic U.S. persons who receive such requests to disclose publicly whether they are complying with such requests; provides that these provisions apply to all domestic concerns and persons, including intermediaries in the export process;

Exempts from the antiboycott provisions transactions in which a unilateral and specific selection is made by a boycotting country, or national or resident thereof; allows United States persons residing in a foreign country to comply with the laws of that country with respect to his activities exclusively therein; permits a negative certification with respect to carriers or route of shipment in order to comply with requirements protecting against war risks and confiscation; allows compliance with immigration or visa requirements with respect to the individual and members of his family; permits U.S. persons to comply with requests for information pertaining to securing or maintaining employment in a boycotting country; preempts all State foreign boycott laws; provides a 2-year grace period for agreements in effect on or before March 1, 1977, with three additional 1-year extensions available in cases where good fatih efforts are being made; and generally strengthens U.S. law against foreign boycotts to reduce their domestic impact. H.R. 5840—Public Law 95–52, approved June 22, 1977. (140)

Export-Import Bank.—Extend from June 30, 1978, to September 30, 1978, the operating authority of the Export-Import Bank in order to conform to the new fiscal year. H.R. 6415—Passed House May 3, 1977; Passed Senate amended June 29, 1977; In conference. (VV)

Financial institutions regulatory agencies.—Provides financial institution regulatory agencies with greater and more specific authority to stop unsafe or unsound practices or violations of law; prohibits interlocking management and director relationships between financial institutions that are not commonly owned nor affiliated in order to foster competition among these institutions in financial markets; allows the Federal Reserve to exempt by rule interlocking, management or director relationships if the effect would be procompetitive; requires the prior approval of the Federal Deposit Insurance Corporation for a State-insured non-member bank to establish a foreign branch or invest in a foreign bank; contains language to clarify the authority of the bank regulatory agencies to examine bank contractors; Provides that it is a crime to forcibly assault or intimidate a financial institution regulatory official; proscribes revolving door employment practices by the heads of financial institutions regulatory agencies; and provides increases in salaries for officials of these regulatory agencies. S. 71—Passed Senate August 5, 1977. (VV)

Foreign corporate bribes and domestic disclosure.—Amends the Securities Exchange Act of 1934 to require companies subject to the jurisdiction of the Securities and Exchange Commission to maintain accurate records, prohibit certain bribes, and expand and improve disclosure of ownership of the securities of U.S. companies;

In title I, requires companies subject to SEC jurisdiction to maintain strict acounting standards and management control over their assets: prohibits the falsification of accounting records and the deceit of accountants auditing the books and records of such companies; makes it a crime for U.S. companies to bribe a foreign government official for the specified corrupt purposes; imposes a maximum fine $500,000 on companies and $10,000 and 5 years imprisonment on individuals for violation of the criminal prohibitions;

In title II, requires those persons who already file reports with the SEC when they own more than 5 percent of the shares in a U.S. company to identify their residence, citizenship, and the nature of their beneficial ownership; provides for the development of a comprehensive system in publicly held companies; requires the Commission to consolidate the various beneficial ownership reporting requirements of the Securities Exchange Act into a centralized nonduplicative system for the collection of such information, and to tabulate and make it available to regulators and the public; requires the Commission, within 30 months of enactment, to report to Congress with respect to the effectiveness of the ownership reporting requirements and the desirability and feasibility of reducing or otherwise modifying the 5-percent disclosure threshold giving appropriate consideration to specified regulatory and public policy; and provides the Commission with authority to assure that the jurisdictional effectiveness of section 15(d) of the Securities Exchange Act is not inappropriately limited because of the use of nominee and street name registration of securities. S. 305—Passed Senate May 5, 1977. (VV)

Interest rates (regulation Q)—Federal credit unions.—Extends from March 1, 1977, until December 15, 1977, existing authority (commonly known as Regulation Q) under the Interest Rate Control Act by which Federal financial regulatory agencies set interest rate ceilings on deposits in financial institu-

tions under their respective jurisdictions; extends until August 31, 1977, the Treasury Department's authority to borrow funds from the Federal Reserve System;

Modernizes the powers of Federal credit unions under the Federal Credit Union Act in order that they may provide more contemporary financial services to their members; considers demand deposit accounts of state chartered credit unions as member accounts, if they qualify pursuant to state law, thus making them eligible for Federal share insurance; establishes varying self-replenishing lines of credit to member borrowers; removes the distinction between secured and unsecured loans and raises the maximum loan maturities to 12 years (currently 5 years on unsecured loans and 10 years on secured loans); empowers the board of directors to establish their own loan maturity and collateral requirements; removes the $2,500 maximum amount for unsecured loans; provides the necessary flexibility to meet members' needs in accordance with the applicant's creditworthiness and the credit union's soundness rather than arbitrary loan ceilings; permits real estate loans with maturities up to 30 years; and includes the following restrictions on such lending authority: (1) loans must be secured by a first lien, (2) loans must be for a one-to-four family dwelling, (3) the dwelling must be the principal residence of the borrower, and (4) the sales price must not exceed 150 percent of the median sales price of residential real property to be determined on a market area basis; allows loans with maturities of up to 15 years for the purchase of mobile homes used as the member's residence, or for the repair, alteration or improvement of a member's residence; permits Federally guaranteed or insured loans, such as the VA guaranteed mobile home loans, with maturities as specified in those statutes; increases the officials' borrowing limit on unsecured loans from $2,500 plus pledged shares to $5,000 plus pledged shares and permits them to guarantee or endorse up to the same amounts without board approval; clarifies the existing provisions regarding the penalty for excess interest and the provision regarding loan amortization; ensures that a member may repay his or her loan prior to maturity with no penalty; authorizes loans to other credit unions and credit union organizations; and contains other provisions. H.R. 3665—Public Law 95–22, approved April 19, 1977. (VV)

International Trade Commission.—Authorizes $11.5 million to the U.S. International Trade Commission for fiscal year 1978; provides that the President will designate one Commissioner as Chairman and one Commissioner as Vice-Chairman, each to serve for 2-year periods, except that the individual the President designates may not be of the same party affiliation as his predessor; makes the Chairman responsible for all administrative functions of the Commission subject to disapproval by a majority vote of the Commission; and authorizes the Commission to continue publication of its reports on synthetic organic chemicals until 1981. H.R. 6370—Passed House April 25, 1977; Passed Senate amended May 17, 1977; Senate agreed to conference report August 5, 1977. (VV)

Securities and Exchange Commission authorizations.—Amends the Securities Exchange Act of 1934 to increase the authorization for fiscal year 1977 from $55 million to $56.6 million. S. 1025—Public Law 95–20, approved April 13, 1977. (VV)

Authorizes $58,290,000 for fiscal year 1978 to the Securities and Exchange Commission. H.R. 3722—Passed House May 17, 1977; Passed Senate amended May 25, 1977; House requested conference July 19, 1977. (VV)

Small business amendments—Disaster relief loans.—Amends the Small Business Act to authorize a total of $1.4 billion for fiscal 1978 and $1.565 billion for fiscal 1979 for the Small Business Administration; sets levels of $2 billion for the surety bond guarantee program, $4 million for the lease guarantee program, $150 million for pollution lease guarantees, and $171 million for salaries and expenses; places ceilings for the first time on SBA lending programs except for the physical and economic injury disaster loans which are open ended authorizations;

Eliminates SBA's obligation to pay interest on capital appropriations to the Real Estate Lease Guarantee Revolving Fund, the Surety Bond Guarantee Revolving Fund and the Pollution Control Lease Guarantee Revolving Fund; eliminates the authority to invest temporarily idle funds except for fees from the Pollution Control Lease Guarantee Revolving Fund; requires the submission of certain reports to the Senate and House Small Business committees and others to the Senate Select Committee on Small Business, the President of the Senate and the Speaker of the House; requires SBA's annual report to break out the assistance provided to socially and economically disadvantaged individuals; requires SBA to specify the Administration's goals for the next fiscal year with respect to minority small business and to make recommendations to improve such assistance; authorizes SBA to finance residential or commercial construction or rehabilitation for sale but provides that such loans may not be used primarily for land acquisition; authorizes SBA to undertake, for a period of 5 years, a small business concern's obligation to make required payments under a SBA loan if the business would become or remain insolvent without such a suspension; requires the business to repay the amounts that become due during the suspension and authorizes SBA to extend the maturity date of the loan to coincide with the suspension; expands SBA's displaced business loan program by authorizing SBA to make displaced business loans to small concerns suffering substantial economic injury as a result of displacement by a State or local government or public service entity which exercises its right of eminent domain; authorizes SBA economic injury loans, upon the request of the Governor of the State, to small business concerns in an area affected by a natural disaster even if the extent of the disaster was not sufficient for a disaster declaration by the President, Secretary of Agriculture, or Administrator of SBA; authorizes the Administrator, upon certification by a State Governor, to lend up to $100,000 to a small business concern in an impacted area which would otherwise become insolvent because of the magnitude of economic dislocations or natural disasters;

Lowers the interest rate on physical disaster loans from the period July 1, 1976, to October 1, 1978, for the uninsured damaged portion of a principal residence and property from the present rate of 6–5/8 percent to the following: 1 percent on the first $10,000 of the loan and 3 percent on the next $30,000 of the loan; reduces to 3 percent on the first $250,000 the interest rate on all loans to other applicants; makes similar reductions in the Farmers Home Administration disaster loan programs; reduces to 3 percent on the first $25,000 the interest rate on economic injury disaster loans; authorizes SBA to increase the principal of a loan by not to exceed $2,000 in order to insulate property which was damaged or destroyed during the period April 1, 1977, to January 1, 1978, whether or not the property was insulated at the time of the damage.

Authorizes SBA to certify a small business company's ability to perform a specific government contract; provides that a contract may not be withheld for any reason without referring the matter to SBA for a determination and that the contract must be awarded if SBA issues a certificate of competency; directs the contracting procurement agency for set-aside contracts in excess of $1 million to reduce the dollar amounts of each contract in excess of that amount in order that SBA may issue a surety bond guarantee; and directs that priority be given to labor surplus areas when awarding small business set-aside contracts. H.R. 692—Public Law 95–89, approved August 4, 1977. (VV)

Small Business Associate Administrator.—Establishes an Associate Administrator for Women's Business Enterprise within the Small Business Administration. S. 1526—Passed Senate August 5, 1977. (VV)

Small business grants.—Authorizes the Small Business Administration to make grants to support the development and operation of small business development centers in order to provide small business with management development, technical information, product planning and development, and domestic and internationl market development, S. 972—Passed Senate August 5, 1977. (VV)

Small business loan ceilings.—Amends the Small Business Act to increase the fiscal year 1977 authorization ceilings for the following SBA financial assistance programs: Business Loan and Investment Fund from $6 billion to $7.4 billion, Economic Opportunity Loans from $450 million to $525 million, and Small Business Investment Company Program from $725 million to $887.5 million; and amends the Small Business Investment Act of 1958 to increase the fiscal year 1977 ceiling on the Surety Bond Guarantee Program from $56.5 million to $110 million, H.R. 2647—Public Law 95–14, approved March 24, 1977. (VV)

Smith College carillon—SSI food stamp eligibility—child support funding—child day care study—Medicaid funding.—Directs the Secretary of the Treasury to admit free of duty thirty-three carillon bells, including all accompanying parts and accessories, provided by the Paccard Founderie de Cloches, Annecy, France, for the use of Smith College, Northampton, Massachusetts;

Extends through fiscal year 1978 current provisions of law relating to the method whereby SSI recipients are eligible for food stamps;

Extends from July 1, 1977, through fiscal year 1978 the Federal matching payments to States for paternity and parent locator services directed toward maximizing child support for nonwelfare families;

Extends from July 1, 1977, until April 1, 1978, the date by which HEW must submit its report on the appropriateness of the Federal Interagency Day Care Program; and

Extends for 90 days the statutory requirement whereby States must have in place regular independent evaluations of long-term patients in skilled nursing homes, intermediate care facilities, and mental hospitals to be eligible for their share of Medicaid funding. H.R. 1404—Public Law 95–59, approved June 30, 1977. (VV)

White House Conference on Small Business.—States as the sense of the Senate that the President should convene a White House Conference on Small Business to develop recommendations that will increase public awareness of the importance of small business; identify the problems of new, small, and independent business enterprise; and suggest appropriate governmental actions to encourage and maintain the economic interests and potentials of the small business community in order to strengthen the overall economy of the Nation. S. Res. 105—Senate agreed to March 28, 1977. (VV)

EDUCATION

Education of the Handicapped.—Extends certain programs under the Education of the Handicapped Act for 5 years, through fiscal year 1982, with authorizations for each of fiscal years 1978 through 1982, respectively, as follows: (1) Part C, Centers and Services to Meet Special Needs of the Handicapped—$76 million, $80 million, $86 million, $89 mil-

lion, and $93 million; Part D, Training Personnel for the Education of the Handicapped—$77 million, $82 million, $87.5 million, $92.5 million, and $97.5 million; Part E, Research in the Education of the Handicapped—$20 million, $22 million, $24 million, $26 million, and $28 million; Part F, Instructional Media for the Handicapped—$24 million, $25 million, $27 million, $29 million, and $29 million; and provides the authority for the Bureau of Education to support model education projects for all handicapped children under section 641 of the act. H.R. 6692—Public Law 95–49, approved June 17, 1977. (VV)

Higher Educational Technical Amendments.—Makes technical and miscellaneous changes to the higher education provisions contained in the Education Amendments of 1976 (Public Law 94–482). H.R. 6774—Public Law 95–43, approved June 15, 1977. (VV)

Vocational Education Amendments.—Makes a number of technical amendments to title II of the Education Amendments of 1976, Public Law 94–482, dealing with printing and clerical errors and changing certain reporting dates; removes the $25 million a year limit for State administrative expenses and authorizes funds under the basic State grant for this purpose with the requirement that States match Federal funds used; requires States to set forth in their State plan the amount of Federal funds it plans to retain at the State level for administration; and gives each local recipient the option of using a percentage of Federal funds which is equal to the percentage of Federal funds in their vocational education program or to use any amount of Federal funds as long as they are matched by State appropriated funds administrative expenses. H.R. 3437—Public Law 95–40, approved June 3, 1977. (VV)

ELECTIONS

Campaign Act Amendments.—Amends the Federal Election Campaign Act of 1971 to substantially reduce the number of reports required to be filed with the Federal Election Commission; raises the threshold above which detailed information with respect to contributions and expenditures must be reported from $100 to $250 and, with respect to independent expenditures, from $100 to $250; makes changes in the law to strengthen the role of political parties in future elections; contains language to encourage a candidate to support his political party's Presidential candidate by providing that the costs of listing or mentioning the name of any Presidential nominee by any other candidate in his campaign material will not be considered as a contribution in-kind prohibited by the act; permits the transfer of excess campaign funds to a political party committee without limitation; contains provisions to improve the act in regard to political action committees; and contains several administrative provisions to facilitate more expeditious handling of complaints; authorizes $250,000 in fiscal year 1978 to reimburse States for the additional costs of receiving and preserving Federal campaign reports; and changes the statute of limitations from 3 years to 5 years with regard to violations of Campaign Act. S. 926—Passed Senate August 3, 1977. (331)

Federal Election Commission Authorization.—Authorizes $7.5 million for activities of the Federal Election Commission for fiscal year 1978. S. 1435—Passed Senate May 5, 1977; Passed House amended July 18, 1977. (VV)

Overseas Citizens Voting Rights.—Amends the Overseas Citizens Voting Rights Act of 1975 and the Federal Voting Assistance Act of 1955 to improve the administration and operation of these laws: vests the authority and responsibility for collecting and disseminating absentee voting information to citizens overseas in the President's designee (currently the Secretary of Defense) under the Federal Voting Rights Assistance Act; authorizes utilization of the same ballot application and free airmail postage provisions presently contained in the Federal Voting Assistance Act for all citizens residing overseas; provides the designee with the authority to revise the absentee registration and ballot application forms currently recommended for use by military personnel and civilians temporarily residing abroad and to develop a single form which could also be used by citizens covered by the Overseas Voting Act; provides that any balloting material sent from the United States to persons covered by either act or returned by them to this country shall be sent by priority airmail or by the most expeditious postal service available; directs the designee to publicize and notify appropriate citizens and State election officials of the availability of free postage and the expedited mail delivery of balloting material; and provides that the exercise of the right to register or vote in Federal elections by citizens residing overseas shall not affect the determination of his place of residence or domicile for the purpose of any tax imposed under Federal, State, or local law. S. 703—Passed Senate May 9, 1977. (VV)

EMPLOYMENT

CETA.—Extends the authorization of sums as may be necessary for all titles of the Comprehensive Employment and Training Act (CETA) through fiscal year 1978; extends the amendments to title VI made by the Emergency Jobs Programs Extension Act of 1976, which provide that each prime sponsor of a public service employment program may use its allocation, first, to sustain its existing member of public service job holders under the Act, and shall thereafter fill any additional public service jobs with low-income persons unemployed for at least 15 weeks who have been receiving or are eligible for unemployment compensation, and also provide that 50 percent of title VI job vacancies due to attrition must meet those eligibility requirements, but the remaining 50 percent may be filled under the original title VI requirements (15 days unemployment in areas having 7 percent or higher unemployment rates, and 30 days unemployment in other areas). H.R. 2992—Public Law 95–44, approved June 15, 1977. (VV)

Emergency Unemployment Compensation.—Extends the Emergency Unemployment Act to October 31, 1977, to provide a maximum of 13 weeks of emergency benefits (which combine with the 26 weeks of regular and 13 weeks of extended benefits for a total of 52 weeks of unemployment benefits) in States where the insured unemployment rate is 5 percent or more, with a phase-out under which individuals eligible before October 31, 1977, may continue to receive benefits until January 31, 1978; extends until April 30, 1977, the maximum 26 week program now in effect (which combine with 26 weeks of regular and 13 weeks of extended benefits for a total of 65 weeks of unemployment benefits) in order to avoid terminating benefits for certain participants in that program; provides that the cost of emergency unemployment compensation paid after March 31, 1977, be met from nonrepayable general revenues without the present law requirements that the costs ultimately be met from Federal Unemployment Tax;

Provides that, in addition to any eligibility requirements of State law, an individual would be disqualified from receiving emergency benefits for failing to (1) actively seek work, (2) apply for any suitable work which was referred by the State agency, or (3) accept any offer of suitable work; defines suitable work as that which (1) is within the capabilities of the claimant, (2) meets conditions of present Federal law, (3) meets the conditions of State law and practices pertaining to suitable or specific disqualifying work such as unreasonable travel distance or threat to morals, health, or safety, (4) pays wages equal to Federal or State minimum wage, (5) pays gross average weekly remuneration equal to the individual's weekly unemployment benefits plus any Supplemental Unemployment benefits he might be entitled to, and (6) was listed with the State employment service or offered in writing; allows a State to waive these requirements if an individual furnishes satisfactory evidence that prospects for obtaining work within a reasonable period of time in his or her occupation are good;

Establishes new statutory authority and procedures for the treatment of fraud and erroneous payments, disqualifies applicants submitting false or erroneous information; requires States with certain exceptions; to recover any overpayments made to individuals; makes fraud in connection with the program a Federal crime and imposes a fine of up to $10,000 and imprisonment for up to 5 years.

Provides for State implementation of changes made by this act; requires each State to enter into a modification if its present agreement within 3 weeks after the Secretary of Labor proposes the modification to the State; provides that if modification is not entered into, the Unemployment Compensation Program in that State would expire within the last week which ends on or before March 31, 1977; permits Kentucky, which does not have a scheduled meeting of its legislature during 1977, to defer until 1979 compliance with certain requirements of the act;

Simplifies administration by terminating an individual's entitlement to emergency benefits two years after the end of the benefit year for which regular benefits were payable; extends for two years, through 1979, the moratorium under which the Federal unemployment tax is automatically increased to recapture any loan to a State which is unpaid after 2 years; prohibits benefits to an individual who was illegally working at the time he earned his eligibility; allows States to deny unemployment compensation to teachers during brief mid-year vacation periods if the teacher was employed by the school system immediately before the start of the vacation and has reasonable assurance of the employment continuing at the conclusion of the vacation; makes clear that groups of local governments are to be provided the same options for financing unemployment compensation as those provided to single government units; extends from September 30, 1979, to March 31, 1980, the provision contained in Public Law 94–566 which requires States to reduce the unemployment benefits of an individual by the amount of any public or private pension including social security and railroad retirement annuities in order to conform this enactment date with the final reporting extension granted the National Commission of Unemployment Compensation; extends the time by which the National Commission on Unemployment Compensation must submit its interim report from March 31, 1978, to September 30, 1978, and the time by which it must submit its final report from January 1, 1979, to July 1, 1979; and amends present law to require an affirmative vote of the Senate and the House to make effective the President's quadrennial recommendations regarding the salary increases of Members of Congress, the Federal judiciary, Cabinet officials and other top Federal personnel. H.R. 4800—Public Law 95–19, approved April 12, 1977. (82)

Public Works Employment.—Authorizes an additional $4 billion to extend the program of grants to State and local governments to provide jobs through construction in places with the most distressing levels of unemployment as originally authorized under Title I of the Public Works Employment Act of 1976; provides that 65 percent of the funds be allotted on total numbers of unemployed and 35 percent on the basis of the relative severity of unemployment, with States participation

in the 35 percent allocation only if their unemployment rates exceed 6.5 percent for the most recent 12 month period; provides that no State shall receive less than three-fourths of 1 percent nor more than 12.5 percent; requires that within a State 70 percent or more of the funds be spent in areas with rates of unemployment above the national average and 30 percent for areas with rates below the national average but above 6.5 percent; provides a $70 million set aside for grants that were not received, considered or rejected solely because of an error by a U.S. employee or officer; contains a 2½ percent setaside for Indian and Alaskan Natives projects to insure a substantial fund for such projects while permitting high-unemployment non-Indian communities a competitive chance to be awarded projects in States with Indian communities; includes the transportation of water to drought-stricken areas within the term "public works project" and permits an applicant who received a grant to substitute one or more projects for the project for which the grant was made under certain conditions approved by the Administrator; requires that all articles, materials and supplies used in a project be produced and made from substances mined or produced in the U.S. except in certain cases; requires a grant applicant to expend 10 percent of the funds for minority business enterprises if available within project areas; requires that priority and preference be given to pending applications resulting in energy conservation; repeals the provision permitting the Secretary to consider the unemployment rate in adjoining areas from which the labor force for a project may be drawn; ensures that all laborers and mechanics employed on projects are paid the prevailing wage rate under the Davis-Bacon Act; requires the Secretary to consider only those applications for grants submitted on or after December 23, 1976, and before the date of enactment except for applications from the Trust Territory of the Pacific, Indian tribes and Alaskan Native Villages or any applicant if a sufficient number of applications were not received; requires the Secretary of Commerce to study public works investment in the U.S. and report his findings to Congress within 18 months of enactment; requires the promulgation of regulations assuring special consideration to the employment of qualified disabled and Vietnam-era veterans;

Mandates, in Title II, the obligation of funds for water resource projects for fiscal 1977 (with the exception of the Meramec Dam in Missouri) and states congressional intent not to uphold any prospective budget rescissions or deferrals regarding these projects; provides that the rates of interest or discount used to assess the return on Federal investment in projects carried out by the U.S. Army Corps of Engineers or the Department of Interior Bureau of Reclamation be those established by the Water Resources Development Act of 1974 or by prior law authorizing such projects. H.R. 11—Public Law 95–28, approved May 13, 1977. (48,216)

Youth Employment and Training.—Adds a new youth employment title VIII to the Comprehensive Employment and Training Act of 1973 (CETA), as recommended by the President as part of his economic recovery package, and authorizes such sums as may be necessary to carry out the new title over a 3-year period; creates, in title I, a National Young Adult Conservation Corps to provide work for unemployed youths in the Nation's public lands and water; establishes, in title II, a variety of employment, training, and demonstration programs to explore methods of dealing with the structural unemployment problems of the Nation's youth; authorizes the establishment of youth incentive entitlement pilot projects for economically disadvantaged youth to provide part-time employment and/or training for youths between the ages of 16 and 19 who resume or maintain attendance in secondary school for the purpose of acquiring a high school diploma or its equivalent; authorizes the establishment of youth community conservation and improvements projects to put unemployed youths to work for a period not to exceed 12 months on the rehabilitation or improvement of public facilities, neighborhood improvements, weatherization and basic repairs to low-income housing, and conservation, maintenance, or restoration of natural resources on non-Federal public lands; and authorizes support for employment and training programs designed to enhance job prospects and career opportunities for young persons, including activities involving useful work experience opportunities in community betterment and appropriate training and services such as outreach, counseling, occupational information, institution and on-the-job training, and transportation assistance;

Specifies the wage rates to which employed youths are entitled; prohibits full time employment to youths who have not attained the compulsory school attendance age; permits full time employment when school is not in session; requires the Secretary of Labor to submit a report to the Congress on the progress of the programs by March 15, 1978; disregards a youth's earnings in determining the family's eligibility to participate in Federal or Federally-assisted welfare programs;

Requires the Secretary of Labor to take steps to increase CETA participation by disabled veterans and Vietnam-era veterans under 35 years of age; and provides that, in filling teaching positions in public schools with financial assistance under CETA title II (public service employment in high unemployment areas) or title VI (Jobs Corps), each prime sponsor shall give special consideration to unemployed persons with previous teaching experience who are certified by the State and who are otherwise eligible under CETA. H.R. 6138—Public Law 95– , approved 1977. (170)

ENERGY

Alaska pipeline destruction.—Amends title 18, U.S.C., to make a Federal crime the willful destruction or attempt to destroy the Trans-Alaska pipeline system with a fine of not more than $15,000 and/or 15 years imprisonment. S. 1496—Passed Senate July 18, 1977. (VV)

Deepwater ports.—Extends through fiscal year 1980 the annual $2.5 million authorization under the Deepwater Port Act of 1974 which established a licensing and regulatory program governing offshore deepwater port development beyond the territorial limits of the United States. S. 891 (identical to H.R. 6401)—Passed Senate May 17, 1977. H.R. 6401—Public Law 95–36, approved June 1, 1977. (VV)

Department of Energy.—Creates a cabinet-level Department of Energy (DOE) to permit coherent administration of the national energy policy with a Secretary, one Deputy Secretary, one Under Secretary (with responsibility for energy conservation), and eight Assistance Secretaries; establishes within the Department (1) the Energy Information Administration to gather, analyze and distribute energy data and to implement a system of mandatory reporting by major energy-producing firms of information related to the economics of energy supply; (2) the Economic Regulatory Administration to administer regulatory functions which the Secretary deems appropriate and which do not fall exclusively within the jurisdiction of the Federal Energy Regulatory Commission; (3) an Office of Inspector General to promote efficiency and prevent fraud and abuse within DOE; (4) the Office of Energy Research; and (5) the Leasing Liaison Committee, composed of an equal number of members from the DOE and the Department of Interior, to provide for cooperation and consultation between the two Departments; provides that the GAO shall audit the DOE;

Transfer of Functions.—Transfers to and vests in the Secretary all functions of the Federal Energy Administration, the Energy Research and Development Administration, and the Federal Power Commission, except those functions transferred to the Federal Energy Regulatory Commission; four Regional Power Marketing administrations and the power-marketing functions of the Bureau of Reclamation currently under the Department of Interior; authority under the Outer Continental Shelf Lands Act, Mineral Lands Leasing Act, Mineral Leasing Act for Acquired Lands, Geothermal Stream Act of 1970 and the Energy Policy and Conservation Act related to the leasing of energy resources onshore and offshore; functions relating to fuel supply and demand analysis currently under the Bureau of Mines; authority for development and promulgation of new building conservation standards now vested in the Secretary of HUD; Commerce Department programs to promote voluntary industrial energy conservation; jurisdiction over three naval oil reserves and three naval oil shale reserves currently administered by the Department of Defense; authority currently vested in the Interstate Commerce Commission related to the transportation of oil by pipelines; and authority to publish guidelines for the Rural Electrification Administration on the issuance of loans or loan guarantees for generation and transmission facilities;

Retains the responsibility for promulgation of automobile efficiency standards within the Department of Transportation, but requires the Secretary of Transportation to give the Energy Secretary 10 days in which to provide written comment on any standard prior to its implementation; leaves responsibility for policing clean air standards with the Environmental Protection agency; continues responsibility for actual leasing of resources for the extraction of energy sources from public land in Interior, but places control over all economic terms and conditions of such leases in DOE; provides that nothing in the transfer of Federal leasing functions from Interior to DOE shall be construed as affecting Indian lands and resources or as transferring the responsibility of the Secretary of Interior concerning such lands and resources; requires cabinet-level departments and agencies with conservation responsibilities to designate a principal conservation officer within their Department; provides that the responsibility for the promotion of vanpooling and carpooling shall be transferred to the Secretary of Transportation;

Federal Energy Regulatory Commission.—Creates within the Department, independent of the Secretary's control, a five-member Federal Energy Regulatory Board, with its members appointed by the President, subject to Senate confirmation; prohibits members from engaging in any other business while serving on the Commission; provides that the Commission shall have sole jurisdiction over the establishment and enforcement of rates and charges for the transmission and sale of electricity and natural gas, and authority to license hydroelectric power plants; provides that either the Secretary or the Commission may propose a rule pertaining to functions within the exclusive jurisdiction of the Commission and that the Secretary can set reasonable time limits for completion of a rule-making proceeding before the Commission; provides that the Secretary shall have jurisdiction over the import and export of natural gas and electricity, emergency interconnections and curtailment priorities;

Provides that the Secretary shall have sole power to propose oil pricing actions, and that all such proposals must be referred immediately to the Commission which has sole power to make final decisions on such proposals; provides that the Commission can

either agree to an oil pricing proposal (in which case the Secretary may issue the rule), amend the proposal (in which case the Secretary may accept the changes and issue the final rule or reject the changes and not issue the rule), or reject the proposal (in which case the Secretary may not issue the rule); provides that during an energy crisis the President may grant the Secretary temporary exclusive pricing authority;

Miscellaneous.—Contains general administrative and procedural provisions governing rulemaking and other proceedings of the Department, and other provisions to eliminate or minimize conflicts of interest within the Department; requires the President to submit a proposed national energy policy plan by April 1, 1979, to be updated biennially thereafter; provides that the act shall become effective 120 days after the Secretary assumes office, or earlier as the President may prescribe; and requires the President to submit to the Congress a comprehensive review of each program in the Department by January 15, 1982, for Congressional review with respect to authorizing legislation for fiscal year 1983. S. 826—Public Law 95–91, approved August 4, 1977. (148,323)

ERDA Nonnuclear Authorization—Civilian, 1977.—Authorizes a total of $4,946,261,000 for the Energy Research and Development Administration for fiscal year 1977, of which $1,175,671,000 is designated for nonnuclear scientific research and programs, and $3,770,590,000 is designated for non-weapon nuclear research programs; includes: $461,801,000 for solar energy; $65.7 million for geothermal energy; $221 million for conservation research and development; $10 million for a high Btu pipeline gas demonstration plant: $5 million for a fuel gas low Btu demonstration plant; and $10 million for solar energy projects; authorizes funds for numerous plans to make improvements to comply with safety regulations; contains authorizations for capital equipment not related to construction to replace obsolete or worn-out equipment and to purchase certain new equipment to meet the needs of expanding programs and new technology at ERDA installations; provides an additional $50 million for the clean boiler fuel demonstration plant authorized by Public Law 94–187 and $15 million for the 5-megawatt solar thermal test facility authorized by Public Law 94–187; provides guidelines under which funds for fossil energy programs may be utilized; deauthorizes authorized fossil energy projects which were not appropriated within 3 full fiscal years; allows the Administrator to assist in the demonstration of the production of synthesis gas, methane, methanol, anhydrous ammonia, and similar energy intensive products from municipal waste by entering into agreements with units of local government or persons proposing to construct facilities for the manufacture of such products; provides authority by which ERDA may reprogram funds between major program areas; directs ERDA to relate the funds authorized and appropriated in annual authorization and appropriation measures to the objectives and goals of the various enabling legislation under which the Agency operates; amends the Federal Nonnuclear Energy Research and Development Act of 1974 to transfer responsibility for preparation of demonstration project water assessments from ERDA to the Water Resources Council; requires the Administration to classify the recipients of ERDA contracts into various categories including: Federal agency, non-Federal governmental entity, profitmaking enterprise, non-profit enterprise, and nonprofit education institution; authorizes the establishment of a small grants program to promote the research, development, and demonstration of energy-related systems and technologies appropriate to the needs of local communities; requires the Administrator, in consultation with EPA, to report to the Congress on the environmental monitoring, assessment and control efforts related to its various energy demonstration projects;

Authorizes $464,302,000 for work in biomedical and environmental research, operational safety, environmental control technology, the materials sciences, and molecular mathematical and geosciences portion of the basic energy sciences program and program support; provides $26.7 million for plant and capital equipment obligations including construction, acquisition, or modification of facilities, land acquisition, and acquisition and fabrication of capital equipment not related to construction; prohibits ERDA from starting projects if the current estimated cost exceeds the original estimated cost by more than 25 percent;

Authorizes ERDA to transfer sums from its "Operating Expenses" to other agencies for work for which the moneys were appropriated; authorizes "Operating Expenses" and "Plant and Capital Equipment" as no year funds; authorizes any Government-owned contractor operated laboratory, energy research center or other laboratory performing functions under contract to ERDA to use a reasonable portion of its operating budget for funding employee suggested research projects up to the pilot plant state of development; permits ERDA to contract for advanced architect/Administrator services for construction projects essential to meet the needs of national defense or the protection of life, property, health or safety prior to congressional authorization; requires any officer or employee of ERDA in a policy making position to report certain known financial interests in various energy technologies and related resources; directs the Administrator to develop regulations that would avoid conflicts of interest in ERDA contracts with private persons or organizations involved in energy research and development; and authorizes the establishment of a National Energy Extension Service. S. 36—Public Law 95–39, approved June 3, 1977. (VV)

ERDA Nonnuclear Authorization—Civilian, 1978.—Authorizes a total of $2,496,762,000 for fiscal year 1978 for ERDA non-nuclear related programs and certain support activities for both nuclear and non-nuclear programs; provides $977.15 million for the fossil energy development program to direct research of extraction, utilization, and conversion of coal, oil and natural gas, and oil shale and in-site coal gasification (of which $88 million is for research in magnetohydronamics); $131.8 million for the geothermal energy development program; $384 million for solar energy development programs (of which $7.5 million is earmarked for design works for small community applications); $372.8 million for energy conservation research and development programs to develop and demonstrate technologies for end-use conservation and conversion efficiency; $249.9 million for the environmental research and development program to assure that environmental, health and safety standards are maintained as new energy technologies are introduced; and $379.4 million for general program management and support. S. 1340—Passed Senate June 13, 1977. (195)

ERDA Nuclear Authorization—Joint Applications.—Authorizes $392,050,000 for fiscal year 1978 for operating expenses and plant and capital equipment for three ERDA military programs (laser fusion, space applications and naval reactors) which have potential for civilian energy applications. S. 1341—Passed Senate June 29, 1977. (VV)

ERDA Nuclear Authorization—Military.—Authorizes a total of $1,780,436,000 for fiscal year 1977 and $2,030,144,000 for fiscal year 1978 for certain Energy Research and Development Administration (ERDA) programs which have military applications; includes funding of the three national defense programs: (1) weapons activities—supporting the operation of the three weapons laboratories; research on advanced weapons and the full scale development of the following 7 weapons—B–61 and B–61–4 tactical bombs, Trident I missile warhead, full fuzing option strategic bomb, Mark 12–A warhead, 8-inch artillery projectile, and common warhead for land attack cruise missiles and short range attack missile; continued development of improved nuclear test detection methods necessary to monitor compliance with the limited Test Ban Treaty, Threshold Test Ban Treaty and Peaceful Nuclear Explosives Treaty; operation of the Nevada Test Site and the related costs of tests of advanced weapons concepts; maintenance and reliability assessment of the current weapons stockpile, production engineering for new weapons, nuclear materials recycle and recovery and security measures to protect nuclear shipments; and production of the following 9 new weapons for the war reserve: B–61–3, B–61–4, and B–61–5 tactical bombs, Lance enhanced radiation warhead, Trident I missile warhead, full fuzing option strategic bomb, Mark 12–A warhead, 8-inch artillery projectile, and common warhead for the land attack cruise missiles and the short range attack missile; (2) special materials production—supporting 3 reactors which produce enriched weapons grade uranium, plutonium and tritium; R & D associated with special materials production and management of radioactive wastes; and surveillance, maintenance and management of production reactor waste; and (3) nuclear explosives applications—supporting development of understanding of applications of nuclear explosives for peaceful purposes; includes $411,344,000 for plant and capital equipment; provides for cost variations in the authorized amounts for projects; provides authority to merge funds appropriated in different years for the same requirement category; directs that funds appropriated pursuant to this act remain available until expended; authorizes ERDA to proceed to design any project subject to the total amount authorized for the activity; authorizes ERDA to retain monies received from outside sources and use them for operating funds; and authorizes ERDA to transfer funds to other agencies supporting its programs. S. 1339—Passed Senate May 22, 1977. (VV)

ERDA Nuclear/Nonnuclear Authorization—Civilian.—Authorizes $5,232,665,000 for civilian nuclear and nonnuclear energy appropriations for the Energy Research and Development Administration for fiscal year 1978; includes the Senate passed provisions of S. 1340 for nonnuclear applications and $75 million for the Clinch River Breeder Reactor Project; and reaffirms Congressional intent that the Clinch River Breeder Reactor Project not be terminated during fiscal years 1977 and 1978. S. 1811—Passed Senate July 12, 1977. (VV)

ERDA Synthetic Fuel Loan and Guarantee Program.—Amends the Federal Nonnuclear Energy Research and Development Act of 1974 to establish a loan guarantee program to be administered by the Energy Research and Development Administration (ERDA) whereby the Administrator may guarantee the payment of interest and principal of bonds, debentures, notes, and other obligations issued for the purpose of financing the construction and initial operation of commercial-sized demonstration facilities for the conversion of biomass into synthetic fuel or other useable forms of energy; authorizes guarantees of up to 75 percent of the total project cost and, during the construction and start up period, up to 90 percent; limits the total outstanding indebtedness that may be guaranteed at any one time to $300 million; requires ERDA, before approving an application, to notify the appropriate State and local governmental officials and to give the Governor of the State an opportunity to make his recommendation respecting the facility; prohibits ERDA from guaranteeing a project if the Governor recommends against it; authorizes the Administrator, in the event of default, to complete the project

and assume management of the facility including the authority to sell the products or energy produced; provides that any patents and technology resulting from the facility will be treated as assets in cases of default and requires that the guarantee agreement contain a provision assuring their availability to the Government if needed to complete the facility; and requires ERDA to submit a report of the proposed guarantee and facility to the appropriate committees of Congress which shall have 90 days to disapprove by passage of a disapproval resolution. S. 37—Passed Senate March 31, 1977. (VV)

Energy saving grants for schools.—Establishes, for fiscal years 1978–1981, the following three programs of matching grants to provide Federal financial assistance to institutions of higher education, public elementary and secondary schools and private non-profit elementary and secondary schools to assist them in meeting the emergency caused by the high costs of fuel, fuel shortages, and harsh weather conditions: $300 million for energy conservation measures including insulation, remodeling and renovation (50 percent Federal-50 percent applicant); $50 million for demonstration projects for innovated energy conservation projects (66⅔ percent Federal-33⅓ percent applicant); and $150 million for technical assistance for energy saving programs involving planning, studies or the temporary employment of special personnel (50 percent Federal-50 percent applicant). S. 701—Passed Senate July 20, 1977. (VV)

Federal Energy Administration authorization.—Extends through fiscal year 1978 the authorities under the Federal Energy Administration Act; includes $1.210 billion to permit 250 million barrels of crude oil to be placed in the Strategic Petroleum Reserve by the end of calendar year 1978; contains $1.8 million for the appliance labeling program under the Energy Supply and Environmental Coordination Act of 1974 and extends FEA's authority to require certain facilities which presently burn oil and gas to convert to coal; adds provisions limiting the powers of the regional counsels of FEA; establishes general procedures to be followed with respect to the use of commercial standards by the FEA; and requires the Administrator within 120 days of enactment, to publish regulations which would require prospective FEA contractors to disclose all relevant data which could cause a possible conflict of interest in carrying out activities for FEA. S. 1468—Public Law 95–70, approved July 1, 1977. (VV)

Natural gas emergency.—Authorizes the President to declare a natural gas emergency if he finds that a severe shortage exists or is imminent in the United States which would endanger the supply of natural gas for high-priority uses and the exercise of his authorities is reasonably necessary to assist in meeting requirements for such uses; provides that these authorities shall terminate when the President finds that shortages no longer exist and are no longer imminent;

Emergency Allocation.—Authorizes the President, during a declared natural gas emergency, to require (1) any interstate pipeline to make emergency deliveries or transport interstate natural gas to any other interstate pipeline or a local distribution company served by an interstate pipeline; (2) any interstate pipeline to transport interstate natural gas from one interstate pipeline to another or to any local distribution company served by an interstate pipeline; or (3) the construction and operation by any pipeline of necessary facilities to effect deliveries or transportation; directs the President, in issuing such orders, to consider the availability of alternative fuel to users of the interstate pipeline ordered to make deliveries and to determine that they would not have an adverse effect on the natural gas supply or exceed the transportation capacity of the pipeline; provides that these authorities shall terminate by April 30, 1977, or after the President terminates the emergency, whichever is earlier;

Emergency Sales at Deregulated Prices.—Authorizes interstate pipelines or local distribution companies to purchase supplies of natural gas for delivery before August 1, 1977, from intrastate pipelines at unregulated prices as reviewed by the President for fairness and equity; provides that these purchases could be delivered from intrastate pipelines and any producer of natural gas not affiliated with an interstate pipeline unless such natural gas was produced from the Outer Continental Shelf, and the sale or transportation of the gas was not, immediately prior to the date of the contract for purchase of the gas, certificated under the Natural Gas Act; authorizes the President to require, by order, any interstate or intrastate pipeline to transport gas and operate facilities necessary to carry out emergency purchase contracts;

Miscellaneous.—Authorizes the President to subpoena information to carry out his authority under the Act; contains antitrust protection provisions available as a defense against civil or criminal action brought against any person for violation of the antitrust laws with respect to actions taken pursuant to a Presidential order; gives the Temporary Emergency Court of Appeals exclusive jurisdiction to review all cases including any order issued or other action taken under this act; imposes civil penalties of up to $25,000 a day for violations of orders and $50,000 a day for willful violations; directs the President to require weekly reports which shall be made available to the Congress on prices and volume of natural gas delivered, transported or contracted for, and to report to Congress by October 1, 1977, on all actions taken under this act; and authorizes the President to delegate all or any portion of the authority granted to him to such executive agencies or officers he deems appropriate. S. 474—Public Law 95–2, approved February 2, 1977. (21)

Outer Continental Shelf.—Declares that the Outer Continental Shelf (OCS) is a vital national resource reserve held by the Federal Government for all the people, which should be made available for expeditious and orderly development, subject to environmental safeguards, in a manner consistent with maintenance of competition and other national needs; directs the Secretary of Interior to prepare a five-year comprehensive leasing development, subject to environmental safe-development of the OCS while assuring receipt of fair market value for publicly owned oil and gas resources; provides a mechanism for separation of exploration from development and production so that Federal, State, and local government officials can assess the political, environmental, social, and economic impact of proposed development in order to resolve any problems prior to production; contains other provisions to increase Coastal states participation in OCS policy development; directs the Secretary of Interior to contract for exploratory drilling where he determines that such drilling is necessary to gain better information about OCS reserves; requires an independent Presidential investigation of all domestic crude oil and natural gas; authorizes the Secretary to modify the bidding system with the proviso that either House of Congress may veto any such change; reduces the maximum amount of bonus bids permitted under the law from 66.67 percent to 50 percent and requires the use of new leasing systems on an experimental basis; provides that at least 20 percent of offshore production be set aside for independent refiners;

Provides that an OCS lessee is liable for the total cost of control and removal of spilled oil; creates a new strict liability rule for damages from oil spills from any offshore facility or any vessel carrying oil produced offshore; sets maximum liability amounts for a lessee or holder of a right-of-way at $35 million and for a vessel owner at $150 per gross registered ton unless such damage resulted from gross negligence or willful misconduct or violation of a safety or construction regulation; creates the Offshore Oil Compensation Fund, which is liable for the balance of damage and which receives its funds from a fee of 3 cents per barrel on oil produced from the OCS; requires that any company permitted to conduct exploratory activities on the OCS submit to the Government all data which it collected about oil and gas resources, including interpretive data, and requires the Secretary to keep all proprietary data confidential until public availability of the data would not damage the competitive position of the permittee; directs the Secretary and the Coast Guard to establish safety and environmental protection standards for equipment used for development of OCS resources; increases criminal penalties for willful violations of the act; and establishes a Fishermen Contingency Fund to provide compensation for damage to commercial fishing vessels and gear caused by OCS development. S. 9—Passed Senate July 15, 1977. (293)

Pipeline Destruction.—Amends title 18, U.S.C., to make a Federal crime the willful destruction or attemot to destroy any interstate pipeline system used in the transportation of gas or oil in interstate commerce with a fine of not more than $15,000 and/or 15 years imprisonment. S. 1502—Passed Senate July 18, 1977. (VV)

Radiation Exposure.—Extends the program of the Energy Research a nd Development Administration (ERDA) to provide financial assistance to limit radiation exposure resulting from the widespread use of sand containing mill tailings in the construction of approximately 500 public and private buildings in the Grand Junction, Colorado area; calls for a cooperative arrangement with the State of Colorado whereby ERDA is authorized to provide 75 percent of the costs of the program; extends the deadline for applying for remedial work under the program from 4 to 7 years; provides that property owners who removed mill tailings at their own expense prior to the date of enactment and without the administrative determination required may apply for such reimbursement within the first year of enactment; permits the State of Colorado to waive the requirement that it perform the remedial work; and increases the authorization therefor from $5 million to $8 million. S. 266—Passed Senate April 4, 1977. (VV)

Stripmining control and reclamation.—Establishes a program for the regulation of coal surface mining activities and the reclamation of coal mined lands, under the administration of the Office of Surface Mining Reclamation and Enforcement in the Interior Department, to assure that surface coal mining operations—including exploration activities and the surface effects of underground mining—are conducted so as to prevent or minimize degradation to the environment and that such surface coal mining is not conducted where reclamation is not feasible; sets forth a series of minimum uniform requirements for all coal surface mining on both Federal and state lands which deal with (1) preplanning (requires that an operator applying for a permit do certain research regarding adjacent land uses, the characteristics of the coal and the overburden, and hydrologic conditions and requires inclusion in his application of the planned methodology and timetable for the operation in a reclamation plan); (2) mining practices (requires that mining methods be used which will minimize or obviate environmental damage or injuries to public health and safety including restrictions on the placement of overburden, blasting regulations, water pollution control requirements, and waste disposal standards); and (3) post-

mining reclamation (requires reclamation and restoration of the mined land to its pre-mined condition including backfilling and regrading to approximate original contour, restoration of water quality and quantity, revegetation to pre-mining conditions and elimination of erosion and sedimentation with certain exceptions) provides that these minimum Federal standards be administered and enforced by the States and by the Secretary of the Interior on public lands; authorizes funds to assist States in improving their regulatory and enforcement programs; provides for Federal enforcement of a State program if a State fails to comply with the Act;

Authorizes $200,000 in 1978, $300,000 in 1979 and $400,000 thereafter for 5 years in matching funds to each State to establish a State mining and mineral resources research institute to conduct research and training mineral engineers and scientists;

Provides for the protection of scarce and vital water resources in the permit application requirements, reclamation standards and provisions for designation of areas unsuitable for mining; provides for a mechanism on both State and Federal lands for citizens to petition that certain areas be designated as unsuitable for surface coal mining; prohibits stripmining of lands which cannot be reclaimed under the standards of the Act; prohibits stripmining in national parks and recreational areas (except for such lands which do not have significant forest cover within those national forests west of the 100th meridian) and areas which would adversely affect such parks; prohibits stripmining 300 feet from an occupied building, 100 feet from a public road, or 500 feet from an underground mine; permits certain variances to the mining-reclamation standards of the bill;

Requires with regard to lands where the Federal government owns the coal but not the surface estate that the surface owner must give written consent to the stripmining of the Federally-owned coal deposits; provides that if the surface and mineral estates are in private ownership, disputes shall be settled by State law;

Requires the Secretary of Interior to issue interim regulations for environmental standards within 90 days; waives provisions of the National Environmental Policy Act of permanent standards one year after enactment; requires EPA approval of air and water quality regulations; requires compliance by all new mines within 6 months; exempts mining operators with under 100,000 tons annual production from compliance with the interim environmental standards until January 1, 1979;

Bans stripmining on alluvial valley floors if it disrupts farming and the quantity and quality of the water supply except for (1) undeveloped range lands which are not significant to farming; (2) those lands the regulatory authority finds have negligible impact on the agricultural production of the affected farm; and (3) those surface coal mining operations in commercial production during the past year or for which a permit has been approved prior to enactment; requires a coal exchange program for fee coal located in alluvial valleys;

Requires that applicants seeking to stripmine on prime farmland demonstrate to the State regulatory authority that they have the technological capability to restore the mined area, within a reasonable time, to equivalent or higher levels of yield as nonmined prime farmland soils in the surrounding area under equivalent levels of management;

Establishes a fund to be used to reclaim abandoned mined lands which will be derived from a reclamation fee levied on every ton of coal mined at 35 cents per ton for surface mined coal and 15 cents per ton for all local mined by underground methods or 10 percent of the value of the coal at the mine, whichever is less; requires that 50 percent of all fees must be allocated to the State or Indian reservation from which it was mined; applies to lignite coal a fee of the lesser of either 10 cents per ton or two percent of the value of the coal;

Provides that, beginning no later than 6 months from the date of enactment continuing until a State program has been approved or a Federal program has been implemented, the Secretary is required to carry out a Federal enforcement program which includes inspection and enforcement actions in accordance with the act; and contains comprehensive provisions for inspections, enforcement notices and orders, administrative and judicial review, penalties, and citizen participation. H.R. 2—Public Law 95-87, approved August 3, 1977. (159,310)

ENVIRONMENT

Clean Air.—Amends the Clean Air Act, as amended, as follows:

Auto Emission Standards.—Extends for 2 additional years, for model years 1978 and 1979, the existing interim auto emission standards of 1.5 grams per mile for hydrocarbons (HC), 15 grams for carbon monoxide (CO), and 2 grams for nitrogen oxides (NO_x); requires 1980 model cars to meet emission standards of .41 gram to HC, 7 grams for CO, and 2 grams for NO_x; requires 1981 model cars to meet the final emission standards set by the 1970 Clean Air Act of .41 grams for HC, 3.4 grams for CO, and 1 gram for NO_x; authorizes EPA to waive the 1 NO_x standard to a level not to exceed 1.5 grams per mile beginning in model year 1981 (1) to encourage the production of new engines (such as the diesel) and emission systems not using precious metal catalysts, or (2) for small manufacturers who produce less than 300,000 cars and who must purchase this pollution control technology from another manufacturer (American Motors); authorizes EPA to grant a 2-year waiver of the CO standards to 7 grams; reduces warranties for emission-control devices from 5 years and/or 50,000 miles to two years and/or 24,000 miles.

Delayed Compliance.—Authorizes EPA and the States to issue enforcement orders extending compliance schedules for stationary sources until July 1, 1979; limits extension of compliance to no more than 3 years delay, except in case of innovative technology (5 years), coal conversion extensions, or smelter orders; automatically subjects noncomplying sources to a penalty after July 1, 1979, equal to the cost of compliance to eliminate any economic advantage of delay;

Non-Deterioration.—Provides that areas where air quality is presently cleaner than the existing standards shall be protected by non-deterioration standards; designates the most carefully protected areas as Class I areas and other areas as Class II and III areas; provides a mechanism for States to redesignate lands from class I to II or II to III; provides that the following areas are not eligible for Class III designation if the area is over 10,000 acres: national monuments, primitive areas, preserves, wild and scenic rivers, wildlife refugees, lakeshores, seashores, parks, wilderness areas and any new areas subsequently designated for these categories; allows a State to redesignate any Federal land as a Class I area without the concurrence of any Federal authority; allows an Indian tribe to designate its land as Class I or III;

Defines "significant deterioration" in all clean air areas as a specified amount of additional pollution measured by increments of sulfur oxides and particulates; exempts facilities otherwise subject to the nondegradation provisions which emit less than 50 tons per year of total pollutants from the increment requirements; provides that States issue construction permits to new major emitting facilities in clean air areas (with EPA acting in the role of monitor of State actions) requiring the use of best available control technology; requires new sources locating in Class II area to demonstrate to the State that they will not exceed the Class II pollution increments, or adversely affect the air quality values in any nearby Class I area; allows a State Governor to waive compliance with the Class I standards if computer models show in advance that the standards would not be exceeded for 18 days annually with the right of the Secretary of Interior to object and a final decision to be made by the President within 90 days;

Non-Attainment Areas.—Requires new sources proposed for construction in nonattainment areas (where pollution levels exceed the public health standards) to meet a number of conditions prior to approval of construction; requires that such sources meet the lowest achievable emission rate; requires that emission reductions from existing sources more than offset the emissions from the new source; requires that existing sources use all reasonably available controls; provides that sources may only be approved after July 1, 1979, if a State implementation plan exists, the source is in compliance with its requirements, and the plan assures the attainment of the health standards within 3 years; makes available an extension until 1987 for States that cannot show attainment of the oxidant and carbon monoxide standards within 3 years; provides waiver from the source-by-source emission offset requirement available to a State under limited conditions; and

Other.—Requires a review of the air quality criteria for existing ambient air quality standards which shall be completed by December 31, 1980 and subsequently every 5 years thereafter; allows a state to temporarily suspend State implementation plan requirements where necessitated by energy or economic emergencies under specified conditions; authorizes the President to require major noncomplying industrial coal burners to utilize coal supplies that are locally and regionally available instead of importing low-sulfur Western coal if necessary to avoid local economic disruption, after taking into account the final cost to the consumer; and contains other provisions. H.R. 6161—Public Law 95- , approved 1977. (190)

Clean water.—Amends the Federal Water Pollution Control Act Amendments of 1972 including the following provisions.

Waste treatment construction.—Authorizes $26.5 billion through 1982 in Federal grants to local municipalities for construction of sewage treatment plants; increases the flexibility of the Administrator of the Environmental Protection Agency (EPA) and the States in determining the best cleanup techniques; extends for 5 years, until July 1, 1983, the deadline for communities to meet clean water standards if they have been unable so far to obtain federal funds for construction;

Industrial standards.—Allows the Administrator of EPA to grant a "reasonable" time for compliance with the 1977 deadline and to set up a compliance schedule; allows EPA to grant an extension of the 1977 deadline for achieving the "best practicable technology" up to 18 months to a source whose facilities are under construction but not completed by July 1, 1977, and who in good faith has tried to meet the requirements;

Oil spill liability.—Increases the jurisdiction for oil spills out to 200 miles and the limits of liability for cleaning up oil spilled from tankers or oil terminals; sets a minimum of $500,000 for liability from an oil cargo vessel and limits liability to $150 a gross ton; raises liability for onshore and offshore handling facilities to $50 million from $8 million;

Penalties for noncompliance.—Sets fines for pollution sources in an amount equal to the economic value of noncompliance in order to remove any economic advantage which might accrue to an industry which

does not comply with the law beginning July 1, 1979;

Phosphate use.—Limits the amount of phosphates contained in laundry detergents, dishwashing compounds, and water conditioners sold in the Great Lakes region and requires a study by EPA to determine whether a national phosphates limitation program should be enacted;

Wetlands protection.—Modifies the controversial wetlands protection provisions by exempting such activities as farming and ranching and allowing the States to control disposal of dredge and fill materials; and

Community flexibility.—Allows communities to use property tax or another payment scheme to charge residential users for waste treatment if the charges are in proportion to use and if the consumer is notified of his contribution to support the waste treatment facility. H.R. 3199—Passed House April 5, 1977; passed Senate amended August 4, 1977; Senate requested conference August 4, 1977. (336)

Earthquake hazards reduction.—Establishes a national earthquake hazards reduction program under the direction of the President to minimize the loss and disruption resulting from future earthquakes; specifies the objectives of the program which includes the following four elements: (1) a research element dealing with fundamental earthquake risk analysis for land-use consideration, hazards assessment, and engineering and research to reduce earthquake, vulnerability; (2) an implementation plan to be prepared within 6 months setting year-by-year targets through at least 1985, specifying roles for Federal agencies, and recommending appropriate roles for State and local units of government, individuals, and private organizations; (3) a State assistance program allowing assistance to the States under the Disaster Relief Act of 1974; and (4) the opportunity for wide sectors of the population to participate in the formulation and implementation of the program; calls for cooperation among a number of Federal agencies including the U.S. Geological Survey and the National Science Foundation; requires the President to report annually to the Congress on progress achieved in the program; and authorizes therefor $55 million, $70 million and $80 million over a 3-year period for the U.S. Geological Survey and National Science Foundation to undertake specific activities and such sums as necessary for other agencies involved in the program, S. 126—Passed Senate May 13, 1977. (VV)

Endangered species.—Extends through fiscal year 1980 the authorization for section 6(i) programs under the Endangered Species Act of 1973 at a rate of $9 million for the Department of the Interior and $3 million for the Department of Commerce to assist States in developing programs for the protection of threatened and endangered species of fish, wildlife, and plants. S. 1316—Passed Senate May 25, 1977. (VV)

EPA authorization.—Authorizes a total of $185,330,000 for the environmental research and development program conducted by the Environmental Protection Agency for fiscal year 1978 as follows: $95 million for water quality under the Federal Water Pollution Control Act; $10.8 million for pesticides under the Federal Insecticide, Fungicide and Rodenticide Act; $830,000 for radiation under section 301 of the Public Health Service Act; $8.2 million for toxic substances under the Toxic Substance Control Act; $28 million for interdisciplinary activities; $19 million for program management; $10 million for a long-term R&D program; $2 million for training of environmental health scientists; $5 million for unanticipated environmental emergencies; $500,000 for a report by the Council on Environmental Quality on coordinating the environmental research and development activities of the various Federal agencies and departments which is to be submitted to the President and Congress by January 1, 1978; and $5 million for Gulf Coast air quality studies; provides the legislative and statutory mandate for EPA's Science Advisory Board consisting of nine members, appointed by the Administrator for staggered terms, to review conflicting claims and advise the Administrator on the adequacy and reliability of the technical basis for rules and regulations; and directs the Administrator to assess organizational structures and management techniques and determine what would be the most appropriate means of tying together the program offices, research laboratories and contracted research efforts and to submit a report to the President and Congress by September 30, 1977. H.R. 5101—Passed House April 19, 1977; Passed Senate amended May 27, 1977. (VV)

National Advisory Committee on Oceans and Atmosphere.—Repeals the Act of August 16, 1971, which established a National Advisory Committee on Oceans and Atmosphere and establishes a new and smaller National Advisory Committee on Oceans and Atmosphere (NACOA) to replace it, consisting of 18 members (which is reduced from 25 in the original act) appointed by the President for staggered 3-year terms; sets more stringent qualifications for membership by requiring that each member be an expert or otherwise knowledgeable in either oceanic matters, atmospheric matters, or both; provides for the transfer of the personnel, positions, records, and unexpended funds to the new Committee; directs the Committee to undertake a continuing review of national ocean policy (on a selective basis), coastal zone management, and the status of U.S. marine and atmospheric science and service programs and advise the Secretary of Commerce with respect to the National Oceanic and Atmospheric Administration; requires the Committee to submit a report by June 30 of each year to the President and Congress and such other reports as may from time to time be requested; gives the Secretary of Commerce 60 days (instead of 90 days) to review and comment on the annual report; directs the Secretary to provide administrative support and services to the Committee; and authorizes $520,000 for fiscal year 1978. H.R. 3849—Public Law 95-63, approved July 5, 1977. (VV)

Noise control.—Authorizes $10.9 million for general technical assistance, regulatory and administrative responsibilities under section 19 of the Noise Control Act of 1972 and $2.1 million for research and development for fiscal year 1978. S. 1511—Passed Senate May 18, 1977. (VV)

Ocean pollution research.—Establishes a comprehensive Federal program of ocean pollution research and monitoring; designates the National Oceanic and Atmospheric Administration as the lead Federal agency for ocean pollution research and monitoring; and provides for the assistance of the Director of the Office of Science and Technology Policy, through the Federal Coordinating for Science, Engineering, and Technology, in coordinating, on a continuing basis, the Federal program of ocean pollution research and monitoring; requires the Administrator to submit annually to the President and Congress a report on all Federal ocean pollution and monitoring efforts; and authorizes therefor $5 million for fiscal 1978 and $6 million for fiscal 1979 to the National Oceanic and Atmospheric Administration. S. 1617—Passed Senate August 3, 1977. (VV)

Safe drinking water.—Amends the Safe Drinking Water Act of 1974 to extend through fiscal year 1978 the following authorizations which expire on September 30, 1977: $17 million for technical information and training, $20.5 million for State water supply supervision programs, $6 million for the State underground injection control program, $25 million for technology demonstration grants, and $16 million for research and development activities; and requires the Administrator of the Environmental Protection Agency to make grants under section 1444(c) of the Act which authorizes funding of projects demonstrating technology for recycling waste water for drinking purposes. S. 1528—Passed Senate May 24, 1977; Passed House amended July 12, 1977. (VV)

Sea grant program.—Extends through fiscal 1978 the authorization for the national sea grant program as follows: $50 million for the basic sea grant program; $5 million for the national program, and $3 million for the international program. H.R. 4301—Public Law 95-58, approved June 29, 1977. (VV)

FISHERIES

Atlantic tunas.—Extends for an additional 3 years, until 1980, the Atlantic Tunas Convention Act of 1975 which implemented an international convention governing fishing for tuna and tuna-like fishes in the Atlantic Ocean and authorizes therefor such sums as necessary; and redefines the term "fishery zone" to mean the 200-mile fishery zone described in Public Law 94-265. H.R. 6205—Public Law 95-33, approved May 26, 1977. (VV)

Commercial fisheries.—Extends the Commercial Fisheries Research and Development Act for 2 years, through fiscal 1980, and increases the annual authorization for fiscal year 1978 and the two subsequent years as follows: $10 million for section 4(a) general programs (increased from $5 million); $3 million for section 4(b) which provides funds on an emergency basis if there is a commercial fishery disaster or serious disruption affecting future production due to a resource disaster arising from natural or undetermined causes (increased from $1.5 million); and $500,000 for the section 4(c) program of grants to develop new commercial fisheries (increased from $100,000). H.R. 6206—Public Law 95-53, approved June 22, 1977. (VV)

Fishermen's protection reimbursement program.—Extends the provisions of the Fishermen's Protective Act of 1967 which expires October 1, 1977, to October 1, 1979; establishes a Federal Government loan program whereby the Secretary of Commerce may make a loan after October 1, 1977, to the owner or operator of any U.S. vessel to replace or repair vessels or gear lost, damaged, or destroyed by any foreign vessel; conditions loans upon assignment to the Secretary of all rights of recovery and directs the Secretary with the assistance of the Attorney General, to take appropriate actions to collect on any right assigned to him; cancels repayment of a loan if it is determined that the owner or operator was not at fault; and provides that loans may be granted for any damage which occurred after October 1, 1976. S. 1184—Passed Senate May 24, 1977. (VV)

Fishery agreement with Canada.—Amends the Fishery Conservation Zone Transition Act by adding a new section giving Congressional approval of the Reciprocal Fisheries Agreement between the United States and Canada during the period of March 1, 1977, to December 31, 1977; authorizes Canadian vessels and nationals to fish within the Fishery Conservation Zone of the United States, or for anadromous species and Continental Shelf fishery resources of the United States beyond the zone only when the fishing is carried out pursuant to the provisions of the Agreement; waives the requirements of title II (relating to foreign fishing and international fishery agreements) and the penalty provisions in section 307 of the act; requires any person who owns or operates a United States fishing vessel and engages in fishing to which the agreement applies or any person who directly or indirectly receives

fish in sufficient quantities as determined by the Secretary of Commerce, to submit to the Secretary such statistics as he may request; authorizes the Secretary, after consultation with the Secretary of State, to issue regulations as necessary regarding the collection of such statistics; and provides that any person violating the act or regulations issued pursuant thereto would be deemed to be committing an act prohibited by section 307 of the Act and subject to a civil penalty of up to $25,000. H.R. 5638—Public Law 95– , approved 1977. (VV)

Fishery conservation zone transition.—Gives Congressional approval of the fishery agreements between the United States and the People's Republic of Bulgaria, the Socialist Republic of Romania, the Republic of China, the German Democratic Republic, the Union of Soviet Socialist Republics, and the Polish People's Republic; provides that these agreements will enter into force on the date of enactment of this joint resolution; waives the 60-day Congressional review period; limits to 7 days the 45 day period for review and comment on application permits required of the Regional Fishery Management Councils created under the Fishery Conservation Zone Act during 1977 for those applications received by the Council on or before the date of enactment and those received by the Council from the Secretary of State after the date of enactment to provide for an orderly transition from the 12 mile to 200 mile fishing limit; waives, until May 1, 1977, the requirement that foreign fishing vessels have a valid permit on board and permits the Secretary to waive the fee required before fishing permits may be issued if he is satisfied that the foreign nation will pay the fee before May 1, 1977; and repeals, effective March 1, 1977, the Northwest Atlantic Fisheries Act of 1950. H. J. Res. 240—Public Law 95–6, approved February 21, 1977. (VV)

Gives Congressional approval of the fishery agreements between the United States and Spain, Japan, South Korea, and the countries of the European Economic Community (Iceland, France, Italy, Luxembourg, the United Kingdom, Denmark, Belgium, West Germany, and the Netherlands); contains essentially the same provisions as H.J. Res. 240 (Public Law 95–240) to provide for an orderly implementation of foreign fishing within the 200-mile fishery zone of the United States after March 1, 1977, including the 7-day period of comment by the Fishery Management Councils and the public with respect to applications for permits, the May 1 extension of time for the payment of fees and permit requirements, and waives the 60-day Congressional review period. H.R. 3753—Public Law 95–8, approved March 3, 1977. (VV)

Marine mammal protection.—Extends through fiscal year 1978 the Marine Mammal Protection Act of 1972 and authorizes therefor $1.8 million for the Department of the Interior of which $1.1 million is for research grants in subjects relevant to the protection and conservation of marine mammals, $11.5 million for the Department of Commerce of which approximately $5 million would fund a 100 percent observer program on all large tuna-purse vessels, and $2 million for the Marine Mammal Commission; and makes it unlawful for any person or vessel to take any species of whale in the U.S. fishery conservation zone (the 200-mile limit) established by the Fishery Conservation and Management Act. S. 1522—Passed Senate July 18, 1977. (VV)

GENERAL GOVERNMENT

Age discrimination report—nutrition programs for elderly.—Amends the Age Discrimination Act of 1975 to extend for 6 months, until November 1977, the time in which the U.S. Commission on Civil Rights must submit its report on unreasonable discrimination based on age in programs and activities receiving Federal financial assistance; authorizes the Commission for a 90-day period following transmittal of its report to provide technical assistance and information to Government officials; and

Amends the Older Americans Act to extend the surplus commodities provision of the title VIII nutrition program for the elderly through fiscal year 1978 in order that it will coincide with the authorization period of the other programs of the act; and gives States the option to receive cash in lieu of such commodities. H.R. 6668—Public Law 95–65, approved July 11, 1977. (VV)

Center for books.—Establishes a Center for Books in the Library of Congress, under the direction of the Librarian of Congress, which will be supported by private gifts to provide a program to stimulate public interest and research in the role of books in the diffusion of knowledge through such activities as a visiting scholar program accompanied by lectures, exhibits, publications, and any other related activities. S. 1331—Passed Senate July 12, 1977. (VV)

Civil Rights Commission authorization.—Raises the authorization limitation for the Civil Rights Commission from the present annual maximum of $9,540,000 to $10,420,023 for fiscal year 1978 plus such additional amounts as may be necessary for salary increases and other employee benefits authorized by law. H.R. 5645—Passed House May 23, 1977; Passed Senate amended July 13, 1977; Senate requested conference July 13, 1977. (VV)

Federal assistance program information.—Increases the availability of information about Federal domestic assistance programs by requiring the Director of the Office of Management and Budget (OMB) to: (1) establish and maintain a data base containing specified information on all Federal domestic assistance programs; (2) develop and maintain a computerized information system to provide for the widespread availability of information contained in the data base by computer terminal facilities; and (3) publish annually a catalog of Federal domestic assistance programs containing information from the data base, a detailed index and any other information deemed appropriate; authorizes therefor $1.2 million for the first year; $1.7 million the second year and $2.2 million the third year;

Amends section 201 of the Intergovernmental Cooperation Act of 1968 to give OMB the responsibility to insure that information is provided to the States through their Governors or designated information centers on Federal financial assistance; requires the Director to report his recommendations to Congress for improving, consolidating and further developing Federal financial information systems; and requires the General Accounting Office to submit a report to Congress 1 year after enactment on actions taken by OMB to implement this act and, within 2 years of enactment, a progress report to Congress 1 year after enactment on actions taken by OMB to implement this act and, within 2 years of enactment, a progress report including an evaluation of its effectiveness and any legislative recommendations. S. 904—Passed Senate May 17, 1977. (VV)

Federal Home Loan Bank Board members.—Amends the Federal Home Loan Bank Board Act, as amended, to permit a board member, whose term expires, to continue to serve on the board for an additional 30 days or until his successor is appointed, whichever occurs first. S.J. Res. 63—Public Law 95–56, approved June 29, 1977. (VV)

Amends the Federal Home Loan Bank Act to extend for an additional 15 days the term of the member of the Federal Home Loan Bank Board which expired on July 31, 1977, in order to permit the Board to obtain a quorum for transacting business until the new prospective chairman can be sworn into office. S.J. Res. 79—Public Law 95– , approved 1977. (VV)

GAO audits of IRS and ATF.—Amends the General Accounting and Auditing Act of 1950 to provide that the General Accounting Office may conduct management and financial audits of the Internal Revenue Service and the Bureau of Alcohol, Tobacco, and Firearms; contains provisions to insure the confidentiality of information including Congressional oversight and penalties for unauthorized disclosure; and requires the Comptroller General to submit to the Senate Finance and Governmental Affairs Committees, the House Ways and Means and Government Operations Committees, and the Joint Committee on Taxation, every six months, the names and titles of GAO employees having access to tax returns and information; to submit as frequently as possible results of the audit; and to submit annually a report of his findings and recommendations which must also include the procedures established for protecting the confidentiality of tax return information and the scope and subject matter of the audit. S. 213—Passed Senate March 11, 1977. (VV)

Intelligence activities authorization.—Authorizes such amounts as specified in a classified report prepared by the Senate Select Committee on Intelligence for fiscal year 1978 for intelligence activities of the United States Government includes specific amounts for activities of the Central Intelligence Agency, the Defense Intelligence Agency, the Office of the Secertary of Defense, the National Security Agency, the military service, the Department of State, the Department of the Treasury, the Energy Research and Development Administration, the Federal Bureau of Investigation, and the Drug Enforcement Administration; authorizes $8.95 million for the Intelligence Community Staff for fiscal 1978 which supports the Director of the C.I.A. in fulfilling his responsibilities for overall management and direction of the intelligence community and the Policy Review Committee of the National Security Council; sets at 170 the end-strength of full time employees for the Intelligence Community staff; and authorizes $35.1 million for the Central Intelligence Agency Retirement and Disability System for fiscal 1978. S. 1539—Passed Senate June 22, 1977. (VV)

Kennedy Center authorization.—Authorizes $4.7 million for the John F. Kennedy Center for the Performing Arts, to remain available until expended, for the Secretary of the Interior, acting through the National Park Service, to correct leaks in the roof, terraces, kitchen, and East Plaza Drive and the damage which has resulted from these leaks; gives the Center approval authority over contracts let by Interior Department; and authorizes $4 million for fiscal year 1978. S. 521—Public Law 95–50, approved June 20, 1977. (VV)

Kennedy Presidential Library.—Authorizes the Administrator of General Services to accept land, buildings, and equipment that have been or may be offered to the United States without reimbursement, for the purpose of maintaining, operating and protecting as part of the National Archives system a Presidential archival depository located next to the University of Massachusetts campus on Columbia Point in Boston in memory of John Fitzgerald Kennedy. H.J. Res. 424—Public Law 95–34, approved May 26, 1977. (VV)

Library services and construction.—Extends through October 1, 1982, and revises the Library Services and Construction Act; retains current use and allocation of funds but adds a provision to direct one-half of the funds after the appropriation level of $60 million is reached (current funding level is $56.9 million) to urban resource libraries, which are defined as public libraries in incorporated areas with populations exceeding

100,000; provides that any State that does not have an incorporated area with at least 100,000 persons will nevertheless be considered to have at least one urban resource library; adds a new title to the Act which provides special aid to and study of urban libraries; authorizes funds for projects to make libraries more energy efficient; and contains other provisions. S. 602—Passed Senate May 20, 1977; Passed House amended June 2, 1977; In conference. (VV)

National Science Foundation Authorization.—Authorizes $879.35 million for fiscal year 1978 to the National Science Foundation and an additional $4.9 million in foreign currencies which the Treasury Department determines to be in excess to the normal requirement of the U.S.; includes (1) $246.8 million for mathematical and physical sciences and engineering; (2) $210.5 million for astronomical, atmospheric, earth, and ocean sciences; (3) $47.5 million for the U.S. Antarctic Research Program; (4) $142.5 million for biological, behaviorial, and social sciences; (5) $4.5 million or 2 per cent of the funds for (1), (2), and (4), whichever is less for basic research stability grants; (6) $83.3 million for science education programs; (7) $75.85 million for Research Applied to National Needs (RANN), with not less than 25 percent of these funds to be earmarked for applied social research and policyrelated scientific research and not less than 12.5 percent be earmarked for the Small Business Innovation Program; (8) $20.9 million for scientific technological, and international affairs; (9) and $47.8 for program development and management;

Contains provisions to support interaction between academic and industry researchers, and to emphasize the activities of the Office of Science and Society; earmarks $4.5 million for programs directed to minority graduate students; contains certain requirements designed to protect pre-college students involved in research funded by the agency; establishes financial disclosure procedures to guard against possible conflicts of interest on the part of NSF employees; requires the National Science board to submit an annual report to Congress; and contains other provisions. H.R. 4991—Public Law 95– , approved 1977. (VV)

Presidential reorganization authority.—Extends for three years from the date of enactment, the authority of the President under chapter 9, title 5, U.S.C., to submit reorganization plans to Congress proposing the reorganization of agencies in the executive branch; expresses Congressional intent that the President provide appropriate means for public involvement in reorganization; requires that the President, on a continuing basis, examine the organization of all agencies of the executive branch and determine what changes are necessary to accomplish the purpose of the statute;

Provides that reorganization plans may: create new agencies, transfer or consolidate the whole or part of agencies or their functions to other agencies, abolish all or part of the functions of an agency except any enforcement function or statutory program, change the name of an agency, authorize an agency official to delegate any of his functions, and provide that the head of an agency be an individual, commission or board with a fixed term not to exceed 4 years;

Requires that each plan be based upon a Presidential finding stated in a message to Congress that the proposed action is necessary to accomplish one or more of the purposes of the statute; requires that the message specify, with respect to each plan, the reduction of or increase in expenditures likely to result from the plan, as well as any improvements in the effectiveness or efficiency of the government anticipated as a result of the plan;

Prohibits the use of reorganization authority to: create a new executive department, abolish an executive department or an independent regulatory agency, abolish any function mandated by Congress through statutes, increase the term of an office beyond that provided by law, create new functions not authorized by pre-existing statutes, or continue a function beyond the period authorized by law;

Requires the President to submit each plan, which must deal with only one logically consistent subject matter, to both Houses of Congress simultaneously for referral to the Senate Governmental Affairs Committee and the House Government Operations Committee; requires the Chairman of the respective committee to introduce a disapproval resolution whenever a reorganization plan is submitted to assure that there will be a resolution for the Committee to act on and to report either favorably or unfavorably a disapproval resolution for each proposed plan; provides that plans shall become law at the end of 60 calendar days of continuous session of the Congress or if specified, at a later date, unless either House passes a resolution of disapproval or prior to that time if both Houses defeat a disapproval resolution; requires the committees in both Houses to file recommendations on each plan with the full House within 45 days and provides, if the committee has not done so, the resolution will automatically be discharged from further consideration and placed on the calendar; specifies that no more than three reorganization plans may be pending in the Congress at any one time;

Allows the President to (1) amend a plan within the first 30 days after submission if neither committee has ordered reported a disapproval resolution or made any other recommendations on the plan, or (2) withdraw a plan at any time prior to the conclusion of the 60 day period;

Provides that any member may move to proceed to consider a disapproval resolution once it has been reported or discharged; limits to 10 hours floor debate on a disapproval resolution and on appeals and motions made in connection therewith, and makes motions to postpone consideration or amend the resolution out of order;

Provides that suits brought against an agency affected by a reorganization plan, or regulations or other actions taken by an agency under a function affected by the plan shall not abate as a result of the plan, except in the case where the function is abolished; specifies that plans may provide for the transfer or other disposition of affected records, property, and personnel, and for the transfer of unexpended appropriations if the funds will be used for their original purpose; and requires that unexpended funds revert to the U.S. Treasury. S. 626—Public Law 95–17, approved April 6, 1977. (40)

Privacy Protection Study Commission extension.—Extends the life of the Privacy Protection Study Commission from July 10, 1977, to September 30, 1977, to provide additional time for the printing of a set of appendix volumes for its final report. S. 1443—Public Law 95–38, approved June 1, 1977. (VV)

Smithsonian Institution.—Canal Zone biological area.—Increases from $350,000 to $750,000 the annual authorization for the Canal Zone Biological Area (the Barro Colorado Island Facility of the Tropical Research Institute of the Smithsonian Institution). S. 1031—Passed Senate May 2, 1977. (VV)

U.S. territories.—Provides for the continuance of the civil government of the Trust Territory of the Pacific Islands by authorizing $90 million for fiscal 1978, $122.7 million for fiscal 1979, and $112 million for fiscal 1980 in addition to such amounts authorized but not appropriated for fiscal years 1975 through 1977; authorizes $13,515,000 for the government of the Northern Marianas until the separate funding provisions of their Covenant become effective; authorizes $12.5 million for the rehabilitation and resettlement of Enewetak Atoll; provides for compensation to the people of Rongelap and Utirik Atolls in the Marshall Islands for radiation exposure resulting from a thermonuclear detonation on Bikini Atoll on March 1, 1954; authorizes $25,000 to each individual who has developed hypothyroidism or a radiation-related malignancy, $1,000 to each person or heir who was an inhabitant of Utirik Atoll at the time of exposure, and not to exceed $25,000 in compassionate compensation to an individual who has suffered a physical injury from a radiation-related cause; authorizes the Secretary of Interior to provide adequate medical care and treatment to any person who has a radiation injury or related illness with the costs to be assumed by ERDA; directs the Secretary to report to Congress by December 31, 1980, on any additional compassionate compensation that may be justified for those individuals continuing to suffer from radiation-caused illnesses or injuries;

Authorizes $15 million for a grant to the Government of Guam to assist in typhoon rehabilitation, upgrading and construction of public facilities, and maintenance of essential services; authorizes Guam to use funds provided under this act as its matching share for Federal programs and services; authorizes for 5 fiscal years beginning in fiscal 1978, $1 million annually for the Guam Development Fund; provides for the Secretary to assume the costs of the Guam comptroller effective October 1, 1977; allows Guam to impose a separate tax on all taxpayers of not to exceed 10 percent of their annual income tax obligation to the Government of Guam; grants jurisdiction to the district court of Guam to review individual claims arising from U.S. land acquisitions in Guam immediately after World War II; requires an individual to prove that he received less than fair value for his land as a direct result of fraud, duress, or other unconscionable actions by the United States and provides that claims of individuals who received payment for their land in judicial condemnation proceedings shall remain res judicata and the district court will not have jurisdiction to review their awards; authorizes the Secretary to guarantee loans to the Government of Guam of not to exceed $25 million to meet their health care needs after obtaining the approval of the Secretary of HEW; requires additional taxes in Guam in the event of a default on these loans;

Provides for the Secretary to assume the costs of the Comptroller General of the Virgin Islands; allows the Virgin Islands Legislature to vary the present 6 percent ad valorem custom duty on the importation of articles into the Virgin Islands; directs the Secretary to submit to Congress by January 1, 1978, a report on Federal programs available to U.S. territories in order to determine the feasibility of extending to Guam and the Virgin Islands those programs extended to the Northern Marianas by the Commonwealth Covenant; and authorizes a one-time payment of $15 million to Guam and an additional $14 million to the Virgin Islands for tax revenue losses. H.R. 6550—Passed House May 2, 1977; Passed Senate amended July 25, 1977. (VV)

GOVERNMENT EMPLOYEES—FEDERAL OFFICIALS

Ethics in government.—Establishes a mechanism for the appointment of a temporary special prosecutor to deal with (a) matters concerning the President, Vice President, Members of Congress, and other high-level officials, and (b) matters which may directly and substantially affect the partisan political or personal interests of the President, the Attorney General, or the President's party and in which there exists a conflict of interest within the Justice Department; contains a general provision requiring any officer or employee of Justice to disqualify himself from cases in which he could have a conflict of interest; creates an Office of Gov-

ernment Crimes within the Justice Department to deal with abuses of office committed by government officials, violations of Federal lobbying, elections, and conflicts-of-interest laws, and other matters; provides that the director of this Office shall be appointed by the President and confirmed by the Senate;

Provides that an individual who has played a leading partisan role in the election of a President cannot be appointed Attorney General or Deputy Attorney General; sets forth procedures to be followed by the Attorney General with respect to any investigation of influence peddling by the Korean Government;

Establishes an Office of Congressional Legal Counsel to represent Congress and, with the consent of Congress, protect the vital interests of Congress in matters before the courts; provides that the Congressional Legal Counsel and the Deputy Congressional Legal Counsel will be appointed by the joint leadership and must be approved by both houses, and that neither position may be filled by persons who have been Congressional members, candidates, employees or persons who have served in Congressional campaigns within the preceding three years;

Requires annual financial disclosure reports be filed by the President, Vice President, Members of Congress, justices and judges of the U.S. and D.C. government, officers and employees of the executive branch at the GS–16 level or greater; officers and employees of the legislative and judicial branches compensated at a rate equal to or greater than the GS–16 pay rate; members of a uniformed service compensated at a rate equal to or greater than the grade 0–7 pay rate, candidates for Federal elective office, and Presidential appointees subject to advice and consent of the Senate; specifies the required contents of such disclosure reports; creates various offices to monitor compliance with this statute; sets criminal penalties for knowing and willful falsification or emission and civil penalties for failure to file or accidental omissions;

Establishes an Office of Government Ethics within the Civil Service Commission with primary responsibility for implementing financial disclosure requirements throughout the executive branch; provides that the director of this Office shall be appointed by the President with the advice and consent of the Senate;

Revises the current statute concerning restrictions on post service activities by officials and employees of the executive branch by imposing a new restriction which prohibits, for a period of one year following termination of government service, a former top-level official from contacting his former department or agency on any matter pending before the department or agency; and makes other minor modifications to the statute. S. 555—Passed Senate June 27, 1977. (245)

Federal comparability increases.—Denies the October 1 cost-of-living increase to Members of Congress, the Supreme Court Justices and other members of the Judiciary, Cabinet officials, and top Executive personnel who received the March 1 quadrennial pay increase under which salaries were increased as follows: Members of Congress from $44,600 to $57,500; Cabinet officers from $63,000 to $66,000; the Vice President, Speaker, and Chief Justice from $65,000 to $75,000; the President Pro Tempore and Majority and Minority Leaders from $52,000 to $65,000; circuit court judges from $44,600 to $57,500; district judges from $42,000 to $54,500; subcabinet assistants from $44,600 to $57,500; and other top Federal personnel from $42,000 to $52,000. S. 964—Public Law 95–66, approved July 11, 1977. (44)

Secret Service protection of former Federal officials.—Authorizes the Secret Service to continue to furnish protection to certain former Federal officials (Secretaries Kissinger and Simon and Vice President Rockefeller) or members of their immediate families who received such protection immediately preceding January 20, 1977, if the President determines that they may be in significant danger, and provides that such protection shall continue for a period determined by the President but not beyond July 20, 1977, unless otherwise permitted by law. S.J. Res. 12—Public Law 95–1, approved January 19, 1977. (VV)

Child nutrition programs.—Extends through September 30, 1980, the summer food service program for children with changes designed to eliminate abuses and otherwise strengthen the administration of the program; extends through September 30, 1982, the authority of the Secretary of Agriculture to purchase agricultural commodities for donation to the child nutrition programs when acquisitions under other agricultural authorities are not available; requires the Secretary to establish procedures to assure that donations of agricultural commodities to the child nutrition programs are more responsive to the problems and needs of local school districts; requires the Secretary to conduct studies of the impact and the effect on the child nutrition programs of making cash payments in lieu of commodities, and of past and present patterns of sanitary practices of commodity producers under consideration for contracts for child nutrition programs; revises the special milk program to provide that in schools and institutions participating in the school lunch, breakfast, or child care feeding programs, free milk may be provided to children eligible for free school meals only at times other than the regular school lunch or school breakfast serving period; revises the school breakfast program to require that the Federal maximum reimbursement for especially needy schools be adjusted semiannually to reflect changes in the cost of food away from home and require States to establish the standards, subject to the Secretary's approval, under which schools in severe need may receive 100 percent of their operating costs; revises the authority under which equipment funds are furnished schools to give priority to schools without a food service program and schools without the facilities to prepare and cook hot meals; revises the authority under which States are provided administrative expenses for carrying out certain child nutrition programs to require that a specific amount (based on percentage of the State's total costs) be made available for the 1978 through 1980 fiscal years; establishes a five-year entitlement nutrition education and information program under which grants would be made to State educational agencies for the purpose of encouraging effective dissemination of scientifically valid information about food and nutrients to children participating in the school lunch and related child nutrition programs and to adults; repeals the provision in existing law which prohibits the Secretary from banning the sale of competitive foods (such as food from vending machines) in food service facilities or areas during the time that school lunches or breakfasts are being served; and requires the Secretary to establish an Institute of Food Management and Technology to address the problems of providing adequate food programs in diverse situations. H.R. 1139—Passed House May 18, 1977; Passed Senate amended June 30, 1977; In conference. (267)

Clinical laboratories.—Extends and expands the existing program of mandatory licensure to all laboratories (except those under the jurisdiction of the Department of Defense or the Veterans Administration) soliciting and accepting specimens for laboratory analysis: authorizes the Secretary of Health, Education, and Welfare to license those laboratories meeting quality assurance standards; authorizes the Secretary to promulgate standards and regulations to assure the quality, accuracy, and reliability of laboratory testing; authorizes the Secretary to delegate his licensure authority to states with primary enforcement responsibility to implement laboratory quality assurance programs at least equal to the Federal program; authorizes the Secretary and any State with primary enforcement responsibility to take necessary actions against laboratories not meeting the quality assurance standards; authorizes the Secretary to establish an Office of Clinical Laboratories to provide a uniform regulatory program for all laboratories subject to Federal jurisdiction; authorizes the Secretary to establish an advisory council to advise, consult with, and make recommendations to the Office of Clinical Laboratories concerning the development of quality assurance standards and the implementation of such standards; authorizes the Secretary to exempt physicians' office laboratories under certain conditions where physicians file an attested application with the Secretary, including but not limited to a description of the qualifications of non-physician laboratory personnel, the quality and type of tests conducted, and the score of proficiency examinations taken by such personnel, or where the laboratory participates in an approved proficiency testing program; authorizes the Secretary to waive from the personnel standards laboratories located in and serving rural areas; authorizes the Secretary and any State with primary enforcement responsibility to utilize the services of private, nonprofit entities for the provision of inspection and proficiency testing services; authorizes $15 million annually to permit the Secretary to provide technical and financial assistance to States to become States with primary enforcement responsibility; authorizes the Secretary to inspect laboratories without a warrant solely for the purpose of determining compliance with the promulgated national standards; authorizes the Secretary to seek revocation of a laboratory's license where it is found that the laboratory has engaged in kickbacks, bribes, or false, fictitious, or fraudulent billing practices; prohibits discrimination by any licensed laboratory against any employee who has become involved in any activity concerning allegations that the laboratory is in violation of this section; authorizes the Secretary to exempt laboratories which are primarily engaged in biomedical or behavioral research, or where the sole purpose of the tests or procedures performed is to determine insurability for insurance; authorizes $1 million annually to permit the Secretary to make grants and contracts for projects and studies respecting clinical laboratory methodology and utilization; authorizes increased penalties for failure to comply with the national standards and for any fraudulent activities undertaken in connection with obtaining reimbursement under titles XVIII and XIX of the Social Security Act; authorizes one year experimental demonstration competitive bidding in State medicaid programs under title XIX of the Social Security Act; and authorizes citizen suits for alleged violation of compliance with the law. S. 705—Passed Senate July 28, 1977. (VV)

Public health programs—Biomedical Research.—Authorizes a total of $3.357 billion to extend through fiscal year 1978, without major substantive modifications, the assistance programs under the Community Mental Retardation and Community Mental Health Centers Act and the programs under the Public Health Service Act, including biomedical research; computes the authorizations for these programs generally on a formula of the higher of the fiscal 1977 authorization or the fiscal 1977 appropriation plus 20 percent;

Establishes five supergrade positions for the National Institute on Alcohol Abuse and Alcoholism in order to attract highly qualified senior level scientific personnel; increases the number of National Cancer Institute consultants from 100 to 151; author-

izes the Secretary of Health, Education and Welfare to develop minimum public health standards to maintain preventive health care programs; directs the Secretary to arrange for studies of international health issues and opportunities and to submit a final report by January 1, 1978; authorizes an additional $67.5 million to enable the Secretary to make grants for construction and modernization projects to assist public hospitals to meet life and safety codes and avoid loss of accreditations; prohibits payments under medicare and medicaid to health maintenance organizations which memberships are made up of a majority of individuals who are recipients of such benefits; requires the Secretary of HEW to take into account unusual local conditions which inhibit access or availability of personal health services in designating medically underserved populations for the purpose of making grants and awarding contracts for community health services; reaffirms Congressional intent that the existing prohibition on the use of funds under the authority of the Public Health Service Act other than section 1004 (relating to authorizations for family planning research) includes the administrative costs of family planning research activities;

Amends the Health Professions Educational Assistance Act to provide for equity in student loan programs, scholarships programs, and payback provisions for medical students within the National Health Service Corps (NHSC) who had made commitments under previous legislation; amends the definition of a health professions educational institution eligible to participate in the guaranteed student loan program to provide that an institution would be eligible for the program if it received or was eligible to receive capitation support in the previous fiscal year; assures that all physicians graduating from medical schools accredited by the Liaison Committee on Medical Education are treated equally; provides that individuals with obligated service to the NHSC may participate in residency training programs as officers in the regular or reserve corps of the Public Health Service prior to fulfilling the obligated service in an underserved area; permits an area Health Education Center to conduct training in general pediatrics as well as in family medicine and general internal medicine; allows the Secretary to repay, in return for service in a health manpower shortage area, educational loans obtained by health professions students before October 12, 1976; guarantees that students who graduated from two-year U.S. medical schools will be treated the same as U.S. students who completed 2 years at a foreign medical school when transferring to degree-granting institutions; authorizes construction assistance for the establishment or expansion of regional health professions programs; provides that traineeships in emergency medicine for graduate medical education students shall provide for tuition and fees and such stipends and allowances that the Secretary of HEW may deem necessary; reinstates the Indian Health Scholarship program; modifies amendments to the Immigration and Nationality Act to ensure that actions by HEW officials will be consistent with the intentions of Congress in regard to the so-called "f" visa training program which sets standards for alien graduates of foreign medical schools enrolling in the United States to study and practice medicine; and amends the Public Health Service Act to conform certain provisions of the student loan program with those in the NHSC;

Increases to $399,864,200 the authorization for the maternal and child health grant programs under the Social Security Act and extends through fiscal 1980 the authority for 100 percent Federal financing of medicaid skilled nursing and intermediate care facility inspection and enforcement costs; extends for 1 month, until August 30, 1977, the date by which the Committee on Mental Health of the Elderly must make its report to Congress to coordinate its actions and recommendations with the Presidential Commission on Mental Health; provides that States shall not receive less than their 1976 formula grant allotments under the Comprehensive Alcohol Abuse and Alcoholism Prevention. Treatment and Rehabilitation Act; and authorizes $140 million for preventive family planning project grants and $5 million for the Sudden Infant Death Syndrome Counseling and Information Services. H.R. 4975—Public Law 95–83, approved August 1, 1977. (131)

HOUSING

Housing and community development.—Amends the Housing and Community Act of 1974 and authorizes a total of $14.6 billion for housing programs through fiscal year 1980;

Community development.—Authorizes $12.4 billion for extension of the community development program through fiscal 1980; provides that not less than $197 million be made available for low-cost housing projects, and not less than $120 million be used for housing for the elderly and handicapped; provides a dual formula method of allocation which permits communities to use either poverty or age of housing stock as the primary indicator of need, and allows cities with at least 50,000 population and urban counties to choose a third formula which uses the proportion of housing stock built prior to 1940 as the primary indicator of need; creates the urban development action grant (UDAG) program to aid seriously distressed cities; allows multiyear funding to small cities; authorizes $60 million for the loan rehabilitation program and $75 million for the comprehensive planning program;

Housing assistance and related programs.—Provides $1.116 billion in new contract authority for low-income housing programs and limits the amount of assistance to be used on existing rather than new housing; authorizes $708.1 million for public housing operating subsidies; permits HUD to make assisted housing payments for new or rehabilitated housing units beyond 60 days in an FHA-insured project; provides that loans for housing and related facilities for elderly and handicapped persons assisted under section 202 be made without regard to mortgage insurance limits contained in the National Housing Act; permits interest reduction subsidies for section 235 cooperatives to increase the availability of cooperative housing projects for low-income families; authorizes $60 million for policy development and research and $15 million for the urban homesteading program; allows communities which choose to not participate in the flood insurance program to continue to have access to conventional forms of financing;

Mortgage credit.—Extends through fiscal year 1978 the following mortgage credit programs authorized under the National Housing Act: insurance of financial institutions, general insurance program, housing for moderate -income and displaced families, homeownership for lower income families, rental cooperative housing for lower income families, experimental financing, armed services housing, mortgage insurance for land development, and mortgage insurance for group practice facilities; extends through fiscal 1978 the authority to set FHA interest rates (Public Law 90–301) and the National Flood Insurance Act of 1968;

Increases the maximum loan amount for FHA-insured mortgages and for loans made by chartered savings and loan associations to adjust for the inflation in the costs of homes, mobile homes, and home improvements; decreases the downpayment requirements for FHA-insured loans; lowers the FHA mortgage insurance premium paid by nonprofit teaching facilities hospitals; provides for the expansion of the experimental graduated payment mortgage program; amends the Government National Mortgage Association emergency tandem plan to correct problems in the program and give it greater flexibility, particularly for use in urban areas and for housing rehabilitation;

Community reinvestment.—Authorizes the Community Reinvestment Act which requires Federal financial regulatory agencies in the course of examining the institutions they regulate to assess each institution's performance in meeting the credit needs of its primary savings service area, to the extent consistent with sound business operations; provides that regulations resulting from the Act will become effective no later than 180 days after its enactment;

Rural housing.—Amends the Housing Act of 1949 to extend through fiscal year 1978 the housing programs under the Farmers Home Administration (FmHA); increases by $25 million the low rent housing for domestic farm labor and low income repair loans programs;

Modifies the guaranteed loan program of FmHA to completely separate the guaranteed loan program, both in operation and funding, from the insured (direct) loan program; restricts the guaranteed loan program to persons with above average incomes, thereby asserting Congressional intent that FmHA use the direct loan program for low- and moderate-income persons; makes interest rates on guaranteed loans negotiable between the borrower and the lender in order to increase the program's attractiveness to private lenders;

Authorizes $10 million in fiscal 1978 for the mutual and self-help housing program; requires that at least 60 percent of FmHA loans made pursuant to section 502 (single family) and section 515 (rental) programs benefit persons of low income; requires the establishment of a research capacity within FmHA; mandates the implementation of a rural rent subsidy; and expands the definition of "rural area" to include smaller communities with standard metropolitan statistical areas which have a serious lack of mortgage credit. H.R. 6655—Passed House May 11, 1977; Passed Senate amended June 7, 1977; In conference. (177)

Mortgage insurance.—Extends for 30 days, to July 31, 1977, the authority of the Secretary of Housing and Urban Development to: insure mortgages or loans under certain HUD-FHA mortgage or loan insurance programs under the National Housing Act, administratively to set interest rates for FHA-insured mortgage loans, enter into new flood insurance contracts; and extends certain authorities under title V of the Housing Act of 1949 with respect to FHA's rural housing program. H.J. Res. 525—Public Law 95–60, approved June 30, 1977. (VV)

Extends from July 31, 1977, to September 30, 1977, the authority of the Secretary of Housing and Urban Development to: insure mortgages or loans under certain HUD–FHA mortgage or loan insurance programs under the National Housing Act, administratively set interest rates for FHA-insured mortgage loans to meet the market at rates above the statutory maximum, and enter into new flood insurance contracts under the National Flood Insurance Act of 1968; and extends through September 30, 1977, certain authorities under title V of the Housing Act of 1949 with respect to FHA's rural housing programs. S.J. Res. 77—Public Law 95–80, approved July 31, 1977. (VV)

Supplemental housing authorizations.—Authorizes additional funds for housing assistance for lower income Americans in fiscal year 1977; extends the riot insurance and crime insurance programs; and establishes a National Commission on Neighborhoods;

Increases, in title I, the authorization for section 8 rental assistance, the major housing program for lower income Americans, by $378 million for a total of $1,228,050,000; increases operating subsidy funds for public housing projects by $19.6 million to pay for this winter's unexpectedly high heating costs; extends the contract period for new,

privately developed section 8 housing from 20 to 30 years in order to attract more private financing; authorizes such appropriations as may be necessary for reimbursement of the FHA general insurance fund for losses on the sale of foreclosed properties from the FHA inventory; contains a $10 million increase for a total of $15 million for the Hud urban homesteading program as a means of attracting additional rehabilitation funds into neighborhoods and disposing of the HUD inventory of foreclosed properties; increases from $500 million to $1.341 billion the ceiling for losses incurred by the Federal Housing Administration General Insurance Fund; extends HUD's authority to write crime insurance and riot reinsurance policies through September 30, 1978, and authorizes continuation of policies in force before April 30, 1978, through September 30, 1981; extends from April 30, 1978, to September 30, 1978, the date that the Secretary must submit a plan for the liquidation and termination of these programs; deletes the requirement whereby mortgages may be insured under section 220 of the National Housing Act only if the property is located in an area which has a workable program for community development; makes clear that mortgages insured under section 221(d)(4) of the Act may be executed by a mortgagor which is a public body or agency, or a cooperative, limited dividend corporation or other entity, private nonprofit corporation or association, as well as a profit motivated entity, as defined by the Secretary; and

Authorizes, in title II, $1 million for the establishment of a National Commission on Neighborhoods to assess existing policies, laws and programs having an impact on neighborhoods and make recommendations regarding investment in city neighborhoods, community government participation, economically and socially diverse neighborhoods, rental housing, and rehabilitation of existing structures, among other issues. H.R. 3843—Public Law 95–24, approved April 30, 1977. (VV)

INDIANS

American Indian Policy Review Commission.—Extends from February 18, 1977, to May 18, 1977, the period of time in which the American Indian Policy Review Commission must submit its final report to the Congress and increases the authorization therefor from $2.5 million to $2.6 million. S.J. Res. 10—Public Law 95–5, approved February 17, 1977. (VV)

Cheyenne-Arapaho lands.—Declares that two separate tracts of excess Government land, totaling approximately 107 acres, located in Canadian and Custer Counties, Okla., be held in trust for the Cheyenne-Arapaho Tribes of Oklahoma and authorizes the Secretary of the Interior to accept, upon request from the tribes, the fee simple title to lands conveyed to them pursuant to the acts of September 14, 1960, and May 18, 1968, to be held in trust for the tribes. S. 1291—Passed Senate June 9, 1977. (VV)

Creek Nation land.—Declares that 5 acres of Federally-owned land in McIntosh County, Okla., be held in trust by the United States for the Creek Nation of Oklahoma. S. 947—Passed Senate June 9, 1977. (VV)

Ely Indian land.—Declares that 90 acres of Federally-owned land located in White Pine County, Nev., be held in trust for the Ely Indian Colony in Ely, Nev. S. 103—Passed Senate June 9, 1977. (VV)

Indian business development program.—Amends the Indian Financing Act of 1974 to extend the Indian Business Development Program for 2 years, through fiscal year 1979, at an annual authorization of $14 million. H.R. 4992—Public Law 95–68, approved July 20, 1977. (VV)

Indian claims.—Extends to April 1, 1980, the statute of limitation under which the U.S., as trustee, can bring Indian claims for monetary damages which arose prior to the enactment of the original statute in 1966 on land claims by Indian tribes, bands and groups. S. 1377. Public Law 95– , approved 1977. (VV)

Extends for an additional month, until August 18, 1977, the statute of limitation under which the U.S., as trustee, can bring Indian claims for monetary damages which arose prior to the enactment of the original statute in 1966 on land claims by Indian tribes, bands and groups. H.J. Res. 539—Public Law 95–64, approved July 11, 1977. (VV)

Indian Claims Commission.—Authorizes $2,250,000 for the Indian Claims Commission for fiscal year 1978; adds a new section to facilitate the transfer of cases from the Indian Claims Commission to the U.S. Court of Claims; confers upon the Court the powers of the Commission to set fees for attorneys representing Indian tribes or claimants and to obtain information and documents from Government agencies and congressional committees; provides that final judgments of the Court shall be paid as other Court of Claims judgments are paid; provides that cases transferred to the Court shall be subject to review by the Supreme Court; provides that the law establishing a revolving loan fund for tribes to obtain expert witnesses in Commission cases shall remain applicable to transferred cases; and increases from 15 to 16 the number of Court of Claims Commissioners. H.R. 4585—Public Law 95–69, approved July 20, 1977. (VV)

Indians rights to Arkansas riverbed.—Directs the Secretary of the Interior to enter into an agreement with the Cherokee, Choctaw, and Chickasaw Nations of Oklahoma for the use, lease, or purchase by the United States of their rights in the Arkansas Riverbed; directs the Secretary to utilize, as a basis for the terms of any agreement, the value of the property rights as determined by appraisals conducted by the Secretary and provides for payment of not less than the appraised value of the property rights involved; directs the Secretary to take such action as necessary to immediately carry out any agreement; and authorizes therefor $177 million. S. 660—Passed Senate June 30, 1977. (VV)

Siletz Indian Tribe restoration.—Extends Federal recognition to the Confederated Tribes of the Siletz Indians, Oregon; makes the provisions of the Indian Reorganization Act of June 18, 1934, applicable to the tribe; makes the tribe and its members eligible for all Federal services and benefits without regard to the existence of a tribal reservation or its members residing on a reservation; directs that a specified area, comprising seven counties, in Oregon be considered a reservation for the purpose of determining the eligibility of tribal members for those Federal services and benefits requiring residency on a reservation; restores to the tribe all rights and privileges, other than hunting, fishing and trapping, under any Federal treaty, Executive order, agreement, or statute, or under the act of August 13, 1954, which terminated the tribe; provides a procedure by which membership in the tribe is to be established; provides for an election to adopt a constitution and bylaws and to elect tribal officials as provided in the constitution and bylaws; directs the Secretary of the Interior to negotiate with all interested parties to develop a plan for the establishment of a reservation, and to submit the plan, in the form of proposed legislation, to the appropriate Congressional committees within two years of enactment; and authorizes the Secretary to promulgate such rules and regulations as necessary to carry out the act. S. 1560—Passed Senate August 5, 1977. (VV)

Sioux Black Hills claim.—Authorizes the U.S. court of Claims to review, without regard to the technical of res judicata or collateral estoppel the determination of the Indian Claims Commission entered February 14, 1974, that the act of February 28, 1877, effected a taking of the Black Hills portion of the Great Sioux Reservation in violation of the fifth amendment. S. 838—Passed Senate May 3, 1977 (VV)

Te-Moak Shoshone land.—Transfers 80 acres of land from the United States to the Te-Moak Bands of Western Shoshone Indians to be held in trust by the United States in order to provide a home for the Wells Indian Community, a group of the Te-Moak Band who are presently landless. S. 667—Passed Senate June 9, 1977. (VV)

Wichita Tribal land claim.—Authorizes the Indian Claims Commission to consider claims by the Wichita Indian Tribe and affiliated bands with respect to aboriginal title to lands which were acquired by the United States without payment of adequate compensation. S. 773—Passed Senate May 5, 1977. (VV)

Zuni lands.—Directs the Secretary of the Interior to acquire through purchase, trade or otherwise the 618.41 acres in the State of New Mexico upon which the Zuni Salt Lake is located and hold such land in trust for the Zuni Indian Tribe; confers jurisdiction upon the Court of Claims to hear and determine an aboriginal land claims that the Tribe failed to file with the Indian Claims Commission under the Act of August 13, 1946, which established that forum; and authorizes the Tribe to purchase and exchange lands in the States of New Mexico and Arizona notwithstanding the restrictions in the act of May 25, 1918, expressly prohibiting further expansion of Indian reservations in these States. S. 482—Passed Senate May 3, 1977. (VV)

INTERNATIONAL

Abu Daoud.—States as a sense of the Senate that the release by France of Abu Daoud, a known terrorist who is accused of having planned the murder of Olympic athletes in Munich in 1972, is harmful to the effort of the community of nations to stamp out international terrorism; further states that the United States should consult promptly with France and other friendly nations to seek ways to prevent a recurrence of a situation in which a terrorist leader is released from detention without facing criminal charges in a court of law; and directs the Secretary of the Senate to provide a copy of this resolution to the Secretary of State for transmission to the Government of France. S. Res. 48—Senate agreed to January 26, 1977. (13)

Arms Control and Disarmament Agency.—Authorizes a total of $16.6 million for the Arms Control and Disarmament Agency (ACDA) for fiscal year 1978, including $11.05 million for program operations, $3.55 million for external research and public affairs, and $2 million for the purpose of furthering the nuclear safeguards and program activities of the International Atomic Energy Agency; creates a new executive level IV position, Special Representative for Negotiations, to be appointed by the President with the advice and consent of the Senate to serve as the Alternate Chairman of the U.S. SALT delegation and to take a part in other negotiations; removes the requirement that all ACDA contracts and grants be with U.S. institutions and persons; allows the agency an exception from the appointment and classification provisions of the Civil Service System in order to allow the agency to compete effectively for employees with other Federal agencies; permits ACDA employees to accept reimbursement for work-related travel and expenses; adds a new section 37 to the Arms Control and Disarmament Act which states the sense of Congress that adequate verification compliance with the terms of arms control agreements should be an indispensable part of any such agreement, and requires the ACDA Director to report to Congress his determinations as to the veritability of the components of arms control proposals, any degradation of veritability in

existing arms control agreements, and the amount of agency resources expended on the verification task. H.R. 6179—Public Law 95. , approved 1977. (220)

Belgrade conference.—States as the sense of the Congress that the U.S. delegation to the preparatory Belgrade meeting, beginning on June 15, 1977, should make every effort to insure that the agenda adopted for the subsequent meeting on the Conference on Security and Cooperation in Europe provides for proper, straightforward and serious exchange of views among the participating States on the application of the principles of the Final Act of the Helsinki Conference as well as on compliance and noncompliance with all of its provisions including the presentation and thorough discussion of all violations of the Final Act, especially those related to universal humanitarian ideals. H. Con. Res. 249—Action completed June 15, 1977. (VV)

States the sense of the Senate that the U.S. representatives to the Helsinki Accords Review Conference should indicate to the Soviet Union and other states represented at the Conference the official concern of the U.S. over the treatment of Anatoly Scharansky, Yuri Orlov, and others who sought to monitor compliance with the Helsinki Accord. S. Res. 198—Senate agreed to July 12, 1977. (VV)

Harp seal killings.—Urges the Canadian Government to reassess its present policy of permitting the killing of newborn harp seals in Canadian waters which is considered by many citizens of the U.S. to be cruel and, if continued at the current high level, may cause the extinction of that species of seal. H. Con. Res. 142—Action complete April 6, 1977. (VV)

International cooperation on nuclear proliferation.—Commends the President for his stated intentions to give diplomatic priority to the pursuit of nonproliferation measures; endorses and strongly supports active consultations with world leaders on the highest level to: (1) curb the spread of nuclear enrichment and reprocessing facilities and otherwise discourage the diversion of nuclear energy from peaceful uses to nuclear weapons or other nuclear explosive devices, (2) achieve universal acceptance of international safeguards on all peaceful nuclear activities, as well as to seek international cooperation to improve the packaging and handling of high-level wastes and to provide for international storage of plutonium, spent reactor fuel, and other sensitive nuclear materials, (3) explore possible international arrangements for the provision of nuclear fuel services to help meet the legitimate energy needs of cooperating states, (4) reach agreement on sanctions to be applied against any nation which seeks to acquire a nuclear explosives option, and (5) strengthen the safeguards of the International Atomic Energy Agency; and pledges prompt Senate action on legislation to enact a clear statement of goals for U.S. nonproliferation policy providing guidance and support to these Presidential diplomatic initiatives, and to establish a clear statutory framework for the development and implementation of U.S. nuclear export policy. S. Res. 94—Senate agreed to April 28, 1977. (VV)

International development assistance—Food for peace.—Authorizes $1,646,800,000 for fiscal year 1978 for bilateral development assistance, international disaster assistance programs, operating expenses for the United States Agency for International Development (AID) and voluntary U.S. contributions to international organizations;

Authorizes $200 million for the initial U.S. contribution to the Sahel Development Program which combines the resources of more than 12 donors and 8 recipient countries in a long term development effort in the Sahel region of Africa; continues the New Directions aid policies initiated by the Congress in 1973 which require that U.S. assistance be channeled directly to aid the poor people in developing countries; extends the Housing Investment Guaranty Program through fiscal year 1979 and combines the separate Latin American and worldwide guaranty authorities; extends through fiscal 1978 the Agricultural and Productive Credit and Self-Help Community Development Programs; authorizes the following housing guaranty programs for fiscal year 1978: Israel—$25 million, Portugal—$15 million, and Lebanon—$10 million, notwithstanding the fact that these countries are not otherwise receiving development assistance; provides $30 million to continue U.S. assistance for the relief, rehabilitation, and reconstruction assistance for victims of the Italian earthquake; improves U.S. population planning programs by providing for their integration with U.S. health and other development assistance programs; bars the use of funds for assistance to or reparations for Vietnam, Cambodia, Laos, or Cuba and directs the President to continue to try to obtain an accounting of MIA's; repeals various provisions of the Foreign Assistance Act prohibiting assistance to countries which furnish assistance to or trade with Cuba or Vietnam; bars funds for involuntary sterilizations; establishes an International Energy Institute;

Includes a separate title to strengthen the economic development and trade expansion aspects of the Food for Peace program (Public Law 480) and to clarify the humanitarian intent of the program; repeals the present exclusion from title I sales program of those countries or exporters which trade with Cuba or North Vietnam; removes the restriction on title I sales to the United Arab Republic; changes the title I sales allocation formula by requiring that 25 percent of the food aid commodities provided in each fiscal year be allocated to countries other than those with a per capita gross national product of $520 instead of $300 or less and by allowing the Secretary of Agriculture to reallocate some portion of title I financing if he certifies to Congress that the quantity of commodities that would be required to be allocated could not be used effectively to carry out humanitarian or development purposes of title I; permits the Secretary to finance projects to aid in the untilization, distribution, and storage of U.S. agricultural commodities; increases the annual minimum of agricultural commodities to be shipped under title II of Public Law 480 from 1.3 to 1.5 million metric tons; requires that 1.3 instead of 1 million metric tons of this amount be distributed through the U.S. voluntary agencies and the world food program; creates a new food for development program; expands and refines the "grantback" authority provided in 1975; permits the President to waive the repayment of title I obligations under a carefully developed plan for utilization of the proceeds raised by the recipient government from the sale of title I commodities upon its own market; and makes various other improvements. H.R. 6714—Public Law 95-88, approved August 3, 1977. (207)

International financial institutions.—Provides a total of $5.125 billion in multiyear authorizations for continued participation by the United States in six international financial institutions which includes $1.57 billion for the World Bank to be spread over three years; $2.4 billion for the International Development Association to be spread over three years; $112 million for the International Finance Corporation to be spread over three years; $814 million for the Asian Development Fund to be spread over three years; and a $50 million one-year authorization for the African Development Fund with a provision directing the Secretary of the Treasury to begin discussions with other donor nations for the purpose of setting amounts for future replenishments and of reviewing the voting structure within the Fund;

Instructs U.S. representatives to all international financial institutions to use their voice and vote to channel aid to projects which address the basic human needs of people in the recipient country; requires U.S. representatives, where other means have proven ineffective in advancing the cause of human rights, to oppose all assistance to countries which engage in consistent patterns of gross violations of internationally recognized human rights or which provide refuge to airline hijackers unless the assistance is directed specifically to programs which serve basic human needs or unless the President certifies that the cause of international human rights would be more effectively served by actions other than voting against assistance; requires the U.S. Executive Directors to consider several additional factors in carrying out their duties: (1) the extent of cooperation of a country in permitting unimpeded investigations of alleged human rights violations by specified international organizations; (2) U.S. actions on bilateral assistance due to human rights considerations; (3) the extent to which economic assistance directly benefits needy people; (4) whether a country has detonated a nuclear device or is not a State Party to the Treaty on Nonproliferation of Nuclear Weapons, or both, and (5) in dealing with requests from Vietnam, Laos, or Cambodia, the responsiveness of these governments in providing a more substantive accounting of American MIAs; requires U.S. representatives to oppose loans or other assistance for expanding foreign production of palm oil, sugar, or citrus crops for export if such production will cause injury to U.S. producers of the same, similar, or competing agricultural commodities; contains language to clarify that all funds to international financial institutions, including multiyear authorizations and pledges for callable capital, are subject to the annual appropriations process; and directs U.S. officials to try to maintain salaries in these institutions at levels near to comparable positions in the United States. H.R. 5262—Passed House April 6, 1977; Passed Senate amended June 14, 1977; Senate agreed to conference report July 27, 1977. (203)

International Security Assistance.—Authorizes a total of $3,195,900,000 ($53 million below the Administration's request) in 1978 budget authority for eight programs to finance international security programs totaling $4,579,100,000;

Military programs.—Provides $228.9 million to the military assistance program which includes funds for military aid to Greece ($33 million), Portugal ($25 million), Spain ($15 million), Turkey ($48 million), the Philippines ($20 million), Jordan ($55 million), Indonesia ($15 million), and Thailand ($8 million); continues the phasedown of the military assistance advisory group program by reducing the number of groups from 34 to 17 and establishing a worldwide personnel ceiling of 865; retains the provision which states that no military personnel performing military functions may operate in any foreign country unless specifically authorized by Congress; authorizes the assignment of overseas management teams in fifteen countries; provides $31 million for the international military education and training program; provides $677 million to finance foreign military sales credits to 29 countries, with direct credits of $500 million to Israel and $20 million to Zaire, and with all loans to other countries to be financed through the Federal Financing Bank; states that a policy of restraint in U.S. arms transfers shall not impair Israel's deterrent strength or undermine the military balance in the Middle East;

Economic programs.—Authorizes $1.89 billion for the security assistance program to provide economic assistance for 15 countries and recommends that such programs be subject to the "new directions" criteria of the Foreign Assistance Act which requires

that aid be channeled directly to aid the poor people in developing countries; provides $20,000 in security supporting assistance for disaster relief in Lebanon; provides that not less than $300 million for the amount authorized for Israel shall be available only for budgetary support on a grant basis; adds a new section 533 to the Foreign Assistance Act of 1961 to create an $80 million Southern Africa Special Requirements Fund to address the economic problems caused by the conflict in that region and prohibits the use of such funds for assistance in Mozambique, Angola, Tanzania, or Zambia unless the President determines that such aid would further U.S. policy interest; authorizes a balance of payments support loan to Portugal not to exceed $300 million to assist in stabilizing the Portugal economy; provides $25.0 million to continue the Middle East special requirements fund with $12.2 million of that amount earmarked for the Sinai support mission;

Narcotics control and contingency funds.—Provides $39 million for international narcotics control, with the understanding that $12.5 million will be used for programs in Mexico; requires the Department of State to review the narcotics control assistance program in Burma; provides $5 million for the President's Contingency Fund to give the Administration some flexibility in dealing with national security;

Other provisions.—Prohibits military assistance, training, and credits to Ethiopia and Argentina; exempts Australia, Japan, and New Zealand from the license requirement contained in the Arms Export Control Act for the export of major defense equipment; includes a statement of Congressional intent to authorize $100 million for a Zimbabwe Development Fund when progress toward an internationally recognized settlement will so permit; prohibits funds to promote any military or paramilitary operations in Zaire; prohibits economic assistance to any supplier or recipient of nuclear technology of equipment unless both agreed to place the transferred equipment under multilateral auspices when available, and that the recipient agreed to place all nuclear activities under international safeguards; authorizes such sums as may be necessary in fiscal year 1978 to carry out international agreements relating to defense cooperation with Greece and Turkey, and raises to $175 million the FMS credits and sales ceiling for Turkey contained in the Foreign Assistance Act; authorizes additions to stockpiles of defense articles in foreign countries of $270 million, with the entire amount earmarked for War Reserve Stocks of ammunition for Korea, a bookkeeping shift requiring no appropriation; and requires the termination of the sale of defense articles and services for one year to any country granting sanctuary to international terrorists unless U.S. national security justifies continuation of such sales. H.R. 6884—Public Law 95– , approved 1977. (209)

National Academy of Peace and Conflict.—Establishes a 1 year Commission to study proposals for establishing the National Academy of Peace and Conflict consisting of 9 members, three each appointed by the President pro tempore of the Senate, the Speaker of the House, and the President, to conduct a study to consider whether to establish a National Academy of Peace and Conflict Resolution; the size, cost and location of the Academy; the effects the establishment of the Academy would have on existing institutions of higher education; the relationship which would exist between the Academy and the Federal Government; the feasibility of making grants and providing other forms of assistance to existing institutions of higher education in lieu of, or in addition to, establishing the Academy; and alternative proposals, which may or may not include the establishment of the Academy, to assist the Federal Government in accomplishing the goal of promoting peace; and authorizes therefor $500,000. S. 469—Passed Senate June 17, 1977. (VV)

Peace Corps authorization.—Authorizes $82.9 million to finance the operation of the Peace Corps for fiscal year 1978 and $1 million for increases in salary, retirement, or other employee benefits authorized by law. S. 1235—Public Law 95– , approved 1977. (VV)

Portugal—Military assistance.—Modifies the existing statutory limitations on the allocation of military assistance funds for fiscal year 1977 contained in section 504(a)(1) of the Foreign Assistance Act of 1961, as amended, to add Portugal to the list of eligible countries and specify that $32.25 million be allocated to that country to upgrade its armed forces which were debilitated as a result of prolonged colonial wars in Africa. S. 489—Public Law 95–23, approved April 30, 1977. (VV)

Regulations to prevent collisions at sea.—Provides the necessary statutory authority to implement the provisions of the "Convention of International Regulations for Preventing Collisions at Sea, 1977" (Ex. W, 93d–1st) by specifying the means by which the Regulations will come into force and effect for the United States, ensuring coordination with the international implementation of the Regulations, and providing legal notice to interested persons through publication in the Federal Register; repeals Public Law 88–131 and replaces it with a congressional authorization for the President to proclaim the International Regulations and to establish the effective date of the Regulations, Annexes thereto, and any subsequent amendments, by publishing the proclamation in the Federal Register; provides for executive and legislative review of any proposed amendment to the Regulations and Annexes by requiring the President to notify Congress of the proposal, including the date before which objections must be received by the International Maritime Consultative Organization (IMCO) and provides that either House of Congress may adopt a disapproval resolution within 60 days of receipt of a notification or 10 days before the last date on which an objection must be communicated to IMCO; provides that the regulation will be applicable to and must be complied with by all U.S. vessels, both public and private, while operating on the high seas; makes the regulations inapplicable to vessels operating in U.S. waters covered by the Inland Rules of the Road, the Navigation Rules for the Great Lakes and their connecting and tributary waters, and the Western Rivers rules which are established by both statute and Coast Guard regulations; requires U.S. vessels to comply with the international regulations if a foreign state has not exercised its recognized right to promulgate different rules; directs the Secretary of the Navy to require a vessel to comply as closely as possible to requirements of the international regulations which he certifies cannot be complied with without interfering with the special functions of the vessel; permits the Secretary of the Navy to establish special rules for sound and light signals for ships of war or vessels in convoy provided that they not be mistaken for signals authorized in the Regulations; authorizes the Secretary of the Department in which the Coast Guard is operating to promulgate reasonable rules and regulations to implement the act and international regulations and to establish special rules for sound and light signals for fishing vessels operating as a fleet; and imposes two separate civil penalties of not more than $500 each for violations. H.R. 186—Public Law 95–75, approved July 27, 1977. (VV)

Rhodesian chrome.—Amends the United Nations Participation Act of 1945 to halt the importation of Rhodesian chrome by nullifying the effect of Section 203 (the so-called Byrd amendment) of the Armed Forces Appropriations Act of 1972, Public Law 92–156, which permitted the importation into the United States of chromium and other strategic minerals from Rhodesia, despite mandatory U.N. sanctions against trade with that country which the United States supported by its vote in the United Nations Security Council and by Executive Order 11419; prohibits the importation into the United States of Rhodesian commodities and products as specified in that Executive Order, of July 29, 1968, as well as steel mill products containing Rhodesian chromium in any form; establishes an enforcement mechanism which requires a certificate of origin for these products confirming that they do not contain chromium from Rhodesia; and authorizes the President to suspend the act if he determines that it would encourage meaningful negotiations and further the peaceful transfer of government from minority to majority rule in Rhodesia. H.R. 1746—Public Law 95–12, approved March 18, 1977. (59)

Romanian earthquake.—States as a sense of the Senate that the United States should join with other nations and international, public, and private organizations to assist the people of Romania following the 1977 earthquake; and expresses deepest sympathy to the victims and their families on behalf of the people of the United States. S. Con. Res. 12—Action complete March 17, 1977. (VV)

Romanian earthquake authorization.—Authorizes $20 million to the President for fiscal year 1977, to remain available until expended, for the relief and rehabilitation of refugees and other earthquake victims in Romania; requires the President to transmit a report to the Foreign Relations Committees of the Senate and House 60 days after enactment and quarterly thereafter on the obligation of authorized funds; and states that nothing in this act shall be interpreted as endorsing any measure undertaken by the Government of Romania which would suppress human rights as defined in the Conference on Security and Co-operation in Europe (Helsinki Declaration) Final Act and the United Nations Declaration on Human Rights or as constituting a precedent for or commitment to provide development assistance to Romania and requires that the Romanian Government be so notified. H.R. 5717—Public Law 95–21, approved April 18, 1977. (VV)

Soviet detention of Robert Toth.—States as the sense of the Senate that the U.S. should continue to press the Soviet Government for a complete accounting of the circumstances which precipitated the detention of Robert C. Toth, a Los Angeles Times staff member, and that appropriate means should be taken to obtain the safe return of Mr. Toth to the United States. S. Res. 194—Senate agreed to June 15, 1977. (VV)

Soviet expulsion of George A. Krimsky.—States as the sense of the Senate that: (1) the Soviet expulsion of Associated Press reporter George A. Krimsky is contrary to the spirit of the Helsinki Declaration respecting the rights of Journalists; (2) the decision serves only to obstruct the implementation of the free flow of information provisions contained in the Declaration; (3) the action only invites and justifies steps of a reciprocal nature by the U.S. Government; and (4) the U.S. and Soviet Governments should seek greater communication in this area to prevent similar events of a counterproductive nature from occurring in the future; and directs the Secretary of the Senate to transmit a copy of this resolution to the President for the Department of State to convey directly to General Secretary Leonid Brezhnev of the Central Committee of the Soviet Communist Party. S. Res. 81—Senate agreed to March 4, 1977. (VV)

Soviet freedom of emigration.—Conveys to

the Soviet Government the sustained interest of the American people regarding Soviet adherence to the Helsinki Declaration, including their pledge to facilitate freer movement of people, expedite the reunification of families, and uphold the general freedom to leave one's country. S. Con. Res. 7—Action complete March 22, 1977. (39)

State Department authorization.—Authorizes $1,693,308,000 for fiscal year 1978 for the operations of the State Department (including the Office of Foreign Buildings), the U.S. Information Agency (USIA), and the Board for International Broadcasting (which makes grants to Radio Free Europe/Radio Liberty);

Facilitates compliance by the United States with the Helsinki Agreement by requiring that the Secretary of State recommend the necessary waiver for any prospective visitor to the United States who could be subject to the denial of a visa solely for reason of political affiliation with the exception of the right of continued denial of entry to any person whom the Secretary judges to be a threat to U.S. security;

Strengthens the ability of the Board for International Broadcasting to oversee and set broad policy direction for Radio Free Europe/Radio Liberty, Inc.;

Provides that (1) U.S. policy toward Korea should be arrived at jointly by the President and the Congress; (2) any implementation of the President's policy of phased troop withdrawal from Korea should be consistent with the security interests of South Korea and the interests of the United States in Asia, notably Japan; (3) such policy should involve appropriate consultations between the United States and governments directly involved; and (4) any implementation of such policy shall be carried out in regular consultation with Congress;

Contains provisions to encourage the State Department to assist Americans incarcerated abroad and requires an annual report to Congress on the prisoners' status, including an assessment of the performance of Embassy and consular personnel in assisting them;

Provides that any new Panama Canal treaty or agreement negotiated with funds appropriated under this title must protect the vital interests of the United States in the Canal Zone and in the operation, maintenance, property, and defense of the Panama Canal;

Repeals existing law which authorizes suits against U.S. consular officers for damages resulting from neglect or failure to perform any duty imposed by law or by an order pursuant to the law in a timely fashion;

States the sense of the Congress that negotiations toward the normalization of relations with Cuba be conducted in a deliberate manner and on a reciprocal basis; that the vital concerns of the United States with respect to the basic rights and interests of U.S. citizens whose persons or property are the subject of negotiations be protected; and that Cuban policies and actions regarding the use of military and paramilitary personnel beyond its borders and the Cuban government's disrespect for human rights are among elements which must be taken into account during negotiations;

Strengthens the Foreign Gifts and Decorations Act of 1966 by clarifying existing ambiguities as to who is covered by establishing certain reporting and publication requirements and by increasing penalties for noncompliance; prohibits the President from making a commitment to provide any reparations or aid to Vietnam and prohibits funds for reparations or aid to Vietnam and directs the President to take all possible steps to obtain a final accounting of POWs and MIAS. H.R. 6689—Public Law 95– , approved 1977. (219)

State Department supplemental authorization.—Provides a supplemental authorization of $89.5 million for the Department of State for fiscal year 1977 as follows: (1) $60 million to pay U.S. dues and assessments to UNESCO for 1975 and 1976, in arrears because of Congressional action suspending further payments until the President certified that UNECO's policies were in line with its objectives and less political, and part of the 1977 assessment, (2) $11,325,000 for aid to Soviet and East European refugees not settling in Israel and $7.4 million for the Indochinese Refugee Program administered by the United Nations High Commissioner for Refugees to continue U.S. support of 80,000 refugees in Thailand who arrived from Vietnam, Cambodia and Laos in 1975, and (3) $10,775,000 to provide for the construction of 108 apartment units for the U.S. mission in Cairo—36 for the State Department and 72 for AID; authorizes the Secretary to use appropriated funds to provide emergency medical attention, dietary supplements, and other assistance to U.S. citizens incarcerated abroad; requires that the Chairman or Vice-Chairman of the Senate and House delegations to the four interparliamentary union groups (Canada-U.S., Mexico-U.S., North Atlantic Assembly, and Interparliamentary Union) be a member of their respective foreign affairs committee; increases from 18 to 24 the size of the delegation to the North Atlantic Assembly and specifies that no more than 7 of the 12-member Senate delegation be of the same political party; and amends Public Law 94–203 (known as the Case Act which requires the Secretary of State to transmit the text of any international agreement other than a treaty to Congress within 60 days after the agreement has entered into force with respect to the United States) to require any department or agency entering into an international agreement on behalf of the United States to transmit the text of the agreement to the Department of State within 20 days following the date on which the agreement was signed. H.R. 5040—Public Law 95–45, approved June 15, 1977. (VV)

Uganda—Human Rights.—Expresses the sense of the Senate that the actions of the current regime in Uganda violating the human rights of its citizens and residents deserve condemnation by the world community and by the Organization of African Unity; urges all nations suppying lethal arms to Uganda to halt all deliveries of weapons; and urges the U.S. Ambassador to the United Nations to request that the situation in Uganda be investigated by an appropriate agency in the United Nations. S. Res. 175—Senate agreed to May 25, 1977. (VV)

Vietnam POW's and MIA's.—Directs the President, as Commander in Chief of the Armed Forces, to require an accounting of all military personnel presently categorized on personnel rosters of the various branches of the U.S. Armed Forces as prisoner of war, missing in action, or killed in action in South Southeast Asia; directs the President, by executive order, to require the Secretary of State to pursue enforcement of the Paris agreement of January 27, 1973; states that the Congress, having passed Public Law 88–408 authorizing the deployment of U.S. Armed Forces for the maintenance of international peace and security in Southeast Asia, recognize a corresponding duty and obligation to determine the fate of missing or unaccounted for Americans; requires that the President, through the Secretary of State, hold the Democratic Republic of Vietnam and the Provisional Revolutionary Government of the Republic of South Vietnam responsible to account for and provide information not otherwise available to satisfactorily dispose of the POW/MIA problem in accordance with the Paris agreement or seek alternatives that might resolve the question; and requires responsible officeholders in the executive and legislative branches to address the authority of their office toward a satisfactory resolution of the problem, make a public accounting, and remove any question as to the integrity of their function. S. Con. Res. 2—Senate agreed to February 21, 1977. (VV)

States as a sense of the Congress that the honor of those Americans who upheld the dignity of the law and served in the U.S. Armed Forces should be reaffirmed and that the Government should do everything possible to address the problems of those who served during the Vietnam war; and urges that there be established, in view of the recent issuance of a general pardon for U.S. draft evaders of the Vietnam War era, a Presidential Task Force on Missing in Action and Prisoners of War to propose courses of action to achieve the fullest possible accounting for all Americans listed in a missing status in Southeast Asia, including the return of remains, and to make recommendations concerning Federal policies relating to POW's and MIA's, S. Con. Res. 3—Senate agreed to February 21, 1977. (VV)

LABOR

Mine safety and health.—Strengthens the national mine safety and health program by providing uniform administration and enforcement for the entire mining industry under a single act administered by the Department of Labor;

Repeals the Metal and Non-Metallic Mine Safety Act of 1966; amends the Federal Mine Safety and Health Act of 1969 (the Coal Act) to make its enforcement and administrative provisions applicable to the entire coal and non-coal mining industry; transfers the responsibility for the administration and enforcement of the mine safety and health program from the Department of the Interior to the Department of Labor;

Provides a streamlined mechanism for the promulgation of mandatory safety and health standards by imposing time limitations on each step of the standard-making process; vests all standard-making authority in the Secretary of Labor who may use Advisory Committees for the development of standards; provides for public comment and hearings on standard proposals and for judicial review of promulgated standards; contains provision for improved health standards;

Requires at least four inspections each year for all underground mines in their entirety, at least two inspections a year for all surface mines in their entirety, and at least one spot inspection every 5 working days for particularly hazardous mines; permits operators and miners or representatives to accompany inspectors; permits miners to request inspections in writing if they suspect a hazardous situation; requires an inspector to issue a citation to the mine operator of any violation of the health and safety standards with a time period within which the violation must be fully abated; authorizes the inspector to issue an order closing all or a portion of a mine affected by certain violations and if a pattern of violations exists; establishes a 5-member Mine Safety and Health Review Commission as the ultimate administrative review body for disputed cases of citations, penalties or closures; and provides a variety of civil and criminal penalties. S. 717—Passed Senate June 21, 1977; passed House amended July 15, 1977; in conference. (231)

MEMORIALS, TRIBUTES, AND MEDALS

Alex Haley.—Honors and pays tribute to Alex Haley for his exceptional achievement in writing *Roots* and extends to him the highest praise of the Senate. S. Res. 112—Senate agreed to March 14, 1977. (VV)

Benjamin Whitcomb Independent Corps of Rangers.—Extends best wishes of the Senate to the Benjamin Whitcomb Independent Corps of Rangers on the occasion of the reenactment, on August 19, 1977, of the Revo-

lutionary War Battle of Bennington, Vermont, and commends the Rangers for their continuing educational efforts in connection with the Revoluntionary War. S. Res. 241—Senate agreed to August 3, 1977. (VV)

Charles A. Lindbergh.—Honors Charles A. Lindbergh for his service to our country in peace and war, and expresses appreciation for his leadership and advocacy in the conservation of natural resources and for his daring and courageous contributions to the field of aviation and aeronautical science. S. Res. 177—Senate agreed to may 19, 1977. (VV)

Cora Rubin Lane 100th birthday.—Expresses the gratitude and appreciation of the Senate to Cora Rubin Lane for her long and outstanding service as an assistant to Senator William E. Borah and expresses best wishes to her on the occasion of her 100th birthday. S. Res. 162—Senate agreed to May 3, 1977. (VV)

Frances G. Knight.—Commends Frances G. Knight upon her retirement as Director of the Passport Office, Department of State, for her diligence and outstanding performance to the Nation during a landmark career of public service. S. Res. 231—Senate agreed to July 27, 1977. (VV)

Francis R. Valeo.—Commends Francis R. Valeo for his long, faithful and exemplary service as an employee of the Senate and his ten years of service as Secretary of the Senate. S. Res. 133—Senate agreed to April 1, 1977. (VV)

General Draza Mihailovich Monument.—Authorizes the Secretary of the Interior to permit the National Committee of American Airmen Rescued by General Draza Mihailovich to construct and maintain a monument to General Mihailovich on Federal land in the District of Columbia in recognition of the role he played in saving the lives of approximately 500 United States airmen in Yugoslavia during World War II; and provides that the location and design of the monument shall be subject to the approval of the National Capital Planning Commission, the Fine Arts Commission, and the Secretary of the Interior. S. 244—Passed Senate June 29, 1977. (VV)

Gerald R. Ford Building.—Names the Federal building located at 110 Michigan Avenue, N.W., in Grand Rapids, Mich., the "Gerald R. Ford Building". S. 385—Public Law 95–25, approved May 4, 1977. (VV)

Henry Ford.—Marks the occasion of the 75th anniversary of the first mass-produced motor vehicle by the elder Henry Ford as an appropriate time to recognize his unique industrial statesmanship. S. Res. 215—Senate agreed to June 29, 1977. (VV)

Jackie Robinson.—States the sense of the Senate to commemorate the 30th anniversary of Jackie Robinson's entry into major league baseball and join in the celebration of the week of July 18 through 25, 1977 in paying tribute to Jackie Robinson and what he symbolized to so many Americans. S. Res. 223—Senate agreed to July 18, 1977. (VV)

Jaycees International Conference.—Commends the "Old Sourdough Jaycees" of Anchorage, Alaska, the U.S. Jaycees, and the Jaycee International for bringing together Jaycee leaders around the world who have contributed to the betterment of mankind. S. Res. 137—Senate agreed to April 6, 1977. (VV)

Lieutenant General Ira C. Eaker Medal.—Authorizes the President to present, on behalf of the Congress, to Lieutenant General Ira C. Eaker, U.S.A.F. (retired), a gold medal of appropriate design in recognition of his distinguished career as an aviation pioneer and Air Force leader; provides a $5,000 authorization therefor; and authorizes the Secretary of the Treasury to have duplicate medals struck in bronze and sold at cost. S. 425—Passed Senate May 13, 1977. (VV)

Marian Anderson medal.—Authorizes the President to award to Marian Anderson, in the name of the Congress, a gold medal with suitable emblems and inscriptions in recognition of her highly distinguished and impressive career; provides that bronze duplicates of the medal shall be coined and sold under regulations prescribed by the Secretary of the Treasury; and authorizes therefor $2,500. H.J. Res. 132—Public Law 95–9, approved March 9, 1977. (VV)

Mike Monroney Aeronautical Center.—Designates the Federal Aviation Administration Aeronautical Center in Oklahoma City, Oklahoma, as the "Mike Monroney Aeronautical Center". S. 1640—Passed Senate June 8, 1977. (VV)

Motion Picture Academy 50th anniversary.—Congratulates the Academy of Motion Picture Arts and Sciences for its past achievements on the occasion of its 50th anniversary on May 11 and extends best wishes for the future. S. Res. 168—Senate agreed to May 11, 1977. (VV)

Nez Perce war commemoration.—States as the sense of the Senate that June 17, 1977, is to be a day for the commemoration of the Nez Perce War of 1977 and for the remembrance of the courage and honor of the Nez Perce during the long tortuous maneuvers of 1877. S. Res. 196—Senate agreed to June 16, 1977. (VV)

Philip A. Hart, death of.—Expresses the sorrow of the Senate over the death of Senator Philip A. Hart, of Michigan. S. Res. 15—Senate agreed to January 4, 1977. (VV)

President and Mrs. Ford.—Congratulates and commends President and Mrs. Ford on their exemplary conduct as President and first lady and for their dedicated public service to the Nation during their entire career of public service. S. Res. 22—Senate agreed to January 10, 1977. (VV)

President Ford.—Commends President Ford for the manner and integrity with which he carried out his responsibilities and wishes him Godspeed in his new and active life. S. Res. 38—Senate agreed to January 18, 1977. (VV)

President-elect Carter.—Extends best wishes to President-elect Jimmy Carter and to all those who will serve in his administration. S. Res. 23—Senate agreed to January 10, 1977. (VV)

Roman L. Hruska Meat Animal Research Center.—Designates the United States Department of Agriculture Meat Animal Research Center located near Clay Center, Nebraska, as the "Roman L. Hruska Meat Animal Research Center". S. 409—Passed Senate July 12, 1977. (VV)

Rosalynn Carter.—Congratulates the President on his selection of Rosalynn Carter as his recent emissary to Latin America and commends her on her performance as a representative of the people of the United States. S. Res. 195—Senate agreed to June 16, 1977. (VV)

St. Patrick's Parish anniversary.—Commemorates the people of St. Patrick's Parish, in Pottsville, Pennsylvania, who this year are celebrating the 150th anniversary of the founding of the parish. S. Res. 116—Senate agreed to March 17, 1977. (VV)

Vice President Rockefeller.—Commends Vice President Rockefeller for the manner and integrity with which he carried out his responsibilities and wishes him Godspeed in his new and active life. S. Res. 37—Senate agreed to January 18, 1977. (V) V

William A. Ridgely.—Commends William A. Ridgely upon his retirement as financial clerk of the Senate for his lengthy, faithful and outstanding service. S. Res. 236—Senate agreed to July 28, 1977. (VV)

William O. Douglas.—Dedicates the canal and towpath of the Chesapeake and Ohio Canal National Historical Park to Justice William O. Douglas; directs the Secretary of the Interior to provide the necessary identification to inform the public of the contributions of Justice Douglas and to erect and maintain within the exterior boundaries of the Park an appropriate memorial; and authorizes such sums as necessary to carry out the act. S. 776—Public Law 95–11, approved March 15, 1977. (VV)

NATURAL RESOURCES—NATIONAL HISTORIC SITES

Bull Run Reserve.—Authorizes the Secretary of Agriculture to permit, under the provisions of the Multiple Use-Sustained Yield Act of 1960, general recreational access and geothermal explorations for six months within a 42,500 acre area of the Bull Run Reserve, Mount Hood National Forest, Oregon. H.R. 7606—Public Law 95–55, approved June 25, 1977. (VV)

Eleanor Roosevelt National Historic Site.—Authorizes the Secretary of the Interior to establish 175 acres, including the Val-Kill estate in Hyde Park, New York, as the Eleanor Roosevelt National Historic Site to commemorate the life of Eleanor Roosevelt as well as provide a location for the conduct of studies and seminars relating to the issues with which she was concerned. H.R. 5562—Public Law 95–32, approved May 26, 1977. (VV)

George W. Norris Home National Historic Site.—Authorizes the Secretary of the Interior to acquire by donation or purchase with donated funds the home of Senator George William Norris (who, among other achievements, authored the 20th amendment to the Constitution which deals with Presidential and Congressional terms and the sessions of Congress, and the legislation which established the Rural Electrification Administration) in the State of Nebraska and to establish it as the "George W. Norris Home National Historic Site". S. 1828—Passed Senate July 11, 1977. (VV)

Land and Water Conservation Fund.—Amends the Land and Water Conservation Fund Act of 1965 to establish a special account for use in acquiring the backlog of lands previously authorized for inclusion in the national park system and certain similar Federal areas; increases the authorized level of the fund from $600 million to $900 million in fiscal year 1978 and from $750 million to $900 million in fiscal 1979 with the additional $450 million to be credited to the special account and to remain available until appropriated; provides that prior acquisition ceiling limitations on authorized areas may be exceeded in any one fiscal year by up to $1 million or 10 percent of the statutory limitation, whichever is greater; permits preacquisition work such as title searches, mapping, and other preliminary work which does not interfere with the rights of private landowners if Congressional authorization appears to be imminent; authorizes the Forest Service to use Land and Water Conservation Fund moneys to purchase land in the Big Thompson Canyon at pre-flood value; and gives the Secretary the authority to (1) make minor boundary adjustments in units of the national park system with such authority to expire 10 years from the date of enactment of the authorizing legislation establishing the boundaries, and (2) accept adjacent lands outside park boundaries by donation. H.R. 5306—Public Law 95–42, approved June 10, 1977. (VV)

Public Works on Rivers and Harbors—Waterways user fee.—Authorizes the construction, repair, and preservation of certain public works of the Corps of Engineers on rivers and harbors for navigation and flood control; includes authorization (either construction or Phase I engineering) for 15 projects developed by the Corps of Engineers, modifications to previously authorized projects, and general legislative items; increases monetary authorizations for eleven river basins which will cover anticipated funding requirements for fiscal year 1978;

Authorizes the reconstruction of Locks and Dam 26 on the Mississippi River at Alton, Illinois, by replacing it with a new dam and a single 1,200 foot lock with contingen-

cies for a second lock, at an estimated cost of $421 million;

Establishes, for the first time in U.S. history, a system of user charges to be paid by the commercial cargo vessels that use the 25,000 miles of Federally built and maintained inland waterways; provides that the user charge plan recover 50 percent of Federal expenditures for construction of navigation aids such as locks and 100 percent of operational and maintenance costs of the inland waterways; and provides that the charges be phased in over 10 years beginning October 1, 1979, unless Congress disapproves by concurrent resolution within 90 days. H.R. 5885—Passed House May 17, 1977; Passed Senate amended June 22, 1977; Senate requested conference June 24, 1977. (235)

Reclamation projects.—Authorizes $31,050,000 for fiscal year 1978 for continuing construction of the distribution system and drains of the San Luis Unit, Central Valley project, California; and provides for the establishment of a task force to review the of the Unit and to report to Congress by January 1, 1978, the results of an examination of certain specified issues. H.R. 4390—Public Law 95–46, approved June 15, 1977. (VV)

Recreation permits.—Establishes uniform and objective policies and procedures to be employed by the Forest Service in issuing and administering permits for ski area and other commercial outdoor recreation facilities and services on national forest lands; removes permits for ski area facilities and services from any acreage limitations providing instead a separate procedure for such areas having more than 3,000 acres; continues the present maximum permit term of 30 years and allows the renewal of the permit at any time during the permit's term if substantial investment is to be made by the permittee with the requirement that there must be six month's public notice prior to the renewal; authorizes the Secretary to suspend or terminate a permit if the permittee has breached the terms and is given due notice and a reasonable opportunity to correct the violation or if the lands are needed for another use; requires the Secretary to submit to the Congress within six months proposed regulations setting forth the conditions and procedures for the issuance of permits and provides certain congressionally mandated conditions and procedures which are to be included; requires that the permittee pay annual fees for the use of the lands to which the permit applies; increases from 25 to 50 percent the State's share of these fees; requires that the share be paid directly to affected local government rather than to the State, and widens the permissible use of the funds from construction of roads and schools only to construction of any public facility and provision of any public service; contains provisions whereby a permittee may increase a charge to the public for use of his principle facilities and services; provides for public disclosure of any memoranda, financial statement, or other materials concerning historical or financial data or information of commercial outdoor recreation facilities and services used in support of or in opposition to proposed increases in charges to the public; provides that structures, fixtures, or improvements not owned by the U.S. to which a permit applies, are the property of the permittee who may remove them and assign, transfer, encumber or relinquish their title; authorizes the Secretary to furnish, on a reimbursement of appropriation basis, all types of utility service on forest reserve lands to concessioners and permittees; contains a provision concerning maintenance of records and provisions of access to them by the Secretary and Comptroller General and requires that such records be kept for six years unless they are mandated to be kept longer in another statute; and contains other provisions. S. 1338—Passed Senate July 13, 1977. (VV)

River basins.—Authorizes $3,905,000 for fiscal year 1978 to carry out the comprehensive river basin planning program of the U.S. Water Resources Council in those areas and river basins where river basin commissions have not been created, and to finance work on national water assessments. H.R. 6752—Public Law 95–41, approved June 6, 1977. (VV)

Increases the authorization for the Brazos River Basin in Texas to $7.5 million and the San Joaquin River Basin in California to $6 million which funds are appropriated but not authorized in order to permit contractors to continue work under their present contracts and allow the Corps to let additional contracts that were scheduled to be awarded in October. S. 2001—Public Law 95—, approved 1977. (VV)

Sabine River compact.—Gives Congressional consent to the amendment to the Sabine River Compact, entered into by the States of Texas and Louisiana, which would permit the Sabine River Authorities of the respective States to address themselves to the problems of pollution abatement and saline intrusion in the water sources within their jurisdiction, subject to the powers already vested in them under the existing agreement. H.R. 1551—Public Law 95–71, approved July 23, 1977. (VV)

Water resources development—Saline water conversion.—Reinstates for fiscal year 1978 the authorization for grants under title II of the Water Resources Act of 1964, as amended, for an institute, center, or equivalent agency at a college or university in each State to carry out water resources and technology; and extends through fiscal year 1978 the Saline Water Conversion Act of 1971 and authorizes therefor $21.95 million plus an additional $40 million for four projects which demonstrate the technology of desalination of which two must utilize underground brackish water. H.R. 4746—Public Law 95–84, approved August 2, 1977. (VV)

Wilderness areas:

Oregon Wilderness.—Designates additional land for inclusion in the following wilderness areas: Kalmispsis Wilderness, Siskiyou National Forest, Oregon—82,400 acres, Wenaha-Tucannon, Umatilla National Forest, Washington and Oregon—185,000 acres, and Mt. Hood Wilderness, Mt. Hood National Forest, Oregon—33,000 acres and designates the proposal Hidden Wilderness area, Willamette and Mr. Hood National Forests, Oregon, for study for possible inclusion in the National Wilderness System under the interim management of the Secretary of Agriculture. S. 658—Passed Senate July 20, 1977. (VV)

Wilderness areas studies:

Montana Wilderness.—Directs the Secretary of Agriculture to study 9 areas of land totaling approximately 973,000 acres located within the following National Forests in Montana to determine their suitability for designation as wilderness under the provisions of the Wilderness Act of 1964: Beaverbrook National Forest—West Pioneer Wilderness and Taylor-Hilgard Wilderness; Bitteroot National Forest—Bluejoint Wilderness and Sapphire Wilderness; Kootenai National Forest—Ten Lakes Wilderness and Mt. Henry Wilderness; Lewis and Clark National Forest—Middle Ford Judith Wilderness and Big Snowies Wilderness; and Gallatin National Forest—Hyalite-Porcupine-Buffalo Horn Wilderness; requires the Secretary to complete the studies and report his findings to the President within 5 years of enactment who is to submit his recommendations with respect thereto to the Congress within 7 years of enactment; and directs the Secretary to administer the areas so as not to diminish their presently existing wilderness character and potential until Congress determines otherwise. S. 393—Passed Senate May 18, 1977.

Wildlife refuges.—Extends through fiscal year 1980 the authorization for the acquisition and development of the San Francisco Bay National Wildlife Refuge in California (consisting of approximately 21,000 acres), the Tinicum National Environmental Center in Pennsylvania (consisting of approximately 1,200 acres), and the Great Dismal Swamp National Wildlife Refuge in Virginia (consisting of approximately 107,360 acres). H.R. 5493—Passed House May 16, 1977; Passed Senate amended May 24, 1977. (VV)

Nominations

(Action by Rollcall Vote)

Griffin B. Bell, of Georgia, to be Attorney General.—Nomination confirmed January 25, 1977. (10)

Joseph A. Califano, Jr., of the District of Columbia, to be Secretary of Health, Education, and Welfare.—Nomination confirmed January 24, 1977. (7)

Peter F. Flaherty, of Pennsylvania, to be Deputy Attorney General.—Nomination confirmed April 5, 1977. (99)

Ray Marshall, of Texas, to be Secretary of Labor.—Nomination confirmed January 26, 1977. (12)

Paul C. Warnke, of the District of Columbia, for rank of Ambassador for SALT negotiations and to be director of the Arms Control and Disarmament Agency.—Nominations confirmed March 9, 1977. (41 and 42)

Andrew J. Young, of Georgia, to be U.S. Representative to the United Nations.—Nomination confirmed January 26, 1977. (14)

Proclamations

American Business Day.—Designates May 13 of each year as "American Business Day". S.J. Res. 40—Passed Senate April 27, 1977. (VV)

Family Week.—Designates that week in November which includes Thanksgiving Day as "National Family Week". H.J. Res. 372—Public Law 95– , approved 1977. (VV)

Grandparents Day.—Designates the first Sunday of September of each year as "Grandparents Day". S.J. Res. 24—Passed Senate May 16, 1977. (VV)

Lupus Week.—Designates the Week of September 18 through 24, 1977, as "National Lupus Week". H.J. Res. 24—Public Law 95–72, approved July 25, 1977. (VV)

School volunteers.—Requests the President to issue a proclamation recognizing the contributions made by the thousands of Americans who are voluntarily working to improve the quality of education in the United States. S.J. Res. 62—Passed Senate June 13, 1977. (VV)

Sickle cell month.—Designates the month of September, 1977, as "National Sickle Cell Month". S.J. Res. 71—Passed Senate August 3, 1977. (VV)

Senate

Commission on the Operation of the Senate.—Extends for an additional 30 days, until April 1, 1977, the Commission on the Operation of the Senate. S. Res. 93—Senate agreed to February 24, 1977. (VV)

Committee reorganization.—Amends the Standing Rules of the Senate to reorder and rationalize the jurisdictions of Senate committees, effective February 11, 1977, among 15 standing committees and 6 other special, select or joint committees; abolishes the Aeronautical and Space Sciences Committee and transfers its jurisdiction to a newly created Committee on Commerce, Science, and Transportation; abolishes the District of Columbia Committee and the Committee on Post Office and Civil Service and transfers their jurisdictions to a newly created Committee on Governmental Affairs; transfers the jurisdiction of the former Interior Committee to an Energy and Natural Resources Committee; transfers the jurisdiction of the former Public Works Committee into a new En-

vironment and Public Works Committee; transfers the jurisdiction of the former Labor and Public Welfare Committee to a new Human Resources Committee; continues the existence of the Special Committee on Aging with membership reduced to 9 in the next Congress; continues the existence of the Select Committee on Nutrition and Human Needs until December 31, 1977, after which its jurisdiction will be transferred to the Committee on Agriculture, Nutrition and Forestry; establishes a temporary Select Committee on Indian Affairs to consider all legislation relating to Indians for the duration of the 95th Congress after which its jurisdiction will be transferred to the Human Resources Committee;

Limits the number of committee and subcommittee memberships a Senator can hold generally to two major or class "A" committees and one class "B" committee and eight subcommittees thereof; prohibits committees from establishing subunits other than subcommittees; permits the Majority and Minority Leaders to temporarily increase the sizes of committees to ensure majority party control; allows Senators to serve on joint committees where such service is required to be from members of a committee on which such Senator serves; prohibits Rules Committee members from serving on any joint committee unless the Senate members of such committees are required by law to be from the Rules Committee; exempts members of the Budget Committee during the 94th Congress from certain assignment limitations during the 95th Congress; continues grandfather rights for Senators who are serving on three standing committees as a result of an exemption in the Legislative Reorganization Act of 1970 to continue to do so during the 95th Congress; allows the chairmen and ranking minority members of the Post Office and Civil Service Committee and the District of Columbia Committee to serve on the Governmental Affairs Committee and two other committees of the same class, as long as their service on Governmental Affairs remains continuous; prohibits a Senator from serving as Chairman of more than one standing, select, special, or joint committee unless the jurisdiction is directly related to that of the standing committee he chairs; prohibits Senators from serving as chairman of more than one subcommittee of each standing, select, special or joint committee; limits members to two class A committee or subcommittee chairmanships and one class B committee or subcommittee chairmanship, effective at the beginning of the 96th Congress; requires that not later than July 1, 1977, the appropriate standing committees shall report legislation terminating the statutory authority of the Joint Committees on Atomic Energy, on Congressional Operations and on Defense Production; requires that the appropriate standing committees report recommendations not later than July 1, 1977, with respect to the Joint Committees on the Library and on Printing; allows Senators to serve on joint committees considered for termination pending final disposition of the issue;

Provides for sequential and join referral of bills that cross jurisdictional lines based on motions by the Majority and Minority Leaders, instead of by unanimous consent; provides for a computerized schedule of committee meetings by the Rules Committee; permits committees to meet without special leave until the conclusion of the first 2 hours of a meeting of the Senate or 2:00 p.m., except for the Appropriations and Budget Committees which may meet at any time without special consent; requires that morning meetings of committees and subcommittees be scheduled for one or both of two periods, one ending at 11:00 a.m. and a second beginning at 11:00 a.m. and ending at 2:00 p.m.; provides for continuous review of the committee system by the Rules Committee in consultation with the Majority and Minority Leaders; prohibits consideration of committee amendments to bills when the amendments are not in the jurisdiction of the committee proposing them; requires committee reports to contain an evaluation of the regulatory impact which would be incurred by individuals and businesses in carrying out the provisions of the bill; provides for the transition of staff from abolished or realigned committees to the new committees and provides for salary and tenure of committee staff during a transition period; provides that committee staff reflect the relative numbers of majority and minority members and that one-third of the committee staffing funds be allocated to the minority members for compensation of minority staff; provides that such adjustment be made over a four-year period beginning July 1, 1977, with not less than one-half being made in 2 years; provides for funding of increases in the expenditures of new committees resulting from this resolution; incorporates provisions of S. Res. 60 of the 94th Congress relating to individuals appointed by Senators to assist them with committee work; provides for the rereferral of measures according to the realigned jurisdictions; and provides that legal references to old committees are to be construed as referring to their successors. S. Res. 4—Senate agreed to February 4, 1977. (36)

Deputy President Pro Tempore.—Establishes, effective January 5, 1977, the Office of Deputy President Pro Tempore which shall be held by any Senator who is a former President or Vice President of the United States; authorizes the President Pro Tempore and the Deputy President Pro Tempore each to appoint an administrative assistant, a legislative assistant and an executive secretary; authorizes the Sergeant at Arms to provide and maintain an automobile for use by the Deputy President Pro Tempore and to employ a driver-messenger; and authorizes the Secretaries of the Conferences of the Majority and Minority each to appoint two staff assistants in each office. S. Res. 17—Senate agreed to January 10, 1977. (VV)

Names Hubert H. Humphrey of Minnesota Deputy President Pro Tempore of the Senate, effective January 5, 1977. S. Res. 27—Senate agreed to January 11, 1977. (VV)

Political fund raising.—Amends paragraph 1 of rule XLIX of the Standing Rules of the Senate to permit those two assistants of a Senator designated to solicit campaign funds to also receive, be the custodian of, or distribute such funds. S. Res. 188—Senate agreed to June 13, 1977. (VV)

Senate ethics code.—Amends the Standing Rules of the Senate to create a Code of Official Conduct; amends Senate Resolution 338, the original resolution establishing the Select Committee on Ethics, to provide for additional procedures for enforcing the new Code as well as other laws and rules of the Senate; and directs other Senate committees to study certain matters related to this resolution;

Public financial disclosure.—Requires Senators, candidates for the Senate, officers and employees of the Senate earning in excess of $25,000 per year to file a report listing their earned income and the sources and categories of value of their income, other than earned income, and all other interests, assets, and holdings held for the purposes of investment or income production;

Gifts.—Prohibits knowingly accepting a gift or gifts having an aggregate value of over $100 during a year from any individual or organization defined as having a "direct interest in legislation;"

Outside Earned Income: Limits outside earned income of a Senator, officer or employee earning over $35,000 to 15 percent of the person's salary; limits each honorarium to $1,000 for Senators and to $300 for officers and employees; allows Senators or staff to accept honoraria up to $25,000 if immediately donated to a tax-exempt charity;

Conflict of Interest: Bars the use of one's official position to introduce or aid the progress of legislation the principal purpose of which furthers one's own financial interests; allows Members or staff who earn over $25,000 to provide professional services for compensation if not affiliated with a firm or association and if their work is not carried out during regular Senate office hours; directs committee employees earning over $25,000 to divest themselves of any holdings which may be directly affected by the actions of the Committee for which they work unless permitted by their supervisor and the Ethics Committee; prohibits Senators from lobbying the Senate for one year after leaving the Senate; applies a similar prohibition to employees lobbying the Committee or office for which they worked;

Unofficial Office Accounts: Abolishes unofficial office accounts, those accounts defined as not including personal funds of a member, official funds, political funds and reimbursements;

Foreign Travel: Prohibits "lame duck" travel by a defeated or retiring member; prohibits receipt of counterpart funds where there has been reimbursement from another source; restricts per diem allowance to food, lodging and related expenses and places the responsibility on the person receiving the per diem to return any unused funds;

Franking Privilege—Radio-TV Studio—Senate Computer: Prohibits mass mailings and the use of the radio-TV studios within 60 days of an election; requires the use of official funds to purchase paper, to print, and prepare mass mailings under the frank; requires a Senator to register mass mailings annually for public inspection; prohibits the use of the Senate computer to store names identified as campaign workers;

Political Activity by Officers and Employees: Restates the present ban on staff soliciting or receiving campaign contributions; allows a Senator to name one assistant each in his Washington and State office to receive and handle campaign funds;

Discriminatory Employment Practices: Prohibits discrimination on the basis of race, color, religion, sex, national original, or state of physical handicap in employment practices in the Senate;

Enforcement: Sets forth procedures for the Select Committee on Ethics in investigating complaints of violation of the Code and enforcing its provisions;

Further Studies: Requires the Appropriations Committee to report within 120 days regarding an adjustment of official allowances; requires the Finance Committee to report within 120 days on the tax status of funds raised and expended to defray ordinary and necessary expenses of Members; directs the Rules Committee (1) to report within 120 days on the desirability of promulgating rules providing for: (a) periodic audits by GAO of all committee and office accounts; (b) a centralized recordkeeping system of accounts, allowances, expenditures and travel expenses of all committees and offices; (c) suggested accounting procedures for committee and office accounts; and (d) public disclosure and availability of information on the accounts of all committees and offices in a form which segregates the allowances and expenses of each committee and office; (2) to report within 120 days on the desirability of requiring that only official Senate funds may be used to pay for any expenses incurred by a Senator in the use of the radio-TV studies; and (3) to study laws relating to contributions made by officers or employees as well as on proposals to prohibit the misuse of official staff in election campaigns and report thereon within 180 days; requires the Governmental Affairs Committee to report (1) within 180

days regarding employee discrimination complaints and the desirability of establishing rules requiring "blind trusts" by members, officers and employees of Senate and (2) within 120 days regarding the use of simplified form of address for franked mail; and directs the Foreign Relations Committee to report in 90 days on the problem of travel, lodging and other related expenses provided members and staff paid for by foreign governments where it is not possible to procure transportation, lodging or other related services or to reimburse the foreign government for those purposes. S. Res. 110—Senate agreed to April 1, 1977. (94)

Severance pay for displaced Senate employees.—Provides severance pay for certain committee staff members whose service as an employee of the Senate was terminated solely and directly as a result of the reorganization of Senate committee staffs caused by the Committee Reorganization Amendments of 1977. S. Res. 389—Senate agreed to August 5, 1977. (VV)

South American delegation.—Authorizes the President of the Senate to appoint, upon the recommendation of the Majority and Minority Leaders, a special delegation of not to exceed 12 members of the Senate to visit certain countries in South America and other areas as needed to conduct a study on U.S. economic and security interests in those areas, and authorizes therefor $45,000. S. Res. 221—Senate agreed to July 15, 1977. (VV)

Special Committee on Official Conduct.—Establishes a temporary Special Committee on Official Conduct composed of fifteen members appointed by the President pro tempore of the Senate (eight appointed upon the recommendation of the majority leader and seven upon the recommendation of the minority leader, with the chairman designated by the majority leader and the vice chairman by the minority members) to conduct a complete study of all matters relating to standards of conduct of Members, officers and employees of the Senate in the performance of their official duties including standards for: (1) annual public disclosure of income, assets, debts, gifts, and other financial items; (2) restrictions on, or the elimination of, outside income from honoraria, legal fees, gifts and other sources of financial or in-kind remuneration; (3) conflicts of interest arising out of investments in securities, commodities, real estate, or other sources; (4) office accounts, and excess campaign contributions; (5) Senate travel; and (6) engaging in business, professional activities, employment, or other remunerative activities, so as to avoid any conflict with the conscientious performance of official duties; requires the Committee to submit a report of its findings by March 1, 1977, together with a resolution setting forth, by way of proposed amendments to the Standing Rules of the Senate, a Code of Official Conduct for Members, officers and employees of the Senate;

Provides that on March 1, 1977, after the conclusion of routine morning business, the resolution shall become the pending business of the Senate under a 50 hour time limitation with a 2 hour time limitation on amendments thereto and 1 hour on amendments in the second degree, debatable motions or appeals; provides that amendments not germane to the bill will not be received; states that motions to limit debate are not debatable and that motion to table or recommit are out of order;

Authorizes the Committee to utilize the facilities and services of the staff of any other committee and provides that expenses of the Committee shall be paid from the contingent fund of the Senate. S. Res. 36—Senate agreed to January 18, 1977. NOTE: (On March 3, 1977, the Senate, by unanimous consent, extended until midnight, March 7, 1977, the time for the Committee to file its report and provided that the leadership may call the resolution up on March 8, 1977, or any time thereafter.) (VV)

Teamsters' Pension Fund.—Authorizes the Committee on Human Resources to inspect and receive any tax return, return information, or other tax related matter held by the Secretary of Treasury with respect to the Teamsters' Central States Southeast and Southwest Area Pension Fund, and any related matter which the committee demonstrates to the satisfaction of the Secretary, contains or may contain information directly relating to its study and oversight proceedings. S. Res. 139—Senate agreed to April 22, 1977. (VV)

TAXATION

Sick pay exclusion.—Delays for one year, to taxable years beginning after December 31, 1976, the changes made by the Tax Reform Act of 1976 with regard to the exclusion of "sick pay" from income; makes a similar delay of the effective date of the provisions regarding the tax treatment of income earned abroad by U.S. citizens; modifies the withholding requirement enacted in the 1976 Tax Reform Act on proceeds of wages placed in parimutuel pools with respect to horse races, dog races, and Jai Alai requiring a 20 percent withholding tax on winnings of $1,000 or more only if the odds are 300 to one or more; extends for one year the provisions of the Internal Revenue Code to allow State legislators to treat their place of residence within their legislative district as their tax home for purposes of computing the deduction for living expenses; and waives the interest and penalties with regard to certain errors regarding underpayments of estimated tax and withholding that might be made in the tax returns for 1976. H.R. 1828—Passed House April 4, 1977; Passed Senate amended April 6, 1977; House agreed to Senate amendments with amendment which omitted the provisions regarding the treatment of income earned abroad by U.S. citizens April 6, 1977; Senate requested conference April 19, 1977. (100) (*NOTE:* Provisions included in Tax Reduction and Simplication which became Public Law 95-30).

Tax reduction and simplification.—Amends the Internal Revenue Code of 1954 to extend the individual and business income tax reductions enacted in 1975 and to provide tax simplification as follows:

Standard Deduction and Tax Simplification: Permanently changes the standard deduction to $2,200 for single returns and heads of households and $3,200 for joint returns; revises the tax tables to simplify tax computation for 96 percent of all taxpayers by building into the tax tables the personal exemption, the general tax credit, and the standard deduction;

Individual and Corporate Tax Reductions: Extends through 1978 the general tax credit of $35 per person or 2 percent of the first $9,000 whichever is larger; extends the earned income credit equal to 10 percent of the first $4,000 of earned income which is phased out as income rises from $4,000 to $8,000;

Extends through 1978 the corporate tax cuts, enacted in 1975 and subsequently extended, which reduced the tax rate on the initial $25,000 of corporate taxable income from 22 percent to 20 percent and reduced the rate on the next $25,000 from 48 to 22 percent;

Filing Requirements and Withholding Changes: Increases the income level at which a tax return must be filed from $2,450 to $2,950 for a single person and a head of household and from $3,600 to $4,700 for a joint return; requires modification of the withholding rates to reflect the changed standard deduction;

New Jobs Credit: Provides a new jobs tax credit for 1977 and 1978 equal to 50 percent of the increase in each employer's wage base under the Federal Unemployment Tax Act (FUTA) above 102 percent of that wage base in the previous year; reduces the employer's deduction for wages by the amount of the credit, thereby reducing the maximum gross credit for each new employee from $2,100 to $1,806; limits the credit to no more than: (1) 50 percent of the increase in total wages paid by the employer for the year above 105 percent of total wages in the previous year; (2) 25 percent of the current year's FUTA wages; (3) $100,000 per employer; and (4) the taxpayer's tax liability with provision of carrying back credit for 3 years and carrying forward credit for 7 years; provides an additional 10 percent nonincremental credit for hiring the handicapped, including handicapped veterans, who have received vocational training;

Postponement of Changes in 1976 Act: Postpones for one year the effective date of revisions made by the Tax Reform Act of 1976 in the tax treatment of sick pay and income earned abroad; relieves individual taxpayers for the periods prior to April 16, 1977, and corporations for period prior to March 16, 1977, from additions to tax and interest arising from changes in the tax law made applicable to 1976 by the 1976 Act; relieves employers from penalties for under withholding in 1976 on remuneration which became taxable prior to January 1, 1976, as a result of the 1976 Act; lifts the exclusive use of the test in the 1976 Act for business deductions for the use of the home for day care services for children, handicapped individuals and the elderly and limits such deductible expense; extends for 1976 the election to treat a State legislator's place of residence within the legislative district he represents as his tax home for purposes of determinating deductions for travel and expenses;

Minimum Tax on Intangible Drilling Costs: Provides for taxable years beginning in 1977 that intangible drilling costs incurred in oil and gas production operations are to be subject to the minimum tax to the extent that these expenses exceed oil and gas production income;

Charitable Contributions of Conservation Easements: Extends through June 13, 1981 the period during which deductions are allowable for charitable contributions of remainder interests in real property exclusively for conservation purposes as well as the period during which deductions are allowable for charitable contributions exclusively for conservation purposes of easements with respect to real property, if the easement is perpetual;

Work Incentive (WIN) Program: Authorizes an additional $435 million in each of fiscal years 1978 and 1979 for employment and supportive services for welfare recipients with no requirement for State matching funds:

Child Care Facilities Amortization: Extends through 1961 the 5-year amortization provision for expenditures relating to child care facilities for children of the taxpayer's employees;

Retirement Income Credit Election: Allows taxpayers over age 65 to choose between the retirement income credit as it existed before the 1976 Act and as revised by it for 1976 taxes only;

Accrual Accounting for Farm Operations: Postpones until 1978 the effective date for requiring accrual accounting by any farm corporation if either (a) two families own at least 65 percent of the stock, or (b) three families own at least 50 percent of the stock and substantially all of the remaining stock is owned by employees or their families;

Gambling Withholding: Modifies the 1976 requirement for withholding on gambling winnings to provide that withholding is required on proceeds of more than $1,000 from bets placed in parimutuel pools involving horses, dogs or jai alai but only if the amount of the proceeds is at least 300 times as large as the amount wagered;

Extension of countercyclical revenue sharing.—Extends for 6 quarters, or until national unemployment drops below 6 percent, the current countercyclical revenue sharing legislation which expires September 30, 1977 to help State and local governments maintain services; authorizes up to $1 billion in additional funding for fiscal year 1977 for a total of $2.25 billion; authorizes up to $2.25 billion for FY 1978; requires that the most recent data be used in the allocation formula and that the national amount be determined on the basis of tenths of the unemployment percentage in excess of 6 percent rather than on half percentage points; provides that each tenth of a percentage point will generate $30 million for allocation in addition to the basic $125 million; extends the program to Guam, American Samoa, Puerto Rico and the Virgin Islands;

Other provisions.—Amends the Social Security Act to clarify the law which provides for the garnishment of Federal payment for purposes of child support and alimony; and contains other provisions. H.R. 3477—Public Law 95–30, approved May 23, 1977. (128)

TRANSPORTATION-COMMUNICATIONS

Air transportation subsidy.—Amends the Federal Aviation Act of 1958 to provide explicit statutory authority for the payment of "flow-through" subsidy pursuant to an experimental local air service program administered by the Civil Aeronautics Board (CAB) in cooperation with Frontier Airlines, during the period August 1, 1973, through July 31, 1975. H.R. 6010—Passed House May 17, 1977; Passed Senate amended May 27, 1977; House agreed to Senate amendment with an amendment June 8, 1977. (VV)

Aircraft registration.—Amends the Federal Aviation Act of 1958 to permit citizens of foreign countries lawfully admitted for permanent residence in the U.S. and corporations lawfully organized and doing business under U.S. or State laws to register aircraft in the United States provided that (1) the aircraft is based or primarily used in the U.S. thus enabling the Secretary of Transportation to condition registration on reasonable inspection by FAA personnel and (2) as at present, the aircraft is not registered under the laws of any foreign country. H.R. 735—Passed House February 22, 1977; Passed Senate amended May 11, 1977. (VV)

Communications Act amendment—Hawaii.—Amends the Communications Act of 1934, as amended, to include Hawaii within the definition of "Continental United States", thereby removing artificial restraints on the availability of telecommunications offerings, the entry of new carriers into the Hawaiian market and service integration into the mainland structure; and adds a new subsection to the Communications Act to ensure that carriers currently serving the Hawaiian market may continue to do so. S. 1866—Passed Senate August 5, 1977. (VV)

Interim regulatory reform.—Provides for interim regulatory reform for the following independent regulatory agencies which are subject to the jurisdiction and oversight responsibility of the Committee on Commerce, Science, and Transportation: Interstate Commerce Commission (ICC), Federal Trade Commission (FTC), Federal Power Commission (FPC), Federal Communications Commission (FCC), Civil Aeronautics Board (CAB), Federal Maritime Commission (FMC), and Consumer Product Safety Commission (CPSC); directs each agency to prepare and submit to Congress a proposed modernization, revision, and codification of all statutes and other lawful authorities administered or applied by it; and

Makes it a Federal crime to kill or forcibly assault, resist, oppose, impede, intimidate, or interfere with a U.S. judge, U.S. attorney, F.B.I. agent, or any other specified Federal official or employee while that person is engaged in, or on account of, the performance of official duties. S. 263—Passed Senate June 10, 1977. (VV)

INTERIM REGULATORY REFORM

Federal Communications Commission.—Amends the Communications Act of 1934 to provide for regulatory reform with respect to the Federal Communications Commission; requires the Commission to review and recodify systematically all of the rules and regulations which it has promulgated and which are still in effect and to submit to Congress within 480 days of enactment a proposed recodification designed to (a) eliminate unnecessary, redundant, overlapping, or conflicting provisions or requirements, (b) provide timely considerations of petitions, (c) provide Congressional access to information, (d) provide representation in civil actions, (e) avoid conflicts of interests, (f) provide for appointment of the chairman by the President with the advice and consent of the Senate, and (g) provide Congressional oversight through the process of an authorization of appropriations not to exceed 4 years; provides for public comment on the proposed recodification and requires the agency to submit a final proposal within 660 days which will go into effect in 180 days unless modified by Congress; applies the conflict of interest provisions to personnel GS–16 or higher; retains the independence of the regulatory agency by not subjecting supergrade positions to OMB clearance; requires that nominees be persons who by reason of training, education or experience are qualified to carry out the function of the Commission; waives the mandatory retirement provisions giving Congress the authority to decide whether a Commissioner should continue to serve over the age of 70 at the time of his confirmation; and authorizes therefor $70 million for fiscal 1978, $74 million for fiscal 1979, $80 million for fiscal 1980, and $82 million for fiscal 1981. S. 1536—Passed Senate June 28, 1977. (VV)

Federal Maritime Commission.—Provides for regulatory reform with respect to the Federal Maritime Commission; contains the same provisions with respect to a proposed recodification of all rules and regulations promulgated by the Commission and still in effect as contained in S. 1536; and authorizes $9.424 million for fiscal 1978, $9.7 million for fiscal 1979, $10 million for fiscal 1980 and $10.4 million for fiscal 1981. S. 1532—Passed Senate June 28, 1977. (VV)

Federal Power Commission.—Amends the Federal Power Act to provide for regulatory reform with respect to the Federal Power Commission; contains the same provisions with respect to a proposed recodification of all rules and regulations promulgated by the Commission and still in effect as contained in S. 1536; and authorizes therefore $44,549,000 for fiscal 1978, $46,410,000 for fiscal 1979, $48,373,000 for fiscal 1980, and $50,444,000 for fiscal 1981. S. 1535—Passed Senate June 28, 1977. (VV)

Interstate Commerce Commission.—Amends the Interstate Commerce Act to provide for regulatory reform of the ICC; requires the Commission to review and recodify systematically all of the rules and regulations which it has promulgated and which are still in effect and to submit to Congress within 480 days of enactment a proposed recodification designed to (a) eliminate unnecessary, redundant, overlapping, or conflicting provisions or requirements, (b) provide timely considerations of petitions, (c) provide Congressional access to information, (d) provide representation in civil actions, (e) avoid conflicts of interest, (f) provide for appointment of the chairman by the President with the advice and consent of the Senate, and (g) provide Congressional oversight through the process of an authorization of appropriations not to exceed 4 years; provides for public comment on the proposed recodification and requires the agency to submit a final proposal within 660 days which will go into effect in 180 days unless modified by Congress; authorizes therefor $71,216,000 for fiscal 1978, $80,474,000 for fiscal 1979, $90,935,000 for fiscal 1980 and $102,755,000 for fiscal 1981. S. 1534—Passed Senate May 20, 1977. (VV)

Maritime authorization.—Authorizes $552,974,000 for programs of the Maritime Administration for fiscal year 1978 as follows: $135,000,000 for acquisition, construction, or reconstruction of vessels and construction-differential subsidies, $372,109,000 for payment of ship operating differential subsidies, $20,725,000 for research and development, $5,137,000 for the reserve fleet, $14,633,000 for maritime training at the Merchant Marine Academy at Kings Point, N.Y., and $5,370,000 for financial assistance to the State marine schools which includes an increased annual student subsidy from $600 to $1,200; authorizes additional supplemental amounts to cover increases in salary, pay, retirement, or other employee benefits authorized by law and for certain expenses of the Merchant Marine Academy at Kings Point; and authorizes an additional Assistant Secretary of Commerce to be the principle advisor to the Secretary for Congressional relations. S. 1019—Passed Senate May 24, 1977; Passed House amended July 13, 1977; In conference. (VV)

Rail reorganization—Office of Rail Public Counsel.—Amends the Regional Rail Reorganization Act of 1973 to authorize an additional $15 million for fiscal year 1978 to the United States Railway Association to cover litigation and other anticipated expenses involving the reorganization of the Northeast railroads, and amends the Interstate Commerce Act to authorize an additional $2 million for the Office of Rail Public Counsel which is the statutory successor to the Office of Public Counsel of the Interstate Commerce Commission. H.R. 4049—Passed House May 3, 1977; Passed Senate amended May 23, 1977. (VV)

Tanker safety.—Amends the Ports and Waterways Safety Act of 1972 to: establish more stringent construction, design, equipment, repair, manning, maintenance, and operation standards for all tankers, regardless of flag, entering U.S. ports; provides clear authority for the Secretary of Transportation to bar substandard vessels from operating in U.S. waters; authorizes the creation of a Marine Safety Information System to identify substandard vessels and disclose the true ownership of ships; authorizes the establishment of regulations for controlling lightering (vessel-to-vessel transfer of cargo) in U.S. waters and on the high seas where a U.S.-bound vessel is involved; mandates that all self-propelled vessels of 20,000-deadweight tons or larger carrying oil in bulk be equipped by no later than June 30, 1979, with a dual radar system, a collision avoidance system, a long-range navigation aid, adequate communications equipment, a fathometer, a gyrocompass, and up-to-date charts; mandates that such vessels also be equipped, by not later than June 30, 1983, with a segregated ballast system, a gas inerting system, a transponder or other appropriate position-fixing equipment, and a double bottom if the vessel is contracted for, or construction is actually commenced, after January 1, 1978; creates an expanded inspection and enforcement program; authorizes the promulgation of improved manning and qualification standards; specifies more stringent requirements for obtaining a Federal pilot's license; and provides for study and evaluation of shore-station monitoring systems of vessels as defined in the Fishery Conservation and Management Act of 1976. S. 682—Passed Senate May 26, 1977. (VV)

Urban mass transportation.—Authorizes the use of the $500 million capital grant program under the National Mass Transportation Act of 1974 for operating as well as

capital assistance costs of public mass transportation service in urbanized areas (areas with less than 50,000 population); authorizes the Secretary to make operating subsidy grants to areas other than urbanized areas; revises the method of financing the capital grant problem, extends it to 1982, and adds $5.318 billion to the remaining contract authority of $3.332 billion for a total of $8.65 billion; incorporates into statute the procedures for funding major capital grants by authorizing the Secretary to announce approval of a multi-year project and an intent to obligate funds from budget authority to be made available in future years; sets aside $400 million annually from the capital grant program for obligation for equipment replacement programs; authorizes $125 million to restore the fiscal 1980 authorization for the formula grant program to its original level; expands the basic formula grant program by creating a supplemental source of funds for high impact areas with a total of $295 million available from (a) authorization of $50 million for each of fiscal years 1978 through 1980 and (b) estimated $145 million in "recycled authority"; creates a new second tier formula program financed by new authorized funds and the reapportionment of unobligated funds; permits the Secretary to develop a new formula for additional funds taking into account the needs of major urban areas; removes certain restrictive provisions for eligibility in the grant program providing fellowships for training of personnel employed in managerial, technical, and professional positions in the urban mass transportation field; expands the definition of "construction" in the capital grant program to include preliminary engineering of mass transportation capital projects; requires the Secretary to convert the two outstanding loans under the mass transit loan program which is no longer in existence into capital grants; requires the Secretary to provide by February 1, 1980, a detailed estimate of major capital grants to be made in fiscal years 1980–84 and by February 1, 1982, a similar estimate for fiscal years 1982–86; extends from March 15, 1978, to March 15, 1980, the 50 percent emergency operating assistance for commuter rail services affected by the reorganization of the Northeastern Railroads and expands the assistance in the authorization; requires assurance that service will be continued for the last 12 months of the 50 percent period; and adds a new section providing $20 million in fiscal 1978 to cover up to 50 percent of the operating deficits of rail commuter services not eligible for the 50 percent Federal subsidy. S. 208—Passed Senate June 23, 1977. (VV)

Vessels sale.—Authorizes the Secretary of Commerce to sell, within two years of enactment, at a price which is the greater of the appraised value or scrap in the U.S. market, two obsolete Navy tankers to mid-Pacific Sea Harvestors, Incorporated, for conversion and operation in the fisheries of the United States; requires that the vessels be converted in the United States and documented and operated under U.S. laws and in conformity with all international fishery agreements to which the U.S. is a party; and requires if the vessels are scrapped within five years of the date of sale, that the work be done in the U.S. S. 854—Passed Senate July 12, 1977. (VV)

TREATIES

Agreement with Canada concerning transit pipelines.—Provides government-to-government assurances on a reciprocal basis so that present and future pipelines carrying all forms of hydrocarbons (including crude oil, petroleum products, natural gas, petrochemical feedstocks, and coal slurries) owned by one country across the territory of the other will be free from interference and discriminatory taxation by Federal, provincial or state authorities particularly in regard to taxes, duties or fees unless the charge would be applicable to similar pipelines within the jurisdiction of the public authority; allows each nation to impose proper regulations for pipeline safety and environmental protection and in the case of a natural emergency, to reduce or stop the flow until the danger has passed; permits each nation to determine the route a pipeline is to take within its territory and provides that protocols may be added to apply this agreement to a specific pipeline; and contains arbitration provisions to resolve disputes which cannot be settled by negotiation. Ex. F, 95th-1st—Resolution of ratification agreed to August 3, 1977. (324)

Protocol to Inter-American Treaty of Reciprocal Assistance (RIO Treaty).—Reaffirms the principle of "attack against one, attack against all" embodied in the Rio Treaty while restricting its applicability and resultant obligations; provides for the lifting of diplomatic, economic and military sanctions against a member state by a simple majority vote rather than by the two-thirds majority vote required for all other decisions; and revises Treaty procedures so as to provide specifically rather than by implication for binding decisions and for recommendations by the Organ of Consultation. Ex. J. 94th–1st—Resolution of ratification agreed to July 19, 1977. (300)

Treaty with Canada on execution of penal sentences.—Allows a convicted prisoner or youthful offender accused of an offense to be returned to his native country to serve the sentence imposed by the other country; limits the transfer arrangement to prisoners convicted of offenses which are criminal under the laws of both countries, who have no pending appeals, have at least six months remaining on their fixed sentences, are not domiciliaries of the nation where they are incarcerated, and have been imprisoned on other than political, military or immigration offenses; requires the prisoner to initiate the transfer process; permits the transfer of parolees and those persons receiving suspended sentences; makes the laws regarding parole and probation of the Nation to which the prisoner is transferred apply but provides that only the transferring State can grant a pardon or amnesty; and contains provisions to protect an offender against double jeopardy. Ex. H. 95th–1st—Resolution of ratification agreed to July 19, 1977. (301)

Treaty with Mexico on execution of penal sentences.—Allows a convicted prisoner, youthful offender or mentally ill person accused of an offense to be returned to his native country to serve the sentence imposed by the other country; limits the transfer arrangement to prisoners convicted of offenses which are criminal under the laws of both countries, who have no pending appeals, have at least 6 months remaining on their fixed sentences, are not domiciliaries of the nation where they are incarcerated and have been imprisoned on other than political, military or immigration offenses and have consented to the transfer; requires the country holding the prisoner to initiate the transfer process and provides that the prisoner may submit a transfer request for consideration; makes the laws regarding parole and probation of the Nation to which the prisoner is transferred apply but provides that only the transferring state can grant a pardon or amnesty; and contains provisions to protect an offender against double jeopardy. Ex. D, 94th–1st—Resolution of ratification agreed to July 21, 1977. (316)

AMVETS.—Amends the Federal charter of AMVETS (American Veterans of World War II) to conform with the organization's practice of admitting men and women who served in the Armed Forces of the United States in the Second World War, the Korean War and the Vietnam War by changing the name of AMVETS to "American Veterans of World War II, Korea and Vietnam" and provisions of its Federal charter, where necessary, to reflect this change. H.R. 1952—Public Law 95– , approved, 1977. (VV)

VETERANS

Veterans and survivors pension adjustments.—Amends title 38, U.S.C., to increase the rates of disability and death pension and to increase the rates of dependency and indemnity compensation for parents; provides a cost-of-living adjustment in the rates and annual income limitations applicable to pension for non-service-connected disabled veterans and their surviving spouses, for surviving parents receiving dependency and indemnity compensation, and in the annual income limitations applicable to persons receiving pension under section 9(b) of the Veterans' Pension Act of 1959; provides an increase of approximately 6.5 percent in rates of disability and death pension under current law, including the additional amount authorized for dependents; increases by approximately 6.5 percent the rates of dependency and indemnity compensation (DIC) payable to parents; increases by the same percentage the maximum income limitations applicable to pensioners and parents entitled to DIC under current law, and to beneficiaries under the protected pension law; increases by the same percentage the amount of additional pension and DIC payable to those recipients so entitled based upon aid and attendance or housebound status; and increases additional allowances for recipients of wartime death compensation by the same percentage based upon need for regular aid and attendance. H.R. 7345—Passed House July 12, 1977; Passed Senate August 3, 1977. (VV)

Veterans' care in State homes.—Amends title 38, U.S.C., to consolidate the construction grant-assistance programs under section 644 (for State home domiciliary and hospital facilities) and under subchapter III of chapter 81 (for State home nursing care facilities) and create new statutory authority for grants for the construction of new domiciliary facilities and the expansion of domiciliary and hospital facilities, and for initial equipment in both categories; increases to $15 million the annual authorization for fiscal years 1978 and 1979; removes the 3-fiscal-year limitation on the availability of sums appropriated for the consolidated programs, making the funds available until expended; makes the allowable nonveteran population of a grant-assisted State nursing home domiciliary, or hospital facility 25 percent in order to make allowance for veterans' spouses, surviving spouses, and Gold Star mothers; sets at 33⅓ percent the limit which any one State may receive in any year of the total amount appropriated for the program; includes domiciliary and hospital projects under the statutory nursing home program recapture provision; allows the Administrator to reduce the recapture period to less than 7 years in cases of expansion, remodeling, and alteration; limits recapture to not more than the amount of grant assistance provided for the project; repeals existing statutory authority for making grants for the remodeling of State home domiciliary and hospital facilities and governing the operation of this program; provides for an October 1, 1977, effective date with a savings provision for hospital and domiciliary grants made under the section to be repealed; and gives existing nursing home program grantees the right to obtain grant modifications consistent with the new act. H.R. 3685—Public Law 95–62, approved July 5, 1977. (VV)

World War I veterans auto allowance.—Amends section 1901, title 38, U.S.C., to extend to veterans of World War I and any eligible veterans who served before or after World War I those benefits entitlement to the automobile assistance allowance for the purchase of an automobile or other convey-

ance and provisions of the adaptive equipment necessary to operate the vehicle safely. H.R. 6502—Passed House May 23, 1977; Passed Senate amended August 3, 1977. (VV)

INDEX FOR SENATE LEGISLATIVE ACHIEVEMENTS

(Prepared by Senate Democratic Policy Committee, ROBERT C. BYRD, Chairman)

AGRICULTURE

Federal Crop Insurance Corporation Capital (S. 955, P.L. 95–47)
FIFRA (S. 1678)
Grain Inspection (S. 1051)
Great Plains Conservation (S. 896)
Land and Water Resource Conservation (S. 106)

Rabbit Meat Inspection (H.R. 2521)
Soil Erosion Prevention (S. 1462)
Tobacco Quotas (H.R. 3416, P.L. 95–54)
Tomato Standards (S. 91)
Western States Conservation (S. 1614)
Wheat and Feed Grains Loan Levels (S. Res. 193)
Wheat Producers Assistance (S. 650)
Wheat Referendum (S. 1240, P.L. 95–48)

APPROPRIATIONS

Fiscal 1977:
Continuing (H.J. Res. 351, P.L. 95–16)
Economic Stimulus (H.R. 4876, P.L. 95–29)
Supplemental (H.R. 4877, P.L. 95–26)
Urgent Disaster Supplemental (H.J. Res. 269, P.L. 95–13)
Urgent Power Supplemental (H.J. Res. 227, P.L. 95–3)
Fiscal 1978:
Agriculture (H.R. 7558, P.L. 95–)
Defense (H.R. 7933)
Foreign Aid (H.R. 7797)
HUD (H.R. 7554)
Interior (H.R. 7636, P.L. 95–74)
Labor-HEW (H.R. 7555, P.L. 95–)
Legislative (H.R. 7932, P.L. 95–)
Military Construction (H.R. 7589, P.L. 95–)
Public Works—Energy Research (H.R. 7553, P.L. 95–)
State-Justice-Commerce (H.R. 7556, P.L. 95–86)
Transportation (H.R. 7557, P.L. 95–85)
Treasury-Postal Service (H.R. 7552, P.L. 95–81)

ATOMIC ENERGY AND NASA

NASA Authorization (H.R. 4088, P.L. 95–76)
Nuclear Regulatory Commission Authorization (H.R. 3733)

BUDGET

Rescissions:
Helium Purchases (H.R. 3347, P.L. 95–10)
Second budget Rescission (H.R. 3839, P.L. 95–15)
Resolutions:
Third Budget Resolution, 1977 (S. Con. Res. 10)
First Budget Resolution, 1978 (S. Con. Res. 19)

CONGRESS

Capitol Grounds Extension (S. 1859)
Congressional Campaign Committee Employees Retirement (S. 992)
Ernest Gruening Statue (S. Con. Res. 25)
Joint Committee on Atomic Energy Abolishment (S. Res. 252) (S. 1153, P.L. 95–)
Joint Committee on Congressional Operations Abolishment (S. 1608)
Joint Economic Committee Study (H. Con. Res. 248)
State Taxation of Members of Congress (H.R. 6893, P.L. 95–67)

CONSUMER AFFAIRS

Debt Collection Practices (H.R. 5294)

CRIME-JUDICIARY

Daughters of the Confederacy Patent Renewal (S. 810)
Drug Enforcement Administration (S. 1232)
Federal Rules of Criminal Procedure (H.R. 5964, P.L. 95–78)
Jefferson F. Davis Citizenship (S.J. Res. 16)
Juvenile Justice (H.R. 6111)
Mississippi Court Terms (S. 662)
North Dakota Judicial District (S. 195)
Omnibus Judgeships (S. 11)
U.S. Magistrates (S. 1613)

DEFENSE

Coast Guard Authorization (H.R. 6823, P.L. 95–61)
Defense Production Extension (S. 853, P.L. 95–37)
Deputy and Under Secretaries of Defense (S. 1372)
Military Construction Authorization (S. 1474, P.L. 95–82)
Military Enlistment and Reenlistment Bonuses (H.R. 583, P.L. 95–57)
Military Procurement Authorization (H.R. 5970, P.L. 95–79)

DISASTER ASSISTANCE

Disaster Relief Programs (H.R. 6197, P.L. 95–51)
Drought Emergency Authority (S. 925, P.L. 95–18) (S. 1935, P.L. 95–)
Drought Emergency Relief (S. 1279, P.L. 95–31)

DISTRICT OF COLUMBIA

D.C. Armory Board (S. 1062)
D.C. Bonds (S. 1063)
D.C. Borrowing Authority (S. 1061)
D.C. Reciprocal Tax Collection (S. 1103)
Federal Water and Sewer Payment (S. 1322)
George Washington University (S. 1060)

ECONOMY-FINANCE

Export Administration—Arab Boycott (H.R. 5840, P.L. 95–52)
Export-Import Bank (H.R. 6415)
Financial Institutions Regulatory Agencies (S. 71)
Foreign Corporate Bribes and Domestic Disclosure (S. 305)
Interest Rates (Regulation Q)—Federal Credit Unions (H.R. 3365, P.L. 95–22)
International Trade Commission (H.R. 6370)
Securities and Exchange Commission Authorizations (S. 1025, P.L. 95–20) (H.R. 3722)
Small Business Amendments—Disaster Relief (H.R. 692, P.L. 95–89)
Small Business Associate Administrator (S. 1526)
Small Business Grants (S. 972)
Small Business Loan Ceilings (H.R. 2647, P.L. 95–14)
Smith College Carillon—SSI Food Stamp Eligibility—Child Support Funding—Child Day Care Study—Medicaid Funding (H.R. 1404, P.L. 95–59)
White House Conference on Small Business (S. Res. 105)

EDUCATION

Education of the Handicapped (H.R. 6692, P.L. 95–49)
Higher Educational Technical Amendments (H.R. 6774, P.L. 95–43)
Vocational Education Amendments (H.R. 3437, P.L. 95–40)

ELECTIONS

Campaign Act Amendments (S. 926)
Federal Election Commission Authorization (S. 1435)
Overseas Citizens Voting Rights (S. 703)

EMPLOYMENT

CETA (H.R. 2992, P.L. 95–44)
Emergency Unemployment Compensation (H.R. 4800, P.L. 95–19)
Public Works Employment (H.R. 11, P.L. 95–28)
Youth Employment and Training (H.R. 6138, P.L. 95–

ENERGY

Alaska Pipeline Destruction (S. 1496)
Deepwater Ports (S. 891) (H.R. 6401, P.L. 95–36)
Department of Energy (S. 826, P.L. 95–91)
ERDA Nonnuclear Authorization—Civilian, 1977 (S. 36, P.L. 95–39)
ERDA Nonnuclear Authorization—Civilian, 1978 (S. 1340)
ERDA Nuclear Authorization—Joint Applications (S. 1341)
ERDA Nuclear Authorization—Military (S. 1339)
ERDA Nuclear/Nonnuclear Authorization—Civilian (S. 1811)
ERDA Synthetic Fuel Loan Guarantee Program (S. 37)
Energy Saving Grants for Schools (S. 701)
Federal Energy Administration Authorization (S. 1468, P.L. 95–70)
Natural Gas Emergency (S. 474, P.L. 95–2)
Outer Continental Shelf (S. 9)
Pipeline Destruction (S. 1502)
Radiation Exposure (S. 266)
Stripmining Control and Reclamation (H.R. 2, P.L. 95–87)

ENVIRONMENT

Clean Water (H.R. 3199)
Clean Air (H.R. 6161, P.L. 95–)
Earthquake Hazards Reduction (S. 126)
Endangered Species (S. 1316)
EPA Authorization (H.R. 5101)
National Advisory Committee on Oceans and Atmosphere (H.R. 3849, P.L. 95–63)
Noise Control (S. 1511)
Ocean Pollution Research (S. 1617)
Safe Drinking Water (S. 1528)
Sea Grant Program (H.R. 4301, P.L. 95–58)

FISHERIES

Atlantic Tunas (H.R. 6205, P.L. 95–33)
Commercial Fisheries (H.R. 6206, P.L. 95–53)
Fishermen's Protection Reimbursement (S. 1184)
Fishery Agreement with Canada (H.R. 5638)
Fishery Conservation Zone Transition (H. J. Res. 240, P.L. 95–6) (H.R. 3753, P.L. 95–8)
Marine Mammal Protection (S. 1522)

GENERAL GOVERNMENT

Age Discrimination Report—Nutrition Program for Elderly (H.R. 6668, P.L. 95–65)
Center for Books (S. 1331)
Civil Rights Commission Authorization (H.R. 5645)
Federal Assistance Program Information (S. 904)
Federal Home Loan Bank Board Members (S.J. Res. 63, P.L. 95–56) (S.J. Res. 79, P.L. 95–90)
GAO Audit of IRS and ATF (S. 213)
Intelligence Activities Authorization (S. 1539)
Kennedy Center Authorization (S. 521, P.L. 95–50)
Kennedy Presidential Library (H.J. Res. 424, P.L. 95–34)
Library Services and Construction (S. 602)
National Science Foundation Authorization (H.R. 4991, P.L. 95.)
Presidential Reorganization Authority (S. 626, P.L. 95–17)
Privacy Protection Study Commission Extension (S. 1443, P.L. 95–38)

International Cooperation on Nuclear Proliferation (S. Res. 94)
International Development Assistance—Food for Peace (H.R. 6714, P.L. 95–88)
International Financial Institutions (H.R. 5262)
International Security Assistance—Arms Export Control (H.R. 6884, P.L. 95—)
National Academy of Peace and Conflict (S. 469)
Peace Corps Authorization (S. 1235, P.L. 95—)
Portugal—Military Assistance (S. 489, P.L. 95–23)
Regulations to Prevent Collisions at Sea (H.R. 186, P.L. 95–75)
Rhodesian Chrome (H.R. 1746, P.L. 95–12)
Romanian Earthquake (S. Con. Res. 12)
Romanian Earthquake Authorization (H.R. 5717, P.L. 95–21)
Soviet Detention of Robert Toth (S. Res. 194)
Soviet Expulsion of George A. Krimsky (S. Res. 81)
Soviet Freedom of Emigration (S. Con. Res. 7)
State Department Authorization (H.R. 6689, P.L. 95—)
State Department Supplemental Authorization (H.R. 5040, P.L. 95–45)
Uganda Human Rights (S. Res. 175)
Vietnam POW's and MIA's (S. Con. Res. 2) (S. Con. Res. 3)

LABOR

Mine Safety and Health (S. 717)

MEMORIALS, TRIBUTES AND MEDALS

Alex Haley (S. Res. 112)
Benjamin Whitcomb Independent Corps of Rangers (S. Res. 241)
Charles A. Lindbergh (S. Res. 177)
Cora Rubin Lane 100th Birthday (S. Res. 162)
Frances G. Knight (S. Res. 231)
Francis R. Valeo (S. Res. 133)
General Draza Mihailovich Monument (S. 244)
Gerald R. Ford Building (S. 385, P.L. 95–25)
Henry Ford (S. Res. 215)
Jackie Robinson (S. Res. 223)
Jaycees International Conference (S. Res. 137)
Lieutenant General Ira C. Eaker Medal (S. 425)
Marian Anderson Medal (H.J. Res. 132, P.L. 95–9)
Mike Monroney Aeronautical Center (S. 1640)
Motion Picture Academy 50th Anniversary (S. Res. 168)
Nez Perce War Commemoration (S. Res. 196)
Philip A. Hart, Death of (S. Res. 15)
President and Mrs. Ford (S. Res. 22)
President Ford (S. Res. 38)
President-elect Carter (S. Res. 23)
Roman L. Hruska Meat Animal Research Center (S. 409)
Rosalynn Carter (S. Res. 195)
St. Patrick's Parish Anniversary (S. Res. 116)
Vice President Rockefeller (S. Res. 37)
William A. Ridgely (S. Res. 236)
William O. Douglas (S. 776, P.L. 95–11)

NATURAL RESOURCES—NATIONAL HISTORIC SITES

Bull Run Reserve (H.R. 7606, P.L. 95–55)
Eleanor Roosevelt National Historic Site (H.R. 5562, P.L. 95–32)
George W. Norris Home National Historic Site (S. 1828)
Land and Water Conservation Fund (H.R. 5306, P.L. 95–42)
Public Works on Rivers and Harbors—Waterway User Fee (H.R. 5885)
Reclamation Projects (H.R. 4390, P.L. 95–46)
Recreation Permits (S. 1338)
River Basins (S. 2001, P.L. 95–) (H.R. 6752, P.L. 95–41)
Sabine River Compact (H.R. 1551, P.L. 95–71)
Water Resources Development—Saline Water Conversion (H.R. 4746, P.L. 95–84)
Wilderness Areas: Oregon Wilderness (S. 658)
Wilderness Area Studies: Montana Wilderness (S. 393)
Wildlife Refuges (H.R. 5493)

NOMINATIONS (ACTION BY ROLLCALL VOTE)

Griffin B. Bell to be Attorney General
Joseph A. Califano, Jr. to be Secretary of HEW
Peter F. Flaherty to be Deputy Attorney General
Ray Marshall to be Secretary of Labor
Paul C. Warnke for Rank of Ambassador for SALT Negotiations and to be Director of the Arms Control and Disarmament Agency

PROGRAM

Mr. ROBERT C. BYRD. Mr. President, the Senate will convene on September 7 at 12 o'clock noon. After the two leaders or their designees have been recognized under the standing order, the Senate will proceed to the consideration of the coal conversion bill, S. 977, on which there is a time agreement. There is 2 hours on the bill, 1 hour on any amendment, 30 minutes on any amendment to an amendment, debatable motion, appeal, or point of order, with one exception, that being a 4-hour limitation on an amendment by Mr. KENNEDY, and at the expiration of the 4 hours it is anticipated that there will be a motion to table that amendment. If the motion to table fails, there is no time limit on further discussion of that amendment. No other amendments dealing with divestiture or the prospective divestiture of energy properties will be in order.

Mr. BAKER. Mr. President, will the Senator yield?

Mr. ROBERT C. BYRD. I am pleased to yield.

Mr. BAKER. Mr. President, reserving the right to object—I suppose technically this is not a reservation—it is my understanding that the Kennedy amendment probably deals with either a prospective divestiture situation or the prohibition of certain acquisitions.

It was my understanding that the unanimous-consent order was an order to provide that if that amendment were not tabled, then debate would be unlimited on that proposal. I simply wanted to make sure I understood it and that the majority leader and I were in full accord on the meaning of the unanimous-consent agreement.

Mr. ROBERT C. BYRD. The minority leader and I are in full accord on the meaning of that order with respect to that amendment.

Mr. President, there will be rollcall votes on amendments and/or motions in relation to the coal conversion bill on our return on Wednesday, September 7. Upon the disposition of that measure, hopefully that day, or certainly no later than Thursday, the 8th, the distinguished Senator from Maine will be ready to call up the second budget resolution, on which there is, under the law, a deadline for final enactment of September 15.

During the month of September and such time in October as is required, the Senate will be passing legislation dealing with the President's energy proposal, the coal conversion legislation having already been mentioned.

The committee, under the chairmanship of Mr. JACKSON, the Committee on Energy and Natural Resources, will have ready by that time a bill dealing with the conservation of energy. A report will have been printed, and that measure will be following on after the second budget resolution.

Thereafter, that same committee, under the chairmanship of Mr. JACKSON, will be ready to deal with utility rate reform and with natural gas regulation.

It is my feeling, after having discussed the matter with Mr. JACKSON on a number of occasions, that the natural gas regulation bill will precede the utility rate reform.

As I understand from Mr. JACKSON, the hearings on natural gas regulation have been completed. That measure will be marked up upon the return of the Congress on September 7.

I should also state that, according to Mr. JACKSON, possibly 2 days of hearings will remain to be conducted on the utility rate reform legislation.

At my request, Mr. LONG, the chairman of the Committee on Finance, will be holding hearings next week on the energy package—at least, that portion that deals with taxes. Mr. LONG will press for action on the tax aspects of the energy package in due time following the return of Congress, and every effort will be made to expedite action on that part of the package.

I hope that the distinguished minority leader (Mr. BAKER) and I shall be able to find ways to get consent for committees to meet during the session of the Senate, especially those committees that have jurisdiction over energy legislation and other legislation which it may be deemed absolutely necessary to pass before Congress adjourns sine die for the year.

I take this occasion to commend my friend and to thank him for the coopera-

tion, the splendid cooperation, that I have received from him as minority leader during these months of the first session of the 95th Congress. I think it is obvious and ought to be clear that, without cooperation on the part of the minority, it would not be possible for the majority to work its will on the various measures that have been taken up. The minority leader has, at all times, fully understood the problems of the majority leader and there has not been a time when the Senate has not had a measure before it. Unanimous-consent agreements have been gotten. I thank the minority leader and the Members of the Senate on his side of the aisle for their cooperation in that respect.

I take this occasion, also, to express appreciation to the majority whip (Mr. CRANSTON) for his fine cooperation and support and dedication to duty.

I also thank the minority whip (Mr. STEVENS), as I have done many times, referring to him also in respect of his capacity as the ranking member of my Appropriations Subcommittee on the Interior.

Incidentally, the Senate has now passed 12 of the 13 regular appropriation bills, well in advance of the beginning of the new fiscal year. The other body has not yet passed the 13th out of the 13 appropriation bills, the District of Columbia appropriation bill.

I am sorry to belabor the Senate at this late hour, it being 9:28 p.m. I take this occasion, however, to thank the members of the Democratic policy staff, under the direction of Tom Hart and Lee Williams, for their splendid cooperation and all of their good help to me during these many months.

I also want to express my appreciation to my able assistant for floor operations, Joe Stewart.

I take occasion, also, to express my deep gratitude to my colleagues on my side of the aisle for their patience and forbearance, understanding, cooperation, and support during these months.

Especially do I thank the chairmen of the committees on this side of the aisle and the ranking Members thereof on the other side of the aisle.

Finally, may I say to all of the officers and officials of the Senate and to the pages, the official reporters of debate, all the people at the desk, the staff of the Democratic cloakroom and the doormen and security officers of the Senate: Thanks to you.

Inasmuch as I have said finally, I shall add as a postscript that I hope for all concerned that they will have a very pleasant August and early days of September. If they are looking for a very restful place that is almost Heaven in which to spend a few of those days, at least, that place is West Virginia.

I might add, as a post-postscript, that, the Lord willing, I expect to be at Coolfont, in Morgan County, just 3 miles west of Berkeley Springs, tomorrow evening with all four of my violins, and I shall be playing there at what is called the Squirrel's Nest, a treetop restaurant. I expect to spend at least 5 hours playing a number of tunes, which, as I indicated sometime ago, will be in addition to "Rye Whiskey" and "The Cumberland Gap."

Thanks to all, my appreciation to all, and see you in September. Be ready for long days, hard work, lots of votes, and a continued splendid record of productivity on the part of the Senate of the United States.

Mr. BAKER. Mr. President, at this hour it would not be seemly nor would it be appropriate to try to emulate the good style and good will of the majority leader. So I will not try, except to say it has been my privilege to work with him in keeping with discipline on the minority side, to arrange the affairs of the Senate for maximum accomplishment, and our continuing efforts together to accommodate the requirements of our respective Members.

There are many things I could comment on about these first months of this session, and the majority leader's able administration of the affairs of the Senate, but I would mention only one. It is a remarkable thing and a refreshing thing to observe that I believe the Senate now has met every single schedule we set in the first weeks of this session, those times of nonlegislative session, this statutory recess, these other commitments that have been made, the absence of weekend sessions.

I really think it is a remarkable thing and an accolade to the majority leader that the schedule previously published has not been breached or broken a single time, and I thank him for that.

Mr. President, it has been a difficult first several months of this session. It has been trying at times. The hours have been long. The debate on occasion has been burdensome. But I think the Senate has comported itself very well, indeed, its work product is of high quality, and no small measure of that credit must go to the majority leader.

Mr. President, I will only briefly express my appreciation, in turn, to those officers and agents and employees of the Senate on the minority side. It would be literally impossible to operate the calendar and the affairs of the Senate from the minority point of view without our distinguished Secretary of the Minority, Bill Hildenbrand, his assistant, Howard Greene, and others who contribute so well and so ably to our efforts.

Mr. President, I will not prolong this session of the Senate except to say that this has been a distinct pleasure for me and a great privilege, not only to serve in this body, but with the distinguished majority leader.

Mr. ROBERT C. BYRD. I thank the distinguished minority leader.

I would only add to my own remarks that I, too, especially recognize and appreciate the fine cooperation that the majority leader has had from Bill Hildenbrand and Howard Greene

The PRESIDING OFFICER (Mr. MATSUNAGA). The Chair will observe that when the distinguished majority leader was speaking of Paradise, the Chair thought for sure he was referring to Hawaii.

Mr. ROBERT C. BYRD. Mr. President, in my 20 years in the Senate, I have yet to see a Senator preside with the flair, the skill, the precision and the fairness of the distinguished Senator from Hawaii who now sits in the chair, and as he adjourns the Senate I am sure that our guests in the galleries will understand what I mean.

ADJOURNMENT TO WEDNESDAY, SEPTEMBER 7, 1977

Mr. ROBERT C. BYRD. Mr. President, if there be no further business to come before the Senate, I move, in accordance with the provisions of House Concurrent Resolution 317, that the Senate stand in adjournment until the hour of 12 o'clock noon on Wednesday, September 7, in the year of our Lord 1977.

The motion was agreed to; and at 9:35 p.m., the Senate adjourned until Wednesday, September 7, 1977, at 12 noon.

NOMINATIONS

Executive nominations received by the Senate August 5, 1977:

DEPARTMENT OF JUSTICE

Charles M. Adkins, Jr., of West Virginia, to be U.S. marshal for the southern district of West Virginia for the term of 4 years, vice Irvin W. Humphreys.

Edward D. Schaeffer of Pennsylvania, to be U.S. marshal for the eastern district of Pennsylvania for the term of 4 years, vice Charles S. Guy.

COMMUNITY SERVICES ADMINISTRATION

Frank Jones, of Virginia, to be Assistant Director of the Community Services Administration (new position).

CONFIRMATIONS—AUGUST 5, 1977

Executive nominations confirmed by the Senate August 5, 1977:

NATIONAL CREDIT UNION ADMINISTRATION

Lawrence Connell, Jr., of Connecticut, to be Administrator of the National Credit Union Administration.

DEPARTMENT OF JUSTICE

George V. Grant, of New York, to be U.S. marshal for the southern district of New York for the term of 4 years.

William H. Shaheen, of New Hampshire, to be U.S. attorney for the District of New Hampshire for the term of 4 years.

DEPARTMENT OF LABOR

Roland Ray Mora, of California, to be Deputy Assistant Secretary of Labor for Veterans' Employment.

The above nominations were approved subject to the nominees' commitments to respond to requests to appear and testify before any duly constituted committee of the Senate.

THE JUDICIARY

T. F. Gilroy Daly, of Connecticut, to be U.S. district judge for the District of Connecticut.

IN THE ARMY

The following officer for appointment in the Army National Guard of the United States under the provisions of title 10, United States Code, sections 593(a) and 3385:

To be brigadier general

Col. James Clifford Good, [redacted].

The following-named officer under the provisions of title 10, United States Code, section 3066, to be assigned to a position of importance and responsibility designated by the President under subsection (a) of section 3066, in grade as follows:

To be lieutenant general

Maj. Gen. Harold Robert Aaron, [redacted] U.S. Army.

IN THE NAVY

Vice Adm. John G. Finneran, U.S. Navy, (age 53), for appointment to the grade of vice admiral on the retired list pursuant to the provisions of title 10, United States Code, section 5233.

Rear Adm. Charles H. Griffiths, U.S. Navy, having been designated for commands and other duties determined by the President to be within the contemplation of title 10, United States Code, section 5231, for appointment to the grade of vice admiral while so serving.

IN THE AIR FORCE

Air Force nominations beginning James E. Payne, to be major, and ending William W. Lehman, to be lieutenant colonel, which nominations were received by the Senate and appeared in the CONGRESSIONAL RECORD on July 18, 1977.

IN THE ARMY

Army nominations beginning William J. Allison, to be second lieutenant, and ending Frederick E. Wolfe, to be second lieutenant, which nominations were received by the Senate and appeared in the CONGRESSIONAL RECORD on July 18, 1977.

Army nominations beginning Robert O. Abney, to be lieutenant colonel, and ending Jacqueline Wonpat, to be lieutenant colonel, which nominations were received by the Senate and appeared in the CONGRESSIONAL RECORD on July 21, 1977.

IN THE NAVY

Navy nominations beginning John Lewis Adams, to be captain, and ending Joseph Albert Howland, to be captain, which nominations were received by the Senate and appeared in the CONGRESSIONAL RECORD on July 18, 1977.

Navy nominations beginning Joseph M. Carwile, to be ensign, and ending Gayle H. Damstrom, to be Chief Warrant Officer, W-2, which nominations were received by the Senate and appeared in the CONGRESSIONAL RECORD on July 21, 1977.

EXTENSIONS OF REMARKS

A TRIBUTE TO THE DESERT SUN NEWSPAPER

HON. SHIRLEY N. PETTIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mrs. PETTIS. Mr. Speaker, I would like to extend my heartiest congratulations to the Desert Sun newspaper upon the occasion of its 50th anniversary. On Aug. 5, 1977, this publication celebrates 50 years of journalistic clarity, sagacity, insight, and purpose.

While there is always a temptation to compromise in the matter of principle whenever the question of economic security is involved, the Desert Sun has consistently hewed to its initial purpose and resisted all allurements to gain circulation through the sacrifice of ideals. Consequently, the people of Palm Springs and the Coachella Valley have much reason for pride in the quality of community service this publication provides.

In an oft-repeated eulogy, John Casey, professor of journalism at the University of Oklahoma, stresses the necessity, character, and influence of newspapers like the Desert Sun in these words:

Without its newspaper, the small-town American community would be like a school without a teacher or a church without a pastor. In the aggregate, the country newspaper determines the outcome of more elections, exerts a greater influence for constructing community programs, is read longer by more members of the family, and constitutes, with its millions of circulation and quadrupled millions of readers, a better advertising medium than any other group of newspapers or periodical publications.

Through service to its community the country newspaper will not merely survive, it will continue to flourish as the most representative, most distinctive, most wholesome type of journalism America has produced.

Mr. Speaker, I am confident that the staff of the Desert Sun will remain fully aware of the newspaper's heritage and will keep it consistently free from distortion, prejudice, censorship and propaganda.

In closing, I am reminded of the words of Elisha Manson, past general counsel of the American Newspaper Publishers Association:

Our founding fathers believed that the people of this country were entitled to information concerning the activities of their government. They also believed that those in power should have their activities reported to the citizens as a restraint upon possible misgovernment.

They did not guarantee freedom of the press to the publishers of this country as a special privilege. Rather they imposed upon publishers a solemn obligation and made them trustees of the right of the American people to have their information free from the control of those who are affected by it—that right to be preserved at all hazards and at all costs.

Those of us who believe in our system of democratic self government are indebted to the press of this country for its vigilance in protecting our right to enjoy life, liberty and the pursuit of happiness. As long as the press maintains its vigilance, democratic self government will exist in America. Without freedom of the press, all liberty will fail.

Mr. Speaker, I am sure that my colleagues join me today in wishing the Desert Sun the happiest of birthdays and in saluting the principles on which it stands. Undoubtedly, such principles insure a continued success which we will all be happy to honor once again 50 years from today.

VA HOSPITALS

HON. ROBERT W. EDGAR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. EDGAR. Mr. Speaker, I would like to share with my colleagues the statement of Robert H. Vogel, director of veterans affairs and rehabilitation, the American Legion, Department of Pennsylvania, before the Subcommittee on Medical Facilities and Benefits of the Committee on Veterans' Affairs, on July 23, 1977, at the Veterans' Administration hospital in Philadelphia. In my opinion, his testimony provides a valuable insight into some of the special problems faced by veterans who use VA hospitals and clinics:

STATEMENT OF ROBERT H. VOGEL

Mr. Chairman and members of the subcommittee, the American Legion, Department of Pennsylvania, appreciates the opportunity to appear before this subcommittee of the Committee on Veterans' Affairs, and to present its views on the consolidation of the Philadelphia Veterans' Administration Hospital and the Veterans' Administration outpatient clinic as announced by the Veterans' Administration Department of Medicine and Surgery.

Before stating the American Legion's position on this subject, may I first summarize briefly the basic problems that have been brought to the attention of the American Legion by veterans receiving service at these Veterans' Administration stations during this period of consolidation.

Veterans have sent letters, telephoned, or come in person to this American Legion service office complaining of verbal abuse by physicians. They have also complained about long waiting periods at the Veterans' Administration Hospital when requesting hospital admission. They are often not admitted that day but told to report back in 1, 2 or 3 days for admission to medical service. In some cases, the veteran has reported that he was admitted within 24 hours to a community hospital with the same complaints.

Many veterans complain of waiting 3 to 4 months or longer, and reporting two or three times, for completion of their compensation and pension examinations. The shortage of physicians, therapists and clerks at the Veterans' Administration outpatient clinic has created problems with appointments, waiting periods and help with Veterans' Administration forms, etc.

What we will attempt to do in the following remarks, as briefly as possible, is to state the findings of the American Legion in reference to these complaints.

On the question of verbal abuse by the physicians, this problem has been discussed on many occasions with the hospital director and his staff. An example of this abuse is referring to veterans as drunken bums. Alcoholism is defined by the medical profession as a disease and the Veterans' Administration recognizes this by having an alcohol treatment unit in this Veterans' Administration hospital. It must be assumed then that this phrase is used by the physicians in a derogatory manner.

The problem of long waits in the admitting area are brought about by waiting for records to be located and by physicians treating veterans in the admitting area instead of referring them to clinical areas. Sometimes, veterans wait many hours and then are told to report back another day, as their records cannot be located. Along with the inconvenience to the veterans, this also compounds the problem of inadequate building space.

The practice of not admitting a veteran to the Veterans' Administration hospital, who then is admitted to a community hospital within 24 hours, tends to support the

theory of selective admissions. This theory is further supported by the fact that veterans are accepted for admission by admitting physicians and refused bed placement by the ward physicians or the bed-distributor physician.

The waiting period of 3 to 4 months or longer for compensation and pension examinations at the Veterans' Administration outpatient clinic is caused by the loss of personnel without replacement. This causes many undue hardships on the veterans and loss of salary when he has to report two or three times to complete the examination. This situation has been brought on by the attempted consolidation of the Veterans' Administration health care facilities in Philadelphia.

When this consolidation was in its infancy, it was explained to the American Legion that it was to be an administrative, not physical consolidation. However, there is some question about this—administrative staff have been sent from the Veterans' Administration outpatient clinic to the Veterans' Administration hospital, rehabilitative medical service and pulmonary function facility at Veterans' Administration outpatient clinic have been closed and all veterans sent to the Veterans' Administration hospital. Professional personnel including pharmacy, dietetics, social service, nursing, X-ray and laboratory technicians have been sent back and forth to further deterioration of the provision of the outpatient care.

Veterans must wait approximately 6 months for an orthopedic clinic appointment. Veterans who had come regularly to the tuberculosis clinic for treatment now wait about 3 months beyond their regular scheduled time for a check-up. Veterans who have applied for benefits because of a neurological or psychiatric disability must wait at least 3 months to be scheduled for an examination; not only does this delay a decision on monetary benefits, but also delays the receiving of treatment which, in a vicious circle, makes the veteran's condition worse.

A satellite clinic in the Allentown, Pennsylvania area was planned approximately 5 years ago and is not yet a reality. This type of clinic would help to eliminate staffing and space problems. It would, also, reduce the inconvenience to the veteran and decentralize service.

Investigation into these complaints over the past few years has given us the opportunity to acquaint ourselves with the problems underlying consolidation.

Many of these complaints, and others, were brought to the attention of the chief medical director of the Veterans' Administration by the reports of the National Veterans Affairs and Rehabilitation Commission of the American Legion, dated December 24, 1975 and November 10, 1976; also, the report of Fred J. Smith, Hospital Administration Specialist, Veterans Administration Central Office, dated February 6, 1976 and the report of Jack S. Westall, Assistant Chief Medical Director for Administration, dated May, 1977.

We believe that the Veterans' Administration central office is doing its job in a responsible manner. We realize that the recommendations of the National Academy of Science's study have just been made public and more planning is needed to follow the recommendation for separate outpatient clinics.

We recognize that medical school affiliation brings better care to the veteran, but we have concern about two medical schools in one Veterans' Administration hospital, each maintaining separate services with separate chiefs. Our concerns center around added cost, added building space, and competition between the two schools causing jealousy and greed, which in turn, could downgrade the quality of medical care to the veteran, which should be second to none.

In summation, Mr. Chairman and members of the subcommittee, may I say again that the American Legion, Department of Pennsylvania, has many reservations about the consolidation of the Veterans' Administration outpatient clinic and the Veterans' Administration hospital. Our experience, as we have tried to present today, is that service to the veteran has deteriorated at the Veterans' Administration outpatient clinic and it has not improved at the Veterans' Administration hospital. The complaints about the Veterans' Administration hospital have remained constant and we are now receiving many complaints about the Veterans' Administration outpatient clinic, which was not the case prior to consolidation. We ask that the Veterans' Administration Medical Service be judged by their delivery of care, their quality of care and how the Veterans' Administration cares for the veteran.

Mr. Chairman, this concludes our statement at the present time. We thank you and the subcommittee again for this opportunity and will answer any questions you may have.

THE NEED FOR A NATIONAL UNIT PRICING LAW

HON. NEWTON I. STEERS, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. STEERS. Mr. Speaker, today I am introducing the Unit Pricing Act of 1977. I consider this bill an ideal example of how consumers can save money by buying in economical quantities.

During my service in the Maryland State Senate I introduced a unit pricing bill. That bill was enacted into law and is now an effective agent of increased consumer awareness. Unit pricing allows a shopper to compare the price per unit, for example, of differing sizes of containers. Essentially, it establishes a uniform criterion such as the pound or foot by which to measure the price paid by the consumer.

Thus, you may see, two tubes of toothpaste, the smaller priced at 69 cents and the larger at $1.09. One no longer needs a calculator or slide rule to find that the prices per pound will be $3.68 for the small tube that weighs 3 ounces and $2.49 for the larger tube that weighs 7 ounces. The prices are right there on the shelf.

After the unit pricing program had been in operation for a period of time, the State government held hearings on the effectiveness of the program. The stores that had to use unit pricing came in to testify. Without exception, the store owners indicated that after the first-time costs for setting up the program there was no additional cost to the program.

As many of my colleagues know, there are other bills that have been introduced that deal with unit pricing. Almost all of them have incorporated restrictions on the use of the computerized check-out systems. My bill does not include any of those restrictions. I have used the system myself and there are several stores in my district that use the system. I have found it to be a positive aid to the consumer with its itemized checkout list and visual display as the prices are tabulated. If it is possible for fewer people to work in a store due to this system, competition will reduce food prices, at least in comparison with what they would be.

Unit pricing is a tool that will make consumers more effective shoppers. They will save money by knowing the best price available. We need to help our citizens pay less on their food budgets.

REPORT ON COAL, NUCLEAR, AND THE ENVIRONMENT

HON. ROBERT W. EDGAR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. EDGAR. Mr. Speaker, I inserted into the RECORD on August 1 the first report prepared for me by a subcommittee of my Energy Advisory Committee, entitled "New Energy Sources and the Future." I would like to share with my colleagues a second subcommittee report entitled "Coal, Nuclear, and the Environment." This subcommittee is chaired by Dr. Ernest B. Cohen, of Upper Darby, Pa., and I am pleased by his leadership in helping me understand the many issues addressed by the report:

SUBCOMMITTEE REPORT: COAL, NUCLEAR, AND THE ENVIRONMENT

SECTION I—BACKGROUND

The energy situation has become critical because of two interrelated facts: (1) The world's consumption of oil and gas has been expanding rapidly and, (2) The estimated reserves, both discovered and undiscovered, are not sufficient to satisfy this demand for more than another decade or so. The United States, as the world's largest consumer of oil and gas, has been forced to face the issue first, in spite of the large oil fields with which the country was blessed. Domestic production of oil and gas will continue to decrease in the future because the best of our oil fields have been significantly emptied already. (All this is covered in Chapters 1 and 2 of the National Energy Plan.) We have about 10 to 20 years in which we can gracefully adjust to the future world economy. This adjustment must take the form of either reducing total energy use or shifting to other energy sources, chiefly some combination of coal and nuclear. The possibilities of exotic energy systems so far remain just possibilities, and the person who counts upon completely new technology to deal with the energy crisis is foolhardy.

The National Energy Plan (NEP) is a first step in coping with the energy shortage of the future. It is the first significant national program to grapple with the problem. NEP is not sufficient and must be followed by additional programs over the next few years.

The philosophy with which this subcommittee approached the National Energy Plan can be characterized by the following points:

1. Belief in gradual evolution and phased-in changes to our economy and way of life.

2. Changes to be the result of maximum individual free market decisions and minimum bureaucratic control or government edicts.

3. All energy involves environmental damage. This was true of the technology of 1776: animal power, fuel wood and water wheels, and it is equally true of energy technology in 1976. In balancing energy needs against the environment, the least amount of energy to just meet our basic needs is best.

4. Because of human resistance to change

and our large existing capital goods stock based on present forms of energy, changes will require 10 to 20 years to be fully implemented. It will require all the grace time available from our present petroleum and gas supply in order to develop and implement alternative energy systems.

SECTION II—INDIVIDUAL REPORTS

The committee considered 5 subtopics: coal conversion, air pollution, the future of nuclear power, nuclear safety and coal (and uranium) mining.

A. Coal conversion (Dr. Ernest B. Cohen)

It is physically impossible to convert oil or gas fired boilers to use coal. Most of the easy reconversions of units built for coal firing but converted to oil have already been done wherever it could be made environmentally acceptable. Coal conversion of newer boilers, both in utility plants and industry, requires installation of a complete unit. A rough estimate is that coal prices must be at least one-third less than oil or gas prices to make coal burning economically competitive in spite of the much higher cost of the equipment. The proposed taxes should push oil and gas into the cost regime. It is important to initiate those taxes proposed in Chapter 6 of the NEP (pages 65–66) early so that business decisions to design and install coal fired boilers will not be delayed, but the full tax should be phased-in over a number of years as proposed in the National Energy Plan.

It is particularly important to initiate these taxes early on utility fuels because utilities can swing a significant portion of their consumption from one fuel to another when operating under light load. Indeed it is standard operating procedure at any electric utility to utilize the most efficient and lower cost generating unit.

Coal conversion is particularly important in the industrial sector where the units are not large enough to justify going nuclear. Pushing the cost of oil and gas up nationwide would not provide any economic incentive for industry to move away from the Northeast States. At best, coal conversion will take place over a considerable period of time because boilers are very long lived pieces of equipment. They are usually considered to have a 40-year life, for depreciation purposes, but a significant number of 50- to 60-year-old boilers are still operational. Based on New Jersey data, about one-half the industrial boilers in this area are 25 years old. However, given sufficient differences in fuel costs, new coal burning boiler capacity would be installed and existing oil fired units retired to standby or emergency services. It is important that sufficient oil and gas fuel be available to run these unconverted standby boilers when required by peak demand or emergency failures of the main coal fired unit.

The utility boilers will generally require sulfur scrubbers as well as precipitators or filters to eliminate particulates (smoke). Industrial boilers can often be designed around firing with low sulfur coal. Our limited supply of low sulfur coal must be carefully watched in regard to both boiler use and making coke for the metallurgical industries, for which no adequate substitute exists.

B. Environmental aspects of coal use (Dr. James Bradley)

1. Interim EPA policy, (page 68 of the national energy plan).—Support is recommended for the Administration policy of no new legislation pending EPA review of present policies allowing offsetting pollution tradeoffs on new installations.

2. Sulfur dioxide and particulate pollution.—Scrubbers and electrostatic precipitators should not reduce the effluent temperature in order to maintain buoyancy and hence dispersion of pollutants in the stack gases. The best available scrubber technology should be required and developed for use in all new installations

High stacks promote dispersion when they extend above the relevant local inversion, but this is not feasible for the deep inversions present in severe, prolonged air pollution incidents. Stacks below the inversion lead to morning fumigation problems and to high local concentrations of pollutants. Because of better scrubbers and taller stacks, power station use of coal is therefore preferable to an equivalent quantity consumed by many small scale users.

Since persistent, widespread adverse dispersal conditions and peak electricity loads both occur predominantly on hot summer days in the eastern half of the U.S., the government should have powers to require curtailment of loads in factories and air conditioned premises.

The use of scrubber residues for production of sulphuric dioxide and trioxide in the atmosphere is inadequately understood; removal is mostly by washout and by reaction with susceptible rock and metal. The catalytic effects of other particulate pollutants, such as metal oxides, are important but very variable because they come from other industries.

3. Radioactive pollutants from coal.—The committee does not have adequate data upon these pollutants; they include long lived uranium, thorium and their daughter nuclides such as radium and radon. Most radioactive isotopes will appear in either bottom ash or fly ash, depending upon the chemical form of their initial bonding, upon other impurities in the coal, and upon the combustion conditions. Entrapped radon will inevitably escape to the atmosphere because it is a noble gas.

Wide variations are expected, depending upon the nature and origin of the coal and the combustion equipment. The public health consequences may well be in the same order of magnitude as radiation exposure from the same amount of fission energy; neither is precisely known, but is not a serious threat.

4. Solid waste.—Ash is a major solid pollutant which is inherent in combustion of coal. Some ash can be used as inert filler in concrete or as sources of potassium or phosphorus. Most ash, as well as residues from stack scrubbers, has no use, and must be buried in land fills or mines.

5. Carbon dioxide.—Combustion of all fossil fuels (coal, oil or gas) releases carbon dioxide to the atmosphere. Although the carbon dioxide cycle is buffered by the oceans and their dissolved bicarbonates, atmospheric carbon dioxide has increased 10% during the industrial era. The warming which this causes may offset cooling trends due to recovery from the abnormally warm climate since 1900, from fluctuation in solar activity, and from cyclic changes in the earth's orbital parameters (the Milankovich hypothesis).

In order to yield reliable inferences about local climatic changes, existing computer General Circulation Models would have to be updated by a much higher usable spatial resolution (attainable by 50 year old finite elements methods and more recent techniques), extensive thinking about the statistical mechanics and irreversible thermodynamics, and possibly improved boundary conditions and forcing functions. Many of the group velocities and non-linear interactions in such models are now admitted to have the wrong order of magnitude and often the wrong sign. Computational expenditures should be held constant pending several years of the preliminary thinking.

6. Waste heat.—The siting of power plants in sparsely populated areas reduces the potential use of waste heat for industry and space heating. Its use for greenhouses to reduce the transportation of vegetables should be encouraged; many vegetable plants, however, respond to daylength rather than temperature. Present design nuclear power plants release more waste heat than coal burning units because of lower steam temperatures.

7. Water use.—Science and Public Affairs, April 1973, pp. 39–40 quotes the North Central Power Study of the Bureau of Reclamation and the Environmental Defense Fund as estimating detrimental water consumption for coal development in Montana and Wyoming. Agriculture should have priority for water use in semi-arid areas.

C. The future of nuclear power (Mr. G. Frank Cole)

The future of nuclear power can be summed up in a word—uncertain.

While the future is uncertain, the potential of nuclear power is very great. Using present light water reactors, it can meet an increasing share of our electrical needs. In fact, it is unlikely our energy needs can be met without nuclear power for electricity. For the longer term, the breeder reactor represents the ability to obtain about 60 times more energy from our uranium resources and would make uranium the largest energy resource we have.

Dr. Schlesinger has stated we must bring on line 300 more nuclear plants between now and the year 2000. While this is a substantial reduction from previous estimates of the requirements, it is a formidable amount of energy. It is not clear, however, if this goal can be met in the current climate. Since the middle of 1974 when the slowdown in building nuclear plants began, there have been only 21 new orders. In this same period of time 32 plants were cancelled and 150 deferred. The problem is not economic nor is it technical. It is the result of the current legal, political, and regulatory climate. Former Congressman Craig Hosmer recently remarked that since the Seabrook experience utility executives have been treating nuclear plant suppliers like Typhoid Mary.

Development of the breeder reactor unlocks an extremely important long term source. With the use of the breeder, already mined uranium would meet our energy needs for several hundred years. Indeed, the breeder may prove the only way to meet energy needs in the next century if fusion power turns out not to be practical, or if the expanded use of coal results in an unsatisfactory carbon dioxide buildup as some fear. Development of the breeder, however, is now a major uncertainty. President Carter has tied the Clinch River breeder demonstration plant to nuclear weapons proliferation and has taken the position it should be cancelled. If this occurs, the United States will have difficulty resuming development work on the breeder in the future. It is noted, however, that many other countries are proceeding to develop breeder reactors.

For the near term, Congressional action will be required to improve the legal, political and regulatory climate so that work on the 300 nuclear plants can proceed. It is essential that enough nuclear generating capacity be installed by 1990 so that oil/gas fueled combustion turbines are reserved for peaking power and emergency use only. It is desirable that enough nuclear generating capacity be available so that many present uses of oil or gas may be converted to electric energy.

For the longer term, Congress needs to deal with the nuclear proliferation problem and decide if the breeder reactor really affects it or not.

D. Nuclear safety (Mr. Daniel M. Sternberg)

Nuclear power plants are regulated in the design, construction and operations phases by the Nuclear Regulatory Commission (NRC). As an aside, the President's plans for the Department of Energy lets the NRC remain an independent body to avoid direct political interaction. The licensing and

standards arms of the NRC establish design criteria for plant siting and systems performance. The NEP's impact on this area (page 72, para. 3 and 4) can't have any near term impact on safety since the licensing activity at best starts 6 years before a plant provides power and the firm siting criteria to prohibit plants near population centers is probably redundant to similar criteria evolving within the NRC and the industry for related reasons. The Inspection and Enforcement arm of the NRC inspect plants from before construction, through construction and operation, and finally the decommissioning phase.

Typically there are 25 to 35 inspections at each plant each year, of which a significant number are unannounced. These inspections focus on ensuring compliance with the criteria established by the licensing and standards arm with the objective of protecting the health and safety of the public and workers. The NEP's impact on this function (page 72, para. 1) will provide for more frequent inspections and assign an inspector to each plant. In terms of overall improvement, this approach strengthens the claim that the nuclear industry is the most closely regulated one in the country today. No major change in the level of protection provided by the NRC is likely to result from these proposals. An additional requirement to make mandatory the reporting of certain minor mishaps and component failures is inculded in the NEP. Such reporting must indeed relate to minor items since nuclear power plants presently have a low threshhold for reporting.

Reference is made to the recent increase in the required number of guards and the training of these guards (page XXI, para. 3). The number of guards is a subjective requirement that is not realistically determinable by the analytical techniques used to analyze systems and accidents. It tends to become a debatable point since no one can deny the threat, but no once can really quantify it. Looked at in perspective, the increased number of guards may dissuade more potential terrorists than a lesser number, but the threat from terrorist action is probably no greater at a power plant than other types of lesser protected facilities such as stadiums, reservoirs, schools, etc.

The subject of radioactive waste disposal comes up quite frequently in discussions of nuclear power. The committee does not feel this is a particularly difficult or insurmountable problem. Today's technology can be classed as almost acceptable. Burial in geologically stable locations such as salt mines, will probably be accepted. However, time works in favor of us in this case. First of all, the amount of material to be disposed of decays away with time and secondly, the technology of disposal, like all techonologies solutions, may be altered and considered to have been an "interim" solution. (Reference: Bernard L. Cohen "The Disposal of Radioactive Wastes from Fission Reactors" Scientific American June 1977).

In summary, the NEP's impact on nuclear power safety is not a major redirection, but rather an upgrading. The potential improvement in the licensing process may or may not decrease the time to license and build a plant, but shouldn't result in any real degradation of nuclear safety. In general, the committee feels that safety of power plants can presently be considered as an acceptable risk when compared to the alternatives.

E. Mining coal and uranium (prepared by Dr. Ernest B. Cohen in default of imput from fifth committee member)

It is estimated that 90 percent of the global fossil fuel reserves are in the form of coal. It is also estimated that the energy content of the U235 isotope in our uranium deposits is about the same as our coal supply. If we utilize the U238 isotope (and also Thorium) in breeder reactors, the energy potential is about 100 times as great. The total energy available from coal and fissionable material is such that we can defer some of these decisions as to the ultimate exhaustion of these resources for many decades, unlike the problem of oil and natural gas supply. However, particularly in the case of coal there are different degrees of accessibility and different forms of the resources. High quality, low sulfur metallurgical coal for coking, is not as common as we would like. A large part of the American coal reserves are in low grade materials like the Montana/N. Dakota lignite beds and other low value deposits. Also we must recognize that only 10–20 percent of the coal reserves can be strip mined, if that much, and of this portion, not all of it should be strip mined because of the environmental consequences. There are also significant quantities of thin seams and other deposits which would only be mined under conditions of extreme scarcity. Where practical, strip mining output can be expanded quickly because it utilizes general available construction equipment, such as bulldozers and draglines. Deep mining involves very special technology. The latest advances in deep mine equipment are the so called long wall coal cutting machines which are largely of European development. At present, the long wall machines account for only about 10 percent of American deep mining coal production. A major advantage of long wall coal technology, where it can be used, is that you can get 100 percent coal recovery. This involves having the mine collapse behind the machinery as the coal is removed. Whereas with the prior American automated technology, the short wall cutting machines, approximately one-half the coal is left behind to support the roof in the room and pillar layout.

The biggest technical problem with deep-mining costs is hauling coal from the working face rather than cutting of coal at the face. Many mines have underground tunnels which extend up to 5 or more miles from the shaft. Labor productivity, measured in tons per man day, has been decreasing in American mines, both deep and surface. I do not know what can be done to reverse this trend, but it appears that future research in mining technology and mechanization might be helpful.

There is a high investment in the opening of new coal mines and it requires considerable time to bring a new mine into full production. This is inherent in the nature of a well operated mine, in that the haulage tunnels are first driven to the extreme distance in which coal will be mined, then the coal is removed from the back of the mine towards the shaft. In the Appalachians and certain other areas, strip mining would cause severe erosion and should not be practiced. In flat or gently rolling terrains, strip mining can be economical and the surface can be restored as good or better than before the coal was removed, at reasonable cost. Of course strip mining is not useful for coal seams below some moderate depth because of the cost involved in removing and replacing the overburden.

All in all, mining is a dirty operation. It breeds a host of mine communities which are left without economic support when the mines are exhausted. We have seen this primarily in the Appalachian coal fields, but there are also western ghost towns left behind by exhausted ore bodies. About all we can say is that the minimum amount of coal usage that we can get by with is the best. Uranium mining has many of the same properties in terms of economics and the environment. If we can restrict our uranium requirements to what can be supplied by the few rich deposits, the environmental damage will not be too bad. If we have to mine the granite beds of the Appalachian mountains (which contain energy and uranium equivalent to coal streams) we will scar a large portion of the countryside forever. This is one justification for developing breeder reactor technology. Relative to the deaths associated with mining coal or uranium, little difference exists between the two. The same can be said for damage to the environment.

SECTION III—SPECIFIC CRITIQUES OF NATIONAL ENERGY PLAN

A. President Carter has stated that the licensing time for nuclear plants must be reduced. There is nothing in the plan which states how this will be done. It is very important that Congress take action to improve the legal, political and regulatory climate so the needed nuclear plants can proceed.

B. Coal fired power plants have a lead time of 7 to 8 years and nuclear plants from 10 to 12 years. With these long lead times, advance planning is needed. If poor planning results in inadequate generating capacity, oil fired gas turbines would have to be used to fill the gap. To prevent future use of oil on an "emergency" basis to avoid electricity shortages, action is needed to cut through the red tape on the lead time for building nuclear power plants. The special coal fields of Eastern Pennsylvania and New England are anthracite which is not particularly good for firing in modern pulverized boilers. However, it may be good feed stock for production of substitute natural gas (SNG). As this resource is almost solely in the Pocono fields and in the Massachusetts/Rhode Island coal fields, it is of great concern to the Northeastern states.

C. With the proposed Portsmouth, Ohio enrichment facility, nuclear fuel supplies will be adequate for the short term. The matter of providing sufficient uranium enrichment facilities depends upon the reactor types in use. This is not covered in the NEP.

D. The National Energy Plan does not mention agriculture use. American agriculture with its high productivity requires high resource use (energy) for operating machinery, fertilizer production, transportation, and other directly associated purposes. The agriculture sphere must be added into the National Energy Plan, probably in the next revision.

E. The impact of the energy plan as discussed in Chapter IX does not show a very large effect of the plan to the year 1985. The overall difference in energy use patterns is dropping petroleum from 46 percent to 39 percent of the national energy supply and increasing coal from 22 percent to 28 percent. The plan forecasts significant growth in industrial use of oil (from 3.2 to 4.0 million barrels per day) in spite of an even larger swing to coal (from 1.9 to 5.0 million barrels per day oil equivalent).

F. The transportation sector remains as oil dependent as before with minimal impact of conservation measures. Oil usage in transportation is forecast to increase from 9.2 to 10.2 millions of barrels per day. The next revision of the National Energy Plan will have to reduce oil usage in transportation. This implies development of electrified transportation. This implies development of electrified transportation systems, primarily electric rail with some supplemental trolley bus service for passenger transportation. Perhaps we should also include a small scale introduction of that old technology device, the battery powered electric vehicle, for local delivery service.

SECTION IV—RECOMMENDATIONS FOR VOTE

A. This committee recommends that you vote for the National Energy policy in almost any form that it takes after Congressional amendment, unless it is completely emasculated. Deficiencies in the program will have to be corrected by subsequent legislation over the next several years.

B. Recommended changes in the National Energy Plan:

1. The provision calling for taxes and fees on the use of natural gas and petroleum products in industrial boilers and utilities should be initiated immediately with passage of the act; although the fees should be nominal in 1977 and 1978 and rising gradually to their final value by 1985. If fees are not initiated now, there will be no serious expectation in the business community that these fees will ever be imposed. As an additional benefit, there are many industrial or utility operations in which multiple fuels can be used or one fuel can be substituted from another by choosing which unit to operate at a given time. In such cases, an immediate application of oil and gas surtax will shift usage away from the gas resources.

2. Funding for expansion of electric transportation is desperately needed. Highway fuel taxes appear to be the best source for obtaining these funds. A figure of 5 cents/gallon would be about right.

3. The Department of Energy should be required to define a program of industrial energy conservation. The greatest increase in energy use forecast under NEP is in the industrial sector.

4. The National Energy Plan involves social factors as much as technical and economic factors. We should initiate basic research on such social phenomena as the dynamics of changing technology and the effects of centralized energy systems on labor organization.

ON THE DEATH OF PRESIDENT MAKARIOS

HON. JAMES J. FLORIO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. FLORIO. Mr. Speaker, it is with deep mourning that we observe the sudden passing of Archbishop Makarios, the spiritual and secular head of the Cypriot nation. His loss will be deeply felt in the councils of world government, in the hearts of his countrymen, and in the minds of all those who value the virtues of honor and self-respect that he so admirably demonstrated before the world.

The son of a poor Cypriot shepherd, Archbishop Makarios had a humble beginning. And yet, in later years, as the singularly influential leader in Cypriot religious and political life, he remained one with his people. This was truly his most memorable quality, and was demonstrated by the unending love and respect shown toward him by his fellow Greek Cypriots and Greek people throughout the world.

It is certain that the tragedies that have been inflicted upon his island nation extracted a heavy toll on President Makarios. The Turkish invasion of Cyprus 3 years ago severely disrupted the nation's steady progress toward full modernization, as well as inflicting great suffering on the Greek Cypriot people. It is hoped that the people and future leaders of Cyprus will be able to build on the firm commitment that President Makarios made toward finding an ultimate solution to the nation's present political problems. The passing of Archbishop Makarios, however, will assuredly make a peaceful settlement more elusive, and for that reason alone all nations and people committed to justice and freedom will mark his passing with great sorrow.

CLIMATE RESEARCH: WE'VE GOTTEN ON WITH THE JOB

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. BROWN of California. Mr. Speaker, as we look forward to House deliberation on the National Climate Program Act of 1977, I would like to note for the RECORD the wide support in the scientific community for the kind of national climate program envisioned in H.R. 6669, a program with a central focus but with diverse and multidisciplinary participation. This aspect is particularly brought to mind by a letter in Science magazine by Dr. John Laurmann, a Californian with whom our office has been in touch again this spring.

Dr. Laurmann's thoughtful letter is illustrative, perhaps more than even he was aware, of the kind of reasoned communication which the House Science and Technology Committee—and the Commerce, Transportation, and Science Committee in the Senate—has received, both in hearing testimony and in letters to Members offices. As Dr. Laurmann states, and many others have also stated in similar words, "understanding climatic change is a truly massive task; social responsibility dictates that we get on with the job diligently and expeditiously."

Mr. Speaker, I am very much encouraged by increased recent activity in the Senate on legislation not dissimilar to H.R. 6669. In 6 intensive days of hearings this June and July, Senator STEVENSON's Subcommittee on Science, Technology, and Space has telescoped very well the thorough exploration of the need and nature of a National Climate Program which we began in the House Science and Technology Committee with hearings in May 1976. I am sure our colleagues in the Senate would agree that the thoughtful urging of scientists like Dr. Laurmann and innumerable of his colleagues has helped us formulate H.R. 6669. We have striven to create the legislative charter for a truly national climate program, one which will achieve a diverse but coherent program of Federal agency and outside efforts in climate research and monitoring.

Dr. Laurmann's early letter to Science, published last Mar. 12, 1976, might be judged a minor benchpoint of our progress toward a national climate program:

CLIMATE RESEARCH

Among the host of warnings of environmental degradation now facing the public is the claim that disaster is in store if mankind fails to realize that his well-being depends on a stable global climate and that climatic change, either natural or man-made, is a real threat which must be attended to today.

As is true in the case of many environmental advocacy causes, some claims are gross exaggerations, thereby lending less credibility to the remainder. In addition, due in large measure to the degree of ignorance regarding the fundamentals of the nature of climatic variability and change, disagreements among climate experts concerning the plausibility of possible traumatic effects of climatic change have caused confusion on the part of the lay-public and within government circles, making it difficult to assess the true state of affairs.

However, these circumstances are hardly sufficient to account for the lack of federal funding of climate research in response, not just to the clamor of the doomsday prophets, but also to a series of highly authoritative and respectable reports,[1] all of which have reiterated the need for a major increase in climate research activities. No doubt the demise last spring of the National Climate Program[2] can in part be ascribed to the nation's economic difficulties, but there is another more trenchant cause for the problem, specifically a failure to demonstrate to funders of such research the practical benefits that can result within a time frame of relevance to their mandate. For example, at its most ambitious, climate research would generate untold benefits if it could lead to a predictive capability; at present, however, this is more a hope than an expectation. Research funding with such an objective would be long-term, high-risk, and have a high payoff. A conservative program would emphasize the collection and analysis of more data on climate the world over. Such knowledge would be of interest to planners in climate-sensitive sectors of the economy, for example, in determining the magnitude of buffer stocks of food. This type of research is easy to justify in terms of short-term goals but has attracted little attention from the research community, presumably because of its relatively mundane scientific content. Finally, there remains the very real possibility of an eventual man-made disturbance of the world's climate through any one of a variety of mechanisms, most of which were reviewed in the Study of Man's Impact on Climate report.[3] The Climatic Impact Assessment Program,[4] based on one such possibility, was in fact funded but ended without gaining the advances needed to predict the climatic consequences of a reduced ozone layer—its stated objective. Other man-induced impacts have been judged potentially serious, but far off, and thus those investigating them have not been able to compete for restricted research funds.

Within the last few months, new information has come to light: there is now a demonstrable case of a man-made global climatic change whose magnitude depends on planning decisions made today but which cannot be quantitatively assessed because of our ignorance of the dynamics of the climate system. The increase in global atmospheric carbon dioxide since the start of this century is well documented and the first-order climatic response well known (the "greenhouse" effect). Best estimates suggest an increase in global mean temperature of perhaps 2°C, with a doubling of ambient CO_2 levels above their preindustrial value,[5] but reliable estimates are far from possible at present, due, not only to a lack of understanding of atmospheric dynamics, but to a wide variety of feedback mechanisms within the climate system that need to be investigated and taken into account. The latter, it should be pointed out, can result in diminution *or* enhancement of the climatic response.[6] Projections have also been made of expected levels of atmospheric CO_2 by extrapolation of present-day trends of industrial generations. The recent report by Broecker[7] estimates a 50 percent increase by the year 2020, a figure that agrees with that used by Hafele and Sassin in an important new study[8] made for the Interna-

national Institute for Applied Systems Analysis (IIASA).

They assume a fully fossil-fuel energy production system for the world well into the next century (that is, insignificant nuclear or other forms of energy production) and report a date of 2035 for a doubling of the ambient CO_2 level. They also assume a 3 percent energy growth rate for the world with an ultimate leveling off at 5 kilowatts per capita using 1974 U.N. population projection figures. The crucial new consideration introduced in the IIASA study is the juxtaposition of this fact with an assessment of our ability to massively deploy a new energy production technology. It points out that the "market penetration time" (that is, the time for a new energy production system to gain a 50 percent share of the total market, starting from a 1 percent level) is 60 years in the case of the United States and longer for the rest of the world. Moreover, this number appears to be an indigenous property of the economic forces that drive the market system and is difficult, if not impossible, to reduce materially. Thus, it so happens that the market penetration time just matches our current best estimate of the CO_2 doubling time, and if planning decisions for avoidance of possible CO_2 climatic impacts are to be effective, the time to make them appears to be now.

If the nation's energy planners take their public charge seriously, it is evident from these fundamental considerations that they should be pressing for assured predictions of the climatic consequences of their decisions on energy production deployment, as error could be disastrous. Understanding climatic change is a truly massive task; social responsibility dictates that we get on with the job diligently and expeditiously.

CUBAN TERRORISM AND THE STATE DEPARTMENT

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. McDONALD. Mr. Speaker, on the same day that Fidel Castro's FALN terrorists slaughtered an innocent American citizen on the streets of New York, the U.S. Department of State revealed that it is supplying the Cuban Communist dictatorship with information about its political enemies.

According to a statement by John Trattner to United Press International, published in the Washington Post of August 4, 1977, "I can confirm that we have exchanged information with the Cuban Government on possible terrorist acts." The UPI linked this statement with an allegation that the U.S. Government had provided information to the Castro regime about a planned commando attack on the Cuban military by an exile group. According to UPI, the group abandoned its plans when it learned that the Castro forces had been alerted by the U.S. Government.

When the State Department advised my office that no further information would be made available on information exchanges with the Castro regime, they were asked whether the Cuban Communists had provided our Government with information on the terrorist groups trained and supported by Cuba now operating in the United States. The State Department not only would not answer the question, but asked, "Do you mean those trained years ago?" We answered, that we were referring to such groups as the FALN which committed a murder in New York yesterday and has publicly thanked Fidel Castro for his support; the Weather Underground Organization—WUO—most of whose members were trained in Cuba and which is currently engaged in terrorist acts in this country.

We called the State Department spokesman's attention to the activities of Julian Torres Rizo, a high ranking official of Castro's DGI secret police whose diplomatic cover at the Cuban U.N. Mission is first secretary. Rizo is the liaison with the Weather Underground and the FALN terrorists.

Terrorism is a violent attack on unarmed civilians, not an attack on enemy military formations or installations. The example given by UPI of information given by the U.S. State Department to the Castro dictatorship did not relate to terrorism, but to a legitimate military action by Cuban exiles against the oppressive Communist military.

I have instructed my staff to investigate this situation. I want to know what kind of information was given to Castro's repressive dictatorship about its enemies, and whether this information related only to terrorism. I want to know further whether the Cuban Communists have provided any information that would help the United States prevent terrorist acts or apprehend the terrorists trained and supported by the Castro regime or its Soviet mentors.

ARCHBISHOP MAKARIOS

HON. JOE MOAKLEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. MOAKLEY. Mr. Speaker, I was deeply saddened to hear of the death of Archbishop Makarios on the morning of Aug. 3, 1977. As president of Cyprus, the Archbishop was a leader who untiringly dedicated his life to the advancement of his fellow countrymen. His profound faith transcended national borders and touched the hearts of many throughout the world. Archbishop Makarios was a man of enduring spirit in the face of political turmoil and social unrest. He will long linger in our memories as one of the greatest political and spiritual leaders of our time. His leadership will be sorely missed in Cyprus; his inspiration will be long remembered throughout the world.

This revered leader had the humblest of beginnings in western Cyprus. He was born Michael Mouskos in August of 1913. This son of a poor village shepard was sent to the ancient monastery of Kykko in hopes of becoming a novice monk. Here, the archbishop received his first formal education. He continued his education in Greece.

His pursuit of knowledge then brought him to the United States where he studied theology at Boston University. Later, he rose quickly through the hierarchy of the church and was elected archbishop in 1950. A striking figure recognized and respected worldwide, the archbishop reflected the unifying force of faith.

His political career, like his spiritual life, was marked by earnest striving for the highest of ideals The archbishop was actively involved in Cyprus' movement toward independence from British colonial rule. In 1960, Makarios became President of Cyprus when the dream of the island's independence was realized. The ascetic Makarios was to become the greatest political figure in the island's history. He was an immensely popular ruler, beloved by his fellow Greek Cypriots. In a tenuous political environment, the archbishop was a figure of endurance. Makarios was still serving as president of Cyprus at the time of his death.

I had the good fortune to befriend the archbishop during his visits to the United States. He was such a vibrant man. I was genuinely moved by his great sensitivity and profound faith. An incident which epitomized his great humanity, faith, and leadership came on the occasion of the archbishop's unfortunate first heart attack, which occurred a mere 4 months ago on Palm Sunday. Despite the pain in his body, the archbishop continued to participate in the Palm Sunday services. That very next day, this determined man conducted the affairs of state from his bedside

The life of Archbishop Makarios should be an example to us all to strive toward the fullest service to one's fellow man and God. The Archbishop Makarios

has his place in history secured; his place in our hearts forever. We will all pray for him.

THE GLOBAL RESPONSE TO NATURAL DISASTERS

HON. CHARLES W. WHALEN, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. WHALEN. Mr. Speaker, this morning a distinguished panel, headed by former Secretary of Agriculture Orville Freeman, presented a comprehensive report on the international disaster relief system and steps which could be taken to correct what is often a tragically inadequate approach to human suffering.

The report, entitled Acts of Nature, Acts of Man: The Global Response to Natural Disasters, was the result of a year-long study sponsored by the United Nations Association. Participants included many outstanding public officials, scholars, and civil leaders such as George W. Ball, Lester Brown, George D. Woods, Glen Watts, David A. Morse, and HUBERT H. HUMPHREY.

The recommendations in the report address one of the broadest aspects of human rights, the right to survival. Drought, crop failure, and the resultant food shortages in countries such as Ethiopia, Ghana, and Haiti too often serve as examples of the politicization of disaster. Sovereign states often refuse to admit the existence of slow-developing disasters, such as famine or epidemics. However, if developing nations were to become part of a program of satellite surveillance and had access to a central computer information system, with members of the international community standing by when aid would be most effective, many of these catastrophes could be avoided.

When a major natural disaster such as an earthquake, tornado, or flood occurs, international relief is often quick to arrive. But the effectiveness of that relief depends largely upon the preparedness of the affected government. Thus, a relief operation often takes on a life of its own, without any real planning or forethought.

The study recommends four major steps to improve, coordinate, and depoliticize international disaster relief. They are: (1) Creation of a disaster early warning unit in the Office of the United Nations Secretary-General; (2) provision of legal protection to victims of natural disasters through neutral international agencies such as the Red Cross and the United Nations Disaster Relief Office. (Such an approach would be comparable to existing contacts with prisoners and refugees); (3) conclusion of international agreements specifying the obligations of governments to disaster victims; (4) creation of a special United Nations fund, administered by the United Nations Development Program, for disaster preparedness programs in the developing countries.

There can be little doubt that implementation of these aforementioned steps could contribute significantly to our efforts to deliver disaster relief when and where it is most needed. Since 1972, we have spent over $1 billion on international disaster relief, often ineffectively. The U.N. is a logical instrument to coordinate activities of international relief agences without becoming involved in confrontations regarding national sovereignty.

The United Nations Association is delivering copies of the report to all Members of Congress. I highly recommend it to my colleagues.

COMMISSIONER OF EDUCATION BOYER INTERVIEWED

HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. BRADEMAS. Mr. Speaker, the distinguished U.S. Commissioner of Education, Ernest L. Boyer, has brought to the Office of Education a new sense of commitment to equal educational opportunity and quality education. In his brief tenure, Dr. Boyer has reactivated the Office of Education as a source of leadership in American education and has made strides to enhance the efficiency and effectiveness of the Office. In a recent interview published by U.S. News & World Report, Commissioner Boyer articulated some of his objectives for the appropriate Federal role in education.

Mr. Speaker, I insert the interview at this point in the RECORD:

A DRIVE FOR BETTER SCHOOLS—WHAT THE GOVERNMENT PLANS

Q. Commissioner Boyer, what is the Carter Administration going to do to improve the nation's schools and colleges?

A. First, it's important to remember that American education is and must remain basically a State and local responsibility. At the same time, we're going to take major initiatives in those areas where the Federal Government legitimately should be involved.

For example, equal access to education is absolutely crucial. Economic and racial barriers must be removed, and we're determined to help the bypassed—the handicapped, poor, minorities, women—to get into the nation's schools and colleges, and the professional schools as well.

We'll also be looking for ways to help the middle-income families who are so pinched when their children go to college because of the high tuition costs.

Q. What about changes in the schools themselves?

A. We're committed to quality as well. I'm convinced it's time to emphasize fundamental skills like reading, writing and arithmetic. I don't suggest that these subjects are ends in themselves—but without these basic tools, it's just impossible for students to be fully educated in literature, science and the arts.

We'll also be proposing some new directions for our schools. For example, the home is the first school, and parents should be helped in their role as teachers. Possibly, schools should offer week-end classes for the parents of young children. At the high-school level, I'm convinced we need more alternatives for students. I'd like to see classroom instruction combined with life experience for most students—working in city parks, for example, or in job apprenticeships. And I believe many of our schools could become community-service centers—places where many services such as health care and counseling programs for the elderly could be offered. After all, the school is a facility within easy reach of everyone.

Finally, we'll be looking at the way our schools are financed. States must be helped in their efforts to spread the costs and benefits of education more equitably across the population.

Q. Does this mean taxing rich school districts to help support poor ones?

A. Property taxes in many districts are strained to the breaking point. The present financing system results in great unevenness by allowing one district to raise more money with a lower tax rate than its neighbors down the road. Court rulings—even common sense—say that we cannot live with such inequities and still deliver on our commitment of equal access to good schools.

Q. What is the Federal Government doing about this?

A. We have a small grant program now that provides State education departments monies to develop plans to equalize financing within their States. I am proposing that we give much more attention to this national problem—that we encourage all States to develop such plans and to swap ideas about equal financing alternatives. Clearly, there must be equity in school financing if we are to protect and increase the quality of our schools.

Q. Is the quality of education declining?

A. If you limit quality to what we now measure on standarized tests, the answer is "Yes." But some of the most important goals of education are not measured by these tests: an understanding of contemporary affairs, an appreciation of the arts, a sense of personal worth, an awareness of future alternatives.

I meet students of all ages, and often I find them most impressive—informed, concerned and wise beyond their years. But in the basic language skills and in the more traditional fields, students are not performing quite as well in tests as they used to, and here we have some catching up to do.

Q. What can you do about this problem?

A. In the Office of Education, we have a dozen or more separate programs which relate in one way or another to the teaching of the basic skills. I plan to bring all of these together to focus our activity and to promote those programs which are working the best. Not surprisingly, the most successful programs have clear goals and set high standards for student performance.

Q. Why hasn't more of this been done already?

A. One reason may be that many "skills teachers"—who might have a splendid major in English literature—let's say—are not well trained to teach the fundamentals.

To combat this problem, I suggest we organize a network of basic-skills clinics all over the country. These clinics, which might meet at schools rather than on college campuses, would bring together school and college teachers to focus on the most effective ways to teach students to read and write. I believe that if the schools and higher-education institutions begin to work together on this problem, great progress can be made.

Q. Commissioner Boyer, is there any way to hold down soaring costs in schools and colleges?

A. First, let me say that many schools and colleges have in fact held down costs.

I came to Washington from the State University of New York, and I know that in recent years our budget increases did not begin to keep pace with inflation, although enrollments grew. Faculty vacancies were not filled, library books went unpurchased, and maintenance was deferred. This same

story can be repeated a thousand times by other colleges and school districts all across the nation. It's just not reasonable to expect education to live with no-growth budgets while everything else is going up.

Q. Yet costs of schools and colleges keep rising rapidly, even though enrollments are falling in many places. Why is that?

A. First, education involves people. About 75 to 85 per cent of school and college budgets are tied to salaries and benefits. If school costs covered only machinery or buildings, we could switch them off or bolt them up. But it's neither legally nor morally right to dismiss people arbitrarily when enrollments shift. Staffing changes must be made in a legal and humane way.

Further, the drop in enrollment doesn't mean that an entire class fails to show up and a teacher can be dropped. Rather, it usually means that there are fewer students in a given class—which is quite a different matter. The teacher is still needed.

Also, it's important to remember that the schools are still being asked to take on additional programs, such as the education of handicapped children. Schools need more money to do these jobs.

Actually, now that school enrollments are beginning to level off, I believe we have a great opportunity to focus not on growth but quality. Schools can be more selective in hiring new teachers and requiring top performance. With smaller classes, the teachers can be given more time to work with individual students. I'd like to see us talking a lot more about excellence in education—not just about cutting back.

Q. Will growing financial problems in the public schools lead to more federal aid?

A. Not substantially. The Office of Education's budget now totals about 9 billion dollars a year. That's about 8 per cent of the nation's education expenditures. This figure may increase marginally, because we are taking on some major new social responsibilities mandated by Congress—such as educating all the handicapped. But I don't see the federal education budget going up dramatically in the immediate future.

Q. How much will the new regulations on the handicapped cost the nation's schools and colleges?

A. We don't have a firm estimate on the total cost. The reason the answer is so elusive is that we have not yet defined with full precision what is meant by "handicapped." The term "learning disabilities," for instance, could involve many students who have performed poorly in school. Also, the changes in facilities needed to accommodate all handicapped students are just now being calculated.

Q. Commissioner Boyer, is the Carter Administration going to require more busing?

A. The Administration will enforce the law. Busing remains a necessary and useful alternative that's constitutionally endorsed through judicial decisions.

Of course, busing is not an end in itself. The real goal is good schools: quality education for all of our children.

Q. Are there any districts where busing has improved the quality of education for blacks or whites?

A. Yes. Busing has been successfully used not only to desegregate but also to promote quality. More children are getting a better start in the educational world. But some experimental programs are also being introduced, such as "magnet" schools. These institutions provide high-powered courses to attract students of different races to the same school voluntarily.

A large part of the Office of Education's effort in desegregation is the drive to achieve quality for all students, black and white.

Q. What has happened to White House plans for a Cabinet-level Department of Education?

A. We're still examining the idea, and there are good arguments on both sides.

A Department of Education would give greater visibility to education and a new sense of priority, as some have argued. But I don't believe it would necessarily mean better administration or more money. My job, within the present structure, is to see to it that the Office of Education is well managed, that paper work is reduced and that the schools are well funded.

What matters most, of course, is not our structure but our vision. Education is central to the progress of this nation. We must have schools and colleges where students not only learn about the past but are also well prepared to live successfully and joyfully in the future, too.

DONALD R. LARRABEE

HON. WILLIAM S. COHEN

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. COHEN. Mr. Speaker, Donald R. Larrabee has for years been the eyes and ears of the people of Maine in Washington. Don Larrabee has covered the Capital for Maine newspapers since 1947. He has seen many Senators and Congressmen come and go, but he has always remained a fair and impartial observer of the events in this town that affect the State of Maine.

Today, Maine newspapers reported that Don is taking a leave of absence from his news bureau, which serves 26 newspapers throughout the country, to undertake a new project to serve Maine. Don has accepted Gov. James Longley's invitation to head a new State of Maine office in Washington which will encourage economic development in our State. I am very pleased to be able to welcome him now to the ranks of those of us who serve the State of Maine in Washington in a more official capacity. I am sure that all my colleagues who have come to know and respect Don Larrabee over the years will join me in wishing him well in his new venture.

The following is a news story from today's Bangor Daily News about Don Larrabee and his new undertaking:

NEWSMAN TO PROMOTE INDUSTRY FOR STATE

(By David Platt)

WASHINGTON.—The Bangor Daily News' Washington correspondent, Donald Larrabee, said Wednesday that he was leaving the news business to become Gov. James B. Longley's Washington representative. The governor's office announced Larrabee's new job Wednesday afternoon.

Larrabee, 54, has covered the capital for the NEWS since 1947, a year after he became associated with what is now known as the Griffin-Larrabee News Bureau.

He will start work for the state Sept. 1.

Larrabee's responsibilities, he said Wednesday, will be in the economic development area.

"I'll go after some industries wanting to relocate to an area like Maine with a solid labor supply," he said.

Larrabee said he and Long agreed there were many potential non-polluting industries that might be lured to Maine, and that a Washington-based recruiting effort would make sense.

As for his relationship with Longley, whose dealings with the press occasionally have been stormy, Larrabee said, "We've always had good conversations and interviews, and I think his objective, like that of previous governors, is sound."

Except for its congressional delegation, Maine has not had a Washington representative since shortly after Longely took office.

The last representative was William Ellis, who worked for former Gov. Kenneth Curtis. Longley closed the Washington office as an economy move three years ago.

Larrabee said Wednesday that the new Washington office, which will have a budget of $28,500 for its first six months, would concentrate in the industrial development area, instead of working on projects and grants as the former office did.

Larrabee said he would retain ownership of his news service while taking a six-month leave of absence. He will work for the state on a contract basis. The state will hire Larabee's new company, New England Development Associates, to represent it in Washington.

The news service will be managed by Knight Kiplinger, a veteran newsman who is the son of Austin Kiplinger, publisher of Changing Times.

"I would not be an appointee of the governor," Larrabee wrote in a letter to his 25 newspaper clients, "but rather, an independent contractor with freedom to take on other clients where there is no conflict."

He added Wednesday that he would be "free to suggest things" to the Longley administration.

As for leaving news reporting, Larrabee said Wednesday that he had been growing increasingly restless during the last two years.

"I wrote the story when the Air Force first started talking about opening a base at Loring," he recalled. "When they started talking about closing the place down, I thought it might be about time for a change."

One problem with covering Washington, Larrabee said, is that a reporter must do the same story many times.

"I've nursed along several generations of congressmen now," he said.

Larrabee's four-man bureau in Washington provides localized stories to 26 newspapers in 12 states, primarily in the Northeast. Larrabee said that his is the only such service in Washington, having survived the last 30 years of newspaper mergers and acquisitions.

The large chains have their own reporters in Washington, he said, making a service like his less marketable than it was when more dailies were locally owned.

Larrabee is a native of Portland, a graduate of Deering High School and Syracuse University. In 1973, he was president of the National Press Club. He is a former president of the State of Maine Society in Washington.

REGARDING THE DEATH OF ARCHBISHOP MAKARIOS

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. ZABLOCKI. Mr. Speaker, it was with profound sadness that we learned of the death of Archbishop Makarios yesterday.

As one of the prominent political figures notwithstanding the relative smallness of his country, his passing leaves another gap on the world's political scene. His loss will be especially felt in Cyprus by the people who elected him overwhelmingly as their first President upon the independence of Cyprus. Their loss is heightened by the unfortunate circumstances which prevail on Cyprus

today, as the search continues for a peaceful settlement to the tragic state of affairs on that island, precipitated by the coup against Archbishop Makarios led by Greek Cypriot army officers in 1974 and the resulting Turkish intervention.

Archbishop Makarios was a strong leader of his people and commanded their near total respect and loyalty. He returned that loyalty and service in kind, as his people so well knew. So great was his preeminence among his own people that he had no genuine challenges to his position of leadership.

There could be no greater tribute or memorial to this true son of Cyprus than to achieve a peaceful settlement of the Cyprus dispute. It is my profound hope that the Cyprus stalemate will soon be ended. It is a great tragedy that Archbishop Makarios did not live to see that day.

IS BERT LANCE THE BENEFICIARY OF A DOUBLE STANDARD?

HON. ROBERT F. DRINAN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. DRINAN. Mr. Speaker, an editorial in today's Boston Herald American raises a pertinent question about Budget Director Bert Lance. "Why," the Herald asks, "should Bert Lance be allowed to duck questions about personal financial affairs while others are asked to answer forthrightly and in good faith?"

Why, indeed? Why should there be a double standard which allows Mr. Lance to escape serious questioning at the same time other executive branch appointees are subjected to the most rigorous scrutiny?

Does the fact that Mr. Lance now has control over the Nation's purse-strings explain the reluctance in the Congress to investigate his financial transactions?

Fortunately the press has kept the matter of Bert Lance before the public, as the Herald did in the editorial I would like to share with my colleagues. I hope, Mr. Speaker, that all Democrats in the Congress will realize that serious questions have not been answered concerning Mr. Lance, and that these questions must not be dismissed merely because a Democratic administration is now in power.

I commend the Boston Herald American for their diligence in pursuing this matter:

BUDGET DIRECTOR LANCE

Why should Bert Lance be the exception to President Carter's intensely preached sermons about avoiding conflicts of interest? Why should Bert Lance be allowed to duck questions about personal financial affairs while others are asked to answer forthrightly and in good faith?

It's too soon to knock Lance for any illegalities, for none has been proved. It's high time to aim a few knocks, however, at those United States Senators, Connecticut's Abraham Ribicoff among them, who have been treating the head of the nation's Office of Management and Budget as if he had some special immunity to the rules laid down for the rest of the Carter Administration.

When Senator Humphrey asked Lance about interest rates, Lance replied, "I've been told I shouldn't talk about interest rates." He didn't say why, but he did admit he was in an "unusual position."

It is "unusual" indeed, made so by Lance's lack of candor, made so by the quashing of a federal investigation of Lance's banking operations just before he joined the Administration, made so by the timing of a Teamster union deposit of $18 million in a Lance bank.

Despite all this, the Senate gave Lance that ridiculous "Good Housekeeping Seal of Approval." Despite all this, Senator Ribicoff, for reasons best known to himself, blamed the press: "You have been smeared from one end of the country to the other."

So far as anyone knows, nothing illegal has taken place. The question nags, however, as to why Bert Lance should be the exception to Mr. Carter's declared rule of conduct, which in the President's words means all appointees should be "unfettered by any actual or apparent conflicts of interest."

ARCHIE DICKRANIAN BENEFACTOR—GREAT AMERICAN

HON. GEORGE E. DANIELSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. DANIELSON. Mr. Speaker, the high recognition of Archie (Arshag) Dickranian, philanthropist and community leader of Beverly Hills, Calif., is eminently deserved. His whole life has been dedicated to the betterment of the conditions of all mankind, with special concern for both the spiritual and physical needs of the less fortunate.

Born in Izmit, Turkey, on January 26, 1905, the son of Mihrtad and Elmona Dickranian, he moved to Constantinople with his parents as a result of the pogrom of Armenians by the Turkish Government beginning in 1915. Later, he came to America to begin his life anew.

Coming to California, he married Eleanor Zakarian of Selma, Calif. in 1932. Archie and Eleanor are the proud and loving parents of two daughters, Cynthia and Laurel, both of whom are now married and living in the Los Angeles area.

Archie Dickranian has always been a super-achiever. Starting at the bottom, he has moved on to outstanding success as a businessman by reason of his own efforts and intelligence, always aided by the love and loyalty of his Eleanor.

But Archie did not keep his success to himself. Deeply religious, humane and understanding, he has spared no effort to help those in need and to spread and preserve the love of God, to further education and culture and to do all sorts of wondrous things for mankind throughout the world.

Among his many benefactions, but by no means all of them, here are a few which impress me as being outstanding:

He has endowed a 3-story building to the Karen Jeppe College of Aleppo, Syria in the name of his mother, Elmona; and has made a large donation to the building of the Mihrtad Dickranian Hall of Ferrahian High School, Los Angeles, in honor of his father;

He has assisted in endowing the chairs for Armenian studies at Harvard University and at the University of California at Los Angeles;

He has contributed generously to many churches and schools in the Los Angeles area, is a founder of the Armenian Symphonic Music Association, and has contributed $100,000 to the development of the Armenian General Benevolent Union's new Armenian Cultural Center in Los Angeles.

He also contributed to the expenses of the theological seminary and the Cathedral of Antelias for which he was honored with an encyclical from the Catholics of the See of Cilicia. The auditorium of the Harach School of Anjar, Lebanon, was named for him.

To the Matendadaran of Ancient Manuscripts of Yerevan, he has donated three precious hand-illustrated vellum manuscripts dating from the 11th, 13th, and 14th centuries. He was awarded the Mesrob Mashtots Insignia.

Mr. Speaker, I am delighted to know that Archie Dickranian has now been awarded the ultimate recognition by his church, the Order of St. Gregory the Illuminator First Degree. I commend the outstanding example of Archie Dickranian to all of my colleagues, to all Americans, and to good people throughout the world.

DAY OF SOVIET SHAME

HON. JAMES J. BLANCHARD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. BLANCHARD. Mr. Speaker, August 21, 1977, will mark the ninth anniversary of the Soviet occupation of Czechoslovakia.

I know many of us still find that day hard to forget. For some months previously, it had been rumored that the Russians would react to the series of liberalizing reform which had taken place under the Dubcek regime, but many doubted up to the final moment when Soviet tanks and planes crossed the Czechoslovak frontier.

It was a brutal reminder that the Soviet sphere of influence in Eastern Europe was, and remains, essentially a colonial empire in which the price of internal autonomy is the suppression of political dissent.

Nonetheless, history suggests that the peoples of Czechoslovakia will someday once again be able to control their own destinies. The Czechs and Slovaks have existed as distinct nationalities in central Europe for over 1,000 years, and for nearly all of that time they have been subject to foreign domination. Yet despite nearly 900 years of Magyar and Hungarian rule, and the more recent Soviet hegemony, their desire for freedom has not been crushed. If anything, it remains as strong today as it has ever been.

The continuing Soviet occupation of Czechoslovakia is another in the long

series of violations of human rights and self-determination pledges which have characterized the conduct of the Soviet Union in recent years.

Again this year, Czech and Slovak Americans will observe August 21 as a "Day of Soviet Shame." I join with them in calling for an end to the illegal Soviet occupation and in looking to the day when Czechoslovakia will again be free from foreign oppression.

ON THE DEATH OF ARCHBISHOP MAKARIOS: A TRAGIC LOSS FOR THE GREEK CYPRIOT COMMUNITY

HON. EDWARD I. KOCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. KOCH. Mr. Speaker, I rise to pay tribute to the memory of Archbishop Makarios, the distinguished leader of the troubled island of Cyprus, who died suddenly yesterday. Archbishop Makarios was a man truly bestowed with the affection and trust of the vast majority of Greek Cypriots. He symbolized their hopes and desires for an independent and democratic Cyprus, totally free from Turkish occupation.

I had the pleasure of meeting with His Eminence during his last visit to the United States. He was a genuinely charismatic figure whose charm and intelligence impressed me deeply. He was one of the few rulers today capable of combining peacably and judiciously the difficult roles of both political and religious leader, a rare accomplishment in an era when religion and politics, more than any other factors, have drawn nations into civil wars and internal conflicts. But, more importantly, His Eminence was a man of principle, an individual who spoke out for what he believed in and fought for what he thought was morally right. It is primarily for this reason that the world will mourn his loss.

Tragically, the death of Archbishop Makarios has created a void in Cypriot state affairs. He leaves behind him an island partitioned by foreign occupation and the problems of caring for close to 200,000 Greek Cypriot refugees. However, I have confidence in the fortitude of the Greek Cypriots in their struggle against Turkish oppression. I have faith that new leaders will emerge to resolve the current troubles between the island's Greek and Turkish communities. Therefore, let us reaffirm our support for an independent Cyprus in the memory of Archbishop Makarios and do all that we can to assist in the realization of his aspirations.

Mr. Speaker, I am appending the editorial which appeared in today's Washington Post on Archbishop Makarios. May God grant him peace. The editorial follows:

ARCHBISHOP MAKARIOS

On Cyprus, where ethnicity is the sum of politics. Archbishop Makarios moved easily from leadership of the Greek Orthodox community, to leadership of the struggle for independence from Britain, to the presidency when independence was achieved in 1960, to dominance of his country's public life in the ensuing years. With his death yesterday of a heart attack, a vacuum forms in Cyprus, and no one can be sure how it will be filled.

The archbishop cut a strikingly individualistic figure on the world stage. But through most of his career it was not entirely clear to either his supporters or his enemies whether he saw Cyprus as a Western-style country in which ethnic groups must try to come to mutually agreeable terms, or as an Eastern-style territory for the preservation of Greek values alone—perhaps by political union with Greece. His supporters revered him, not least for his displays of Byzantine and democratic political skills. His enemies, including the Turkish minority and mainland Turkey, were certain he was the instrument of a whole Western conspiracy against them. The United States, always more interested in stabilizing the eastern Mediterranean than in coping with community passions, at best only dimly understood, gritted its teeth and held on.

During a political upheaval in 1974, Turkey seized and occupied 40 per cent of Cyprus, insisting, indefensibly, that there was no alternative if the safety and welfare of the Turkish minority were to be ensured. If, as some suspected, the archbishop then concluded that Cyprus's true interest lay in community reconciliation rather than dependence on Athens, the Turks never gave him the chance to prove it. Tied in political knots of its own, Ankara had since 1974 balked any progress on ending the division of Cyprus and on establishing ways for Greek and Turkish Cypriots to coexist.

For a towering figure like Archbishop Makarios, it always seems there is no replacement. A period of introspection and sorting out is inevitable. The risk of it is that either mainland or island Turks may be tempted by the disarray in Nicosia to make more irreversible the Turkish grip on northern Cyprus. This could further strain Greek-Turkish relations and further embarrass American diplomacy in its so-far unsuccessful attempt to repair NATO's torn southeast flank. It is a time for responsible statement to give Cyprus the calm it needs to prepare its future.

JUSTICE WALTER J. FOURT

HON. ROBERT J. LAGOMARSINO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. LAGOMARSINO. Mr. Speaker, as a resident of Ventura County, it is with personal loss that I relate the passing of an outstanding American, Justice Walter J. Fourt. A lawyer by profession, Justice Fourt served as a superior court judge and from 1955 to 1969 as a justice of the court of appeals.

As a man, he was a model leader of his community. He was a member of the California Legislature from 1943 to 1946. Mr. Fourt also led many civic organizations such as the American Legion, Chamber of Commerce, and the Lions Club.

We must not only remember this man by his titles, for he left a legacy of legal commonsense as a permanent contribution to society. His ideas are best conveyed in his words:

We must convince the apathetic citizen that this country became great because it was one of laws and not of men. That without respected law we have no liberty—that if we have unbridled liberties we will not have a safe and stable society. That our individual rights and liberties cannot survive in a vacuum; that we have a decent and reasonably safe place to live and work, otherwise there is no place within which to exercise our individual rights such as the right of privacy.

As we all share in the grief of Justice Fourt's death, I call upon my colleagues to extend their heartfelt condolences to his wife Pauline and his sister, Mrs. Edward Adams.

MONTHLY LIST OF GAO REPORTS

HON. JACK BROOKS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. BROOKS. Mr. Speaker, the monthly list of GAO reports includes summaries of reports which were prepared by the staff of the General Accounting Office. The May 1977 list includes:

AGRICULTURE

Issues Surrounding the Management of Agricultural Exports. ID–76–87, May 2.

Federal Deficiency Payments Should Not Be Made for Crops Not Grown. CED–77–77, May 24.

Examination of the Rural Telephone Bank's Financial Statements for the 15-month Period Ended September 15, 1976. FOD–77–02, May 12.

Administration of Marketing Orders for Fresh Fruits and Vegetables. B–177170, December 11, 1974.

COMMERCE AND TRANSPORTATION

The Federal Motor Carrier Safety Program: Not Yet Achieving What the Congress Wanted. CED–77–62, May 16.

Certifying Workers for Adjustment Assistance—The First Year under the Trade Act. ID–77–28, May 31.

If Defense and Civil Agencies Work More Closely Together, More Efficient Search/Rescue and Coastal Law Enforcement Could Follow. LCD–76–456, May 26.

Mass Transit for Elderly and Handicapped Persons: Urban Mass Transportation Administration's Actions. CED–77–37, March 25.

Transportation Programs for the Elderly. HRD–77–68, April 7.

Letter Report

The Maritime Administration needs to reevaluate its policy of giving the American shipbuilding industry preference in its vessel sales program. CED–77–80, May 26.

COMMUNITY AND REGIONAL DEVELOPMENT

Letter Reports

GAO evaluation of pilot project in Cincinnati, Ohio, for paying property taxes on acquired single family homes. FGMSD–77–38, May 5.

Farmers Home Administration's decision to allow a rural rental apartment to be used for commercial office space. CED–77–43, March 11.

EDUCATION, TRAINING, EMPLOYMENT, AND SOCIAL SERVICES

Curriculum Case Studies Are of Questionable Quality But Helped Precollege Curriculum Activities. HRD–77–46, May 2.

Controls Over Vocational Rehabilitation Training Services Need Improvement. HRD–76–167, May 5.

Domestic Resettlement of Indochinese Refugees—Struggle for Self-Reliance. HRD–77–35, May 10.

Further Improvements to a Building at the Maryland Job Corps Center. HRD–77–36, May 13.

Letter Reports

Delays in issuing food stamp authorization-to-purchase cards in Chicago. CED–77–65, May 9.

GAO survey of student loan borrowers who had petitioned for bankruptcy. HRD–77–80 or HRD–77–83, April 15.

Investigation of allegations that ineligible applicants were being enrolled in programs administered by the United Migrant Opportunity Service, Milwaukee, Wisconsin. HRD–77–59, March 22.

GENERAL GOVERNMENT

Establishing a Proper Fee Schedule under the Independent Offices Appropriation Act, 1952. CED–77–70, May 6.

Changing Ownership of Mutual Savings and Loan Associations—An Evaluation. FOD–77–10, May 26.

Further Improvement to a Building Leased for the Social Security Administration Should Not Be Made If the Activities Will Be Consolidated Elsewhere. LCD–76–351, April 6.

Misuse of Unexpended Capital Outlay Fund Balances. GGD–77–39, May 10.

Examination of Financial Statements of the National Credit Union Administration for the Fiscal Years Ended June 30, 1976 and 1975. FOD–77–6, May 23.

Government Printing Office Production and Management Controls—Improvement Opportunities. LCD–77–410, May 4.

Annual Report of the Comptroller General of the United States, 1976. Stock Number 020–000–00146–1.

Letter Reports

GAO comments on proposed deferrals of budget authority for the Energy Research and Development Administration and the Commerce Department. OGC–77–17, May 6.

GAO comments on proposed impoundments of Treasury and Commerce Department funds. OGC–77–18, May 18.

How the Internal Revenue Service uses 100-percent penalties against responsible officials of corporations for willful nonpayment of taxes withheld from employees' wages and certain excise taxes. GGD–77–49, May 3.

More information is needed before costs of implementing recommendations of the American Indian Policy Review Commission can be estimated. CED–77–75, May 9.

Quality of mail service in Louisiana was lower in 1976 than in 1975. GGD–77–57, May 11.

Suggestions for making equal employment opportunity training for Federal employees more effective. FPCD–77–27, May 12.

Corrective actions taken to enforce Davis-Bacon Act labor standards for carpet-laying on construction projects in Denver. HRD–77–86, May 13.

Assessment of plans for building a convention center in Washington, D.C. GGD–77–58, May 18.

The Commodity Futures Trading Commission should improve its information-gathering program. GGD–77–52, May 26.

Problems in hiring clerical and technical employees in San Francisco and Sacramento. FPCD–77–5, May 27.

GAO plans for monitoring contracting out of functions now performed in-house by Government employees. PSAD–77–79, February 16.

GENERAL SCIENCE, SPACE, AND TECHNOLOGY

Status and Issues Pertaining to the Proposed Development of the Space Telescope Project. PSAD–77–98, May 4.

Space Shuttle Facility Program: More Definitive Cost Information Needed. PSAD–77–17, May 9.

Status of the Mariner Jupiter/Saturn 1977 Project. PSAD–77–103, May 20.

Space Transportation System: Past, Present, Future. PSAD–77–113, May 27.

HEALTH

Fundamental Improvements Needed for Timely Promulgation of Health Program Regulations. HRD–77–58, May 5.

Delays in Setting Workplace Standards for Cancer-Causing and Other Dangerous Substances. HRD–77–71, May 10.

Letter Reports

Need to improve the payroll system for officers in the Commissioned Corps of the Public Health Service. FGMSD–77–23, May 3.

Possible effects on the Medicaid program of a proposed amendment to restore Medicaid eligibility to individuals who lost it because of 1974–76 cost-of-living increases in social security benefits. HRD–77–88, May 20.

INTERNATIONAL AFFAIRS

The World Food Program—How the U.S. Can Help Improve It. ID–77–16, May 16.

The United States Should Play a Greater Role in the Food and Agricultural Organization of the United Nations. ID–77–13, May 16.

Need for U.S. Objectives in the International Labor Organization. ID–77–12, May 16.

Greater U.S. Efforts Needed to Recruit Qualified Candidates for Employment by U.N. Organizations. ID–77–14, May 16.

U.S. Participation in the World Health Organization Still Needs Improvement. ID–77–15, May 16.

Summary of Actions Being Taken in the United States to Control Questionable Corporate Payments in Foreign Countries. OP–77–1, May 2.

Public Diplomacy in the Year Ahead—An Assessment of Proposals for Reorganization. ID–77–21, May 5.

Nationalization and Expropriations of U.S. Direct Private Foreign Investment: Problems and Issues. ID–77–9, May 20.

Implementation of Economic Sanctions Against Rhodesia. ID–77–27, April 20.

LAW ENFORCEMENT AND JUSTICE

Internal Audit Coverage of Financial Matters in the Department of Justice. FGMSD–77–28, May 13.

Lawsuits Against the Government Relating to a Bill to Amend the Privacy Act of 1974. GGD–77–21, May 6.

Drugs, Firearms, Currency, and Other Property Seized by Law Enforcement Agencies: Too Much Held Too Long. GGD–76–105, May 31.

Examination of Financial Statements of Federal Prison Industries, Inc., Fiscal Year 1976. FOD–77–03, May 31.

NATIONAL DEFENSE

What Defense Says about Issues in Defense Manpower Commission Report—A Summary. FPCD–77–40, May 3.

Why Improved Navy Planning and Logistic Support for the Mark–48 Torpedo Are Essential. LCD–76–451, May 9.

Emergency Power Generators Used and Managed Inefficiently by Department of Defense. LCD–77–406, May 20.

Selecting Production Site for Army's New Main Battle Tank. PSAD–77–107, May 11.

Restructuring Needed of Department of Defense Program for Planning with Private Industry for Mobilization Production Requirements. PSAD–77–108, May 13.

Cost of Training Granted to Foreign Students Under the Military Assistance Program. ID–76–79, May 17.

Determining Requirements for Aircraft Maintenance Personnel Could Be Improved Peacetime and Wartime. LCD–77–421, May 20.

A Central Manager Is Needed to Coordinate the Military Diagnostic and Calibration Program. LCD–77–427, May 31.

Contractor Pension Plan Costs: More Control Could Save Department of Defense Millions. PSAD–77–100, May 19.

Letter Reports

Transportation support provided for the Foreign Military Sales program during fiscal years 1976 and 1977. LCD–77–225, May 4.

Results of Defense Department reexamination of planned reimbursements for foreign military training in fiscal year 1978. FGSMD–77–40, May 6.

The Military Sealift Command should develop a staff with knowledge of commercial ocean tariffs, and should review its negotiation efforts on shipments to Puerto Rico. LCD–77–226, May 3.

Department of Defense can save $9.2 million annually by consolidating its undergraduate helicopter pilot-training programs. FPCD–77–52, May 5.

Suggestions for improving management of depot stock inventories in Korea. LCD–77–124, May 9.

The Department of Defense should collect a nominal fee from passengers flying on military aircraft on a space-available basis to cover processing costs and taxes. LCD–76–230, May 11.

Suggestions for improving Army and Air Force medical education and training programs. HRD–77–89, May 7.

Costs of transferring messages transmitted over different communications networks can be cut through consolidation or automation and direct delivery of some messages. LDC–76–128, May 18.

Reasons for differences in independent cost estimates for the B–1 bomber. PSAD–77–116, May 25.

Information on the proposed Project PISCES—Pacific Intertie Strategic Communications ELF System—an extremely low frequency communications system. LCD–77–319, February 11.

NATURAL RESOURCES, ENVIRONMENT, AND ENERGY

An Unclassified Digest of a Classified Report Entitled "COMMERCIAL NUCLEAR FUEL FACILITIES NEED BETTER SECURITY." EMD–77–40A, May 2.

Delayed Redevelopment Was Reasonable After Flood Disaster in West Virginia. CED–77–17, December 30, 1976.

Information on Federal Land Exchanges with Private Citizens in New Mexico. RED–76–83, April 2, 1976.

Information on the Proposed Alaska Oil Pipeline. B–174944, June 27, 1973.

Letter reports

The Nuclear Regulatory Commission has not taken steps to implement GAO's 1973 recommendation for making sure that containers used to transport radioactive materials are safe. EMD–77–35, May 11.

Federal Leadership and assistance will be essential for the development of effective programs for the reclamation of lands damaged in the mining of minerals other than coal. CED–77–72, May 17.

Potential health hazard in using sewage sludge products with high levels of cadmium—a suspected cancer-causing substance—to fertilize food crops. CED–77–78, May 23.

Comparison of revenues and royalties received by the Navajo and Hopi Indian tribes with those received by the Federal Government from similar coal leases, and with revenues received from mining on State and private lands. B–177079, January 29, 1974.

REVENUE SHARING AND GENERAL PURPOSE FISCAL ASSISTANCE

Procurement Practices of Cities: Using Federal Grant Funds, PSAD–77–88, April 1977.

Letter reports

What can the Federal Government do to help alleviate some of New York City's fiscal problems? B–185522, May 2.

VETERANS BENEFITS AND SERVICES

Survey of job satisfaction among employees of the Veterans Administration's Department of Medicine and Surgery. HRD–77–94, May 9.

The Monthly List of GAO Reports and/or copies of the full texts are available from the U.S. General Accounting Office, Distribution

Section, Room 4522, 441 G Street, N.W., Washington, D.C. 20548. Phone (202) 275–6241.

Summaries of significant legal decisions and advisory opinions of the Comptroller General issued in May 1977 are also available as follows:

Payment of Judgments When Agency Fails to Comply with Garnishment Order. B–188654, May 6.

Reimbursing an Employee for Living Expenses Incurred Due to Sex Discrimination. B–187598, May 6.

Travel Expenses Home to New Duty Station. B–188045, May 9.

Agency Should Not Overstate Its Actual Needs. B–187604, April 8.

Cost-of-Living Allowances in Alaska and Hawaii. B–187876, April 13.

If you need further information regarding these or other decisions, please call (202) 275–5308 or write to the General Counsel, U.S. General Accounting Office, Washington, D.C. 20548.

ALFRED LUNT: THE NATION LOSES A GREAT ACTOR—WISCONSIN LOSES A GREAT FRIEND

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. REUSS. Mr. Speaker, Alfred Lunt, thought by many to be the greatest American actor of this century, died yesterday morning in Chicago 2 weeks after undergoing surgery for cancer. We have lost a great actor, and a great lover of life.

With his wife Lynn Fontanne, Lunt enjoyed a long and brilliant career. The two of them packed theaters all over the country. If there was a great romantic couple to be played, the Lunts played it. The Nation suffers a loss.

The people of Wisconsin, my home State, have suffered a double loss. Lunt was a good neighbor as well as a good actor. He was born and raised in Milwaukee, and he spent his last years with his wife on their farm in Genessee Depot, a delightful town about 30 miles west of Milwaukee.

I feel his loss personally. In recent years he has been a stalwart supporter of the development of Wisconsin's Ice Age Reserve and Ice Age Trail, projects on which I have been working for 20 years. He loved the Wisconsin countryside in which he grew up. His work on the trail and the reserve helped preserve and protect the country.

Lunt's acting career got its start on Grand Avenue—now called Wisconsin Avenue—in Milwaukee, in the large stone house of his parents, when he was 3 years old. His mother, who doted on young Alfred, the story goes, gave him a stack of magazines to page through one day while she was entertaining friends in the parlor. The boy happened on a picture of the God Eros and was inspired to mimesis. He dug a bow and arrow out of a toy chest, stripped to the buff, ran into the parlor and struck a god-like pose. It was only afterward, he said later, that he realized he had neglected the sash that had adorned the young cupid in the magazine. This performance received mixed reviews.

He remained a theater buff all his life. His spare hours as a boy were taken up in seeing every play his budget would allow, and filling scrapbook after scrapbook with pictures of his favorite actors. It is said that the most pictured actress in these books was one Ellen Terry, whose picture later reminded a Lunt biographer of Lynn Fontanne Lunt.

After the death of his father, and after that of his stepfather, Lunt's family moved to Waukesha, which is about 20 miles west of Milwaukee, and Lunt attended Carroll College there. It was at Carroll that he met the woman who inspired and molded his dramatic talent.

Her name was May Rankin, and she had the ability, Lunt said later, to transform nervous farmboys into enthusiastic and accomplished Shakespeareans. In Lunt, she recognized genius, and she gave him his head.

After 2 years of theater in Waukesha that was entertaining and realistic—when a scene called for a baby, for example, Lunt would not settle for the obligatory doll—a nervous Waukesha mother would be convinced to give up her 6-month-old to the arts for a night. Lunt went away to school in Boston. But he left school after a day and took a job at the Castle Square Theater, where he stayed for 2 years. Because he was considered ugly and of ungainly height, he was given no roles of an age of less than 50.

In 1914, he left the Castle Square and returned to Wisconsin, where, with his inheritance, he built his house in Genessee Depot and put his family in it.

It was then that the break came along that set up his subsequent successes. Margaret Anglin, a touring romantic actress in a play called Beverly's Balance, lost her leading man in Chicago. She had heard about Lunt, and she asked him to audition for the vacant part.

Lunt hurried to Chicago and read his best, but Miss Anglin's stage manager was not impressed—he thought Lunt a most awkward, ungainly, ugly chap.

Luckily for us all, Miss Anglin disagreed. "I think this boy has quality," she told her manager. "He will go far. True, he is ugly, but it is a handsome ugliness, rather like that of the Vanderbilts." A star was born.

INDIANA PARENT COMMENTS ON THE EDUCATION OF ALL HANDICAPPED CHILDREN ACT

HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. BRADEMAS. Mr. Speaker, on July 14 Mr. John Huber, project director of the Task Force on Education for the Handicapped of St. Joseph County, Ind., testified before the Senate Subcommittee on the Handicapped concerning the implementation of Public Law 94–142, the Education for All Handicapped Children Act. Mr. Huber, a parent of a handicapped child, advocated "full implementation of the act without any further amendments until problems of implementation have been experienced, reported and analyzed." He commented in detail on some of the proposed revisions of the act.

Mr. Huber also gave the Senate subcommittee a description of the work of the Parent Information Center in South Bend, Ind. This center, funded by a contract with the U.S. Office of Education, involves the parents of handicapped children in advising and counseling other similarly situated parents. The Parent Information Center provides an outstanding and valuable service to the community, helping to assure that all handicapped children receive the assistance and education which they need and to which they are entitled.

Mr. Speaker, I would like to share Mr. Huber's testimony and the description of the work of the Parent Information Center with my colleagues:

TESTIMONY OF JOHN HUBER

As the father of a mentally retarded child, I look forward to the implementation of Public Law 94–142, The Education for All Handicapped Children Act of 1975, and I urge Congress to see this Act through to its full implementation without any further amendments until the problems of implementation have been experienced, reported, and analyzed after at least 1 year.

That there will be problems in implementation cannot be denied, and not the least of these is funding. We would support any amendment to accelerate the rate at which funding moves toward the 40 percent level, but we must insist at the same time that the current relatively low level of funding is no excuse for holding states harmless from the requirements of the act. For special education is primarily a state responsibility, and where states have in the past—through discriminatory laws, regulations and attitudes—failed to provide an equal educational opportunity to handicapped children, the States cannot rightly call on the Federal Government to bail them out. The principle that all children, regardless of their handicap, have the right to a free, appropriate public education is simply not negotiable. Other educational interests compete for State resources, to be sure, but they must not be allowed to invade the handicapped child's right to education.

The current census procedure, which requires that children be counted on October 1 and February 1, has caused concern for some administrators. It may be that a duplicated count is more fair to the States than an unduplicated count; however, a proposed method of counting children on the first full school week in February will provide schools with undesirable incentives to delay. While some adjustments in the placement of children will always have to be made, particularly in the early months of a school year, most children should be appropriately placed on the first day of school. A February-only count of children will encourage delay in the place of children. Furthermore, a February-only count may destroy the incentive of schools to move students who have succeeded after a few months in special education into the main stream of regular education. We recommend that there be no change in the method of counting children.

We are concerned that some states have only limited authority over the operations of local educational agencies, but we find that a strong, centralized authority is sometimes required as the only means of guaranteeing the due process rights of children who have been denied appropriate programs by their local schools. We recommend that there be no change in the requirement of the

act that states must assign their state educational agency responsibility for general supervision.

We most strongly urge that there be no change in the act which prohibits employees of agencies serving handicaped children from acting as surrogate parents. This prohibition is not unnecessarily restricting, but absolutely essential to insure the independence of the surrogate. It is unfair to the child to expect that potential surrogate parents will always agree with their employers about the education of the child; likewise is it unfair to the potential surrogate parents to expect them to press strongly their interest in the child when it does not coincide with the interest of their employer, and yet maintain a good relationship with the employer. One need not question the motives of school employees who might wish to become surrogate parents; it is enought to point out that they could not maintain their independence in difficult cases. If the schools are concerned that they cannot find enough qualified surrogate parents to do the job, let them do what we do in St. Joseph County, Indiana: look first to the other parents of handicapped children.

PARENT INFORMATION CENTER

On September 30, 1976, Congressman John Brademas announced that the U.S. Office of Education had awarded a contract to the Task Force on Education for the Handicapped of St. Joseph County, to provide a Parent Information and Referral Center which will serve the handicapped of St. Joseph County and their families. The Bureau of Education for the Handicapped will oversee the project, which is expected to run for three years.

The Task Force on Education for the Handicapped is a relatively new organization in St. Joseph County, only 3 years old.

It has its own board of directors and anyone who wishes may join its general membership. Most of the members are parents of handicapped children, who have been active in community organizations which serve the handicapped. The task force cannot replace the efforts of those many organizations which promote the welfare of people with particular handicaps. Therefore we support those who wish to work through organizations serving the visually impaired, the hearing impaired, the learning disabled, the physically handicapped, the mentally or emotionally handicapped, or any other group acting on behalf of handicapped individuals. But wherever there is an issue of common interest to all those groups, the task force will work with them to coordinate their activities for the common good of all handicapped persons.

So far, most of the work of the task force has been in the area of education. Our volunteers have held conferences on education of the handicapped, helped smaller organizations get organized, and helped parents who are having trouble getting adequate services for their children. We are convinced that the best help to parents is other parents who have already "been there." Experienced parents who have talked with their doctors, dealt with the school systems or tried to find jobs for their children with handicaps—those who handled their frustrations and tackled the "system"—have a lot to offer those who are just beginning. That's what the task force is all about.

The Bureau of Education for the Handicapped is as convinced as we are of the value of parent-to-parent information and advice. Its funding of our Parent Information Center has allowed us to open an office in South Bend where experienced parents will help others get through their hassles with their doctors, with their schools, with employers, and even with themselves. The Parent Information Center will be staffed by such experienced parents, and will need volunteer efforts of many more. The motto of the Center is: "Tell us what you know—so others can learn from it."

Since opening up our office January 1, 1977, we have completed a resource file on the many services available to handicapped children throughout the area, the State, and some national resources. We have organized information on the rights of handicapped children and their parents. Our parent helpers and volunteers are assisting parents who have looked for help.

If you need our help, we can provide it. If you don't need it, somebody else needs yours. Write to us, or stop in at our office.

While the Task Force on Education for the Handicapped was formed by St. Joseph County people, the Parent Information Center will serve anyone who can use our help regardless of residence. We serve every age and any disability at no cost to you.

SURVEY SHOWS CONTINUED OPPOSITION TO ABORTION

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. ZABLOCKI. Mr. Speaker, I recently reviewed a survey on the subject of abortion conducted in the 27th Assembly District in the State of Wisconsin, which falls within my congressional district, the Fourth District of Wisconsin.

The survey conducted by the Wisconsin Citizens Concerned for Life presented eight abortion-related questions to a random sampling of 1,500 residents in the district. While the results are to be used in testimony at the State level, I believe Federal lawmakers ought to note the results.

Mr. Speaker, it is significant that while the area polled is a low-income community, it was found to be strongly opposed to abortion on demand and strongly opposed to the use of public moneys for abortions.

Because I find this survey relevant to the ongoing efforts to restore the basic right-to-life, I would like to share the following information:

SURVEY RESULTS

Calls were made by 35 callers from a random sampling taken from the Bressers Street Address Directory and the residents were asked eight abortion-related questions. A sample of 1,500 calls was completed with the following results:

Question 1. Are you against abortion on demand?

Yes—66 percent; No—23 percent; Undecided—11 percent;

Question 2. Do you feel that public moneys should be used to pay for abortions?

Yes—20 percent; No—72 percent; Undecided—8 percent;

Question 3. Do you feel that information relating to an abortion which was performed should be filed with the State Health Commission?

Yes—66 percent; No—11 percent; Undecided—16 percent;

Question 4. Do you feel a woman should be informed of possible complications and other alternatives before obtaining an abortion?

Yes—96 percent; No—1 percent; Undecided—3 percent;

Question 5. Do you feel that the woman's spouse should be consulted before an abortion is performed?

Yes—91 percent; No—5 percent; Undecided—4 percent;

Question 6. Do you feel that the parents of a woman under 18 should be consulted before an abortion is performed?

Yes—90 percent; No—4 percent; Undecided—6 percent;

Question 7. Do you feel abortions should be prohibited in the last 3 months of pregnancy?

Yes—89 percent; No—4 percent; Undecided—7 percent.

Question 8. Do you feel that the U.S. Constitution should be amended to prohibit all abortions except when the life of the mother is in danger?

Yes—66 percent; No—21 percent; Undecided—12 percent.

All of the questions pertain to provisions in bills before the Wisconsin Legislature. The size of the sample, 1,500 calls, was predetermined by computer based on the total population of the assembly district and allows for a 3 percent error factor in either direction. By comparison, Harris and Gallup polls sometimes use a 1,500 sample to measure national opinion for some 200 million people.

Although we feel this survey is a valid indication of the opinion of the residents of the 27th Assembly District, it does not represent a cross section of either the city of Milwaukee or the State of Wisconsin and is therefore limited in scope. There are several conclusions that can be drawn, however.

1. Since the area polled is a low income community which strongly rejects abortion and the use of public moneys for abortions; it appears that the argument that abortion and public moneys are needed for poor women is largely without basis.

2. Some of those who favor abortion itself, were nevertheless opposed to expenditure of public funds.

3. Even larger numbers of those who favor abortions also favored prohibiting abortions in the last three months of pregnancy, informed consent of the woman, and consultation with spouse or parents.

The results of this survey were presented as testimony before the Assembly Health and Social Services Committee chaired by Representative Czerwinski.

A MARSHALL PLAN FOR MEXICO

HON. B. F. SISK

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. SISK. Mr. Speaker, this year, for the first time in my 23 years in Congress, I voted against the foreign aid bill. I consider myself sympathetic to the problems that developing nations face, but unless and until we reform the reasons and methods of allocating foreign aid, such as giving military hardware to military dictatorships, I will find it hard to justify to my constituents that this money is reaching those it is intended to benefit.

In my view, we must begin to more aggressively address ourselves to the development problems facing the countries identified by the Domestic Council Committee on Illegal Aliens as the major sources of illegal immigrants: Mexico and several other Latin American countries, the Philippines, Thailand, India,

Nigeria, and so forth. We are currently giving bilateral economic development assistance to only 7 of the 15 countries identified as major sources of illegal immigration and we have population assistance programs in only 7 of those 15 countries.

Our refusal to come to grips with the illegal immigration issue has been a subtle form of foreign aid, but not a very positive form of assistance. By acting as a safety valve for the underdeveloped countries and by accepting their excess population, we enable them to delay taking action on their own to deal with economic and population problems.

Although it is a mistake to view the illegal alien problem as a Mexico problem, Mexico is probably the largest single sending country. Our longtime friend and neighbor to the south certainly needs and deserves our special consideration.

The fact is that along no other border of comparable length in the world have such strong push and pull migration factors been operating for so long. In recent years, these factors have acquired a new intensity. On the push side, rapid change in Mexico has generated a host of new pressures. Population is expanding; unemployment is very high, particularly in the border cities; and per capita income is very low. Mexico's population of over 64 million with 46 percent under age 15, is expected to increase to 82 million by 1985 and to 132 million by the year 2000. The pull factors have remained strong too, despite the fact that we still have a disturbingly high unemployment rate.

There certainly is a basic need to encourage United States-Mexican cooperation on key economic and social issues and I am encouraged by the discussions which have been undertaken in this regard by President Carter and Mexican President Jose Lopez Portillo.

The illegal alien problem probably cannot be eliminated completely, but it certainly can be reduced to manageable proportions. Most migrants prefer to remain where they are with friends and families and risk moving away to strange places only when they feel they must—usually for economic reasons. Developing countries, while gaining certain initial advantages from illegal immigration, suffer in the long run as it is generally their brightest, youngest, and most ambitious who take the risk of illegal immigration.

The Mexican Government is aware of all of this and is willing to cooperate with us in reducing illegal immigration. But Mexico needs our help in coping with the massive problems it faces.

This Nation should move actively toward fashioning a more effective and enlightened foreign policy outlook, and in my view, there is no better place to start than with Mexico. Recently, following an extended visit to Mexico, the associate editor of the Fresno Bee, Verne H. Cole, proposed that we institute a massive Marshall Plan to save our neighbor to the south. He noted that Mexico has demonstrated it is helping itself—a requirement of the original Marshall plan. I believe the time is ripe for such a plan and I enclose Mr. Cole's commentary for my colleagues consideration:

MARSHALL PLAN FOR MEXICO?

(By Verne H. Cole)

As a tourist in Mexico a few months ago, I followed the footsteps of the many Americans who have visited there, seeing the major tourist attractions in four cities, including Mexico City.

I saw more than the normal tourist attractions, though. I saw the magnificent skyscrapers built on floating platforms so they can withstand earthquake shocks—an invention of Mexican engineers that has drawn interest from around the world.

I saw Indian mothers, barely in their 20s, wandering around trying to sell a few oranges or flowers, while trailed by three or four children, much as ducklings follow their mothers. The children often whimpered, being tired, hungry, and some of the youngest in need of a change of clothing.

I chatted with businessmen whose greatest worries were the drastic devaluation of the peso and the directions to be taken by the new administration of President Lopez-portillo.

And since returning, I have read with interest the many news and feature stories about the problems of Mexico and the problems of the United States in attempting to halt the tide of illegal immigrants from Mexico.

Mexico is a land of sharp contrasts. It has undeveloped wealth in oil and other minerals, a vast supply of unskilled labor, fine craftsmen, as witness the silver industry of Taxco, exceptional engineers and architects, a strong sense of history, and a dread of exploitation by foreigners—which has marked its history.

Newspapers, television and magazines a couple of weeks ago hailed the 30th anniversary of the Marshall Plan, which directly led to the economic recovery of western Europe after the devastation of World War II.

Gen. George C. Marshall unveiled the European Recovery Program at Harvard June 5, 1947, and 10 months later Congress authorized the spending of $5.3 billion for the first year of the plan's operation in West Germany and 16 countries of Europe. In all, $16.7 billion was spent on the program in about four years.

In announcing the plan, Marshall declared, "Our policy is not directed against any country or doctrine, but against hunger, poverty, desperation and chaos." And he specified that as a condition of American aid, each of the European nations would have to increase their industrial production and give other evidence of being ready to help themselves, instead of placing reliance solely on American aid.

The shock waves of that four-year plan are still reverberating around the world.

Well, I think it's time for a massive Marshall Plan to save our neighbor to the south from hunger, poverty, desperation and chaos. Granted, the United States does help Mexico financially in several ways, as when it loaned $600 million last winter to shore up the peso.

In my opinion Mexico is ready for a Marshall Plan. It offers great inducements to foreign investors willing to establish manufacturing plants there. Volkswagens are the most popular automobile in Mexico largely because Volkswagen has a plant in Mexico City. But also because high import duties have forced the price of a Ford or Chevrolet to about $13,000.

The Mexican government wants and needs new manufacturing plants to provide jobs for some of the estimated 16 million unemployed—a full 30 per cent of the work force.

Mexico, in just the last six years, built 80,600 miles of new roads to add to the 43,400 that existed before; built hundreds of new schools and thousands of classrooms; increased the number of university graduates by 100 per cent; constructed 149 water storage dams, and spent some $3.3 billion on irrigation projects to bring more arid land into agricultural production.

The nation has demonstrated it is helping itself—a requirement of the original Marshall Plan. I believe the United States can only gain by offering massive assistance to help develop an economically sound nation on its border.

Perhaps, in this way, the influx of poverty-stricken illegal immigrants can be curbed. The reason most of them come here, to accept any kind of job, is to prevent starvation.

I would like to return to Mexico in a few years and see the results such an aid program could achieve.

THE FRANKED MAIL ACT OF 1977 (H.R. 7792)

HON. ADAM BENJAMIN, JR.

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, August 3, 1977

Mr. BENJAMIN. On July 12, the House passed, under Suspension of Rules, the Franked Mail Act of 1977 (H.R. 7792). The procedure by which this bill was adopted precluded any amendment to clarify the differing Senate and House interpretations of section 3210(a) (2) and (3) (B) and (C), title 39, United States Code which, by the ruling of the House Commissioner on Congressional Mailing Standards, prohibits the use of the reverse frank by constituents. Contrary to the House interpretation, the Senate allows the use of the reverse frank for response to questionnaires.

During the consideration of H.R. 7792, Mr. ASHBROOK inquired whether the franking laws have equal applicability to the House and the Senate to which Mr. UDALL provided an affirmative response.

The colloquy continued:

Mr. ASHBROOK. I appreciate that answer because I have had a great amount of concern in the past about different interpretations of the franking law by the other body. For example, I received a letter from a constituent that one of our Senators had used his questionnaire with a return form and solicited the constituent to return the questionnaire without postage to the Senator by using his frank. Yet when I brought this to the attention of the appropriate regulatory commission in the House, they indicated that it is illegal for House Members to do it, but evidently it is legal for Senate Members to do it. If we are going to get into the frank, and the gentleman indicated earlier that he wanted to remove clouds, I am wondering if we are creating any more clouds here by different interpretations. I wonder how the gentleman would resolve the situation.

Mr. UDALL. If the gentleman will yield, this is an old thorny problem. I think the Senate got some bad legal advice. We have had our lawyers and experts look at it, and I think we are right and they are wrong.

Section 3215 of the basic Postal Code says a person entitled to use a frank "may not lend it or permit its use by any committee, organization, association, or person,"

and so on. To me, if one lets a constituent mail back a piece of mail under one's frank, he is lending his frank. The Senate has taken a contrary view. I would like to settle this in conference so that we have one rule which applies to both Houses.

Mr. ASHBROOK. I thank my colleague and appreciate his interest. That is one of the reasons I directed these questions, because his remarks on this proposal indicated that it was to clear up some clouds. I hope we are not creating more differences between the House and the Senate. I, for one, do not advocate the loaning or using of the frank by someone else, but I do feel, to prevent Members like myself from being embarrassed by people who write in saying, "If he can do it, why don't you?" that we should have it one way or the other. I hope in the areas covered by this legislation we can clear up any doubts, and I appreciate the gentleman's efforts.

Mr. UDALL. We will do our best to get uniformity in this area.

Mr. ASHBROOK. I appreciate the gentleman's response.

Mr. SPEAKER. I, along with other Members of this body, share Mr. ASHBROOK's concern. On May 12 I directed a lengthy personal analysis of the pertinent section of law to the House Commissioner on Congressional Mailing Standards, an operation which employs four at the cost of $5,800 per month. While its chairman, Mr. UDALL, was kind enough to discuss the reverse franking problem with me personally, I have not had the courtesy of an acknowledgment from the commission staff to date which might explain in part why the so-called experts and lawyers of the House and the Senate cannot agree—agreement entails some willingness to communicate.

My unanswered communication of May 12 indicated that I had then mailed a news report to my constituents. The report contained a short questionnaire which the constitutents were asked to complete and return at their own expense. About 5 percent of those who returned the completed questionnaire inquired as to why I had the privilege of mailing to them but they had to pay to return the answer. One gentleman forwarded a questionnaire which he had received from a U.S. Senator who provided the reverse frank thereby allowing a free return of the response.

I discussed this disparity with a member of the commission who felt the reverse frank would cost considerable moneys and favor the incumbent. While I cannot now intelligently assess the cost, I do not believe that it favors incumbency. Perhaps the mailing from the congressional office does, but the assessment of attitudes and encouraged response do not favor incumbency—they merely mean work and hopefully a better appreciation of what citizens think.

I am aware of H.R. 455 and H.R. 2067 which would invoke the reverse frank in toto, and I favor these measures and extensions of the constitutional right of petitioning and seeking redress from the Government. However, the only argument that I present here is for the limited reverse frank to enable and facilitate better response to the Member's questionnaire.

Initially, I did not believe that this would require a statutory enactment as much as a reconsideration of the interpretation of the law. However, the commission's apparent refusal to consider this matter and the Ashbrook-Udall dialog on H.R. 7992 persuades me to believe that H.R. 7992 is the appropriate vehicle to reconcile the conflicting interpretations regarding limited use of the frank for questionnaire responses. I parenthetically add that good sense would suggest that one House or the other may not be entirely correct in the use of the frank for questionnaire returns and that our views should be reconciled before the public reacts. After all, it is the same public law that both Houses adopted and are now interpreting differently.

Section 3215 specifies that a person entitled to use a frank may not lend it or permit its use by any committee, organization or association. It also prohibits its use by any person for the benefit or use of any committee, organization or association. Literally construed, this prohibition is directed to the use of or for committees, organizations or associations. It does not prohibit the individual use for the benefit of a constituent by a constituent or for the benefit of a Congressman by a constituent.

On the other hand, section 3210(a)(1) specifies that franking is established under this section to assist and expedite the conduct of official business, activities and duties of the Congress.

Section 3210(a)(3) indicates that frankable mail includes, but is not limited to:

(A) mail matter to any person regarding programs, decisions and other related matters of public concern or public service;

(C) usual and customary Congressional questionnaire seeking public opinion.

While section 3201(3) defines frank as the autographic or facsimile signature of persons authorized by sections 3210–3216 and 3218 to transmit mail without prepayment, there is no provision which specifies that the origin of the mail must be in the Congress and the only reference is to the type of mail and the purpose to be served. If fact, there is nothing in title 39 that I can find which states that a Member of Congress is specifically entitled to a frank or a constituent is not except for groups listed in section 3215.

The only difference that I can find in the law, other than that found in the patron mail section and in House Resolution 287, is found in Public Law 93–191 wherein the Congress established the House Commission on Congressional Mailing Standards.

Section 5(c) of that Act mandates the Commission to provide guidance, assistance, advice, and counsel with respect to portions of title 39. Further, the Commission is to prescribe regulations governing the proper use of the franking privilege.

The commission apparently concludes in its regulations, published February 1977, that the penalty mail provisions permit penalty mail covers to facilitate a response, and since similar verbage is not found in the franked mail provisions, that no such authority can exist.

I hope that Members will read the penalty mail provisions. Penalty mail is defined in section 3202 as the official mail of several agencies (enumerated) of Government except the Congress. This section specifically sets forth the point of origination and necessitates section 3205 which is the penalty cover section. It differs vastly from the franked mail section where the point of origin is not specified. The drafter of the regulations also attempts to bolster support for the regulation banning the use of the frank for the return of the questionnaire by citing a 1936 opinion from Cannon's Precedents and a 1930 reply of a Third Assistant Postmaster General. Chapter 32, title 39, is a product of the 91st Congress (1970) and superceded the 1904 law which provided that "Members of Congress may send as franked mail . . . correspondence, . . ., upon official business to any person."

To recapitulate, I find nothing in chapter 32, title 39, to prohibit the use of the frank in the return of questionnaires. There is no specific prohibition and I believe that the authority for any mailing is found in the type of mail specified in section 3210(a)(3) except for specific enumeration of matter found in sections 3212 and 3213. The point of origin is not specified as it was in the 1904 law on which the regulations and supporting citations are based. I also find that the franked mail sections differ from the penalty mail sections so as to divorce any possibility of analogy or extension of the logic found in the explanatory note on page 3 of the printed regulations.

Admittedly, I may not have all of the law on which the commission staff may have relied to draft the regulations, but I do believe the regulations are far more restrictive than the governing statute and are not supported by the statute on which they were to be based. Of course, besides my interpretation of the law, I do believe that it would be most wise for the two bodies of Congress to interpret the law they jointly wrote in the same manner. Finally, I believe that constituents should be encouraged to answer questionnaires, more for Representatives than Senators, if we are to truly represent the views of our districts and that any barrier to that response should be removed.

H.R. 7992 has been referred to the Senate Committee on Governmental Affairs. I have directed a request asking each member of that committee to consider clarifying language to end the conflict and debate on whether constituents will be allowed to return answers to questionnaires without postage charge. Senate action will insure the House that the matter will receive the attention of the conference on H.R. 7992.

I ask my colleagues to join with me to resolve this dilemma now while a legislative vehicle is available. As stated, it is my opinion that there are many valid reasons to justify a request that all correspondence mailed to Members of Congress be sent postage free. However, in

this instance I only ask that we immediately clarify the interpretation and application of the law by asking the Senate to act in a manner which would cause consideration of this issue in conference. It would be much less futile to economize by eliminating some of our experts and lawyers than to curtail response from interested constituents.

I ask that other interested colleagues join with me to address the Senate Governmental Affairs Committee regarding this concern.

LEGISLATION TO ESTABLISH PROCEDURES FOR THE DISPOSITION OF LAND IN THE CANAL ZONE WILL RESOLVE THE EXISTING UNDESIRABLE SITUATION

HON. JOHN M. MURPHY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. MURPHY of New York. Mr. Speaker, while the Panama Canal issue has been oversimplified time and time again, as a whole and in each of its many aspects, this issue is in fact very complex, involving as it does, considerations of national security, domestic and foreign commerce, international relations, and U.S. territoriality. A potential new treaty arrangement with the Republic of Panama by which the United States would divest itself of Canal Zone territory, and ultimately the canal itself, has raised many issues, but one paramount concern should be the constitutional prerogatives of the Congress in the disposition of U.S. territory.

Article IV, section 3, clause 2 of the U.S. Constitution provides in part:

> The Congress shall have Power to dispose of and make all needful Rules and Regulations respecting the Territory or other Property belonging to the United States. . . .

This investiture of the two Houses of Congress with the power over territories has by implication placed restrictions on powers conferred elsewhere in the Constitution. Among other things, this provision restricts the treatymaking power of the President under article II, section 2 insofar as any treaty disposes of U.S. territory or property.

It is particularly appropriate that the power of property disposition conferred on Congress in the Constitution should be discussed in connection with the Panama Canal issue, for this issue is of great importance to the people of the United States in whom the sovereignty of our country rests. The people rightfully view the canal as an important defense asset, a key trade artery, a major historical accomplishment, a model government enterprise, and a significant U.S. investment.

Although article IV, section 3, clause 2 of the Constitution enumerates the undeniable right of the Congress to deal with the transfer of U.S. territory and property, the executive branch has created difficulties by insisting that the President's right to negotiate treaties can overside this prereogative. While the emphasis on Presidential authority is understandable in view of the executive's desire to insist on its own authority, the prior practice of the U.S. Government with respect to the disposition of canal property, and the clear necessity for the participation of the House of Representatives in making a new canal treaty operative, build a commonsense case for the involvement of the House in the disposition of a U.S. investment of over $7 billion.

There should be no doubt that the United States is the bona fide holder of property rights in the Canal Zone. The acquisition of canal property was authorized by Congress in 1902, effectuated in articles VIII and XXII and other articles of the 1903 Hay-Bunau-Varilla Treaty, and confirmed by an opinion of the Attorney General and a decision of the U.S. Supreme Court in 1907.

Therefore, regardless of the overall sovereignty issue, the U.S. possesses territory and property in the Canal Zone; even if we recognize by treaty Panamanian sovereignty over the Canal Zone, the separate issue of the disposal of U.S. territory and property must be addressed in this House and in any new treaty.

In the past, canal property acquired pursuant to our authority on the isthmus has been transferred only in accordance with congressional authorization. In 1932, 1937, 1943, and 1955, canal property or Canal Zone territory, whether promised by executive agreement or treaty, was not transferred until congressional consent had been obtained.

The executive branch has never sought legislative authorization to transfer to the Republic of Panama those lands and waters which are presumably going to be divested under a new treaty arrangement in which the Canal Zone would disappear and only specific use rights granted to the United States. By its failure to consult with and receive the authorization of the Congress for the transfer of land, the executive has set the stage for confrontations with the over-expectant Panamanians on one hand and an irritated Congress on the other. The confrontation with Congress will be especially difficult if there is no provision in the new draft treaty for full congressional authorization of any land and property transfers to Panama.

Given the present awkward situation created by negotiations involving U.S. territory and property, one manner in which the President can deal with the situation is by insuring that any new Panama Canal treaty contain that provision requiring congressional authorization for any transfer of territory and property. Absent that provision, the Members of the Senate could refuse to consider a draft treaty just as there ought to be no consideration of a canal treaty by the Senate until the agreement has first been considered in the irregular and unstable political environment of a military dictatorship in Panama. Also, it is possible that no consideration be given until it is clear precisely what interpretation Panama is making of sensitive or ambiguous portions of any new arrangement. Too hasty a consideration of a new treaty arrangement will leave the United States in the untenable position in which we placed ourselves in 1903 by ratifying the Hay-Herran Treaty and seeing it rejected by Colombia at the cost of our closer friendship with that Latin country.

While the import of article IV, section 3, clause 2, with respect to disposing of property, transcends even the vital Panama Canal issue, and despite the fact that the controversy goes to the heart of our constitutional system, it is important to keep in mind the second power bestowed in that particular clause, the power of Congress to make "all needful Rules and Regulations" with respect to U.S. territory or property.

Congress has exercised its prerogatives in connection with territories and U.S. properties on scores of occasions. In the case of the Canal Zone, the Congress has legislated a three-volume, eight-title set of laws called the Canal Zone Code. The courts have affirmed that the Congress is the legislative body for the Canal Zone in the absence of any local legislature *Luckenbach SS Co.* v. *Panama Canal Co.*, 196 F. Supp. 835. (D.C.C.Z. 1961), affirmed, 303 F. 2d 252 (5th Cir. 1962). With respect to the power to regulate U.S. territories, of which the Canal Zone must be recognized as one in a jurisdictional context, the Constitution of the United States Annotated, 1973 (pp. 849–850) records:

> In the territories, Congress has the entire dominion and sovereignty, national and local, and has full legislative power over all subjects upon which a state legislature may act. It may legislate directly with respect to the local affairs of a territory or it may transfer that function to a legislature elected by the citizens thereof, which will then be invested with all legislative power except as limited by the Constitution of the United States and acts of Congress

Congress, over the years, has chosen to regulate affairs in the Canal Zone directly, and has treated the Canal Zone, in effect, as a Government reservation.

In accordance with the rules and regulations powers of the Congress, I am introducing today legislation to clarify the procedures for the disposition of land in the Panama Canal Zone. This legislation, when passed, will serve notice of the importance which the legislative branch attaches to canal property.

The legislation authorizes the disposition of land in the Canal Zone by the President if the property is properly described and appraised, and certified as unnecessary for canal operation, or expansion, and if the Congress approves the disposition within 1 year after its proposal. In setting out procedures for the turnover of any land, the measure will help to overcome the confusion which has characterized the canal property issue. Further, if precise procedures are followed, it will prevent the vituperative situation which has come to exist in which the executive branch is negotiating a treaty involving the relinquishment of billions of dollars of U.S. assets paid for by the U.S. taxpayer without any authorization from Congress, the appropriating authority.

I solicit the support of the Members of the House as well as the administra-

tion for this important clarifying legislation, the text of which I include as part of my remarks:

H.R. —

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) chapter 1 of part 1 of title 2 of the Canal Zone Code (2 C.Z.C. Pt. 1) is amended by redesignating section 3 as section 4 and by inserting immediately after section 2 the following new section:

"§ 3. Disposition of land

"(a) The President may not dispose of any land (including appurtenant structures) incorporated in the Canal Zone (as defined by the treaty with the Republic of Panama, dated November 18, 1903, as modified by the treaties of March 2, 1936 and January 25, 1955) unless—

"(1) The President submits to the House of Representatives and to the Senate a document, which conforms with the requirements set forth in subsection (b), regarding any disposition which he proposes to make; and

"(2) before the close of the one-year period beginning on the date on which the document referred to in paragraph (1) is so submitted, the House of Representatives and the Senate approves of such disposition by concurrent resolution.

"(b) Any document required to be submitted under subsection (a) relating to the proposed disposition of any land in the Canal shall set forth—

"(1) a description, by metes and bounds, of such land and a description of the appurtenant structures, if any;

"(2) a separate certified appraisal by the Chief of Engineers, Corps of Engineers, of the current value of the land and the current value of the appurtenant structures, if any;

"(3) the acquisition cost of the land, as certified by the Governor of the Canal Zone; and

"(4) a certification by the Governor of the Canal Zone that such land is not needed for the maintenance, operation, sanitation, government, and protection of the Panama Canal and the Canal Zone, and the future expansion of the Canal.

"(c) A copy of the document referred to in subsection (a)(1) shall be delivered to each House of Congress on the same day, and shall be delivered to the Clerk of the House of Representatives if the House is not in session, and to the Secretary of the Senate, if the Senate is not in session. Any such document shall be referred in the House of Representatives to the Committee on Merchant Marine and Fisheries and in the Senate to the Committee on Armed Services.

(b) The analysis of such chapter 1 is amended by striking out "3. Towns and subdivisions."

and inserting in lieu thereof the following:

"3. Disposition of land.
"4. Towns and subdivisions."

SALUTE TO YOUTH SERVICES OF TULSA

HON. JAMES R. JONES

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. JONES of Oklahoma. Mr. Speaker, it is rare that one can point to a program that actually seems to be doing something to curb our rising rate of crime and juvenile delinquency.

The city of Tulsa is indeed fortunate to have such a successful program in operation today. The pride the citizens of my district have in Youth Services of Tulsa, Inc., is reflected in the fact that the city of Tulsa has proclaimed the month of August as Youth Services of Tulsa Month.

Youth Services of Tulsa operates on a concept and a philosophy of dealing with juveniles before the problems they might be having leads them into serious difficulty with society. By working to divert youth into alternative programs and away from the juvenile justice system, the YST helps avoid the negative labeling of children which so often leads to self-fulfilling prophecies about their ability to function in our society.

The programs of the Youth Services of Tulsa agency are many and varied—the school outreach program (RAP), the Youth Services Bureau, county programs, and the recently instituted youth shelter—all of these services are models of effectiveness that other communities should study in an effort to improve their own juvenile services.

I sincerely hope that my colleagues will join me in wishing continued success to the Youth Services of Tulsa agency. It is only fitting that we draw attention to their fine work on behalf of society and the young people forced to cope with that structure.

A BILL FOR LABOR

HON. WILLIAM (BILL) CLAY

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. CLAY. Mr. Speaker, the labor movement has suffered some setbacks these past few years, but if greater protections are sanctioned by the administration we can still hope that the backbone of this country will not be broken or weakened.

I want to take this opportunity to share with my colleagues the following editorial which appeared in the St. Louis Post Dispatch on July 23, 1977:

A BILL FOR LABOR

Why Labor Secretary Ray Marshall insists that the package of proposed labor law revisions supported by the Carter Administration is not a bill on behalf of organized labor is puzzling, for that is exactly what it is and there is no good reason to characterize it as anything else—as Mr. Marshall did when he said it was only regulatory reform. It is that, to be sure, but it is reform that is clearly intended to facilitate the organizing of workers by unions and it deserves support on that basis.

To achieve its objective, the bill would establish strict deadlines for scheduling a union certification election after authorization cards have been signed by workers. The purpose of this provision is the elimination of long delays that employers often use to conduct a campaign among workers to vote against a union. The measure would also require the payment of double back wages to employes illegally discharged for engaging in union activities. It is hoped this would make such firings too expensive to be worthwhile.

In a provision analogous to laws that deny federal contracts to companies engaging in racial discrimination, the bill would prohibit employers who willfully violate labor laws from being awarded federal contracts. Another important feature is one mandating increased pay levels, based on industry averages, for workers whose employers refuse to negotiate with validly-chosen bargaining units. Other features of the bill would streamline the National Labor Relations Board's administrative procedures so that cases would be less likely to get bogged down in red tape for prolonged periods.

If the bill is enacted, those companies that use delay and threats to frustrate a lawful effort to organize employes or the collective bargaining process would have a much more difficult time doing so. The Carter Administration has no need to apologize for supporting legislation that does nothing more than give greater meaning to the protections offered working people by the National Labor Relation Act.

OREGON RESPONDS TO CALL FOR GRASSROOTS RESPONSE ON WELFARE

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. ULLMAN. During the past year, this country's income maintenance policies have been the subject of considerable public debate. Poverty and unemployment have once again shared the Nation's attention with inflation and the energy crisis.

Reflecting this new mood in the country, President Carter has made it clear that welfare reform will be a major concern of his administration. Five months ago, HEW Secretary Califano asked for a grassroots effort to advise the administration on reforming Federal welfare programs. The 12 guidelines for reform enunciated by the President in early May were thus the result not only of the bureaucratic process but also of the national and regional hearings on public assistance held by HEW in March.

As President Carter prepares to announce to the Nation and the Congress his specific recommendations for welfare reform, he and Secretary Califano are to be commended for their willingness over the past 9 months to engage in direct consultation with the American people on these critical national issues. At the same time, it is also fitting to commend the people of Oregon for their willingness to act as consultants to the President and Secretary.

Oregonians believe, with considerable pride, that they have responded to the President's invitation "in more sweeping fashion than have the residents of any other State." (Editorial, Portland Oregonian, July 17, 1977.) Oregon's exercise in grassroots Democracy began last November, when 150 people gathered in Portland to discuss problems in current income maintenance and employment programs. Following this workshop, representatives from business, labor, academic, religious, civic, social service and public interest groups met, under the auspices of the Metropolitan Family Service of Portland, to encourage continuing public exploration of these concerns. As a result, a broad coalition of 24 organizations was formed to further the community education effort begun in the November workshop.

On April 15–16, more than 1,000 people attended a conference organized by this coalition to explore income maintenance and employment policies. This forum, called "Wages, Welfare or WHAT?" attracted both nationally known experts and political leaders at the municipal, State, and Federal levels. Dialog at the conference was focused on four major public policy options: Full employment, less Government intervention, welfare reform, and guaranteeing an adequate income.

"Wages, Welfare or WHAT?" generated considerable enthusiasm throughout the State for following this conference with a project which would encourage greater direct citizen involvement in formulating public policies. On July 14 approximately 3,000 Oregonians in 35 cities and towns throughout Oregon attended over 55 town hall meetings. Citizens voiced opinions about their ideals for the kind of society they wished to live in, about the public policies that they saw as necessary to achieve these ideals and about the Government programs they preferred for implementing these policies in response to continuing social problems of poverty and unemployment.

The opinions of Oregonians who participated in the town hall meetings were recorded in a public opinion survey. The results of the 55 town hall meetings will be presented this month to the Oregon Congressional Delegation, and transmitted to Secretary Califano and President Carter. They also will be offered as testimony in congressional hearings on welfare reform later this fall. These results promise to be exciting and challenging for the insights which they will provide into the beliefs and preferences of a diverse sample of citizens in Oregon.

NATIONAL "CHEF OF THE YEAR"

HON. JOSEPH M. GAYDOS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. GAYDOS. Mr. Speaker, it is with great pleasure that I call the attention of my colleagues to a man from my 20th Congressional District of Pennsylvania who was honored recently by the American Culinary Federation, ACF, during its national convention.

Jack F. Braun, executive chef of the Lemon Tree Restaurant in McKeesport, Pa., won an overwhelming endorsement from the national organization of professional chefs, ACF, and was named the U.S. "Chef of the Year" for 1977. Nominated by the Pittsburgh chapter for the national award, Chef Braun won the award by unanimous decision representing the vote of some 7,000 chefs across the country. Each year the chefs bestow the honor upon "the one chef who has singularly done the most for the advancement of the profession."

Chef Braun has been actively involved in the food service industry for 17 years and has been employed at the Lemon Tree for the past 8 years.

During his 17-year career, Chef Braum has contributed to his profession by successfully developing and implementing the first cook's apprenticeship training program to be registered by the U.S. Department of Labor. The standardized educational program is designed to train aspiring young chefs and has been adopted nationally and by the U.S. Army.

The initial program was implemented in Pittsburgh 3 years ago. Its success there prompted Chef Braun and his colleague, Mr. L. Edwin Brown of the Community College of Allegheny County, to present the program as a nationwide prototype to be used as the standard of cook's training throughout the country.

The apprenticeship program earned Chef Braun a citation merit award from the Pennsylvania House of Representatives.

At age 31, Chef Braun is the youngest ever to receive the ACF's most prestigious award. The award also brings special recognition to Pennsylvania and Allegheny County. During the 48-year history of the award, Pennsylvania is the only State to have two winners of the title. The previous National Chef of the Year is Ferdinand Metz, chef of Heinz Co.

Late this fall, chefs from across the country will gather to prepare a 21-course dinner at the Lemon Tree as a testimonial to Chef Braun.

Chef Braun resides in North Huntingdon Township with his wife, Barbara, and their two sons, Rudy and Kevin.

Earlier this year, Chef Braun was the recipient of an "Outstanding Young Man of the Year Award," bestowed upon him by the Jaycees.

I congratulate restaurateur, Benjamin Kulasa, proprietor of the Lemon Tree as well as Jack F. Braun in achieving this distinctive honor and wish them continued success in the future.

ST. STEPHEN OF HUNGARY

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. ANDERSON of California. Mr. Speaker, on August 20 the people of Hungary—and the many Americans of Hungarian descent—celebrate St. Stephen's Day, a national holiday that combines religious and patriotic history in the memory of the first Christian King of the Magyars.

Hungarians have long prided themselves on their independence, and freedom is a concept which they hold dear. Even today, under Communist domination and the shadow of the Soviet Union, St. Stephen's Day retains its national significance, and is observed with traditional ceremony.

St. Stephen of Hungary, a member of the Magyar people, was born in 977 A.D. Following the death of his father, Geza, he succeeded to the Magyar throne in 1001. To commemorate his conversion to Christianity, Stephen was given a crown by Pope Sylvester II. Today, that crown is reversed as a national symbol with the same significance we give to the Liberty Bell. Ironically, the crown today is kept in the United States, having been given to our Government for safekeeping by the Hungarian Crown Guard at the end of World War II.

During St. Stephen's reign from 1001 to 1038 A.D., the Magyars were brought together under the aegis of national unity. He was victorious in numerous battles with internal and external enemies, and with the help of the Catholic Church founded dioceses and abbeys throughout his nation. Not only did this hasten the religious conversion of his people, but the abbeys, as centers of learning, played an important role in the development of Hungarian education and learning.

Through his marriage with Gisela, the sister of St. Henry II, an alliance was forged between the fledgling Hungarian nation and the Holy Roman Empire. By protecting the security of his country, Stephen was able to enjoy a reign that is still remembered as one marked by compassion, wisdom, and success.

So on August 20, Americans of Hungarian descent will pay tribute to one of the great men in history. Stephen of Hungary remains a symbol of freedom not only for Hungarians, but rather for all of us to revere for his dedication to his people.

THE SOCIAL SECURITY DEBATE

HON. JOHN P. MURTHA

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. MURTHA. Mr. Speaker, the social security system is in trouble—but it is not broke, and Congress will not allow it to fail.

New funding represents the most urgent need. With more people retired, unemployment reducing the number of workers paying into the fund, and inflation pushing up the annual cost-of-living increases, social security experiences the same pressures as any bank account.

Two sources of new funding are mentioned most often. Social security taxes can be increased, but low- and middle-income workers already pay heavily into the program; or money can be taken from other tax revenues. This is easier, but provides another drain against a balanced budget, and ends the tradition of social security supporting itself. Other options must be explored.

Congress must also review another tradition. Social security began as a supplement to other income. Today, many retired persons rely solely on these checks. The Government must determine if social security should remain a supplement or insure the daily needs of the retired.

Other questions exist about the fairness of the system, the needs of persons just under social security age, and long-term financing as the retired population continues to increase.

In its 38 years, social security has never missed a payment. Congress plans to continue that record.

THE UNITED STATES AND THE ILO

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. FRASER. Mr. Speaker, the United States faces a serious foreign policy decision: to give effect to former Secretary Henry Kissinger's 1975 letter of intent to withdraw from the International Labor Organization by November 1977 or to find a way not to withdraw at this time. We joined ILO in 1934 with the support of the President, the U.S. Senate, the House of Representatives and American labor. A cabinet-level committee in less than 2 weeks will meet—on August 16—and recommend a decision to President Carter on the ILO.

The issue of withdrawal is complex. It involves the points raised in Kissinger's 1975 letter as well as important considerations of the U.S. relations with its Western Allies, the Soviet Union, and the Third World. A decision to withdraw also has important implications for this administration's commitment to human rights, to a Middle East settlement, and to the north-south dialog in which discussions on improving labor standards must play a continuing role.

The Overseas Development Council has prepared a balanced and useful analysis of the issue of the United States and the ILO and I request that it be inserted in the RECORD. It describes the origins of the 1975 letter of intent to withdraw, ILO's record since November 1975 and several additional factors that should enter the U.S. decision. The ODC's analysis importantly refers to the ILO's unusual work in promoting and supervising the international human rights standards it has prepared. Since it was established in 1919, ILO members have developed over 300 conventions and recommendations; these comprise the International Labor Code. According to ILO's constitution, members are to report to a committee of experts every year on steps they have taken to implement the conventions they have ratified. The members of this committee are appointed by the director-general from among the world's leading international legal experts. They meet in their independent capacity every year, consider reports submitted to them and report to an ILO conference committee on the application of conventions, which in turn reports to the ILO conference. The United States wants to strengthen this ILO human rights machinery and I understand that our Western allies and some of the group of 77 are committed to working with us to support the reforms we seek in the months ahead. We should also note that the reports of the committee of experts are to be used by the Helsinki Commission in accordance with the Declaration of Principles of the Helsinki Agreement.

I am very pleased that Mr. Douglas Fraser, new President of the United Auto Workers publicly supports the United States' staying in the ILO. In his letter to President Carter of July 28, 1977, Mr. Fraser refers to the importance of the ILO's promoting the rights of workers throughout the world. I request that this letter also be inserted in the RECORD.

Mr. Speaker, it seems to me that the new administration's commitment to promoting human rights requires that the United States remain a member of the International Labor Organization. The administration must examine the points raised in the 1975 letter and pay particular attention to the implications of a decision for human rights, the north-south dialog and the Middle East situation:

ISSUES MEMORANDUM: THE UNITED STATES AND THE ILO

(By Stephen M. Taran and Rosemarie Philips)

The United States is on the threshold of a decision regarding its continued participation in the International Labor Organization (ILO). In its most narrow context, this decision involves nothing more than determining whether the United States should tolerate conditions which, in its judgment, impair the ability of the ILO to fulfill its mandate. But in a broader context, the decision involves considerations of U.S. relations with its Western European allies, with nations of the Third World, and with the Soviet Union. Because of the unique, tripartite structure of the ILO—with each member nation's delegation consisting of two government delegates, one worker delegate, and one employer delegate—the decision directly involves U.S. domestic political interests as well. Without the consent and support of the AFL–CIO and the U.S. Chamber of Commerce, which are responsible for appointing the U.S. worker and employer delegate, respectively, the United States would find it difficult, if not impossible, to continue as a member of the ILO.

In reaching a decision, due by November 6, President Carter must weigh not only the likely impact of the decision on the ILO and its work, which was deemed worthy of the Nobel Peace Prize in 1969, but also its impact on U.S. participation in other international organizations and on his nascent efforts to gain worldwide acceptance for his human rights campaign. At the same time, if a decision is made to stay in the ILO, the President must devise a strategy for achieving some amelioration of the conditions which warranted the issuance of a letter of intent to withdraw. Without such a strategy, it is unlikely that the AFL–CIO or the Chamber of Commerce would lend their support to the President's decision.

BACKGROUND ON THE ILO

The original mandate of the ILO (founded in 1919) was to set standards of performance in such areas of social and human rights as freedom of association, the elimination of forcer labor, and non-discrimination in employment. Under the tripartite structure of the organization, worker, employer, and government delegates vote independently.

Most of the ILO's early work concerned itself with setting international labor standards and supervising their implementation by member countries. As the organization's membership has broadened to include the newly independent developing countries, an increasing share of its resources has been devoted to technical assistance activities and to research in such fields as employment policy.

The ILO, which is located in Geneva, is comprised of three parts. The Conference, which meets annually and consists of four-member delegations from 134 nations, serves as the forum for discussion of world labor and social problems and sets minimum international labor standards and broad policies of the Organization. Between Conferences, the work of the ILO is guided by the 56-member Governing Body, consisting of 14 worker and 14 employer delegates and representatives from 28 governments. The International Labor Office is the organization's secretariat, operational headquarters, research center, and publishing house. The work of the Office and of the Governing Body is assisted by tripartite committees covering major industries and by panels of experts on a wide range of issues, including vocational training, occupational health, and special problems of women and young workers.

THE CURRENT U.S. POSITION AND ITS ORIGINS

The immediate origins of the decision facing President Carter are found in a letter of intent to withdraw issued on November 7, 1975, under the signature of the Secretary of State, Henry Kissinger, and with the full support of the Ford Administration and the AFL–CIO and the Chamber of Commerce. This letter was issued in order to fulfill the ILO's constitutional requirement that two years' notice be given prior to the departure of any member-nation. It served the additional function of summarizing the U.S. position regarding the ILO and of outlining the terms under which the United States would remain in the organization. The U.S. withdrawal will become automatically effective on November 6, 1977, unless a decision to the contrary is taken.

The letter cites four issues as the heart of the U.S. complaint:

(1) Erosion of the tripartite principle underlying ILO structure and function.—This refers not just to the fact that there is considerable government domination of worker and employer delegates within Soviet-bloc and many Third World delegations—a phenomenon that is admitted to be outside the purview of the ILO, being the result of increasing governmental control throughout the world of many aspects of national life. The U.S. concern is that government domination is beginning to override the decision-making power of all worker and employer delegates within the organization;

(2) Selective concern for human rights.—The ILO Conference has passed resolutions condemning the practices of a few select nations (e.g., Israel), while ignoring the human rights records of nations that are protected by their allegiance to a majority bloc. This is taken as a threat to the credibility of the organization, diluting whatever moral authority it can bring to bear on nations violating its International Labor Code, which is the codification of the Conventions and Recommendations agreed to within the ILO. Although Conventions, once adopted by the ILO Conference and ratified by member-nations, have the force of treaties, the success of the ILO in promoting economic and social justice depends almost exclusively on its ability to serve as the conscience of the international community on labor issues, using moral persuasion rather than legal sanction to gain compliance with its standards;

(3) Growing disregard of due process in ILO procedures.—Long-established fact-finding and conciliation machinery has been ignored or bypassed in efforts to score rhetorical victories against particular political targets. A recent example of this occurred in 1974 when the ILO Conference condemned Israel for its treatment of Arab workers in the occupied territories without the required investigation by an ILO committee of experts; and

(4) An increasing politicization of the ILO's deliberations.—The United States has acknowledged the inherently political nature of many of the ILO undertakings, specifically its responsibility "to promote and protect fundamental human rights, particularly in respect of freedom of association, trade union rights, and the abolition of

forced labor." But the United States has insisted that consideration of international political issues such as those concerning relations between states seriously disrupts the work of the ILO, diverts attention from the real tasks constituting the ILO mandate, and arouses conflicts that inhibit the organization in its efforts to promote social justice through its work on employment, labor relations, and work conditions.

The U.S. letter of intent to withdraw is a carefully drawn bill of particulars containing serious allegations about the motives and behavior of many ILO members. But the key question remains whether these issues, to the extent that they are valid, constitute sufficient cause for the United States to withdraw from the ILO. While the record on each of these conditions will be important in determining the U.S. decision, it will not serve as the only criterion for judging the value of continued U.S. participation. The importance of the ILO's work for the United States and the rest of the world, the impact of a U.S. withdrawal on the ILO, and the potential effect of withdrawal on other multilateral institutions are other factors that will be considered.

THE RECORD SINCE NOVEMBER 1975

In the 21 months since the letter of intent to withdraw was issued, the United States has worked toward bringing about changes in the conditions that prompted the letter. Some success in this effort is evidenced in a number of developments.

1. The 1976 ILO Conference adopted a convention calling for the establishment of national consultative machinery by member-nations to strengthen the ILO tripartite mechanism. The independence of worker delegates was reaffirmed both at the 1977 Conference (where the U.S. worker delegate, Irving Brown, was elected Vice President) and after the 1977 Conference (when the Canadian worker delegate was elected Chairman of the Governing Body—the first time in ILO history that this position has been held by a non-government delegate).

2. The issue of politicization within the ILO has become somewhat less salient. At none of the four world ILO conferences in the last thirteen months—the 1976 and 1977 annual conferences, the World Employment Conference, or the World Maritime Conference—was a resolution concerning Israel, Zionism, or the Middle East adopted.

3. At the Governing Body meeting in March 1977, the United States won important political victories on the issue of due process within the ILO when that body adopted a U.S.-proposed change in rules that would prevent the introduction of politically motivated resolutions and when it approved the Director General's decision to abandon his examination of Israeli labor practices in occupied territories.

In spite of these rather positive developments, three events at the 1977 Conference have caused the United States to seriously consider allowing the 1975 letter of withdrawal to become effective. These are: a) the effective rejection of the Governing Body's recommendation that political issues be screened by a group of experts before entering ILO deliberations, b) the rejection—with strong Soviet encouragement—of an ILO committee report criticizing the Soviet Union and other countries for their failure to apply ILO standards, and c) the failure to approve the Governing Body's recommendation to end ILO action concerning Israeli treatment of Arab workers in the occupied territories, thereby reaffirming the 1974 Conference resolution condemning Israel.

OTHER FACTORS TO BE CONSIDERED

In determining whether the United States should remain in the ILO, other considerations must be taken into account by each of the three parties—government, workers, and employers—taking part in the U.S. decision.

The most important of these is the usefulness of the ILO and its work to its tripartite constituency in the United States and to the world community at large. The ILO is one of the few international institutions with a mechanism for bringing about change within nations in the field of human rights. In 1976, for example, as a result of pressure from the ILO, 45 countries altered a total of 80 pieces of national legislation to comply with ILO standards; in 1975, 55 countries amended 94 pieces of legislation; and over the past fourteen years, 1,100 national laws were changed because of the standards set by the ILO.

The ILO's long-standing concern for human rights entered its most innovative stage with the adoption at the 1976 World Employment Conference of a "basic human needs strategy" for fostering economic development. This strategy—which has as one of its fundamental principles the promotion of job creation and full employment in rural areas—embodies the most ambitious effort yet undertaken by any international agency to secure for the vast majority of the world's people the economic rights which are the necessary counterpart of political freedoms in a comprehensive approach to promoting human rights. Since the ILO adopted this strategy, the concept—developed by the staff of the ILO secretariat—has found support and approval in the U.N. General Assembly, the World Bank, the Development Assistance Committee of the Organization for Economic Co-operation and Development, the Conference of Non-Aligned Nations, and the U.S. Agency for International Development. This wide-ranging support suggests that the ILO continues to be of considerable relevance and importance to the world community.

Of little immediate economic benefit to either American business or labor, the ILO holds considerable potential for ensuring a greater degree of equality of labor conditions internationally. Labor and business have both been hurt recently by products manufactured in countries where there is little concern for the treatment of workers, the wages they receive, or the conditions under which they must work. The ILO has contributed to the alleviation of some of the worst problems and holds the promise of even further improvement in each of these areas. U.S. Secretary of Labor Ray Marshall recently suggested, for example, that the long-term solution to the loss of U.S. jobs due to import competition include the establishment of a worldwide minimum wage. The ILO could be a useful forum within which to consider such a measure.

A second consideration affecting the U.S. decision is the impact of its withdrawal on the ILO itself. The loss of U.S. leadership in fighting to maintain the ILO's commitment to its fundamental principles would almost inevitably worsen the conditions which the United States deplored in its letter, further undermining the ILO's credibility and effectiveness. By leaving, the United States could trigger the withdrawal of those nations which supported its views on the need for reform within the ILO, setting off a vicious circle in which each withdrawal leaves the ILO less effective, cause even more withdrawals. Moreover, U.S. departure from the ILO would mean a loss of $20 million, which is 25 per cent of total ILO resources supplied by member-nations. There is, therefore, considerable risk that a decision by the United States to quit the ILO would mark the beginning of the organization's demise.

The final point to be considered is the effect which such a precedent-setting action would have on other international organizations. For the United States to leave the ILO under any but the most serious circumstances would raise questions about its commitment to other international organizations and could undermine its effectiveness in such politically volatile institutions as the United Nations General Assembly or the United Nations Educational, Scientific, and Cultural Organization (UNESCO). There is the further danger that this action would serve as a precedent for other countries to leave international organizations when circumstances no longer suit them. This would over the longer term destroy the international forums important for settling many of the world's problems.

In sum, its recent record indicates that the ILO, as most other international agencies, is affected by the political atmosphere outside the organization. This was true in the 1920s and 1930s when the ILO was the scene of debates on the rise of fascism and the formation of popular front governments and it remains true today when the issues are East-West conflict, North-South debates, and Arab-Israeli disputes. What matters most is that these issues have not yet crippled the ILO or turned it into a meaningless debating society. In fact, some would point to its initiative on basic human needs, its continued success in gaining greater acceptance of international standards for workers as national laws, and its growing technical assistance programs as evidence that the ILO can continue to fulfill its legitimate mandate in international labor affairs. The question today is whether President Carter will seek to maintain the United States in a position from which it can continue to influence the ILO from within the organization or whether he will decide that the conditions within the ILO are indeed intolerable and follow the course set by the Ford administration leading out of the organization.

JULY 28, 1977.

President JIMMY CARTER,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: I have followed closely for several years the debate over the continued participation of the United States in the International Labor Organization (ILO). Because you will scon be making a decision on this crucial issue, I would like to make you aware of my position.

Like many other American trade unions, the UAW has been proud that the ILO was created, in large part, at the urging of the labor movement. It was and is a unique tripartite world organization in which workers have an equal voice with government and management. Although we live today in a much different world than existed in 1919 when the ILO's charter was established, its goal of promoting the well-being of working people throughout the world remains valid today.

As President of the United States, you have made it clear that human rights is a cornerstone of our nation's foreign policy. I believe that the ILO has a significant role to play in the struggle of workers for human rights across the world. If the United States withdraws from the one international agency which has played such a central role in promoting human rights for workers, our hope of improving the lives of many will greatly diminish.

I have been distressed by the increased drift toward unconstructive politicization of the ILO and share the belief of many trade unionists that its greatest contribution must be in providing technical and developmental assistance to working people particularly in developing nations. The ILO cannot and should not be the forum for resolving broad, complex foreign policy issues confronting member states. If the ILO is to achieve its objectives, it will be essential that non-communist industrial nations and third world countries support efforts to limit the trend toward purely politically motivated resolutions.

My hope is that the U.S. will remain an active participant in the ILO and will press vigorously within that forum for the human rights principles you have so articulately presented as President. It is not clear to me that our goals can, in any way, be furthered by withdrawal. In fact, withdrawal will provide those with whom we strongly disagree an unobstructed path down which they will carry their effort to expand their influence, particularly in developing countries. In addition, I believe withdrawal will harm many member nations which have supported our positions, both on specific and general ILO issues.

The UAW has always been a friend of Israel, a nation with a strong, democratic trade union movement. We have deplored the condemnation by the ILO of Israel without even an effort to impartially investigate the charges as required under established ILO procedures. Yet neither that development nor the seating of Palestine Liberation Organization observers resulted in a decision by Israel to withdraw. Nor have any other western democracies which shared the U.S. position on these and other ILO issues chosen to withdraw.

In addition, I am concerned that U.S. withdrawal from the ILO could create pre-conditions for the unravelling of our involvement in other international forums that can and should move us closer to the goal of world peace. That goal can best be achieved by improving and strengthening these forums rather than abandoning them to countries with which we disagree.

I hope you share my belief that the concessions which we seek in order to have the ILO properly live up to its promise can best be achieved from within the organization. I would be happy to discuss this matter with you further should you wish and appreciate greatly the opportunity to express my views to you on this crucial subject.

Respectfully,

DOUGLAS A. FRASER,
President, International Union, UAW.

WHALE OIL'S FUTURE

HON. JAMES M. COLLINS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. COLLINS of Texas. Mr. Speaker, people have asked what will happen if America runs out of oil and gas. I want to tell you it will be the same thing that happened when we ran out of whale oil. No one in your home is using whale oil today, and no one in your family has gone down to the store lately to price whale oil.

Yet, history shows that whale oil for a 1,000 years was the most important resource that was used for lighting and as an industrial oil.

Civilization first adapted whale oil back around 950 A.D. For the first few centuries whales were hunted and captured in the oceans surrounding Western Europe. It may have been that the Scandinavians were looking for whales when they first came across our North American area.

With the big market for whale oil and whale bone, the more venturesome and aggressive whalers extended the search further and further into distant oceans.

In the early part of the development of the American colonies, whaling was a major industry. New England took the lead and at the time of the Revolution the American colonies had the biggest share of the whaling business in the world. They broadened into new areas including the Pacific and in the 1880's they moved up to the Arctic Ocean. The exploration reflected the natural motivation that comes through individual enterprise. With the demand for energy and the older areas playing out on supplies, the whalers moved into new areas. Whale oil had its high point during the Civil War and from then on it was a downhill slide.

Whale oil priced itself out of the market because as it became short, the price went up. It reached a point of $2.55 per gallon with a Civil War greenback currency inflation. Remember there are 42 gallons in a barrel of oil. So they were paying $107 a barrel for whale oil.

So what happens is a natural development. In 1859, petroleum was discovered in Pennsylvania. Kerosene and the incandescent electric light came in as competitive alternatives for whale oil. Although the American whalers at their high point had over 70,000 people engaged in the industry, and Americans owned 73 percent of the world's whaling ships, the lower priced alternative provided tough competition. The new kerosene created a bright and cheap illumination. In the 1850's kerosene sold for $1 a gallon. Whale oil at this time was not only faced with a decreasing number of whales but also the cost of ships and the rising cost of seaman labor made it even more expensive to stay in the whaling business. Only the strong price of whale bone kept the market up through the latter part of the 1800's but by 1900 America was out of the whaling business.

By 1900, all whale oil lamps had been discarded, despite the fact that the whale oil price had broken and was selling for less than 20 percent of its high point.

Fortunately, in those days President Jimmy Carter was not in the White House. People did not think they could put price controls on the single commodity of whale oil. They left energy to natural economics. Twenty years from now our power might come from the waves of the ocean, or it might come from new nuclear developments, or it might come from utilization of waste products. But President Carter must realize that for the next 10 years our industrial facilities are geared so that 74 percent of America's energy will come from oil and gas.

The answer is to cut back on our Arab OPEC imports which could bankrupt our American economy. Our imports of oil have increased from $5 billion in 1972 to where we sent the Arab OPEC countries $45 billion during 1977. We must be self-sufficient in our resources and the only way to do it is to eliminate price control. The only commodity in the United States today under price control is oil and gas. Let an open market provide the incentive for future alternatives to our energy needs.

LIFE CYCLES

HON. JOE MOAKLEY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. MOAKLEY. Mr. Speaker, today I would like to insert into the RECORD an article sent to me by a constituent. It is not about any particular issue but about general conditions in American life. It discusses our life cycle and the pace of life created by our society. As its author, Ellen Goodman, says, it presents "the big picture."

I believe we legislators need to keep such pictures in mind as we set our legislative priorities. It is only through panoramic views of American life we can pick out the problems most needful of resolution.

In keeping with this belief, I urge Members of Congress to consider this short article on the cycles of American life:

KEEPING IN STEP WITH THE LIFE CYCLE

Every once in a while, I'm convinced that the last Easy Answer was taken away by the Tooth Fairy, who didn't even have a quarter in return. Every solution we've come up with lately turns out to be an embryonic problem and every time we resolve one conflict, we produce a new one.

It's enough to make anyone retire from the business of social problems, except for the fact that one of these problems is retirement.

Retirement. Forced retirement, mandatory retirement, compulsory retirement. The notion that every human being is ready to be marched out of the economic system at 65 or 70 is more absurd even than the notion that every child is ready to be marched into the educational system at 5 or 6.

Forced retirement programs deal with age categories instead of individuals and legislate the psychological and economic realities of life.

Now, these are being rethought. In Los Angeles, residents this spring voted to substitute annual physicals for mass retirements. In Seattle the mayor did away with most compulsory plans by executive order, and now, in Congress there are several bills pending that would also ban the wholesale "firing" of the older population.

But unless we want to stay in the business of spawning new problems out of the solution for the old ones, we have to look at what they always call "the big picture." Mandatory retirement is a miniature in close-up. It only touches on the fundamental problem of the American life cycle of today—a story that doesn't begin at 65.

The major statistical fact of the century is that people live longer than they used to. But rather than stretching out the pressures and pleasures over more years, we suffer from middle-aged bulge, with a lean youth and age.

Childhood, or youth, has become an extended period of dependency that can last until the last degree, the first (increasingly scarce) job, or the birth or a child. Middle-class children in their 20s recycle through their homes with such regularity that their parents never quite dare to make their rooms into dens.

Their adult childhood seems to be characterized by lack of commitments, a shortage of the kind of energy that comes only from expending energy. They testify to feel-

ing useless, empty or even afraid of adulthood.

Yet, a few years later, they enter the middle of the life cycle. Then the pressures collect to form like an embolism in a major artery. For most people the child-rearing years coincide with the career-building years.

The time when parents of young children feel most needed at home is precisely the time when they most need the money that can only be earned outside the home. In the same intense, speeding decades, they are trying to deal with growing children, aging parents, bosses and each other. They are in the pressure-cooker of the life cycle, when the most common lament is, "We don't have enough time." Or energy. A fact of family life today is that many only have the time and energy to appreciate it after they've missed it.

Yet, in some ways today, the young elderly mirror the problems of the old young. A few years or a decade after the paid-life tensions are relieved, millions have again been pushed, this time into forced idleness. Their letters and testimony in Congress express the same malaise—discomfort at idleness, fear of uselessness—as the young. They have too much "time" on their hands.

Too little or too much. There is an unequal distribution of pressure along the life cycle. Ending mandatory retirement is only one of a series of adjustments to be made if we are looking for a public policy that will be supportive of stronger families and more sensible lives.

We need employment (or even national service) for the young as well as the able old, just as we need flexible work schedules for the parents of young children. We need to foster the mutual support systems of extended families and mixed-age communities, and neighborhoods. As a beginning.

It's time for an energy redistribution program all along the life cycle, one that would smooth the pressure points of some and add meaning to the lives of others. In the process we might even discover something they call the balanced life.

STRENGTHENING THE NATIONAL DRIVER REGISTER

HON. ROBERT A. ROE

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. ROE. Mr. Speaker, the safety devices to protect life on the highways, the campaigns for better driving habits and against drunken driving, the research, the investigations, and the National Driver Register have all contributed to make America a safer driving environment. The safety of people traveling on our roads and highways must remain highest on our list of priorities. However, revision of faulty or ineffective programs is a necessary prerequisite.

Ken Nathanson's article in the August 1 Washington Post, "A Forgotten Road Hazard; The Unsafe Driver," poignantly articulates the need to change one such program—The National Driver Register. The concept of a national register of motor vehicle violations is sound. With only voluntary participation by the States, the NDR, however, is not working and needs to be overhauled and strengthened. By strengthening this program as proposed in H.R. 8614, authored by our colleague, JAMES L. OBERSTAR, we will be reaffirming the commitment we put forth in the Highway Safety Acts of 1966 and 1973.

Mr. Nathanson's article follows:

A FORGOTTEN ROAD HAZARD: THE UNSAFE DRIVER

Ben Kelley in his excellent op-ed article, "Highway Slaughter: By Caring, We Could Stop It," (July 2) states that "much of the carnage will be technologically preventable . . . but as a community, the United States probably will not care enough to stop it." He correctly attributes this collective not-caring attitude to the fact that "the violence will strike not in a few catastrophic outrages but in unimpressive dribbles, day by day, through the year."

Kelley accurately describes the need for lowering the built-in top speed of cars and the importance of seat belts and air bags. Unfortunately, he fails to mention the significant role in highway slaughter of the chronically offending driver.

Kelley is not alone in bypassing the importance of behavioral factors in the total picture. This concentration by many highway-safety specialists on the engineering aspect gives an incomplete picture and unrealistic perspective. Such exclusion of the human factor in highway-safety results in a poorly informed public that remains understandably complacent and in no position to demand suitable remedies.

There are now 10 million unlicensed drivers on America's highways. This is the core of the problem. Among these millions of unlicensed drivers are untold numbers of problem drivers who consistently flout the law and rack up violation after violation. Sooner or later death and/or maimings result. Granted, not all highway accidents are caused by the dangerous driver, but so many are that this is where more emphasis should be placed. We could have the safest vehicles and the safest highway construction, yet unnecessary tragedy would continue. A concerted national campaign must be mounted to identify and rehabilitate the unsafe driver.

The National Driver Register of the U.S. Department of Transportation is an index data bank containing the names of well over 5½ million drivers whose licenses have been revoked or suspended. NDR is a sound concept but it simply is not working. Only the state driver-licensing authorities have access to this data when issuing an original or renewal license. The police, the courts, researchers and even another branch of DOT, the Bureau of Motor Carrier Safety, do not have access to this invaluable data.

At present the NDR responds by mail to requests from the states for driver-licensing information. Delays of up to two weeks are not unusual.

A step has finally been taken in the right direction. Rep. James L. Oberstar (D-Minn.), a member of the House Public Works and Transportation Committee, introduced legislation last Thursday to strengthen the National Driver Register and give it a quick-response electronic communications system. This would be its first major overhaul since it was established in 1960.

Kelley mentions the negligence of Detroit but does not discuss the inaction of state and federal officials who, though they have early means to know of the extreme danger posed by drivers with bad records, are not making the necessary efforts to improve the driver-records system and use it to maximum advantage.

We should not forget that the highway-safety picture has three parts: the driver, the vehicle and the highway. Unless the public is sufficiently informed that it will care enough to demand the kind of highway safety it has a right to expect, the safe driver, the innocent passenger and the unprotected pedestrian will soon become endangered species.

GEN. CASIMIR PULASKI

HON. BO GINN

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. GINN. Mr. Speaker, one of the most dramatic and significant stories of the American Revolutionary War revolves around the life of a son of Poland, Gen. Casimir Pulaski. He came to America at the time of our greatest need, and his heroic self-sacrifice contributed both to our success in securing independence, and to the honor that surrounds those who fought for our freedom. In the end, General Pulaski gave his life in combat during the historic Battle of Savannah, Ga., in 1779.

In honor of this great man, who symbolizes one of the many contributions of the people of Poland to America, I ask that the resolution in honor of General Pulaski by the Honorable George Busbee, Governor of Georgia, be included in the RECORD at this point. I also ask that an excerpt from a statement prepared by the Honorable Edward C. Rozanski, chairman of the Polish American Congress, Inc., be included:

RESOLUTION OF GOVERNOR BUSBEE

GEN. CASIMIR PULASKI DAY

Whereas, July 23, 1977, marks the 200th anniversary of General Casimir Pulaski's arrival in America; and

Whereas, during the Battle of Savannah in the War for American Independence, Brigadier General Casimir Pulaski of Poland commanded and led the famous Legion which included Savannah's own Georgia Hussars; and

Whereas, Brigadier General Pulaski distinguished himself in action against a determined and strongly entrenched enemy force, recognized the confusion and faltering of the combined American and French forces at Spring Hill Redoubt, and, at the risk of his life, led a gallant cavalry charge to create a diversion among the enemy, thereby buying time for the attacking force; and

Whereas, He was mortally wounded and died two days later; now therefore:

I, George Busbee, Governor of the State of Georgia, do hereby proclaim the day of July 23, 1977, as "General Casimir Pulaski Day" in Georgia, and commend the observance of this occasion to the citizens of our State.

EXCERPT

POLISH AMERICAN CONGRESS, INC.

This year marks the 200th anniversary of General Kazimierz Pulaski's arrival to America, and thus provides a great opportunity for informing the American people of the contributions Poles made in the fight for American independence. It is also fortunate that our president Mr. Mazewski of the Polish American Congress (PAC) has issued a call to action across the entire country, wherever there are large Polish communities or active Polish American organizations, in the form of patriotic and commemorative observances honoring the Founder of the American Cavalry, a deeply patriotic Pole who in the fight for Independence made the

supreme sacrifice and gave his life in the battle near Savannah, Georgia.

Casimir Pulaski, alongside Thaddeus Kosciuszko, symbolizes not only the noblest ideals of freedom for the Polish people, but also extraordinary service in the battle for American independence. The participation in the Revolutionary War of these two distinguished Poles and their contributions are accepted without argument, nevertheless, their historical context is not well known among average Americans. Thus, education through such special commemoratives, becomes a very patriotic responsibility for America's Polonia. One must remind the public of these fragments of American history in which Poles or Americans of Polish descent played a vital role, and in which the ideal of Polish-American cooperation and the traditional friendship between the two nations are accented.

The actions of Pulaski in the Revolutionary War testify to the undisputed fact that the best sons of Poland, from the very beginning, fought in America's wars as well as helped build the Republic's greatness. Pulaski's death handed down later generations, including today's, an unique inheritance, one of faith in the ideal of freedom and independence, irregardless of the character of Polish history.

Pulaski bequeath the entire American public, especially the Polonia community, an exceptionally rich treasure for the soul. In it we see the example of self-sacrifice for the ideals of freedom. When freedom was missing from the soil of Pulaski's fatherland, tramped upon and taken away by the partitioning powers, he came to where the battle for freedom was waging, America. His subsequent endeavors are indeed worth remembering, and thus it is very appropriate to commemorate the 200th anniversary of Pulaski's arrival to America.

CARTER'S ENERGY PLAN COSTS $377 BILLION

HON. JAMES M. COLLINS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. COLLINS of Texas. Mr. Speaker, a complete study of President Carter's energy plan shows that it costs $377 billion in the 8 years until 1985. An excellent analysis was prepared by Milton R. Copulos of the Heritage Foundation. Here is a summary of his report.

As the Carter energy package nears the end of its consideration in the House, concern is growing over its potential cost to the American public. Much of the measure consists of tax programs intended to either encourage or discourage some sort of activity in the energy area. While the administration has repeatedly emphasized that the taxes will be rebated, the fact is that in many instances they will not be returned.

For example, one of the more significant tax credits is for insulation; however, there is some indication that there will not be nearly enough fiberglass available to meet even relatively modest increases in demand. Without this material, many firms will not be able to insulate and therefore not be able to take this credit.

Another instance of no rebate credit is that most firms will not be taking the risk associated with unproved technologies such as solar and wind power. In any case, where they do these technologies have relatively specialized applications at present. The simple fact is that the majority of the tax revenues under the Carter plan will wind up in the Federal coffers and quite possibly eventually be used for social programs. For example, while the administration claims that all of its crude oil tax will be rebated, in fact only 75 percent will be, leaving $40.8 billion out of $163 billion to be eaten up by administrative and similar costs.

Other costs associated with the Carter energy program are more difficult to identify than taxes. For instance, as we depend on increasing amounts of imported oil, we not only pay higher prices but become more vulnerable to economic dislocation as well. One thing is certain: The energy bill in its current form is going to significantly raise costs to the public and at the same time tend to create severe disincentives for the exploration and development of additional oil and gas reserves. As a result, we will have to import $553 billion worth of foreign oil between 1978 and 1985.

TAXES ON OIL

There are essentially three forms of tax on oil. The first is the crude oil tax at the wellhead; the second is the industrial users tax; and the third is the tax on utilities which burn oil. The Carter administration has indicated that all of the revenues from the wellhead tax are to be rebated to the public. However, on closer examination this is not exactly the case. First of all, there is a provision in the legislation to allow the administrative costs for collecting and rebating the tax to be deducted from receipts. As a rule, the administration of a program at the federal level accounts for 15 percent of that program's budget, and there is no reason to believe that the administration of something as complex as the wellhead tax on oil will be any different.

A second consideration in regard to the wellhead tax on oil is the concept of opportunity costs. The tax will be paid over a period of one year and will be rebated with an individual's income tax. As a result, the individual incurs a very real cost—that of not having the money on hand during that year. It is not unreasonable to assign a 10 percent discount for the loss of use of the wellhead tax for the year. Therefore, it is reasonable to assume that a minimum 25 percent of total collections of the wellhead tax represents a real cost to the public.

A third consideration is that the tax on industrial users of oil is not rebated and is therefore a real cost to the businesses subject to it. Since it is eventually going to be passed on to the consumer, it is also a real cost to the public. The same holds true for the tax on utilities that must burn oil. The total cost of these taxes is staggering.

Total collections of the wellhead tax on crude oil will come to $163 billion for the period between 1978 and 1985. Even if discounted to account for rebates, there still is a $40.8 billion cost to the public. The industrial users tax will amount to $11.4 billion for the same period, and the tax on utilities will come to $3.9 billion. This means that the public will pay a total of $56.1 billion between 1978 and 1985 in taxes on crude oil and boiler fuel. This amounts to $801 for every family in the U.S.—and it is just the tip of the iceberg.

ADDED COSTS FROM IMPORTS

One aspect of the costs of the Carter energy program which has received relatively little attention is the potential additional cost of imported oil. While there are some OPEC members who take a more moderate view of price increases, many of them are pushing quite hard for significant escalations in the cost of crude. While the actual amount of the increases is obviously open to debate, there can be little doubt that they will be significant. One must remember that the initial increase voted by OPEC was nearly 400 percent. There is no reason to believe that the members of OPEC will be content to merely keep pace with inflation. For the purposes of this estimate, it has been assumed that OPEC increases will average only 4 percent annually. This, of course, is far less than the increases have been historically; however, even at this figure they come to a substantial amount. Based on an assumed 3 percent annual increase in the real price of oil, the cost of imports for the period between 1978 and 1985 will be fully $57.8 billion. This amounts to over $825 for every family in the United States.

NATURAL GAS

Much has been said about the pricing of natural gas. There is considerable evidence of its price responsiveness and of the fact that the current low prices have been a strong disincentive to exploration and development. There is no reason to believe that the $1.75 price contained in the energy bill will provide the incentive necessary to increase our supply. In fact, there is a considerable body of evidence which would indicate the opposite. For the purposes of this estimate, however, the secondary costs associated with shortages which are likely to occur at the $1.75 price have been ignored. Although these costs will be severe, they are difficult to quantify as their exact nature is dependent on a number of exogenous variables such as region, time of the year, and the like. Instead, it is assumed that supplies will be adequate to meet demand, and the tax consequences are all that will be considered. These alone are significant enough to be of considerable concern. For the period betwen 1978 and 1985, it is estimated that the cost of the taxes on natural gas will amount to $44.2 billion, or slightly over $631 per family.

IMPACT OF INFLATION ON TAXES

The National Chamber of Commerce has completed an econometric study of the potential impact of the Carter energy program on taxes through inflation. This aspect of the program will considerably increase the real tax burden of the middle class. The chamber estimates this impact as totaling $98 billion for the period between 1978 and 1985. This amounts to $1,400 for the average family.

IMPACT ON SUPPLY

Perhaps what is most significant about the Carter program is the total lack of incentives for exploration or development of new supplies of oil or natural gas. Also, when considering the various environmental initiatives proposed by the Administration, one is hard pressed to see how the mandated coal conversion can take place. In addition to stringent strip mining requirements, a severe tax burden will be placed on operators. The total tax bill is likely to surpass $1.8 billion for the coal industry by 1985. Further, since coal is relatively nonprice elastic, the cost of coal may rise dramatically over the coming years. The cost of pollution control equipment will be enormous. The only industry which has made a reliable estimate, the utility industry, indicates that the cost of coal conversion will amount to $50.6 billion between 1978 and 1985. A similar figure will be multiplied for the rest of American business, if they are allowed to convert under existing environmental regulations. These costs will mitigate strongly against the use of coal.

In the case of natural gas, an estimate prepared by Rep. Stockman of Michigan indicates that under the Carter program, 25 trillion cubic feet of natural gas which would have been produced under de-control will not be produced. While the cost of replacing this natural gas with some other fuel has not been included here, its replacement would be an expensive process—if it could be replaced at all.

CONCLUSION

The Carter energy program will represent the most significant increase in the middle-

class American's tax burden in our nation's history. The total cost of the program will be $377.31 billion over the next 8 years. This is over $5,390 for every American family. On an annual basis, the cost per family of the program will be as follows, excluding the cost of coal conversion (the cost of coal conversion will be $722.00 for every family just for utilities): 1978, $104; 1979, $357; 1980, $491; 1981, $584; 1982, $663; 1983, $783; 1984, $832; 1985, $851.

The American public is on the verge of discovering just how expensive the Carter Administration's approach to solving the energy puzzle will really be.

TOTAL COST OF CARTER PLAN—1978–1985
(*Billions of 1977 Dollars*)

Taxes on oil less rebate	56.1
Taxes on natural gas	44.2
Gasoline taxes	58.8
Auto efficiency taxes	10.0
Tax on coal	1.81
Added cost of imported oil	57.8
Additional Federal tax caused by inflation from energy taxes [1]	98.0
Utility conversion [2]	50.6
Total	377.31

MISSING IN ACTION

HON. ROBERT K. DORNAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. DORNAN. Mr. Speaker, I would like to call to my colleagues' attention the discussion which took place between Mr. Leonard Woodcock and me during his testimony before the Subcommittee on Asian and Pacific Affairs of the International Relations Committee on March 31, 1977. It will give further insight into the activities of the President's commission sent to Vietnam and into the tragedy of Laos from which not a single missing American serviceman or missionary has emerged alive. Not one. The discussion follows:

Mr. DORNAN. Thank you, Mr. Chairman, and thank you, Mr. Burke, for allowing me to address some questions to these two distinguished gentlemen. I am not a member of this subcommittee but in many discussions with Congressman Montgomery he has been kind enough to acknowledge expertise on my part on this POW/missing-in-action issue.

Let me establish for the record and for your own information, Mr. Woodcock, just what that expertise is. I'll try to make it as brief as possible. I helped to raise, for the POWs, millions of dollars through the development of the POW bracelet, which I started with the help of two teenage girls in 1970. One of them has blossomed into womanhood and is in this room. Most of those millions were spent to let the world know the ghastly mistreatment and torture of our prisoners held by the Communists in South and North Vietnam and in Laos.

I raised funds personally in 1970 and 1971 to take three groups of wives around the world. Our trips took us to Moscow, Romania, Hungary, Egypt, Iran, Czechoslovakia, Cambodia, Laos, to Italy to meet with Pope Paul, to India to see Indira Gandhi when she was head of the largest democracy on the face of the Earth, and also, to South Vietnam into combat zones to visit hospitals.

I have made eight trips to Vietnam myself, five on this missing-in-action issue, one trip going back to May of 1966. My best friend during my 5 years in the Air Force was unreturned POW Lt. Col. David Hrdlicka, and I don't use that term "best friend" in the general sense, but quite literally. I checked Dave out in the F–100 supersonic fighter at George Air Force Base. Because we're the same religion, he asked me to be the godfather of his oldest child. Dave was shot down on May 18, 1965 in Laos, and was observed by his wingman being captured after a safe parachute descent and is still carried as a known POW. He was photographed in captivity as late as 1968 or 1969. He was almost the object of an international prisoner transfer by the Communist half-brother of Laotian Prince Souvanna Phouma. There were tape recordings and photographs of him in captivity. His wife found out about his missing-in-action status through a newspaper photograph in Moscow and not through the State or Defense Departments.

I have flown on combat missions as a journalist in all four corps areas of Vietnam, and was one of the first journalists reported missing in Cambodia. I made four trips to Laos. On one trip to Laos, our Ambassador put a helicopter at my disposal. I went up to the mountain areas, made trips to the villages to question people about the missing-in-action. I ate with the people and picked up intestinal parasites which stayed with me for a long time. I won their confidence. They told me many tales of downed Americans.

One of my Air Force commanders was one of the prominent POW's, Col. Robinson Risner, recently retired as a brigadier general. For 2 years on my television show in 1968 and 1969 I ended every broadcast with the closing plea to "Remember Robbi Risner and the other POW's in Hanoi."

This is just a partial background of my involvement with this issue. This POW bracelet that I still wear was originated with the two young ladies I mentioned, Miss Carol Bates, in the room now, and Miss Kay Hunter; this is what caused millions of dollars to be raised. I think the bracelet did help to bring word to Americans and to focus on relief of some of the POW families' suffering and to bring Geneva Convention treatment to POW's after 1971.

I think I should share a little-known story that will live in infamy forever. Over a little sleazy porno shop on the corner of 9th Avenue and 42d Street in New York City, all POW mail was delayed and contaminated by pro-Communists—imagine, all mail to and from POW's and their fathers, mothers, wives, sons, and daughters. What a disgrace. Some of these heroic POW's were tortured to death, as was the man whose name is on my bracelet, Maj. Edwin Atterberry. For escaping in May of 1969 he was stripped naked and beaten until there was not a square inch of flesh that was not a raw wound. He died after 8 days of sadistic beatings.

Imagine, all of the mail by these brave men after about 1967 was manipulated by this pro-Communist group, the Committee of Liaison, from above a porno shop in fun city. That disgrace and other disgraces like it for these families made me what President Carter would call emotionally involved. I agree.

With all due respect to Congressman Sonny Montgomery, who was one of the early friends when I first came to Capitol Hill on this issue back in 1968, 1969, and 1970—and with due respect to you, Sonny, and to Congressman Pete McCloskey and others, I really do know more about this subject than any other Member of Congress.

I could not begin an effective line of questioning that would bring any light to these hearings and thus to the American people in the 2 minutes I have left. I can only concentrate on one aspect, the missing-in-action in Laos.

I wonder, Mr. Woodcock, if you were briefed in depth on Laos and if you are aware that Laos became a black hole of Calcutta, a bottomless pit for American airmen, that if we could write an after-the-fact squadron order for pilots we would have told all the men to bend their crippled airplanes back around and bail out over North Vietnam, where, if they were not killed in the villages or tortured to death in prison they would have had some hope of coming home? But zero chance in Laos.

All of the 10 men who were reported to have come home from Laos were not Pathet Lao Laotian-held prisoners. One, a civilian, Ernie Brace, was held for only 3 weeks at the old French battle area of Dien Bien Phu, but then he, the same with the nine others, was taken to the Hanoi prison system. Not a sole, single, solitary American missing in Laos has ever been returned to our custody. I repeat, not one. Those 10 so-called Laos POW's were put into North Vietnamese troop control within days if not hours of their imprisonment.

So we now have the disgrace of 300 or more men still missing in action in Laos.

Mr. Woodcock and Mr. Montgomery, please comment. Did you feel any difference in approach between Laos and North Vietnam, given the North's hegemony of terror over Laos and all of Southeast Asia? North Vietnam must also bear some responsibility for the incredible genocide of possibly 2 million people in Cambodia.

Did you feel any independence on the part of Laos—given their U.N. membership and the fact we still have a delegation there—where maybe we could move independently with them to undo this horrible fact that not a single, solitary man has been returned from Laos?

Mr. WOODCOCK. In Vientiane we endeavored to establish that. Let me say that in our formal discussions with the Laos Government representatives they were very formal. Their words had a very hard line. They deliberately and distinctly linked doing anything about MIA's with reparations.

In the informal discussions they were completely different.

We made no progress whatsoever. I simply say that we possibly have some hope. It was a little confused by an identification of a so-called governmental broadcast which said they had set up a commission. I learned today that we have not been able to identify such a broadcast. Our whole endeavor was to try to make clear to them we look to them to take some steps, of which up to now they have taken absolutely none.

Mr. DORNAN. Did you have any feeling that they blamed us when they threw up to you that men were still fighting against their Communist regime in the hills and fields—did they indiçate to you that they thought we were guilty of some continued CIA connection, or that if the fighting were to stop they would start talking about missing-in-action Americans?

Mr. WOODCOCK. They kept talking about Thailand was our friend and Thailand was doing it. The inference, without its being a specific charge, was that we must be doing it. There was no specific reference to the CIA.

We had been authorized to say to them we were not involved either within their country or outside of their country in any hostile activity against their government. We asked them for some proofs—particularly Senator Mansfield, who was there last August and went through the same business at that time with them.

And their response finally was that when you are dealing with secret intelligence work, how can you possibly have proofs?

Mr. WOLFF. As the chairman of the full committee I hope that if this will continue to be a problem that we will act in an oversight capacity and continue to pursue it. I intend very strongly to pursue it. I don't know whether the rest of the committee will

support me. I intend to pursue strongly some of the aspects of this that I referred to.

I want to thank both Mr. Montgomery, Mr. Woodcock for the services that they have given. After all, for Mr. Montgomery it is somewhat in the line of duty as a member of Congress to pursue this. As a private citizen, Mr. Woodcock, you have the thanks of the American people.

Mr. DORNAN. Mr. Chairman, may I make a closing statement?

Mr. WOLFF. In one moment.

The fact is, Mr. Woodcock, that this is an issue of great controversy. I am sure that with the accolades also come some of the barbs. That is unfortunate. That is because we live in a country such as we do.

Mr. WOODCOCK. I learned that before today, sir.

Mr. WOLFF. People can speak their minds. That is the one thing we have to safeguard here. With that in mind, I yield to Mr. Dornan.

Mr. DORNAN. Mr. Woodcock, I would like to request that I be allowed to see you sometime in the near future to elaborate on some of the knowledge that I have on this tragic MIA issue and to also commend you because you volunteered for this, I have special admiration for volunteers.

I believe even our draftees in Vietnam were volunteers because it was not difficult to get a bus ticket to the Canadian border. All of our missing pilots and aircrew members, of course, were volunteered and you were a volunteer. You did not have to do what you did.

I would like to make two statements in closing and then hopefully elaborate on them to you privately. Never, in my 12 years of activity in this tragic cause have I ever confronted, or even felt vibrations from a family member whose motivation was trying to stay on the Government dole, and that payroll money was the reason why they would not accede to a Government desire to declare their son or husband dead. This is a cruel, untrue charge. Number two. I believe that there is a God, and that there is truth in a common expression used by Americans, "If there is a heaven, we're going straight there because we've served our hitch in hell." It may have been overused, but it nevertheless was very true, particularly for POW's that died in captivity from torture. If these men could address us from heaven in some ghostly way in this chamber today, I believe they would say, "My sacrifice is mocked if you trade my femur or my tibia or a hip socket, or whatever is left of my bones, for aid to the country that has brought such a vicious type of slavery to all of Southeast Asia."

I agree with our President, that we have nothing to be ashamed of about our effort in Vietnam. I say to my colleagues that the difference between our postwar aid to crushed Nazi Germany and imperial Japan and none to Communist Vietnam is that in those other areas we won and we brought war criminals to death. In Southeast Asia we lost and although we may have punished some of our own for our My Lais, and flagellated ourselves, sometimes in an orgy of self-criticism, the North Vietnamese have, however, gone unpunished for horrors like the flamethrowing of an entire village of Montanards at Dak-son, the slaughter of 4,000 people at Hue and the unbelievable ongoing genocide of more than a million people in Cambodia under their nose. These stories are only part of the vicious communist legacy in Southeast Asia. I honor you for trying to help and I honor Sonny Montgomery for being one of the first Congressmen to respond to the pleas for help of the families. But we must not let them down now in the final hours. Please leave your door open, Mr. Woodcock, open to these incredibly heroic mothers, fathers, and wives and their children now fully grown. Thank you very much.

Thank you, Mr. Chairman.

COPING WITH THE WORLD: TROUBLED YOUTH

HON. JAMES ABDNOR

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. ABDNOR. Mr. Speaker, major news periodicals in the United States have, in recent weeks, carried cover articles on the problems some of our young people are having in coping with the world today.

It has been noted than in the last 17 years, juvenile crime has risen twice as fast as adult crime and that more than half of the serious crimes, including car theft, rape, aggravated assault, burglary, robbery, murder, and larceny, are committed by children aged 10 to 17.

The causes of the problem are as perplexing as the solutions. We have before this Congress several dozen proposals addressing attempted solutions. We all know, however, that passing another law, or many laws, is not going to do much to help salvage these deeply troubled young people who take out their frustrations or find their kicks through assaulting, by one means or another, their fellow man.

Salvaging the damaged lives is one of our Nation's greatest challenges, and one institution which is achieving a high degree of success in meeting this challenge is located in the Second Congressional District. The Sky Ranch for Boys, founded by the late Father Don Murray in 1960, is located near Camp Crook, S. Dak.—60 miles from the nearest town and 150 miles from the nearest city.

Sky Ranch, by combining academic and vocational education with professional counseling and the unique therapies of working on a ranch and learning to fly, has successfully rehabilitated over 90 percent of the more than 800 disturbed and delinquent teenaged boys who have gone there from all over the country. In many cases, those who were rehabilitated were kids who were not responding to traditional approaches.

The 3,000-acre working ranch has evolved from a unique partnership between Father Murray, his successor, Father Dale Kutil, and the beverage alcohol industry which has formed a foundation for the support and expansion of the facilities.

A new dormitory is nearing completion which will expand the capacity of the ranch to 80 young men—64 at the Sky Ranch itself and 16 at "Wingspread" a halfway house in Sturgis, S. Dak., for those who have earned the opportunity to live a more normal, less restricted life before returning to society.

Eighty boys was believed by Father Murray and Father Kutil to be the maximum number under the care of Sky Ranch so that each boy can receive the individual attention needed for rehabilitation. The boys must work at farming and ranching if they are to eat, as the spread grows most of its own food. They attend a fully staffed and equipped school on the ranch with special educational facilities to treat learning disabilities. After earning the privilege they can continue their education at the public high school in Sturgis.

The fundamental philosophy of the ranch is that rehabilitation results from equal doses of security, discipline, and love. When the boys qualify scholastically and behaviorally they are entitled to the special reward of learning to fly. With progress to responsible maturity they begin ground school training, and at age 16 may start the actual operation of one of the ranch's Cessnas. Father Murray once said of this tool:

> Nothing does more for a boy's image of himself than his first solo flight. Many of these boys have been told they couldn't do anything, and now they've mastered an airplane in flight. They've conquered a tremendous challenge.

Two years ago Father Murray died in a crash while flying with his boys. The work of Sky Ranch, in its unique partnership of dedicated men and an industry, continues under the direction of Father Kutil, handpicked successor to the founder. The philosophy remains the same:

> So many boys have been hurt so many times because of a lack of love, understanding and trust. They cover that hurt with anti-social behavior. They become defiant or delinquent or they escape into drug addiction. Our job, the responsibility of every staff member at Sky Ranch, is to give these boys love, understanding and trust so that they, in turn, will love, understand and trust others.

South Dakota's success story is one bright spot in the tragic national picture of troubled youth coping with a perplexing world.

ENERGY RHETORIC

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. DERWINSKI. Mr. Speaker, even though the administration forces rammed through amendments to the energy bill, one should not be misled to believe that this legislation will solve our Nation's energy problems.

Even though it is now too late, I am inserting an article by noted economist Milton Friedman, which appeared in Newsweek magazine of June 13. His column effectively addresses the Carter-Democrat Congress energy hypocrisy:

ENERGY RHETORIC

I do not know whether the Guinness Book of World Records recognizes a record for the divergence of rhetoric from reality. If not, I suggest that it do so, and I nominate as a candidate the debate over energy policy now raging in the U.S. Herewith some supporting evidence.

1. Pride of place must go to President Carter's use of William James's phrase "the moral equivalent of war" to describe the approach needed.

We do have a real energy crisis—no doubt about that. And, of course, every aspect of life has a moral dimension. But, for the ordinary U.S. citizen, there is simply no special moral issue involved in energy, any more than there is in how to make the most effective use of our limited supplies of food, or iron ore, or land. The problem is a strictly technical economic problem of adjusting consumption and domestic production to a drastic change in the world price of oil engineered by the OPEC cartel.

If there is any special moral issue, it is the failure of the Congress and the Federal bureaucracy to acknowledge the major role that they have played, through ceilings on price, encouragement of OPEC and heavy-handed administration, in greatly exacerbating the crisis. Of course, the best defense is a good offense—hence the appeal to other people's moral responsibility!

2. "The nation's most careless squanderers of energy"—a phrase used in one media report on an affluent suburb.

Are the residents of the suburb (and the reporters writing the story) also "squanderers of food, housing, clothing"? Is it either an actual or desirable policy that everyone should consume all items at some minimum sustainable level? At the same level as everyone else? What has happened to pride in our success in improving the living standards of our people? Today's lower-middle classes live at levels that would have been affluent "squandering" a century ago; and today's "squanderers" will set the pace for the less advantaged tomorrow—if ill-considered government meddling does not kill the goose that lays those golden eggs.

Energy has been relatively cheap, and it has been sensible for all of us to adjust our use to that fact. It has become more expensive—perhaps only temporarily—and if each of us is required to face that fact, we shall all be led to cooperate in using less energy and producing more at home.

3. Gasoline prices have risen drastically and it is unconscionable to let them rise further.

Corrected for inflation, the price of gasoline in 1976 was 2 per cent lower than in 1956! Gas prices did slightly more than double over the two decades, but prices in general rose even faster.

A major source of our energy problem is that government policies have been falsifying the true situation to consumers. As a nation, we are paying more for gasoline than two decades ago, but we are doing so through taxes that are used to subsidize the import of foreign oil, in order to hold down the price at the gasoline pump. That is why we have not had the right incentive to conserve.

4. In a discussion of President Carter's proposals: "The biggest burden will probably fall on industry. Factories and utilities will be taxed heavily unless they shift to coal."

How do you "burden" industry or "tax" a factory? Do you squeeze it until it screams? Send it to jail?

Only people can bear a "burden" or pay a tax. An industry, a factory, or a utility can do neither. Officials of an enterprise may transmit a check to the U.S. Treasury, but they are only agents. The burden of the tax is borne either by the stockholders, or the employees, or the customers—and, in the long run, for a tax on a specific product, primarily by the customers. Stockholders and employees may bear the initial burden if they are temporarily locked into a particular enterprise or industry, but only at the expense of discouraging further investment and employment in the industry.

We need more investment in the domestic production of energy. Taxing away the fruit of past investment is hardly a sensible way to encourage more investment. It is simply stupid of us to adopt the general policy of taxing away "windfall" profits reaped by farsighted individuals who invested in advance in order to be able to profit from high prices when a "shortage occurs—whether because of a cartel or a drought or whatnot. That is a sure way to destroy private provision for emergencies and to transform our economy into a centralized corporate state. Senators who scream about "obscene profits" are sabotaging the free-market system, and therewith our political and civil freedoms.

5. A congressman about the President's program: "OK, as long as everybody is hurt equally."

What a sadistic philosophy. That is a prescription for universal misery. I thought true American philosophy was "OK, as long as everyone has an equal opportunity to improve his lot."

6. The House energy committee's 40 members "were carefully chosen . . . with a light tilt toward consumer interest and against radical changes, such as the total elimination of price controls on gas and oil."

How rapidly the conventional becomes radical and the radical, conventional. The truly radical element of present energy policy is the existence of price controls. The controls on natural gas date back only to 1954, on oil, to 1971. They are not only radical, but a major source of our problem.

7. "Gas-guzzling" cars.

A combination of demagoguery, confusion about morals, and bad economics. One man's gas guzzler is another man's necessity. If each of us has to pay the full cost of energy—which is what would occur if the market were allowed free rein—we would each have to choose how to meet the cost. One man would decide to do so by driving a large car fewer miles; another by buying a small car; a third, by conserving on other items of consumption, thereby releasing them for persons who had a less urgent need for the gasoline.

Given that gasoline sells at full-cost—which today means at the cost imposed by OPEC—there is no justification whatsoever for an additional tax on large cars and a subsidy for small cars. That simply imposes a cost greater than the value of the energy saved. Neither is there any justification for governmentally mandated average-mileage requirements. These are just further examples of how one government mistake—artificially keeping down the price at the gas pump—leads to others. A full-cost price for gasoline gives just the right incentive to the car owner to balance the advantages of a larger car against the extra costs of gas; it gives the right incentive to the manufacturer to meet the demands of the prospective car purchaser.

Insofar as the problem is one of relieving persons in acute distress, we should do that by giving them general purchasing power, through a negative income tax replacing our present rag bag of welfare programs, not by trying to do something about gasoline separately, food separately, and so on ad nauseam.

UNITED STATES-CHINA RELATIONS

HON. WILLIAM M. KETCHUM

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. KETCHUM. Mr. Speaker, I wish to address my remarks on a subject of grave concern and importance to the security of this Nation. The issues of our relations with the Republic of China and the People's Republic of China is one which must be carefully and thoughtfully considered. I would like to focus on three areas of concern: The economic, military, and political importance of Taiwan.

The real immediate threat to the continued existence and independence of the Republic of China arises from potential nonmilitary confrontations. Normalization with the People's Republic of China will adversely affect the United States-Taiwan trade, which each year amounts to several billion dollars. In fact, Taiwan's present trade with the United States is greater than that of France with the United States, and there is confidence that when the current 6-year plan is concluded in 1982, Taiwan will be formally ranked among the developed nations.

Private U.S. banks have lent $1.5 billion to Taiwan and the U.S. Government-owned Export-Import Bank has extended another $1 billion. Private investments amount to about $500 million and those investments enjoy insurance coverage under the Overseas Private Investment Corporation.

In short, Taiwan continues to be a major and essential economic ally of the United States. Normalizing relations with the People's Republic of China is not likely to increase significantly the United States-China trade, nor is it going to lead to U.S. investments in China because of the Chinese policy of economic self-reliance. The transfer of recognition would, however, give Peking many means for undermining Taiwan's economy.

Should the United States formally recognize the People's Republic of China, what would become of the position in the Export-Import Bank? If Taiwan is ousted, what happens to the $1.7 billion in loans that they currently hold? What would happen to the eight American banks and the nearly one-half billion dollars of U.S. investment? If mainland China is recognized as the only legitimate government of China, would they then intervene in the commercial affairs of Taiwan?

These questions and many others must be resolved before we even ponder the question of recognizing the People's Republic of China. It is incomprehensible to me that anyone could even consider normalizing relations with Red China in light of the economic commitment we have with Taiwan.

While our economic alliances are important, our military ties with Taiwan are essential. Through the 1954 Mutual Defense Treaty, the United States has a commitment; I repeat, an obligation to maintain strong military ties with the Republic of China.

Taiwan constitutes a crucial element in our defense posture for the entire Pacific region. As tensions may again rise in Korea with the withdrawal of our ground forces, the use of our facilities in Taiwan gain even more importance. Any change in our position with regards to the final removal of forces from Taiwan, while we withdraw troops from Korea, can only further encourage aggression by North Korean's Kim Il Sung. Yet, this is exactly what mainland China calls for us to do if we are to normalize relations.

We have assisted the Republic of China militarily with the training and equipment for its navy, air force, and army. We must continue to provide Taiwan with access to replacement parts and the upgrading of American equipment.

I, for one, believe that our presence in Taiwan maintains a stable balance of power in East Asia. The continuation of our present relations with the Republic of China is unlikely to lead to serious conflict over the island. But, should we pull back troops from Taiwan and break our security treaty with the Republic of

China, we cannot help but increase the likelihood of armed conflict. Peking surely would be tempted to gain control of the island by force following a U.S. withdrawal of support.

We must face the political realities of this situation squarely. Recognition of the government in Peking as the official China must also imply acceptance of the position that Taiwan is a province under authority of that government. It implies that the laws and regulations of that government pertains to its province. How can we justify risking the security of the people in Taiwan for the sake of improved United States-People's Republic of China relations? I ask my colleagues how can we, in good conscience, subject the people of Taiwan to almost certain military pressure and possible attack from the mainland?

We must maintain our diplomatic ties with Taiwan; otherwise, Peking will proceed from diplomatic isolation to economic isolation attempting to strangle Taipei by denying her access to markets necessary for her survival.

Many will look to the Japanese model of Chinese relations of establishing a regular embassy in mainland China and downgrading the embassy in the Republic of China to a liaison office as a possible alternative for the United States. However, the Japanese action was only feasible because the United States continued to maintain full diplomatic relations with the Republic of China.

Finally, I would like to reiterate the fact that the United States has a commitment to the Republic of China. Taiwan remains a close trading partner with this country. We must maintain a credible military posture in East Asia, and we must sustain our traditional allies in the region. The survival of the Republic of China depends on our continued support, that support we are here to reconfirm today.

THE ALL-ALASKA GAS ROUTE

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. ANDERSON of California. Mr. Speaker, I want to share with my colleagues a letter I received on the future transportation of Alaska's natural gas. The letter follows:

JOHN A. VANNA,
Danville, Calif.

Hon. GLENN M. ANDERSON,
House of Representatives,
Washington, D.C.

DEAR MR. ANDERSON: I am writing to you regarding an urgent national problem which warrants the immediate attention of all Americans and of Californians in particular.

I am referring to the upcoming Federal decision on a pipeline route to transport badly needed Alaskan natural gas to the Lower 48 States.

I reside with my family in Danville, California, and work as Vice President and General Manager for Sea-Land Service, Inc., at the Company's Pacific Division headquarters in Oakland, California. Sea-Land is the largest American-flag general cargo steamship company. We operate forty-four fully containerized U.S.-flag ships, employing more U.S. citizen seamen than any other ocean carrier. The Company connects the State of California with more than 50 countries through our container terminals in Oakland and Long Beach. We serve both terminals with two sailings per week and, in 1976, handled more than 160,000 containerloads of cargo in and out of California. We directly employ more than 1000 people in the State with an annual payroll of $22.3 million.

As a senior manager of a large, American transportation company, and as a citizen who is concerned about the handling of this country's energy resources, I am convinced that the "All-Alaska" gas route is in the best economic interest of the United States and of California.

I am also concerned about developments in Washington, D.C., which indicate the possibility of the selection of a pipeline route through Canada. This would be subjecting our energy resources to foreign control.

As you are probably aware, a recent report by a Canadian government commission recommended that a Canadian gas pipeline to the U.S. be delayed for ten years to permit settlement of native land claims. We can ill afford delays in the delivery of our energy resources.

Also, if a Canadian route were selected, most of the economic benefits of employment, economic stimulation and increased tax revenues would accrue to Canada. The All-Alaska route would provide these same benefits to the United States—and California would be a primary participant.

A recent study indicated that the total economic impact to our state during the construction period alone would be nearly $1.8 billion. This would be generated primarily by the construction of an LNG tanker terminal, a regasification plant and the laying of additional pipe.

It has been calculated that the El Paso project would generate more than 121,000 man-years of primary, secondary and induced employment in California.

Additionally, our State would be assured of a steady, long-term supply of natural gas, which we could not count on if a Canadian pipeline route were to be selected.

Being fully aware of the pressures and time constraints placed upon you, Mr. Anderson, by virtue of your position, I would be most grateful if you would review this issue. Should you find sufficient merit in the arguments favoring the All-Alaska route, I would be most appreciative if you would communicate your feelings to the White House prior to the July 1, 1977, deadline which was established by the Alaska Natural Gas Transportation Act of 1976.

I am deeply grateful to you for your interest in this matter, which is of concern not only to Californians, but to all Americans.

Sincerely,

JOHN A. VANNA.

LEGISLATION TO LIMIT IMMUNITY AND REQUIRE LIABILITY INSURANCE FOR DIPLOMATS

HON. EDWARD I. KOCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. KOCH. Mr. Speaker, last week this body passed and sent to the Senate a significant piece of legislation designed to help protect Americans against abuses of diplomatic privilege by diplomats who are guests in our country. This legislation, H.R. 7819, the Diplomatic Relations Act, has two major purposes. The first is to bring our domestic statutes into conformity with the Vienna Convention on Diplomatic Relations, which the United States had ratified in 1972. Under the terms of that convention the United States is no longer required to extend diplomatic immunity for civil and criminal acts to lower-ranking employees of foreign embassies, unless they are actually performing official tasks at the time of the infraction. With the passage of this new legislation U.S. law will be changed to conform with the Vienna Convention so that cooks, chauffeurs, and other embassy service employees will have to answer in court for any auto accidents or other conduct that might create liability, which occurs off duty.

The other major purpose of this legislation is that all diplomatic personnel will be required to obtain liability insurance for any boats, aircraft, or automobiles that they operate. The failure to have liability insurance has resulted in a number of cases in which diplomats involved in accidents with American citizens have failed to compensate those injured. This new requirement that diplomats obtain adequate insurance will help protect Americans in the future from diplomatic abuses.

Last year, at my request, the Library of Congress prepared a study of the insurance requirements of both Western European and Eastern European nations. I was surprised to learn that the United States is one of the few nations that does not require insurance for diplomats as well as tourists who visit the country. This legislation will correct that situation so far as diplomats are concerned. In addition, because lower-ranking embassy employees will no longer have immunity from civil lawsuits, those jurisdictions like New York City which treat parking violations as civil matters will be able to prosecute a large number of diplomats who previously could defy local parking ordinances. Hopefully this will help correct a large part of the diplomatic scofflaw problem.

I am pleased that the House has adopted this legislation. I also introduced legislation earlier this year to require auto insurance for foreign diplomats in the United States, and I was a cosponsor of the bills introduced by Congressman JOSEPH FISHER on diplomatic immunity and Congressman STEPHEN SOLARZ on compensation of those injured by diplomats. I am pleased that the efforts of many Congressmen have resulted in legislation to deal with abuses of diplomatic privilege. I particularly commend Chairman DANTE FASCELL and the staff of the Subcommittee on International Operations of the International Relations Committee for their efforts in reporting this bill.

I also want to applaud the efforts of the Eastside Courier, a newspaper located in my congressional district, which has done a superb job of reporting on local and citywide matters, including the controversial matter of diplomatic immunity and its abuses. That newspaper's efforts have also contributed significantly to the passage of this legis-

lation that will reduce abuses of diplomatic privilege in New York City and around the country. I would like to insert their editorial on this legislation that appeared today:

DPLIABILITY

We applaud the House of Representatives and our local Congressman Edward Koch, for the passage of legislation that would modernize our concepts and use of diplomatic immunity.

New York, and particularly the Eastside, has gone to great lengths to be a cordial and accommodating host to the many foreign officials connected with the United Nations. But too often, this hospitality has been flouted by ungrateful diplomats. A conspicuous minority of foreign diplomatic personnel has consistently abused their traditional privileges, causing an unconscionable burden on our community.

Eastsiders have borne the greatest burden. Our police precincts are diminished by protecting diplomatic missions. Our on-street parking has been diminished by diplomatic special parking zones. Our pedestrians are endangered because diplomats are not required to carry motor vehicle insurance, or to stand liable for accidents they cause.

Yet, as good hosts, we have assumed these burdens without much complaint. But what of the undiplomatic manners of the guest?

We consistently find diplomat motor vehicles endangering our lives, neighborhoods and livelihoods—because they are too often driven by irresponsible drivers and parked before fire hydrants, driveways, bus stops and intersections. And always with complete impunity.

It is time we forced those few arrogant members of the diplomatic community to maintain at least the basic decorum required for civilized urban living.

To the majority of diplomats, who carry themselves in a perfectly respectable manner, we regret the actions of a few who have compromised the dignity of their profession.

DPL WHO?

One easy way to bring civility to the philistines among the Eastside's diplomatic community is to engrave the names of their respective countries on their license plates.

Thus, the consul of Spain would have a tag "SP–1" and his chief attache would be "SP–2" and so on, with a special cypher affixed to the plate indicating diplomatic status. This would make these diplomats representatives to the American people as well as the American government and United Nations.

Perhaps then, when diplomats bear the emblem of their country, they will be a little more careful not to offend any potential American tourist, businessman or consumer.

FUNDING OF RADIO FREE EUROPE AND RADIO LIBERTY

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. DERWINSKI. Mr. Speaker, last night we passed the State Department authorization bill, which included funding for Radio Free Europe and Radio Liberty. The significance of the funding of these radio stations was lost in the debate involving congressional practices.

However, lest the Members overlook the practicality of Radio Free Europe and Radio Liberty, I wish to insert a column by John Maclean, appearing in the Chicago Tribune of August 3, which stresses the importance of these operations:

RADIO WAVES TEAR OPEN IRON CURTAIN

(By John Maclean)

WASHINGTON.—In a remote prison camp in the heart of the Soviet Union, a small band of political prisoners huddle around a makeshift radio.

The prisoners, who had scraped together the radio with an ingenuity born of confinement, strain to hear the signal of the United States-sponsored Radio Liberty. Months later, one of their number, a noted dissident named Vladimir Bukovsky, would be exiled to the West and would tell how the radio sustained him and his comrades.

Throughout the Soviet Union and Eastern Europe this radio-listening scene, often in less harsh surroundings, is being repeated with a new urgency.

Once thought of as an outmoded relic of the Cold War, Radio Free Europe and Radio Liberty have found new purpose since the signing of the Helsinki Accords two years ago.

Integral parts of the agreement are provisions for human rights and freedom of communication. It was signed by the U.S., Canada, Soviet Union, and 32 European countries.

Paul Goma, a Romanian writer, says he and his fellow dissidents "found each other" through Radio Free Europe, which broadcasts to the Communist nations of Eastern Europe. They now rely on the broadcasts to keep each other informed of their activities.

And Andrei Amalrik, another exiled dissident, told congressmen in recent testimony how he and other dissidents listened to American broadcasts to Moscow for news of the raid on Yuri Orlov's apartment by the KGB, the Soviet secret police.

"Foreign broadcasts in Russian play an enormous role," Amalrik told the United States Commission on Security and Cooperation in Eastern Europe last spring.

"It is the only alternative information available to millions of Soviet citizens. The role of the radio in fact is continually growing for two reasons. One is simply physical—the number of transistor radios in the Soviet Union keeps on growing.

"[And second] the activity of the Soviet dissidents is itself continually growing, and the growth of that activity is communicated and becomes widely known."

Amalrik criticized the efforts of the Voice of America, the U.S. government's official broadcasting arm charged with spreading the word on American foreign policy. He said VOA fails to focus enough on Soviet events.

"It seems to me its broadcasts are a great deal less interesting than the broadcasts of Radio Liberty . . . because its [Radio Liberty's] basic focus is on Soviet events."

Radio Liberty broadcasts exclusively to the Soviet Union.

Many still criticize Radio Free Europe and Radio Liberty as being more effective in placating American conservatives than in changing Soviet society. Both networks no longer are considered tools for stirring insurrections, as during the Hungarian Revolution in 1956.

The official guidelines for the radio networks now call for "avoidance of any comment or broadcast of any material which could be reasonably construed as incitement to revolt or support for illegal or violent actions."

But no less an advocate than President Carter views the networks as "the most valuable instruments this nation has" for stimulating the flow of ideas across national boundaries, as called for in the Helsinki Accords.

"If detente with the Soviet Union and the countries of Eastern Europe is to have real meaning, we must work towards a freer flow of information," Carter said before his election.

Since his inauguration, Carter has asked Congress to approve $45 million in additional funds to double the power of the transmitters used by Radio Free Europe, Radio Liberty, and Voice of America.

In short, Radio Free Europe and Radio Liberty no longer seek to lead the charge—urging the masses to overthrow their Communist oppressors. But they do provide an "alternate domestic radio service" for their audience, which is estimated at 4 million to 5 million daily in the Soviet Union, and about 13 million daily in Poland, Romania, Hungary, Czechoslovakia, and Bulgaria.

While VOA broadcasts go unimpeded, Radio Liberty has to overcome jamming in the Soviet Union, and Radio Free Europe must overcome jamming in Bulgaria and Czechoslovakia.

Amalrik told the Helsinki Commission that while VOA is the most listened to station in the Soviet Union because its signal is so strong, most Soviets prefer the meatier programming of Radio Liberty.

Commentators for Radio Liberty might read an essay on the state of religion in the Soviet Union, how the Soviets assess the recent Spanish parliamentary elections, or the effect on the private sector of the new Soviet Constitution.

"A Soviet listener who puts in the time [to listen to that station] has earned the right to have something broadcast to reward his effort," Amalrik said.

The Soviet government vehemently disagrees. While the Soviets long have claimed that Radio Free Europe and Radio Liberty were hostile and slanderous, they now charge the networks violate the Helsinki Accords—by intervening in domestic affairs of sovereign nations.

A recent commentary on Radio Moscow attacked both networks along those lines.

"The undermining radio stations, Radio Free Europe and Radio Liberty, broadcasting slanders and disinformation about the world of socialism, for which dozens of millions of dollars were being spent annually, belonged to the CIA arsenal," Radio Moscow complained.

Sig Mickelson, former CBS News president who now heads Radio Free Europe and Radio Liberty, has cautioned that the Soviets and Third World countries are making every effort to keep foreign media from crossing national boundaries.

"The Soviet Union is leading a concerted international campaign with the enthusiastic support of a large number of Third World countries to put the dead hand of the bureaucrat on the throttle of the worldwide communications transmissions system," Mickelson said in a January speech.

Meanwhile, Radio Free Europe and Radio Liberty are emerging from the shadows that surrounded them after 1971 when a financial link between the networks and the CIA was disclosed.

While that link was officially broken by placing the networks under a presidentially appointed Board for International Broadcasting, the scandal fueled a campaign to terminate the networks as relics of the Cold War.

Then Sen. J. William Fulbright [D, Ark.] led the attempt to scuttle the networks, calling them a nettle in the delicate membrane of detente. He failed.

But Radio Free Europe and Radio Liberty kept a low profile for several years, failing, for example, to seek funds for the additional transmitter power needed to overcome heightened jamming. Now they have a champion in President Carter and a cause in the Helsinki Accords.

MOBILIZATION FOR SURVIVAL: CO-OPTATION OF THE ANTI-NUCLEAR MOVEMENT

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. McDONALD. Mr. Speaker, the section of the Marxist-Leninist movement led by the Soviet Union is in the process of coopting the anti-technology anti-nuclear power movement to its drive for Western disarmament. The theoretical explorations of how to harness the revolutionary potential of the anti-nuclear ecology movement have been underway in Europe and the United States for some time with Institute for Policy Studies-Transnational Institute associate Hans Magnus-Ensenberger's article in New Left Review being one example. And having marked the large attendance at Ralph Nader's critical mass conferences, Women Strike for Peace (WSP), an organization which has enjoyed the full support of the Communist Party, U.S.A. (CPUSA) from its inception and which continues to work closely with such international Soviet fronts as the World Peace Council (WPC) and Women's International Democratic Federation (WIDF), has been devoting its attention to both the WPC's new Stockholm appeal and the ecology anti-nuclear power for peaceful purposes area.

Now two veteran Communist organizers who have worked with the WPC and its U.S. affiliates for many years, Sidney Peck, a former member of the Wisconsin State Committee of the CPUSA; and his friend Sidney Lens, a former member of the now disbanded Trotskyite Revolutionary Workers League (RWL) have initated an organization to combine the disarmament and anti-nuclear power issues. The work of Lens and Peck in organizing the mobilization for survival was supplemented by a British agent of the World Peace Council, Peggy Duff, who entered the United States earlier this year to provide impetus and direction.

I commend the following article from the July 29, 1977, issue of the newsletter, Information Digest, to my colleagues' close attention:

MOBILIZATION FOR SURVIVAL

A new national organization to combine the anti-nuclear power movement with the international Soviet sponsored campaign for U.S. disarmament has been formed by professional activist organizers of the former anti-Vietnam War coalitions.

Now circulating its manifesto, *"A Call to Action,"* the Mobilization for Survival (MFS), operating from the headquarters of the Women's International League for Peace and Freedom (WILPF), 1213 Race Street, Philadelphia, Pa 19107 [215/563-1512], made its formal debut on April 23, 1977, at a Philadelphia conference.

Some 118 persons from 49 groups and organizations attending including the American Friends Service Committee (AFSC); Chicago Peace Council (CPC), a Communist Party, U.S.A. front; North American Congress on Latin America (NACLA); Fellowship of Reconciliation (FOR); Women Strike for Peace (WSP) and its California affiliate, Another Mother for Peace (AMP); Women's International League for Peace and Freedom (WILPF); Clergy and Laity Concerned (CALC); the AFSC's Campaign to Stop the B-1 Bomber; the Coalition for a New Foreign and Military Policy (CNFMP) and assorted remnants of the Communist Party, U.S.A.-initiated sequence of anti-Vietnam coalitions ranging from the Spring, National and New Mobilization Committees through the People's Coalition for Peace and Justice (PCPJ).

Sid Peck, now teaching sociology at Clark University, and Kathy Mathews of the Harvard Employees Organizing Committee have explained in an article for WIN magazine (7-28-77) that "The politics of the Mobilization for Survival are to energize the growing opposition to the military through effective political education, solid community organizing, and significant mass actions."

The principal immediate political goal of the MFS is to bring "the power of nonviolent direct mass action to prevail at the UN Special Assembly on Disarmament next May (or June), so that the international community takes on the demand of abolishing nuclear weapons as a singular, universal, enforceable demand."

Peck and Mathews emphasize that for the past thirty years and again with its "New Stockholm Appeal" the World Peace Council (WPC), the principal international Soviet front which campaigns for U.S. disarmament while providing logistical support to Soviet-sponsored terrorist movements, "continues to push for detente and an end to the threat of nuclear war." The article notes that the WPC and two of its more active affiliates, the Japan Council Against Atomic and Hydrogen Bombs (Gensuikyo) and the British International Confederation for Peace and Disarmament (ICPD) "are working closely with non-governmental organizations the world over to create maximum impact on the United Nations Special Assembly on Disarmament in late May, 1978. Clearly, there is a growing international consciousness expressing the demand for zero nuclear weapons."

The Mobilization for Survival is building on another WPC-associated base, that layer of the anti-Vietnam organizing that focused on the legislative process.

"When Congress voted to stop funding the Vietnam War, these lobbying groups were ecstatic. They are still hopeful in their work—and they have formed legislative action coalitions such as the Campaign to Stop the B-1 Bomber and the Coalition for a New [Foreign and Military] Policy. In generating these campaigns, they have created an active political network across the country to respond at the moment to any new legislative crisis regarding the arms race.

The third element drawn upon the MFS is the community and workplace organizing carried out by such groups as the New American Movement (NAM) demanding government programs to solve "unemployment, inadequate health care, poor education, substandard housing, neglect of the elderly and the young." The issue of disarmament is presented to these target groups as, simply, "guns or butter."

The fourth "political base" for the MFS is the anti-nuclear power and ecology movement. The article notes that "In particular, the Clamshell Alliance carried off one of the best organized mass actions of this decade. Through a powerful display of nonviolent direct action, Clamshell was able to convey a serious political message. For many, the issue of the nuclear threat—by reactor or bombs—was joined. Because of Seabrook and similar efforts, movement people, and thousands of others, have become sensitized to the plutonium economy and nuclear proliferation."

According to author Sid Peck, a former member of the Wisconsin State Committee of the CPUSA, his friend Sid Lens, a former member of the now defunct Trotskyite communist Revolutionary Workers League (RWL), drafted the original conference call after meeting with AFSC and other "peace activists" last Thanksgiving in Boston. "At that gathering, Lens shared his fears and urged those assembled to issue a call for action. In turn Lens was asked to draft the call for prominent signatures."

Next, AFSC "national peace secretary" Ron Young arranged for British WPC and ICPD activist Peggy Duff to speak to the Boston group and impress them "with the historic importance of the UN Special Assembly on Disarmament * * *." Duff demanded, "Well, what are you folks going to do about it?" As Peck and Mathews note, the formation of the Mobilization for Survival was the response.

Another veteran organizer, Norma Becker, the WRL chairwoman, was brought in to chair an organizing meeting in New York City on March 12, 1977. After a general consensus to work against all forms of "nuclear pollution" was reached discussion broke down over particulars of dates for actions and their nature. Michael Klare, NACLA founder, fellow of the Transnational Institute of the Institute for Policy Studies and now with the InterUniversity Committee to Stop War and Military Spending who has lectured on U.S. arms policies to meetings of the WPC and in Havana, took the lead in proposing that questions of detail be left to later meetings.

The Mobilization for Survival calendar starts with traditional anti-atomic local demonstrations around the August 6-9th period of the Hiroshima/Nagasaki anniversaries. The MFS states:

"We will call on people to mount local actions including demonstrations (at nuclear power sites wherever possible), vigils, leafleting, petitioning in their communities as a signal that the Mobilization for Survival has begun."

Joint press conferences in Hiroshima and the U.S. will be held to formally announce the launching of the MFS. MFS organizers will participate in the annual August conferences of the Gensuikyo and Gensuikin groups.

During the period October 15 to November 15, the MFS will ask city councils in as many cities as possible to pass resolutions "demanding that Congress dramatically cut military spending and shift funds to human needs." The Spring 1978 focus will be the mass rally at the United Nations.

MFS leaders include: Norma Becker, Carol Patti and Dave McReynolds, WRL; Terry Provance, Pat Conway and Kathy Knight, AFSC; Michael Klare; Tom Cornell and Dorothy Maas, Fellowship of Reconciliation (FOR); Mary Ellsberg, Dean Hammer and J. Paul Hodel, Connecticut Peace Action Coalition (CPAC).

The Mobilization for Survival participated in a July 9, 1977, conference of "peace activists" held at Yale Law School sponsored by the Connecticut Peace Action Coalition.

Featured speakers included CPUSA activist Sid Taylor who "stressed the importance of demanding that the U.S. Government live up to its obligation to give aid to Vietnam." Other participants included Gloria Emerson; General (Ret.) Hugh B. Hester; Louise Ransome, Gold Star Parents for Amnesty; Tom Wynn, National Association of Black Veterans; AFSC activist Stewart Meacham who denounced the remaining non-communist countries in Southeast Asia—Philippines, Malasia, Singapore, Thailand and Indonesia—as having increased "repressive measures" since the fall of Vietnam, Cambodia and Laos; and the ubiquitous Cora Weiss.

MFS regional offices include:

Chicago Mobilization for Survival, 343 S. Dearborn, Chicago IL 60604 [312/663–1248].

San Francisco Campaign Against Nuclear Weapons, 1360 Howard Street, San Francisco, CA 94013 [415/626–6976].

Boston Mobilization for Survival, 13 Sellars St., Cambridge, MA 02139 [617/354–0008].

FLYING COLORS FOR NUCLEAR SAFETY

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. TEAGUE. Mr. Speaker, in the plethora of material that has been published recently on nuclear energy, there has been endless exhortations about safety hazards and projected scenarios for core meltdowns. There has been far less dramatic discussion of the safety hazards related to coal utilization.

It is time to examine some hard facts and make some necessary comparisons with regard to these issues.

The Nuclear Safety Bimonthly which is prepared at the Oak Ridge National Laboratory for the Nuclear Regulatory Commission has presented a comparison of coal and nuclear safety records in plant operation and associated transportation. All figures are based on a single 1,000-megawatt plant for each energy source, for a 1-year period.

OPERATION AND ASSOCIATED FUEL TRANSPORTATION FOR A 1,000-MEGAWATT PLANT FOR 1 YEAR

Coal: Fatalities, 1.65; non-fatal injuries, 48.0; total man-days lost per year, 12,750.

Nuclear: Fatalities, 0.109; non-fatal injuries, 6.08; total man-days lost per year, 960.

To state these same numbers in another way, it is 15 times more likely that a person will die working in a coal plant than in a nuclear plant or transporting fuel to a coal plant than to a nuclear plant. It is eight times more likely that a coal worker will incur a nonfatal injury than a nuclear worker. For every 1 workday lost due to a nuclear-related accident, more than 2 workweeks are lost in coal-related accidents.

These figures clearly indicate the safety superiority of nuclear power generation over coal power generation.

In the August 1 issue of the Energy Daily an article entitled "Nuclear Is Safest Energy Source in U.K." further substantiates the safety record of nuclear power. The text of the article which follows also includes comparisons of nuclear with other nonnuclear technologies such as gas, offshore oil, and gas and oil refining.

Accusations in Parliament last winter that he was constantly finding fault with the safety record of Britain's nuclear industry provoked Energy Secretary Anthony Wedgewood Benn to promise members of the Parliament the accident statistics of the British fuel industries over the past 20 years. He released them last week, commenting that the outstanding safety record of the nuclear industry "emerges clearly from the figures." None of the handful of fatal accidents in the nuclear industry were caused by the specific hazards of radioactivity.

Fatal accidents to employees over the period 1957–76 totalled: coal, 3,562; gas (1966–76), 67; electricity (including nuclear stations), 312; offshore oil and gas (1965–76), 65; oil refining, 43; and nuclear fuel and R&D, 9.

Still more revealing is the fatal accident rate per 1,000 employees, which show that Britain's offshore energy activities are by far the most hazardous. Figures for 1976 are: offshore oil and gas, 1.5 deaths per 1,000; coal, 0.19; gas, 0.10; electricity, 0.09; oil refining, 0.05; nuclear fuel and R&D (no deaths).

Mr. Speaker, in nearly 2 decades of commercial nuclear power generation in the United States there has been: No injury to any member of the public; no radiation injury to any plant worker.

In addressing the subject of possible core meltdown, a report of the first in a series of three experiments recently conducted by Albuquerque's Sandia Laboratories appeared in the July 28 issue of the Energy Daily. Excerpts from the account of the Sandia tests follow:

The worst accident that could happen may not be so bad after all, indicate early results of advanced reactor safety testing by Albuquerque's Sandia Laboratories.

The researchers sought to make their initial experiment the most realistic conducted anywhere.

In the Sandia experiment, happily, the sodium successfully permeated the porous simulated debris bed and kept it to a cool 734° C maximum, thanks to sodium's natural qualities as a conductor. This natural cooling is preferred for breeder safety because mechanical cooling systems could fail.

It is evident that the risks that might be associated with nuclear power generation are not being ignored. Rather, they are being addressed in a straightforward, public manner.

The administration's new energy proposal has placed heavy emphasis on increased coal production, which is essential if we are to meet our near-term energy needs. It has at the same time recommended the deferral of the Clinch River Breeder Reactor, which may prove essential if we are to meet the longer-term energy needs of this country. The safety record of coal power is poor compared to that of nuclear power but we will have to use coal nonetheless and work on improving its failings. However, the safety record for nuclear power is excellent and the breeder offers us an almost unlimited potential for energy production. Why then ignore this safety record and the enormous energy capability of breeders when there is great question about our long-term energy needs?

I ask all of my colleagues to consider this issue before the vote on the Clinch River breeder reactor.

NATIONAL WOMEN'S BUSINESS OWNERSHIP CAMPAIGN

HON. JIM WRIGHT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. WRIGHT. Mr. Speaker, last year during the campaign, President Carter spoke of the need for a program to assist women in becoming the owners, and not just the employees, of American business. He is now making good on that commitment.

Yesterday at the White House the President's special assistant, Ms. Margaret Costanza, held a joint press conference with A. Vernon Weaver, Administrator of the Small Business Administration, and Ms. Pat Cloherty, Deputy Administrator-designate of SBA, to announce the beginning of a National Women's Business Ownership Campaign by the SBA.

The program has the strong support of the President.

Mr. Speaker, I ask unanimous consent to insert in the RECORD a press release from the Small Business Administration issued in connection with this announcement, as well as a fact sheet setting forth the details of the program:

NATIONAL WOMEN'S BUSINESS OWNERSHIP CAMPAIGN BY SBA ANNOUNCED BY WHITE HOUSE TODAY

A national Women's Business Ownership Campaign by the Small Business Administration was announced today by Margaret Costanza, Special Assistant to the President for Public Liaison.

She made the announcement at the White House in a joint press conference with A. Vernon Weaver, Administrator of SBA, and Ms. Pat Cloherty, Deputy Administrator-designate, SBA, who will have overall direction of the program.

"This program has my strong support and the President's strong support," Ms. Costanza said. "In the campaign the President discussed the need for such assistance by SBA for women entrepreneurs and this initiative follows through on his commitment to work to assure women equal economic opportunity.

"I want to commend Vernon Weaver, Pat Cloherty and SBA for moving forward with this timely and significant program at this time. SBA has the programs and the resources to make such an effort a success and I am confident that under the new leadership at SBA it will be a success."

Weaver pointed out that "SBA is going to have a 'new look'—internally, with greater emphasis on the appointment and promotion of women, and externally, with a strong definite program to encourage business ownership by women.

"We will take definite, positive actions in our basic programs to assure the success of this initiative. We are committed to the use of SBA as a major instrument to assist women in gaining entry into the small business sector of our economy."

Ms. Cloherty, the deputy-designate at SBA, said:

"The goals of this campaign are to increase the number of women in small business. This will be done through a combination of management assistance, financial assistance, advocacy, and assistance in securing Federal contracts and services.

"This campaign will begin immediately and will be keyed to short-term goals designed to reorient SBA priorities, and a longer term strategy geared to developing specific programs. The latter will take feedback from the immediate program and will utilize resources already in existence, such as the Advisory Council on Women in Business. A pilot program will be developed in a selected sector of the economy where women already have experience and the leap to ownership position is not that great.

"To deal first with the short-term plan:

"A. Advocacy—a series of some 110 seminars and conferences will be mounted with the primary purpose of informing women about SBA programs and how to get into business or develop a business.

"B. Financial Assistance—through our lending programs administered by our district offices, SBA will be more attentive to the needs of women seeking business loans. An attempt will be made to stimulate greater activity through the Small Business Investment Company program.

"C. Management Assistance—this element is critical to the success of many small businesses, particularly new ones. Knowledgeable persons have observed many times that the failure of many small businesses is traceable to inadequate management systems. SBA will devote resources in this area specifically to women. Among these current programs will be included training; use of the retired business people who are volunteers in the Service Corps of Retired Executives (SCORE) and the Active Corps of Executives (ACE) who provide counseling; the call contract program which is a more specific form of counseling assistance; the Small Business Institute program which harnesses university talents in the assistance of small business and the pilot University Business Development Center project which brings together federal, state, local and other resources in universities to assist small business persons.

"D. Contract Assistance—this office is instituting a deliberate and systematic search by contract specialists in our Regional offices to locate and add to our source files the names of eligible women-owned small businesses desiring to participate in Government contract work. These businesses will also be assisted in the mechanics of securing contracts.

"As you can see, the key elements of this campaign do not involve reinventing the wheel. They are instead based on the maximum utilization of existing resources coupled with a reorientation and much sharper focus on women. There are program elements, however, designed to enhance the implementation of the program . . .

"It will be necessary for SBA people on the line in the District offices to have more intensive training to sensitize them to the needs of women desiring to enter business. We will work to increase the number of women loan officers and supervisory loan officers and managers in order to provide more sensitivity to the problem women face in business. And SBA personnel will be made aware of the special requirements of the program.

"We anticipate that the Advisory Councils composed of people knowledgeable in the nuts and bolts of business will be heavily involved in the process of program development.

"I am pleased to be a part of this initiative which the Agency has mounted and I plan to follow closely the results through visits to District and Regional offices where, after all, the action is—in short, we mean business!"

The first of the 110 seminars as a part of this national effort will be held August 24 in San Francisco.

FACT SHEET

NATIONAL WOMEN'S BUSINESS OWNERSHIP CAMPAIGN

The need

Women constitute 51.3 percent of the population in the United States; yet they own only 4.6 percent of the businesses.

Only 11 percent of SBA loans in 1976 went to women, and only 8 percent of dollars went to women.

In FY 1977, loans to women have been averaging approximately 27 percent less in dollar amounts than other loans.

In 1976, only 11.9 percent of the persons counseled through our Management Assistance programs were women.

Women have demonstrated a strong desire and need to participate in the economic life of the Nation—in 1975 and 1976, 27 percent of those attending SBA's training sessions were women. In the first nine months of FY 1977, almost 40 percent of the persons attending the training sessions were women.

Specific SBA initiatives and response

Advocacy—A series of some 110 seminars and conferences will be held by December 1978. The primary purpose is to inform women about SBA programs and how to get into business or develop a business. The first seminar will be held August 24. These seminars will also be geared toward providing information on how to prepare bids for Government contracts, and information on national business trends and issues.

Financial assistance—SBA will be more attentive to the needs of women seeking business loans. Field-level loan officers will be encouraged to seek out opportunities to involve women in business through our lending programs. And an attempt will be made to stimulate greater activity through the Small Business Investment Company program. SBA's regular loan program provides for loans up to $500,000.

Management assistance—SBA will devote more resources in this area specifically to women. Management Assistance programs involve counseling; training; the Service Corps of Retired Executives/Active Corps of Executives (SCORE/ACE) program; the call contract program; the Small Business Institute program and others. SBA publications are being revised with these programs in mind.

Procurement assistance—A search is being instituted to locate and add to sources files the names of eligible women-owned small businesses. They will also be assisted in the mechanics of securing Federal contracts for goods and services.

Designating roles—A Representative for Women in Business will be designated in each of our 10 Regional Offices. Bank Relations Officer will also be designated for each region. An individual in each field office will be designated to counsel women who wish to establish a business, or who are encountering problems in repaying SBA loans.

Internal priorities—SBA personnel will be made aware of the intent of the Agency to follow through on these initiatives and in some cases training programs will be instituted on the field level in order to sensitize personnel to the needs of business women. Efforts will be made to increase the number of women loan officers, supervisory loan officers and managers.

Long-term plan—The long term strategy is geared to developing specific programs. Information will me gathered as the short-term plan is carried out, and from sources such as the Committee on Women in Business of SBA's National Advisory Council.

President Carter's stand on the issue

President Carter told the National Women's Agenda Conference on October 2, 1976, that under his Administration the woman entrepreneur would have "business assistance, with loan guarantees, finanacial advice, and constant support" from the Small Business Administration.

Available SBA programs

Financial assistance—SBA offers a broad range of loan programs for small businesses needing money that cannot be borrowed from conventional lenders. The Agency may either participate with a bank or other lender in a loan, or guarantee up to 90 percent of a loan which a lender agrees to make. SBA loans may be used for business constructions, expansion, or conversion, the purchase of machinery, equipment, facilities, supplies, materials, or working capital.

Management assistance—The Agency's Management and Technical Assistance program is extensive and diversified. It includes free individual counseling by retired and active business executives (SCORE/ACE); training programs such as prebusiness workshops, problem clinics, conferences and courses; the Small Business Institute program in which senior and graduate students of business schools provide on-site management counseling to small business owners; the Call Contracts program, which provides management and technical assistance to small businesses from professional consulting firms under contract to SBA. The Agency also issues hundreds of management, technical, and marketing publications.

Assistance in securing contracts—Specialists in this field throughout the country counsel small businesses on how to prepare bids and obtain prime contracts and subcontracts, direct them to Government agencies that buy the products or services they supply, help them get their names placed on bidders' lists, and assist in obtaining drawings and specifications for proposed purchases. They also supply leads on research and development projects, new technology and assistance in technology transfer.

Advocacy—SBA represents the small business community at national, state, and local government levels and with business, professional and trade associations and organizations. The Agency's Advocacy Office endeavors to find out what problems small businesses are having and calls these problems to the attention of Government officials, and attempts to develop solutions.

OFFICE OF CONSUMER ADVOCACY

HON. BUD SHUSTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. SHUSTER. Mr. Speaker, over the past several months I have received scores of letters urging my support for the creation of an Office of Consumer Advocacy. These letters have not come from the folks back home who would supposedly benefit, but those letters have come from the heads of Federal agencies who would be in charge of implementing the program.

In the June 27 edition of the Wall Street Journal, John W. Morris, the first assistant district attorney in Philadelphia pointed out an aspect of the consumer protection bill that somehow was overlooked by the bureaucrats in Washington who took the time to write Members of Congress. I know my colleagues will be interested in the excellent arguments set forth by Mr. Morris and I ask unanimous consent that the article be inserted into the RECORD:

[From the Wall Street Journal, June 27, 1977]

NO TO CONSUMER ADVOCACY

The creation of an Office of Consumer Advocacy seems imminent. While the plight of the consumer is obvious—he is ill-equipped to defend against or even recognize the depradations of all forms of marketers—I think the much heralded Office of Consumer Advocacy will bring nothing but trouble.

Although the debate to date has centered on the cost-benefit arguments of additional economic regulation, a bit of trial and possible error on that score would not seem inappropriate. What concerns me about the proposed office is the unexamined but radical shift it will bring to our structure of democratic government.

Traditionally, government attacks problems through legislative action and executive policy. The solution, whether it be wise or foolish, becomes a matter of settled govern-

mental policy, subject to modification and electoral consequences.

With the Office of Consumer Advocacy comes a new and dangerous idea. It will be the function of that office to cajole and sue other governmental departments and regulatory agencies on behalf of consumer interests. Thus, our elected and appointed officials will no longer be trusted or expected to address themselves to the issues. Our officials will now be mere litigants in a political system in which complex issues of economic policy will be placed before the courts.

Congress, finding its duty to regulate commerce too complex, has decided to deputize these lobbyists whom it found impossible to satisfy. The President, instead of settling upon a recognizable consumer policy, is being asked to assent to a plan under which a soon-to-be-official lobbying group can sue him and his department heads to get what they want in court.

If consumer policy has been unresponsive, inexpert or slow of development, it is ironic that we now turn to the courts to correct the situation. Judges are not meant to be policymakers. Nor can we expect our overburdened judiciary to resolve the competing pressures of lobbying groups.

Think what you may of the power of lobby and pressure groups on government, why is it that we are now willing to institutionalize one such group within the very walls of government? If there be an Office of Consumer Advocacy, then why should there not also be paid officials advocating the equally just causes of aggrieved taxpayers, the unemployed and the underprivileged?

I submit that it is not the function of government to advocate.

JOHN W. MORRIS,
First Assistant District Attorney
District Attorney's Office Philadelphia.

NATIONAL INSTITUTE OF EDUCATION PRAISED FOR ASSISTANCE IN TENNESSEE AND SOUTH CAROLINA SCHOOL REFORM

HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. BRADEMAS. Mr. Speaker, I would like to say a word about a significant project of the National Institute of Education. The Institute provided support to the legislators' education action project which was instrumental in helping win passage of recent landmark school reform laws in Tennessee and South Carolina. The success of this project is an example of the constructive Federal-State partnership in education being encouraged by the Institute.

At this point in the RECORD I insert letters which I recently received from legislative officials in South Carolina and Tennessee commending the Institute for its assistance:

JOINT LEGISLATIVE COMMITTEE ON ELEMENTARY-SECONDARY SCHOOL FINANCE,
Nashville, Tenn., May 25, 1977.

MS. PAT GRAHAM,
Director, National Institute of Education, Washington, D.C.

DEAR MS. GRAHAM: I am enclosing copies of Public Chapters 289 and 290 of the Tennessee Public Acts of 1977 which enacts the Tennessee Education Finance Act of 1977 and a new Student transportation formula for our state. These major reforms were made possible by a grant from the Legislators Education Action Project of the National Conference of State Legislatures which NIE has assisted.

Our Governor and the leadership of the Tennessee General Assembly have called this the most significant education legislation in our state in the last twenty-five years, and our sincere appreciation to the Institute and to the National Conference of State Legislatures for the assistance.

Sincerely,

HOWELL W. TODD,
Staff Director.

SOUTH CAROLINA,
House of Representatives,
Columbia, S.C., July 5, 1977.

DR. PAT GRAHAM,
Director, National Institute of Education, Washington, D.C.

DEAR DR. GRAHAM: During the past two and a half years we have grappled with the thorny questions of fiscal equity and accountability in the public schools of South Carolina. After months of study and detailed legislative debate we have enacted the South Carolina Education Finance Act of 1977. This major piece of reform legislation would never have been drafted, much less become law, without valuable assistance from the Legislators' Education Action Project of the National Conference of State Legislatures, a project supported heavily by the National Institute of Education in the past few years.

We in the South Carolina General Assembly consider this to be perhaps the most significant education enacted in our state in the last decade, and we would like to express our sincere appreciation to the Institute and the National Conference of State Legislatures for their assistance in this matter. A copy of our new school finance legislation is enclosed for your consideration.

Sincerely,

NICK A. THEODORE,
Chairman, House Education Committee.
REX L. CARTER,
Speaker, House of Representatives.
HARRY A. CHAPMAN, JR.,
Chairman, Senate Education Committee.
JAMES M. WADDELL, JR.,
Senator.

MONTHLY LIST OF GAO REPORTS

HON. JACK BROOKS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. BROOKS. Mr. Speaker, the monthly list of GAO reports includes summaries of reports which were prepared by the staff of the General Accounting Office. The June 1977 list includes:

JUNE 1977 LIST

AGRICULTURE

Food Stamp Receipts—Who's Watching the Money? CED–77–76, June 15.

Marketing Meat: Are There Any Impediments to Free Trade? CED–77–81, June 6.

Procedural Operations of the Farmers Home Administration, Department of Agriculture, in Wisconsin. CED–77–29, February 10.

Letter reports

Removal of conservation measures installed under Federal cost-sharing programs. CED–77–63, May 17.

School lunches served in New York City do not meet minimum nutritional standards. CED–77–89, June 15.

Department of Agriculture plans for acquiring computer equipment for the Farmers Home Administration. LCD–77–114, June 23.

How Agriculture's Office of Investigation reviewed a loan by the Farmers Home Administration to the Collier County Sewer District A, Florida. CED–77–36, February 23.

Farmers Home Administration's rural rental housing program in Iowa and Missouri. B–114873, January 30, 1973.

Complaints concerning the Farmers Home Administration's rural housing loan program in five Arkansas counties. B–114873, July 21.

COMMERCE AND TRANSPORTATION

Reporting, Staffing, and Other Changes Would Enhance the Internal Audit Function. CED–77–58, June 1.

Amtrak's Incentive Contracts with Railroads—Considerable Cost, Few Benefits. CED–77–67, June 8.

The Federal Role in Merchant Marine Education. FPCD–77–44, June 15.

Need to Resolve Metro Funding. PSAD–77–123, June 29.

COMMUNITY AND REGIONAL DEVELOPMENT

Department of Housing and Urban Development Could Be Streamlined. FPCD–77–56, June 16.

The Work Measurement System of the Department of Housing and Urban Development Has Potential But Needs Further Work to Increase Its Reliability. FPCD–77–53, June 15.

Poor Design Reviews and Construction Inspections of Apartment Project in Rhode Island. CED–77–66, June 3.

Planning Federal Assistance to Communities Affected by the Trident Submarine Base, Washington State. LCD–77–320, June 8.

EDUCATION, TRAINING, EMPLOYMENT, AND SOCIAL SERVICES

The National Direct Student Loan Program Requires More Attention by the Office of Education and Participating Institutions. HRD–77–109, June 27.

Information on the Summer Youth Employment Program. HRD–77–121, June 27.

GENERAL GOVERNMENT

Review of the Impoundment Control Act After 2 Years. OGC–77–20, June 3.

Government Regulatory Activity: Justifications, Processes, Impacts, and Alternatives. PAD–77–34, June 3.

Personnel Ceilings—A Barrier to Effective Manpower Management. FPCD–76–88, June 2.

Management of Civilian Personnel in the Federal Government: The Present Situation and Proposals for Improvements. FPCD–77–36, June 7.

Extent of Use and Application of Fitness-for-Duty Examinations by Federal Agencies. FPDC–77–38, May 13.

The Federal Deposit Insurance Corporation's Financial Disclosure Regulations Should be Improved. FPCD–77–49, June 1.

Changes to the Federal Employees Group Life Insurance Program are Needed. FPDC–77–19, May 6.

Centralized Direction Needed for Calibration Program. LCD–77–426, June 13.

The Force of the Public Utility Holding Company Act Has Been Greatly Reduced by Changes in the Securities and Exchange Commission's Enforcement Policies. FGMSD–77–35, June 20.

Fire Prevention and Security at the Denver Federal Center. LCD–77–341, May 19.

Review of the American Indian Policy Review Commission. GGD–77–62, June 29.

Audit of the House Beauty Shop Calendar Year 1976. GGD–77–54, June 8.

Letter reports

Information about the New Federal office building in Indianapolis. LCD–77–346, June 2.

Computer operations and data processing activities of the Social Security Administration. HRD–77–97, June 3.

GAO comments on impoundments proposed in the President's 12th special message to the Congress for fiscal year 1977. OGC–77–19, June 13.

Agreement between the Navy and the Interior Department for use of land at Sachuest Point, Rhode Island. LCD–77–344, May 6.

How the Office of Management and Budget is carrying out its duties under the Federal Reports Act. GGD–77–38, May 25.

Improper use of Federal funds by the National Commission on the Observance of International Women's Year to promote ratification of the Equal Rights Amendment. HRD–77–27, January 17.

Clarification of information in GAO report on "Management of Federal Supply Service Procurement Programs Can Be Improved." PSAD–76–16, September 2, 1975.

GENERAL SCIENCE, SPACE, AND TECHNOLOGY

Landsat's Role in an Earth Resources Information System. PSAD–77–58, June 10.

More Emphasis Needed on Data Analysis Phase of Space Science Programs. PSAD–77–114, June 27.

HEALTH

The Swine Flu Program: An Unprecedented Venture in Preventive Medicine. HRD–77–115, June 27.

Federal Efforts to Protect Consumers from Polybrominated Biphenyl Contaminated Food Products. HRD–77–96, June 8.

Investigations of Medicare and Medicaid Fraud and Abuse—Improvements Needed. HRD–77–19, May 23.

Letter reports

Legislation needed to eliminate inequities in the Supplemental Security Income Program resulting from different treatments of room and board and other living expenses. HRD–77–101, June 23.

Are Public Health Service hospitals and clinics operating at 1973 levels, as required by law? HRD–77–111, May 26.

The Indian Health Service needs better justification of its plans to construct or expand hospitals. HRD–77–112, May 31.

Discussion of issues related to the swine flu vaccine program. HRD–77–66, March 8.

Compliance with Medicaid requirements that States providing long-term care have an effective program of control over use of such services. HRD–77–56, March 1.

INTERNATIONAL AFFAIRS

Results of the Third Law of the Sea Conference 1974 to 1976. ID–77–37, June 3.

An Evaluation of the U.S. Early Warning System in the Sinai. ID–77–11, June 6.

U.S. Direct Investment in South America's Andean Common Market. ID–76–88, June 7.

U.S. Assistance Provided for Resettling Soviet Refugees. ID–76–85, June 20.

Actions Recommended to Make the Foreign Gifts and Decorations Act More Effective. ID–77–31, June 23.

Impact of Population Assistance to an African Country. ID–77–3, June 23.

U.S. Participation in International Organizations. ID–77–36, June 24.

LAW ENFORCEMENT AND JUSTICE

Military Jury System Needs Safeguards Found in Civilian Federal Courts. FPCD–76–48, June 6.

The District of Columbia's New Detention Center: Careful Planning Essential for Adequate Addition. PSAD–77–86, June 13.

Crime in Federal Recreation Areas—A Serious Problem Needing Congressional and Agency Action. GGD–77–28, June 21.

Grievance Mechanisms in State Correctional Institutions and Large-City Jails. GGD–77–63, June 17.

NATIONAL DEFENSE

Accountability and Control of Warheads in the Custody of the Department of Defense and the Energy Research and Development Administration. PSAD–77–115, June 2.

Withdrawal of U.S. Forces from Thailand: Ways to Improve Future Withdrawals. LCD–77–402, June 3.

Unauthorized and Questionable. Use of Appropriated Funds to Pay Transportation Costs of Non-Appropriated-Fund Activities. LCD–76–233, June 3.

Two Coproduction Programs—F–5E Aircraft in Taiwan and M–16 Rifle in the Philippines. ID–76–84, June 6.

Submarine Supply Support Costs Can Be Greatly Reduced Without Impairing Readiness. LCD–76–237, June 7.

Air Force Continues to Repair Parts When Serviceable Parts Are Available. LCD–77–202, June 7.

Military Services Should Uniformly Adopt Improved Packaging Techniques. LCD–77–216, June 8.

Another Look at the Readiness of Strategic Army Forces. LCD–76–457, June 9.

The United States and Japan Should Seek a More Equitable Defense Cost-Sharing Arrangement. ID–77–8, June 15.

The Air Force Can Reduce Inventories by Eliminating Unneeded Stock Levels. LCD–76–425, June 17.

Accuracy of Records and Reported Quality of Military Male Enlistees. FPCD–76–73, August 12, 1976.

Potential for Contracting Selected Operations at the Air Force Academy Cadet Dining Hall. FPCD–77–57, June 20.

Letter reports

SANDY KYRISH HONORED AS 1977 ESSAY CONTEST WINNER

HON. JIM WRIGHT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. WRIGHT. Mr. Speaker, for the past several years I have had the privilege of sponsoring an annual high school essay contest for the students in Tarrant County, Tex.

This year, as in the past, the response of high school juniors and seniors was excellent, with 153 students submitting essays.

It was certainly difficult for the judges to select winners since the essays submitted were of such uniformly superior quality.

In this keen competition, the first-place winner was Sandy Kyrish, daughter of Mr. and Mrs. Marvin Kyrish of Bedford, Tex. Miss Kyrish, an honor graduate of Trinity High School in Euless, Tex., won top prize for her essay entitled, "State of the Union, Year 2077: A Look At America's Next Century."

Miss Kyrish will be attending the University of Texas this fall, majoring in radio, television and film. She is a member of the National Honor Society and a finalist in the National Merit Scholarship program. This year's contest winner was also a finalist in the State competition of the National Forensic League

for extemporaneous speaking, and was chosen "Mayor of Bedford" during the "Youth in Government Days" sponsored by the Mid-Cities Kiwanis Club in the Mid-Cities area.

Runners-up for the contest were as follows:

First runner-up—Eric Mair, son of Mr. and Mrs. Alexander Mair of Forth Worth. He will be a senior at Western Hills High School in the fall.

Tied for second runner-up were Marjorie R. Stephens, a June graduate of North Side High School in Fort Worth, and Donna Newhouse, a June graduate of Mansfield High School. Miss Stephens is the daughter of Mrs. Marjorie Stephens of Fort Worth. Miss Newhouse is the daughter of Mr. and Mrs. Don Newhouse of Arlington.

In addition to the above awards, honorable mentions went to the following: Linda Miller, of Eastern Hills High School in Fort Worth; Gloria Jane Shipman, of L. D. Bell High School in Hurst; Scott Lawrence, of Paschal High School in Forth Worth; John Rooke, also of Paschal High School; Kristie Yates, of Bell High School; and Bryan Blakeman of Eastern Hills High School.

The top essay, by Miss Kyrish, is included in today's CONGRESSIONAL RECORD:

STATE OF THE UNION, YEAR 2077; A LOOK AT AMERICA'S NEXT CENTURY

Members of Congress and citizens of America, last year, the seventy-five United States of America celebrated a glorious event: the nation's Tricentennial. As we now begin our fourth century of democratic existence, I would like to reflect upon our achievements of the last one hundred years and define our goals for the next one hundred years.

We have traveled an unfathomable distance since 1977. In that year, space travel was in its infancy; today, it is a common occurrence. In 1977, overpopulation threatened mankind's very existence; today, we have nearly eradicated the problem. One hundred years ago, the nation suffered from an energy shortage; in 2077, we have abandoned the traditional fossil fuels and moved to the infinite power of solar energy. In 1977, the world feared atomic warfare; today, we have eliminated that problem.

But this is not a time to be complacent. Indeed, much still remains to be done. To be certain, we deserve to sit back and reap the fruits of our labors, yet at the same time let us push onward for a better America.

Where do the challenges lie? At present, we are plagued with ageless problems: crime, poverty, corruption. These are not problems that advancing our technology will solve; these are not problems that a computer can print a solution to. These are obstacles that must be conquered through a strengthening of our moral intellect. Our third hundred years could unfortunately not solve these problems, but perhaps we can.

Other challenges lie in providing a better America for our children. Are we really pleased with the way that life is? Indeed, the days of disease and hunger are almost gone, but this is not the end of our quest for a more perfect society. We still have racial and religious prejudices; we still have corruption in business and government. Let it be our duty to eliminate these as well.

This last century has been one of achievement, momentous achievement. Technologically, we are superior to any nation on this earth, democracy is still our form of government, and freedoms are still assured. But the quest for a better way is not over.

In 1977, much of American literature was science fiction, and much of the science fiction related to this time period. Authors attempted to foretell what society would be one hundred years later. They guessed correctly our technological advancements in space flight, communications, energy, and other areas, but will they have guessed correctly about our moral and intellectual situation?

Will we be judged in the future as primitive, civilized, or incredibly advanced? Let it be our job in this fourth century to utilize what we have and what we will have only for the good of man. That is the best that we can do.

THE FUTURE OF THE STEEL INDUSTRY

HON. JOHN P. MURTHA

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. MURTHA. Mr. Speaker, many Members of Congress have been following the deliberations by the Bethlehem Steel Corp. concerning the Johnstown plant located in the district I represent. Some elements of these deliberations are clear; others are not. I would like to report to the Members on the discussions.

The immediate cause for Bethlehem's review is the severe flooding in central Pennsylvania. Preliminary estimates of the clean-up expense at the Johnstown plant is in the range of $35 million, and the cost of restoration to preflood conditions will be much greater. We are doing everything we can to continue the plant in operation and retain jobs.

Behind that immediate concern, however, are severe problems in the steel industry. In July, Bethlehem Board Chairman Lewis W. Foy wrote to me that "The American steel industry is trying to bring to the attention of its congressional representatives and the general public the bind it is caught in between low production rates, a low return on investment, and the high import levels of foreign-made steel."

These underlying problems mean the economic impact and employment decisions we are confronting in central Pennsylvania today can be faced by communities throughout the United States if Congress does not respond to these basic problems.

I insert for the Members a summary of a report entitled "Economics of International Steel Trade—Policy Implications for the United States" prepared by the American Iron and Steel Institute. This report shows the problems Congress must confront to protect the American steel industry and the Nation's economy.

The article follows:

SUMMARY: AN ANALYSIS OF THE ECONOMICS OF INTERNATIONAL STEEL TRADE AND POLICY IMPLICATIONS

Three senior staff members, Howard Pifer, III, Paul Marshall, and John Merrill compiled this extensive analysis, ultimately concluding that a thorough review of United States trade policy (as it affects the steel sector) was vitally necessary. The major conclusions revealed in this report are: (1) foreign producers are currently selling steel in the United States market at prices below their average costs, this practice has been consistently used by foreign producers in the past whenever necessary to increase their capability utilization, (2) the market share of imports is increasing, (3) additional capacity will not be added to supply the United States market at these price levels, either by foreign or domestic producers, and (4) the demand for steel will grow, presenting the possibility for a severe steel shortage between 1980 and 1985.

The availability of reliable supplies of steel at reasonable prices has been a major concern to every industrial and developing society. In the past, United States policies have helped foreign steel producers increase the size and efficiency of their operations relative to our producers. Presently, the United States is the only large industrialized nation incapable of producing 100 percent of its domestic requirements. In 1976, over 14,000,000 tons were imported, accounting for over $4 billion of trade flow (14 percent of the total steel consumption for the United States).

The majority of imported steel bought by the United States is exported by Japan and the EEC (European Economic Community). The United States is the largest buyer of imported steel in the world and Japan's and the EEC's share of its market has gradually increased since 1964. This penetration by foreign producers could conceivably increase to 30 percent of the United States market. This, the report concluded, is entirely unacceptable.

Japan manipulates profits by countercyclical exporting, i.e., each downturn in domestic demand is met by a sharp surge in export activity; conversely, when domestic demand improves, export activity is reduced. The EEC also follows a similar policy. Putnam, Hayes, and Bartlett, Inc. express a fear that other developing nations will emulate these examples.

United States trade policies must be reassessed because at stake are many jobs which are directly or indirectly related to domestic steel production and the United States balance of trade. Allowing imports to increase from the average 14 percent level of recent years to as much as 30 percent would eventually deprive the United States economy of 96,000 potential steel worker positions. This report finds this, in addition to expressing an aversion to our increasing dependence on foreign producers, entirely unacceptable.

J. P. STEVENS STORY: THE NEED FOR LABOR LAW REFORM

HON. GEORGE MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. MILLER of California. Mr. Speaker, on the weekend of July 4, 1935, President Franklin Delano Roosevelt signed into law one of the most significant and far-reaching pieces of legislation ever enacted by Congress, the National Labor Relations Act—NLRA. This law, which is better known as the Wagner Act, guarantees workers the right to organize into unions "for the purpose of collective bargaining or other mutual aid or protection."

During the past 40 years, millions of workers have exercised this right, and have thereby greatly improved their standard of living. Unfortunately, there are still many thousands of American workers who, due to the intransigence of unscrupulous employers, are still being denied the rights—and concomitant

benefits—granted them in 1935. A prime example of such an employer is our Nation's second largest textile manufacturer, J. P. Stevens & Co. The examination of how this firm has been able to flaunt the national purpose is the best illustration of why we need legislation to prevent such abuses.

J. P. Stevens employs 44,000 people in approximately 85 plants in both the North and South. Not one of these plants has a union contract. Contrary to company assertions, a need for such contracts clearly exists. A close look at Stevens' plants reveals many problems which cry out for collective bargaining. The most glaring of these include: extremely low wages—as Mike Wallace documented on "60 Minutes," "Stevens' workers average about $3.65 per hour—$1.75 per hour less than the national average for factory workers"; inadequate pensions—according to "Christianity and Crisis," "a worker retiring in 1976 with 30 years' service would receive only $20 per month pension"; dangerous working conditions—according to data compiled by the North Carolina Department of Labor, in some Stevens plants as many as one in three workers are likely to develop a disabling respiratory disease known as "brown lung"; and blatant racial bias—U.S. District Court Judges James McMillan and F. T. DuPree have cited the company for discriminatory acts. See *In re Lucy Sledge et al.* v. *J. P. Stevens & Co., Inc.*, 11 EPD 11047 ed., and see 1976 pending appeal 12 EPD 11,252 4th Circuit, 1976.

Such a litany would seem to make Stevens' plants fertile ground for unionization. But, a 14-year effort by the Textile Workers Union of America has been thwarted by the company's "massive multistate campaign to prevent unionization of its southern plants. This campaign has involved numerous flagrant unfair labor practices including coercive interrogation, surveillance, threat of plant closings, and economic reprisals for union activity." U.S. Court of Appeals for the Fifth District in *J. P. Stevens* v. *NLRB*, 417 F. 2d 533, 1969. This "massive campaign" has been so effective that to this day only 7 percent of Stevens' 44,000 employees belong to a union, and even these are not covered by a contract.

The most damaging element in J. P. Stevens' campaign against the union has been the company's firing of prounion employees. As documented in the accompanying chart prepared by the Amalgamated Clothing and Textile Workers' Union of America, over the past 14 years Stevens has been found guilty by the NLRB of illegally firing 184 prounion workers. The company has also been charged with intimidating union supporters through pay cuts and threatening interrogations. Fifteen times the NLRB has brought suit against Stevens for such activities, and 13 times the Courts have upheld the NLRB's decision.

Since the NLRB has proven Stevens' antiunion activities to be patently illegal, most of the prounion workers fired have been reinstated with backpay. The problem is that final reinstatement only occurs after a long and protracted period of litigation, usually taking between 2 and 6 years. As workers simply cannot afford to risk being unemployed for so long, the threat of firing is—though illegal—quite effective. A Labor-Management Subcommittee staff report in 1976 concluded that this long delay in the adjudication process "gives the ruthless employer full sway to destroy a union organization drive."

Another impediment to effective enforcement of the NLRA is the fact, that as the subcommittee staff put it, "the penalties under the act cost less than does recognition of a union."

Certainly the tax-deductible $1.3 million which Stevens has paid out in backpay over the last 14 years is much less than what the company would have had to pay in higher wages and decent working conditions if unions had been established. By simply paying such fines, after having taken full advantage of the appeals process, J.P. Stevens has been able to systematically block the Federal Government from carrying out its mandate to protect the right of workers to organize, leaving the workers at J. P. Stevens in the "deplorable" conditions outlined above.

Even if, after years of struggle and litigation, a union does manage to get established in a Stevens plant—as it has in Roanoke Rapids, N.C.—the company continues to obstruct the process of equitable collective bargaining. In Roanoke Rapids, Stevens has refused to grant the union such basic rights as a dues checkoff and grievance arbitration—rights which are granted in 95 percent of all industrial contracts. Clearly, Scott Hoyman, the textile union's southern regional director, is correct when he maintains that "the company is not trying to reach an agreement. It is trying to destroy the union." (Nation, Oct. 2, 1976.) Although the NLRB has issued a complaint of "bad faith bargaining" against Stevens which is pending before an ALJ there is very little the board could do under existing law to make Stevens bargain in good faith if the company refuses to do so.

In response to Stevens' unscrupulous circumvention of the NLRA, the Thompson-Williams labor reform bill has proposed amendments to the act which would greatly strengthen the National Labor Relations Board's power to correct such abuses. The bill would significantly reduce the time lag between the filing of a complaint and final adjudication by streamlining the procedures of the NLRB. It creates remedies that could deter violations of the act. In addition it would give the NLRB the power to adopt a "make-whole" remedy in cases where the employer refuses to bargain in good faith during negotiations for an initial contract. Each of these provisions would make it much more difficult for an employer like J. P. Stevens to frustrate the intent of the act.

The Thompson-Williams bill is a long-overdue attempt to guarantee to all American workers the rights bestowed upon them by the NLRA. That an employer can brazenly deny these rights does much to undermine the authority of the Federal Government. If only for this reason, the bill should be enacted. More importantly, however, the workers at J. P. Stevens and other such "rogue" firms desperately need the protection which a stronger NLRA would give them.

The NLRB cases follow:

THE RECORD OF A CORPORATE OUTLAW

The unprecedented record of violations of the National Labor Relations Act listed below earned J. P. Stevens & Co. its reputation as the Nation's Number 1 Labor Law Violator. As the cases mounted, the National Labor Relations Board resorted to tagging each case with a Roman numeral. Several pending cases threaten to add even more violations to the record.

NLRB CASES

Case, period of litigation, present status of case, and violations of law

Stevens I: August, 1963 to December, 1967, Company found guilty. 2nd Circuit Court of Appeals upheld NLRB findings. Supreme Court denied company request for review; 71 discharges of union supporters and other violations.

Stevens II: June, 1964 to October, 1968, Company found guilty. 2nd Circuit Court of Appeals upheld NLRB findings. Supreme Court denied company request for review; 18 discharges of union supporters and other violations.

Stevens III: August, 1966 to December, 1968, Company found guilty. 4th Circuit Court of Appeals upheld NLRB findings. No further appeals; 15 discharges and other violations.

Stevens IV: August, 1966 to December, 1968, Company found guilty. 4th Circuit Court of Appeals upheld NLRB findings. No further appeals; 3 discharges and other violations.

Stevens V: September, 1967 to October, 1969, Company found guilty. 5th Circuit Court of Appeals upheld NLRB findings. No appeal to Supreme Court; 4 discharges and other violations.

Stevens VI: November, 1967 to February, 1971, Company found not guilty. Workers won case through NLRB, but lost decision in 4th Circuit Court. Supreme Court turned down review; involved 17 discharges.

Stevens VII: February, 1968 to October, 1971, Company found guilty, 5th Circuit Court of Appeals upheld NLRB findings. Supreme Court denied company request for review; 4 discharges and massive violations resulting in bargaining at Statesboro.

Stevens VIII, July, 1968 to March, 1971, Company not guilty. 4th Circuit Court of Appeals reversed NLRB ruling. No appeal to Supreme Court; involved 2 discharges and other violations.

Stevens IX: March, 1969 to June, 1972: Company found guilty. 4th Circuit Court of Appeals upheld NLRB findings. No appeal to Supreme Court; 1 discharge and other violations.

Stevens X: February, 1970 to July, 1970, Company not guilty. An order to bargain case which automatically lost when Stevens VI was lost; Company cut pay of 144 workers after union won bargaining rights.

Stevens XI: January, 1970 to December 1971, Company found guilty. 5th Circuit Court upheld NLRB findings. No appeal to Supreme Court; Company cut pay of 144 workers after union won bargaining rights.

Stevens XII: June, 1970 to February, 1973, Company found guilty. DC Circuit Court of Appeals upheld NLRB findings. No appeal to Supreme Court; 2 discharges and other violations.

Stevens XIII: September, 1973 to Present, Pending. Workers have appealed NLRB decision to 4th Circuit Court; Involves 23 discharges.

Stevens XIV: January, 1974 to April, 1975, Company found guilty by NLRB. No further appeals; Interrogation of and threats to union supporters.

Stevens XV: November, 1974 to September 1975, Company found guilty by NLRB. No further appeals; Interrogation of and threats to union supporters.

CONTEMPT CASES

Contempt I: August, 1969 to February, 1973, Company found guilty by 2nd Circuit Court of Appeals. Supreme Court denied review; 11 discharges and other violations.

Contempt II: September, 1970 to October, 1971, Company settled case prior to hearing in 5th Circuit Court of Appeals; 7 discharges and other violations.

Contempt III: September, 1973 to Present, Pending. Recommendations of Special Master appointed by 2nd Circuit Court of Appeals expected soon; Involves 6 discharges and other violations.

Contempt IV: September, 1973 to Present, Pending. Decision from 5th Circuit Court of Appeals on recommendations expected soon; Involves refusal to bargain at Statesboro, Ga., plant.

Contempt V: June, 1975 to Present, Hearing in 2nd Circuit Court of Appeals. Pending; Threats, coercion, interference.

NLRB CASES

Update as of February 1977—

Stevens XIII: September 1973 to September 1976, Company found guilty by 4th Circuit Court of threats & interrogation. Court ruled one worker discharged unlawfully, 22 workers discharged lawfully; Involves 23 discharges.

Stevens XVI: October 1974 to present, ACTWU's charge on company's refusal to bargain in good faith at Roanoke Rapids, N.C.

CONTEMPT CASES

Contempt III: September 1973 to present, Special Master issued his recommendation finding the company in contempt. Decision from the 2nd Circuit pending; Involves discriminatory no-solicitation rule; threatening discharge of union supporters; interrogation of union supporters; and surveillance of employees' activity.

Contempt IV: September 1973 to present, Company held in contempt by U.S. Court of Appeals for the 5th Circuit. Decision on remedies pending; Involves refusal to bargain at Statesboro, Ga. plant.

JOINT GOVERNMENT-INDUSTRY-LABOR EFFORT SAVES PHILADELPHIA PLANT

HON. JOSHUA EILBERG

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. EILBERG. Mr. Speaker, because of a unique partnership of labor, industry and Government, I am very proud to be able to report a "success story" to my colleagues in the Congress.

This story began 2 years ago, when the Wissahickon Industrial Center was facing closure, threatening the loss of a thousand jobs to the Philadelphia community. It has culminated in a ceremony held recently to salute those who took part in the revitalization of this center, which now provides more than twice as many jobs as it did 2 years ago.

Participating in the dedication ceremonies were Anne Wexler, Deputy Under Secretary of the U.S. Department of Commerce; Paul Smith, Pennsylvania secretary of labor and industry; Irwin Solomon, manager of the Philadelphia Dress Joint Board of the International Ladies' Garment Workers' Union; and City Managing Director Hillel S. Levinson.

This success story is an outstanding example of what can be achieved when all levels of government work together with labor and management for the common good.

Commented Mayor Rizzo:

I would like to extend sincere congratulations to all who were involved in this undertaking.

The Wissahickon Industrial Center is a 760,000 square foot industrial building formerly built by Atwater Kent Radio Co. and last owned by the Southeast Pennsylvania Economic Development Corp.

Its revitalization is a successful venture involving the Council for Revitalization of Employment and Industry in Philadelphia, the City of Philadelphia, the Commonwealth of Pennsylvania, the U.S. Department of Commerce and Industry located in the facility.

In 1975, the Wissahickon Industrial Center was in danger of closing down with the subsequent loss of 1,000 jobs in textile manufacturing, bindery, printing and physical therapy services.

The Council for Revitalization of Employment and Industry entered the picture and became project manager, now owning the building.

In the space of 2 years, the council obtained over 400,000 feet of new tenants and expanded tenants in the building. The city of Philadelphia was the first new tenant, committing itself to 148,000 square feet for storage of city voting machines.

The State department of commerce, acting through its Pennsylvania Industrial Development Authority, made funds available for the restoration of the building on a long-term loan basis. The U.S. Department of Commerce made a public works grant for job-creating purposes.

Presently some 2,000 people work at the Wissahickon Industrial Center and employment is expected to reach 3,000 when the center is completely rehabilitated.

The center is a 30-acre industrial complex located in north-central Philadelphia. Its restoration has been instrumental in bolstering the entire north-central industrial section of Philadelphia.

The Council for Revitalization of Employment and Industry in Philadelphia was established in 1974 as a nonprofit corporation through a partnership of labor, industry, civic, and Government officials seeking ways to stabilize and improve the economic base for blue-collar and labor-intensive industries in Philadelphia.

The council is currently under contract with the city of Philadelphia to explore the feasibility of establishing a labor-management committee in Philadelphia.

The purpose of this committee would be to improve communications between labor and management, and develop areas of mutual cooperation to increase business and production output of industry in Philadelphia.

SPIRIT OF THE RHODESIANS

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. McDONALD. Mr. Speaker, if you believed all the accounts and statements in the press and the media, it would be difficult for you to understand why Rhodesia has not surrendered to the various terrorist bands skulking around and across her border. What is generally not appreciated is the great strength and resiliency of the Rhodesians who are more akin to our pioneers of a hundred years ago. The flavor of this spirit was captured in a speech by the Rhodesian Foreign Minister, I feel, on June 26, 1977 in a speech dedicating a memorial hall to those who had fallen at the hands of the terrorists. The text of his speech follows:

I would like to associate myself with all that has been said in praise of what Mr. Bower and his Committee have succeeded in doing in erecting this Memorial Hall.

It is a fitting and inspired idea that we should honor and commemorate those Rhodesians who have fallen in the terrorist war in this manner which, while honoring them and perpetuating their memory, at the same time does so much to ease the lot of those who have been greviously wounded and whose courage and sacrifice are often equally great.

In this hall we are in an atmosphere of superb courage where one of the most gallant countries in history has produced a race of men and women whose fortitude has become a by-word and which is so great that to praise it is almost to belittle it.

The whole of our history has been a succession of brave and splendid deeds. The courage to which we have gathered here today to pay tribute, is the greatest of all human virtues because it is the father of all other admirable traits—compassion, magnanimity, loyalty, kindness, devotion, tolerance and humility. It is only the brave who have all these qualities and these qualities are the outstanding characteristics of Rhodesia and Rhodesians.

It is therefore not surprising that we have produced this race of heroes who we honour today. Heroes cast in the same mould as Hector and Achilles, of Horatius and El Cid because, after all, their forefathers fought at Agincourt and Alamein; they marched with Kruger and Botha and with Mzilikazi and the Monomatapa and though at times in the past we fought each other, we are now welded into one great force in defending Rhodesia.

Out of the crucible of this terrible war a new race of warriors has been forged; a race of great diversity of origin embracing all the colours of the spectrum but now eternally united in the brotherhood of the great and noble enterprise in which we are engaged—the defence of our homes, our people and our country.

This new race is a great and splendid thing and one can have no greater pride than to be able to say "I am a Rhodesian".

This is a breed of men, the like of which has not been seen for many a long age and which may yet perhaps, by virtue of the example that it sets, go some way towards redeeming the squalid and shameful times in which we live.

The cream of these men who we are remembering today have made the supreme sacrifice but while we do them all the honour, let us not forget those who also bear a grievous burden of sorrow—their wives and

their mothers, their fathers and their children, and their comrades who have been wounded and maimed.

I hope that in some way this Memorial Hall may also be a memorial to them too, because this would undoubtedly be the wish of those who have fallen.

A long time ago a great American President, Abraham Lincoln dedicated a place under similar circumstances to these and I will quote what he said because I cannot improve on it:

"We have come to dedicate a portion of that field as a final resting place of those who here gave their lives that the nation might live. It is altogether fitting and proper that we should do this.

"But in a larger sense, we cannot dedicate, we cannot consecrate, we cannot hallow this ground. The brave men, living and dead, who struggled here have consecrated it far above our poor power to add or detract. The world will little note nor long remember what we say here, but it can never forget what they did here. It is for us the living, rather, to be dedicated here to the unfinished work which they who fought here have thus far so nobly advanced. It is rather for us to be here dedicated to the great task remaining before us, that from these honoured dead we take increased devotion to that cause for which they gave the last full measure of devotion; that we here highly resolve that these dead shall not have died in vain; that this nation shall have a new birth of freedom."

I cannot too strongly emphasize my complete acceptance of the philosophy contained in this inspired declaration. Merely to go through this ceremony and no more is no fitting tribute to the fallen.

In the final analysis the only meaningful and lasting, and indeed adequate, tribute that we can make to those who have made the supreme sacrifice is by all means in our power to ensure that their sacrifice was not made in vain, and that what they fought and died for is preserved and cherished. This is our obligation. This is our responsibility. And this is our sacred duty.

We all know what our brave men fought for, and are still fighting for—to preserve their homes and families and to save this country from degradation and ruin. They died so that you and I could continue to live here and if we fail to do all in our power to ensure that their ideals and objectives are achieved, then we will have denied them and we will be traitors to all that they stood for and for which they fought and died.

I have a deep feeling of compassion for those Rhodesians who due to the economic recession and other factors, largely brought about by the sanctions imposed upon us by those who should be our friends, are forced to leave the country because it is impossible for them to make a living here. One has nothing but contempt for those who have left, and are still leaving, because they are tired of being called up, or because of the inconvenience and even danger of living in Rhodesia during her present time of trouble.

These people are failing our dead and living fighting men and if the cause our soldiers died for should be lost, then an intolerable and shameful burden of responsibility will rest on the shoulders of those who fled, and haunt them all of their days.

At the height of the last War an Englishman sent a prayer to Eleanor Roosevelt and this is what it said:

"Dear Lord, Lest I continue my complacent way, help me to remember somewhere out there a man died for me today. So long as there be war I must then ask myself and answer, am I worth dying for?" Let our conduct be such, let all of us so bear ourselves, so carry out our duty, that we are worth dying for.

Seldom in the history of mankind has a gallant little country such as ours, with so many virtues and so little fault, been so grievously beset by enemies as we are.

The Russian colossus is on the search to subjugate and enslave all of Africa and we like the Spartans at Thermopylae are a major stumbling block in their path. At the same time, the greatest power on earth—the United States, together with Great Britain for whom so many of our fathers died, do all in their power, diplomatically and economically, to strangle us.

A loathesome and savage foe howls at our gates, backed by the Russians and succoured and comforted by these who should be our friends.

Every imaginable pressure is brought to bear on us, by those who have little regard for the peace and happiness of our people, to come to terms and settle at any cost. We must make, and no matter what the rebuffs, continue to make, every effort to secure a settlement which might mean the end of the war and the necessity for our people to fight and die.

But we must not—and we will not—come to any accommodation which is not in keeping with the ideals and the objectives for which these men laid down their lives. To do so would be the utter rejection of everything they fought for; to do so would be the total betrayal of the trust and duty which they bequeathed to us.

No matter what the difficulties; no matter how hard the road; no matter how apparently great the odds, we must endeavor to emulate the high example and courage which they have shown, in order to justify their sacrifice.

And if the battle should wax fiercer, and if the forces arrayed against us should become immeasurably stronger, there can be no question of surrender: every inch of ground will be fought for.

We will contest every hill and every river; every village and every town; every crossroad and every bridge. Inevitably and unavoidably the land will suffer.

Indescribable cheers and irreparable destruction will follow but, come what may, we will uphold the ideals for which these men fought. We can not let them down.

And now, with profound humility and with all my homage, I declare this Memorial to the Fallen officially open, and I call on soldiers, civilians, all Rhodesians, to dedicate ourselves to ensuring that these men did not die in vain.

AUTOMOBILE SAFETY

HON. BOB ECKHARDT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. ECKHARDT. Mr. Speaker, as you are probably aware, the Secretary of Transportation recently issued a ruling which would require that automobiles be equipped with passive means of protecting passengers in crashes—that is, that devices such as automatic belts (VW has them already), or air bags, or other technological alternatives, be installed which the occupant of a car need take no action to activate.

Since that ruling was made, much information has been circulated to our colleagues. I noted that my esteemed colleague from the Ninth District of Pennsylvania discussed at some length a study which he indicates shows that one of the options available under Brock Adams' ruling, the air bag, is ineffective at saving lives and injuries, compared with standard lap and shoulder belts.

I have asked both the Congressional Research Service and the Insurance Institute for Highway Safety to study the documents on which Mr. SHUSTER relies for his strong position against this alternative for meeting the passive restraint standard.

The Insurance Institute for Highway Safety, an organization which has done much excellent research on safety matters, has responded to my request and I would like to have their response inserted in the RECORD at this point for my colleagues' information:

INSURANCE INSTITUTE FOR HIGHWAY SAFETY,
Washington, D.C., July 26, 1977.

Hon. BOB ECKHARDT,
Chairman, Subcommittee on Consumer Protection and Finance of the Committee on Interstate and Foreign Commerce, Washington, D.C.

DEAR MR. CHAIRMAN: I am replying to your letter of July 18, 1977.

Rep. Shuster's position is described in his press statements (July 5, July 18 and July 20) seeking support for his "Concurrent Resolution to disapprove the air bag order (Federal Motor Vehicle Safety Standard No. 208)."

As the principal basis for his position, Rep. Shuster has cited what he describes as "an air-bag study supported by NHTSA."

In summary, Rep. Shuster's position and contentions are as follows:

The Department of Transportation has issued an air bag "order" or "edict".

Air bags are "unproven," that "no hard evidence exists to show that air bags will actually save lives" and "air bags could actually cause more highway deaths than they prevent."

Air bags would be protective "only in frontal collisions, and only 55 percent of all fatalities occur in such crashes."

Non-passive safety belts (such as now provided in new cars) "triple" the chances of survival in crashes, and "forty million Americans," or "44 percent of the people," now wear belts.

DOT Air Bag "Order": The Department has issued no air bag "order" or "edict", nor may it do so under the law. The law * provides that DOT issue motor vehicle safety performance standards. The standard issued on June 30 by Secretary Adams requires, starting with the 1982 model year, that a new safety performance standard be phased in for new cars over three model years. The standard puts a limit on the crash forces reaching the front seat occupants in severe frontal impacts.

Auto manufacturers are entirely free to choose any appropriate design alternative—including passive safety belts, air bags or other approaches—as long as the end result is that the force reductions are accomplished automatically ("passively"). Under the standard and the prevailing law, however, they may not choose designs, such as the ignition interlock belt design, that do not work unless the occupant has activated them. In addition, lap belts would be provided for those who would use them for even additional protection.

The "NHTSA-Supported" Study: The "study" relied upon by Rep. Shuster was not "supported" by NHTSA. It was prepared by a private consulting firm, Economics and Science Planning, Inc., whose witnesses appeared at the passive restraint hearing held by Secretary of Transportation Adams on

*PL 89-563.

April 27 and 28, 1977. In one appearance, an Economic and Science Planning staff member appeared as a paid witness on behalf of the American Safety Belt Council, which opposed a passive restraint requirement. For the other appearance, a second Economic and Science Planning witness sought and was granted expense funds for his presentation under the provisions of an NHTSA demonstration program entitled, "Financial Assistance to Participants in Administrative Proceedings" (42 Fed. Reg. 2863–67, January 13, 1977).

NHTSA neither requested nor endorsed the witness or the material he submitted—the material that Rep. Shuster now is relying upon as a "study supported by NHTSA".

Attached to this letter is a detailed analysis of the "study". In summary, the analysis makes clear that the Economics and Science Planning "study" was based on speculation and assumptions not consistent with the known facts.

Remarkably, the "study" is not based on an evaluation of the known crashes involving air bag cars but on crashes and injuries that the authors speculate might have taken place in such cars. (In contrast, the Insurance Institute for Highway Safety evaluation, also attached, considers only actual crashes and does not invent crashes and injuries that may or may not have occurred.) The approach chosen by Economics and Science Planning is scientifically inexcusable.

Belt Use: The "study," also uses an assumption that 44.2 percent of auto occupants are now using shoulder belts (it is doubtless on that basis that Rep. Shuster has publicly, wrongly stated that 44 percent of Americans, or "40 million," are now wearing belts). Every valid study of current safety belt use levels has found less than 25 percent shoulder harness use in 1974–76 model cars, and less than 10 percent in pre-1974 model cars. Ironically, the 44 percent use level was reported only during the period when the now-outlawed ignition interlock was required in new cars.

Effect of Belt Use, Bag Use: Rep. Shuster is incorrect that a person wearing a safety belt in a serious crash "triples his chance of survival," and is also wrong that air bags "provide no additional protection over safety belts." DOT's own estimates, based on its thorough evaluation of all of the available evidence, are that lap/shoulder belts, when worn, reduce the chance of death by 60 percent, while air bags plus lap belts provide even greater protection, reducing the chance of death by 66 percent. And, as the Institute's attached study shows, air bags offer more protection than lap/shoulder belts in severe frontal crashes.

Air Bag Passive Belt Effectiveness: Neither of the two systems presently available for meeting DOT's automatic crash protection standard are, as claimed by Rep. Shuster for air bags, "unproven," nor is there any lack of "hard evidence" to show their effectiveness. Furthermore, there is no evidence to support nor logical reason to believe the incredible claim that "air bags could actually cause more highway deaths than they prevent."

Air bags are one of the most thoroughly, rigorously and successfully tested automotive safety systems ever developed. Nearly a decade of exhaustive laboratory and track research has made clear the effectiveness of air bag systems in greatly reducing crash forces in frontal crashes; the research has been conducted and validated not only by government and industry, but also, in particular, by the companies ready to supply such systems to the auto companies—suppliers that include Eaton Corp., Allied Chemical, Talley, Rocket Research, and Thiokol.

Supplementing the laboratory and track research have been the extensive real-world operating results (as of July 1, 1977, more than 350,000,000 miles of travel) and crash results (153 crashes severe enough to deploy the air bags) available from the more than 11,000 air bag-equipped cars already placed on the highways. As the Insurance Institute for Highway Safety evaluation indicates, these results have been consistent with the earlier laboratory and track research; they have indicated levels of effectiveness for the air bag in frontal crashes even higher than for lap/shoulder belts, when worn.

Volumes of research and real-world operating data for air bag technology were available to DOT in reaching its decision to require passive restraints in future new cars.

Passive belts now are on the road in some 60,000 VW Rabbit automobiles. A recent Highway Loss Data Institute preliminary study shows that such automobiles have substantially lower injury claim frequencies than identical cars equipped with active lap/shoulder belts. The findings provide "encouraging evidence that the use of passive belts is substantially higher than active belts and as a result is producing substantial reductions in the frequency of crash injuries to the occupants of the relatively small number of vehicles so equipped," the HLDI study notes.

Frontal Crashes.—Rep. Shuster is correct that, as now written, DOT's standard will require that air bags be effective "only" in frontal crashes, and is also correct that "only" 55 percent of all highway crash fatalities occur in such crashes. If that is a valid argument against passive protection, it would be equally valid to argue against penicillin because it doesn't stop all infectious diseases—just some of them; or against brakes because they don't stop all collisions.

It is a tragedy that so much misinformation is being propagated concerning this issue. The National Highway Traffic Safety Administration (NHTSA) is the federal agency with the necessary expertise to judge the effectiveness of passive restraints and the research relevant thereto. After years of research, study and review involving a tremendous effort, the agency has reached thoroughly-considered conclusions concerning the relative effectiveness of air bags, passive belts, lap/shoulder belts based on all of the available evidence. But Rep. Shuster has apparently decided to ignore the conclusions reached by the responsible federal agency and rely instead on a single superficial and incompetent study that required less than three man-weeks of effort to complete. The obviously shallow analysis in this study clearly reflects the minimal effort put into it.

It is worth noting that three Secretaries of Transportation (Volpe, Coleman, and Adams) and three NHTSA administrators (Toms, Gregory, and Claybrook), when they looked at and reviewed the totality of available evidence, concluded that air bags are feasible, practical, and effective, and would save many more lives than lap/shoulder belts.

The Department of Transportation has concluded that in 1975 lap and shoulder belts saved 3,000 lives, but that had all of the vehicles in that year been equipped with air bags, an additional 9,100 lives would have been saved. Despite many incorrect assertions by others to the contrary, DOT has concluded (again, on the basis of a review of all of the evidence) that air bags plus lap belts are 10 percent more effective in preventing fatalities than lap and shoulder belts when worn. It is not correct to assert, as has been done frequently recently in the press and elsewhere, that present users of lap and shoulder belts would pay more for less protection if required to purchase cars equipped with air bags. In actual fact, they would receive additional protection.

Rep. Shuster has relied, in developing his position, on incorrect data and wrong assumptions. It is apparent that he has not availed himself of the comprehensive data and research results underlying Secretary Adams's decision. Tragically, by his statements Rep. Shuster has become the medium for broadcasting misinformation and unfounded conclusions about passive restraints, and in particular about Secretary Adams's decision, to members of Congress and the public.

If Americans unnecessarily die or become injured in future highway crashes as a result, the nation will have suffered inexcusably.

Sincerely,

WILLIAM HADDON, Jr., *M.D.*

COMPARATIVE EFFECTIVENESS OF OCCUPANT RESTRAINT SYSTEMS

The subject document was submitted to the U.S. Department of Transportation's docket on FMVSS 208 subsequent to the April 27 hearing on passive restraints.

The following are detailed comments on this study:

STATEMENT

"To determine the comparative effectiveness of various restraint systems with respect to unrestrained occupants, the injuries and fatalities experienced have to be related to some common baseline such as fatalities per car year, per million miles or per tow away accident. Tow away accidents are used for the baseline in this comparative evaluation since NHTSA data is available in this form."

COMMENT

Crashes of air bag equipped cars and other cars can be and, in other studies, have been matched on a number of criteria such as point of impact and vehicle deformation that are more indicative of crash forces than whether the vehicle was towed away. The use of the fact that a vehicle is towed away from the crash as a criterion for inclusion in a study can lead to very serious biases, and should not be used when far better, more scientific measures of the crash forces are available.

STATEMENT

". . . no injury data [on VW Rabbits] has been collected."

COMMENT

Some injury information on VW Rabbits with passive belts was reported by VW at the passive restraint hearings conducted by Transportation Secretary Coleman in August 1976. (Pages 99–103, transcript, August 3.) Subsequent to the Goldmuntz and Gates study the insurance loss experiences of VW Rabbits with and without passive belts were compared in a Highway Loss Data Institute (HLDI) Research Report. It reported that ". . . these preliminary results . . . provide encouraging evidence that the use of passive belts is substantially higher than active belts and as a result is producing substantial reductions in the frequency of crash injuries to occupants . . ."

STATEMENT

". . . 2.3 percent of U.S. cars are involved in tow away accidents each year. Since the accumulated mileage of air bag-equipped cars is approximately 340 million miles, and since new cars (air bag-equipped cars) accumulate 14,000 miles per year, it is reasonable to estimate tow aways of air bag equipped cars as

$$\frac{340\times10^6}{14\times10^3}\times0.023=560$$

which is close to the NHTSA estimate."

COMMENTS

The formula used for estimating the number of air bag cars in tow away crashes is invalid. It is a gross oversimplification to estimate the number of tow away crashes (560) for air bag-equipped cars by multiplying the per vehicle rate of tow aways for the U.S. vehicle population by the estimated number of vehicle registration years of air bag-equipped cars. It is unlikely that the

annual rate of involvement of full size air bag-equipped vehicles in tow away crashes is the same as an overall national figure.* The factor used for estimating the number of registration years for air bag-equipped cars was derived by assuming that air bag-equipped cars travelled as many miles every year as new cars would, and this is unwarranted since most of the air bag cars have accumulated mileage for three or more years. On the average, the rate of use of new cars declines substantially from the first year on, so the correct factor in the denominator of the formula should be smaller than $14x10^3$. Slight changes in either the rate of involvement in tow away crashes or annual mileage can substantially change the estimated number of tow away crashes—a fact clearly evidenced by the discrepancy between the Goldmutz and Gates estimate of 560 such crashes and the estimate of 600–800 provided by NHTSA.

As a result of their assumption, Goldmuntz and Gates include in their analysis 392 tow away crashes (560 less than 178 reported to NHTSA) that may or may not have occurred. Their conclusions are completely dependent on the reliability of their estimate, and it is clear that it is based on overly simple assumptions.

STATEMENT

Another one of the "assumptions" in the study is that, "The same proportion of injuries occurred in non-reported, non-deployment tow aways as in reported non-deployment tow aways."

COMMENT

This assumption is used to estimate injuries that may or may not have occurred in crashes that may or may not have occurred. No evidence for this assumption is cited. It is, however, implausible for two reasons. It is likely that injury under-reporting is less common in the population of crashes in which one or more AIS 2 or more severe injuries occurred than in the population without such injuries. In other words, authorities are much more likely to have injury producing crashes reported to them than damage-only crashes. Ignoring this reporting bias—as the study does—inflates the estimated number of unreported injuries.

For this reason, the frequency of unreported AIS 2 or more severe injuries is likely to be substantially below the figure used in the study. This is yet another reason to disregard the conclusions of the study.

STATEMENT

". . . the probability of risk in a population exposed to hazard as determined from a sample of n exposures in which k were killed, or injured at AIS $\geqslant$ 2" was derived in part on the basis of the following argument (p. 25) "Since, a priori, p(R) [the probability that the risk of injury or death is R] is known, from Bayes axiom (sic) all values are equally likely; thus p(R) = a. But by definition

$$\int_0^1 p(R)=1;$$

hence, a priori p(R) = 1."

COMMENT

Customarily statisticians employ Bayes' Theorem to explicitly incorporate prior information in the analysis of data at hand. The results of an analysis that employs Bayes' Theorem is critically dependent on the choice of the prior distribution, p(R)=1 in the present case. Bayes' Postulate states in the absence of information to the contrary all prior possibilities are to be assumed equal. This postulate has been, and continues to be subject to much dispute and undiscriminating application. The Goldmuntz and Gates analysis is an example of an inappropriate application of the postulate.

A major source of difficulty with the Baysian method is that the choice of the prior distribution directly influences both the estimate and the uncertainty about the estimate, and it is not always clear which particular prior distribution is an adequate summary of the existing prior knowledge. Bayes' Postulate should only be invoked in the complete absence of prior knowledge about the risk; to the contrary, in the case of crashes there is a considerable body of information available. The extensive knowledge about highway crashes developed by competent research scientists in recent years indicates that the risk of death in such crashes is not constant, but varies dramatically with the severity of the crash, the number of occupants, the age and sex of the occupants and many other factors.

Thus, the conclusions of their study were based on equations derived from an inappropriate assumption that is at complete variance with known facts.

STATEMENT

"The most likely effectiveness of lap and lay-shoulder harnesses in mitigating fatalities is 68% based on available field data."

COMMENT

NHTSA, based on all of the available field data and component statistical analyses, has concluded that lap/shoulder belts when worn reduce the chance of a fatality in a crash by 60%.

STATEMENT

"To overcome the air bags effectiveness of only 40 percent relative to the harness, the air bag would have to be utilized 2.5 times as much as the lap/shoulder harness which is impossible at a 44.2 percent harness utilization rate."

COMMENT

The 40 percent relative effectiveness is invalid for reasons cited above. The assumption of a 44.2 percent harness utilization is based on the Restraint System Evaluation Program which was done on 1973–1975 cars in use in 1975 when the ignition-interlock was required and restraint use in the cars so equipped was temporarily high. ESP totally ignores subsequent studies that find less than 25 percent shoulder harness use in 1974–76 model cars and less than 10 percent in pre-1974 model cars.

In summary, the ESP document "Comparative Effectiveness of Occupant Restraint Systems" shows clear evidence of selected use of biased data and use of invalid statistical methods, and its conclusions are without merit.

* It should be noted that no source was given for the national figure of 0.023 used.

ALASKAN NATURAL GAS: PART VIII—MORE POSSIBLE DELAY

HON. JOHN P. MURTHA

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. MURTHA. Mr. Speaker, in this series of articles and comments, I have tried to point out the key issues associated with transporting Alaskan natural gas to the lower 48 States.

The greatest of these problems is delay. We need this gas available in this country as soon as possible. One of the key reasons I have supported the El Paso/Alaska proposal is that decisions would be controlled solely by the U.S. Government and that it had the firmest construction plan.

Further evidence of potential delay with the Alcan/Canadian route came this week from the three-member Board of Inquiry considering problems along the Alcan route facing the Canadian Government. The report said:

We consider that a minimum of four years will be necessary to permit sufficient implementation and to avoid prejudice to a just settlement of the Yukon Indian land claims.

This would require no construction prior to 1981. It would further delay delivery of this gas which the United States needs so badly.

For the information of the Members, I insert into the CONGRESSIONAL RECORD the press release of the Alaska Highway Pipeline Inquiry Board:

ALASKA HIGHWAY PIPELINE INQUIRY

The three-member Board of Inquiry into the proposed Alaska Highway natural gas pipeline has unanimously concluded that undesirable social and economic consequences of the project can be kept within acceptable limits if key recommendations are accepted.

If the federal government wishes to give approval-in-principle to such a pipeline, the Board of Inquiry states that four things should be done.

The first condition refers to the unresolved Yukon Indian land claim. The Board notes that negotiations for settlement of the claim appear to be progressing well, with agreement-in-principle anticipated next year. The Board was assured that implementation of major elements of the claim settlement can begin at that time, even before final settlement is reached.

The Board states that it is important that the pipeline project not prejudice the claims process. "We have no doubt that the achievement of a just settlement and the implementation of the Indian land claim is much more important to the future of the Yukon than any pipeline."

So that implementation of the settlement will not be impeded by lack of financial resources, the Board recommends that the federal government immediately make an advance payment of $50 million on the settlement. Interest earned on that money could be used by the Yukon Indians to begin implementing the claims settlement.

Second, the Board recommends that the pipeline company be required to pay compensation in recognition of the fact that regulatory measures cannot entirely prevent undesirable consequences of the pipeline project. "The main benefits from the pipeline will be concentrated outside of the Yukon, largely south of the 49th parallel, whereas the most significant costs, in terms of both economic dislocation and social disruption, will be experienced in the Yukon. . . . We believe that the anticipated distribution of benefits and burdens is unfair and unacceptable to Yukoners, and it is our strong view that steps should be taken to redress this imbalance."

The Board recommends that Foothills be required to pay $200 million to compensate for the overall negative impact on the Yukon. It suggests that this amount be paid into a Yukon Heritage Fund, which could be applied to improve various aspects of the quality of life there.

Third, it recommends that if approval-in-principle is given to the pipeline, the government should immediately establish a single planning and regulatory agency as the most effective method of keeping undesirable consequences of the project to a minimum. The agency would be given comprehensive powers to regulate engineering, social, economic and environmental aspects of the pipeline project.

The fourth key condition calls for deferring the commencement of construction of the pipeline. "We consider that a minimum

of four years will be necessary to permit sufficient implementation and to avoid prejudice to a just settlement of the Yukon Indian land claim." Accordingly, the Board recommends that if approval is to be given now to the pipeline, construction of it should not proceed before August 1, 1981.

The Foothills aplication calls for construction of the pipeline to commence in June 1979. The Board noted, however, that at the hearings the President of Foothills acknowledged that some additional time would benefit the pipeline company itself both in terms of increased efficiency during construction, and in savings that might be effected through more careful planning, and he indicated that commencement of construction in the following year would be acceptable to the company. In the Board's opinion, further postponement of start-up of construction to August 1, 1981, at the earliest, is necessary to avoid prejudice to the claim settlement and implementation process.

Additional time provided by deferral of construction would also be useful for other reasons One reason is that further study of the pipeline route to be followed through the southern Yukon is necessary. Foothills had applied for a route following the Alaska Highway. The National Energy Board favours a route through Dawson which would follow the Klondike Highway instead of the Alaska Highway to Whitehorse. A third route favoured by some witnesses before the Inquiry would follow the Tintina Trench. The Board of Inquiry recommends that the proposed planning and regulatory agency, along with its other responsibilities, be given the task of making recommendations on route selection.

The possibility of a pipeline along the Dempster Highway (the Dempster lateral) from the Mackenzie Delta has been put forward. The Board states that there is insufficient information about this route and recommends deferral of any decision on construction. The Board notes that many witnesses were convinced that there should be no pipeline along the Dempster Highway in the foreseeable future.

The Board expresses concern that relations between Indians and Whites in the Yukon are strained, and appear to have been deteriorating. In its letter to Warren Allmand, Minister of Indian Affairs and Northern Development, the Board states: "It is our deeply felt conviction, Mr. Minister, that a reversal of this trend must be a leading priority for your government in all of its policies that relate to the Yukon in any way. We believe that your decision with respect to the proposed pipeline will be of critical importance in whether or not this trend is reversed."

Solutions must be found which "will promote, not erode further, harmonious relations among all segments of society in the Yukon". This view is basic to the recommendations in the report.

Despite the existence of certain differences between Indians and Whites, the Board finds a high level of agreement on a number of fundamental objectives and values, and it stresses the importance of recognizing these common interests.

An important theme of the report is that more attention must be focused on identifying and developing those things which unite Yukoners rather than those which divide them on racial lines. A number of specific recommendations in the report are aimed at developing structures in which Indians and Whites will be encouraged to work together.

On the pipeline question generally, the Board cautions against relying upon generalizations about the north that would lead to the conclusion that the Yukon is much the same as the Northwest Territories. The report notes differences between the two geography, history, development and racial mix. Unlike the Northwest Territories, every community in the Yukon, with one exception, is connected to southern Canada by a highway network. Also, in the Northwest Territories the native land claims negotiations have taken a different course and are not likely to be finally settled as early as the Yukon Indian land claim. For those and other reasons, the Board holds the view that the social and economic impact of a pipeline through the southern Yukon would be less severe than the impact of a pipeline through the Northwest Territories.

Other recommendations include:

Preferential hiring and training of Yukoners.

Programs to control in-migration of job seekers.

Continuation of constraints on land grants in the Yukon for three years to allow for land selection under the Yukon Indian claim settlement.

A formula for the taxation of the pipeline property.

An independent impact monitoring center.

The Board of Inquiry—Kenneth Lysyk, Chairman, Edith Bohmer and Willard Phelps—notes that its terms of reference permitted any member of the Board to submit a minority report or a supplementary report. "We have particular pleasure in stating that none of us has wished to take advantage of that provision. This report presents our unanimous views."

"HELSINKI'S UNFULFILLED PROMISE"

HON. DAVID L. CORNWELL

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. CORNWELL. Mr. Speaker, I am pleased today to join my colleagues in a project entitled "Helsinki's Unfulfilled Promise" on behalf of Soviet Jewry. I am most concerned about this subject because events of the past few months demonstrate that despite denials by Soviet officials, harassment of Jews continues. This religious, social, and economic repression of Jews in the U.S.S.R. is a blatant violation of the human rights provisions of the Helsinki Final Act, signed by the Soviet Union, as well as Soviet constitutional guarantees of freedom of religion. I rise today to implore the Soviet Government to honor the Helsinki agreement by unequivocally applying its provisions to all peoples of the world.

According to the latest census, there are 2,151,000 Jews living in the Soviet Union. Genia and Lev Frumkin and their daughter Dina are three of the more than 200,000 Jews who seek permission to leave in order to be reunited with their families.

Genia is 29 years old and a graduate of the Riga Medical Institute where she specialized in stomatology. Since her graduation from the institute, she has been unable to find employment as a dentist. Geniva, Lev, and their daughter live in Riga Latvia where Lev is employed as a mechanical engineer in a factory. They applied for an emigration visa in 1972 and were refused in 1974 because of Lev's service in the Army which ended in 1969.

Genia's parents and brother reside in Israel where they anxiously await her arrival. Her mother, Mrs. Lea Roitkop, writes from Israel:

Genia is my only daughter and I have never seen my granddaughter. I have shed many tears but the Russian government finds all kinds of excuses not to let them out. You can imagine the agony I go through not to be able to be reunited with my children.

Repeated denial of permission to emigrate as in the Frumkins' case is but one example of harassment on the part of the Soviet Government. Letters from Soviet Jews which have recently reached the outside world report of renewed and often-violent persecution. Two letters, one signed by three activitists accused by a government newspaper of espionage on behalf of the CIA and the other signed by 250 Jews, report of an escalation in this harassment, mass arrests, and threats to arrest the editors of the magazine Jews in the U.S.S.R. Conditions are so threatening that in one of the letters, the authors were compelled to write:

The situation is such that we feel exactly like hostages in the hands of terrorists who acknowledge no laws, national or international, and who are ready to take extreme measures at any moment.

The recent arrest of Anatoly Schransky, a leader of the Moscow Jewish community and a founding member of a Soviet group formed to monitor the Helsinki agreement, is a further indication of increased repression. In addition, on July 19, 1977, Benjamin Levick, the highest-ranking Soviet scientist who wishes to emigrate to Israel, was officially summoned for questioning by the KGB state security police.

It is imperative that we continue to exert pressure on the Soviet Union in order to eliminate the continual harassment and repression of Soviet Jews. Our responsibility to protect human rights extends not only to Americans but also to all the citizens of the world. History has proven that we cannot afford to compromise our position on this issue. The events of recent months, as illustrated by the individual case of the Frumkin family, and the past history of Soviet Jewry clearly demonstrate that the promises made in the Helsinki accord remain unfulfilled.

SOCIAL INSECURITY FOR FORMER SPOUSES

HON. PATRICIA SCHROEDER

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mrs. SCHROEDER. Mr. Speaker, when the Government created the Civil Service Retirement System in 1920 and social security in 1935, the divorce problem we experience today was not envisioned.

In 1965 Congress responded to the growing number of long marriages ending in divorce by amending the Social Security Act to provide benefits for a divorced spouse who was married at least 20 years.

Unfortunately, the Federal pension plans have not taken similar action so that former spouses of Federal employees find themselves out in the cold with no

retirement benefits when a long marriage ends in divorce.

The United States has the highest divorce rate in the world. According to census statistics, there were 4.4 divorces per thousand in our country, with Great Britain, Canada, and Germany averaging half of that. Yet all of these countries have experienced soaring divorce rates in the 1970's because of liberalized divorce codes.

Studies prepared for me by the Library of Congress Law Library revealed that Germany and Canada, alarmed at the economic consequences of divorce, are taking measures that compensate the homemaker for her nonsalaried services.

In July 1976, Germany passed a marriage and family law reform entitled "the Equalization in Division of Pension Expectancies." This law recognizes pensions as being jointly earned by both spouses to provide old age security for both insured and noninsured spouses. There is no duration of marriage requirement and the law divides the pension on a prorata basis by the ratio of work years to marriage years.

On April 18, 1977, the Canadian Minister of National Health and Welfare and Minister Responsible for the Status of Women introduced an amendment to the Canada pension plan to permit equal splitting of Canada pension plan credits between husband and wife upon divorce regardless of the amount of direct contribution made by husband and wife. Under the Canadian proposal, an individual's interest vests after 3 years of cohabitation and credit splits would be made upon application by either spouse within 3 years of the dissolution of the marriage. The amendment covers the ex-spouse against disability and makes the child of the ex-spouse eligible for survivor's benefits following the death of the former spouse. The Canadian proposal is retroactive, providing credit splits for all years of marriage back to 1966 when the Canada pension plan was created. Those already receiving pension plan retirement and disability benefits would receive a new benefits amount calculated on the basis of the split.

Aware of the gaps in our country's legal protection of homemakers, the Homemakers Committee of the National Commission on the Observance of International Women's Year has published surveys on "The Legal Status of the Homemaker" in each State to educate homemakers of their legal risks and rights.

According to former Congresswoman Martha Griffiths, chair of the Homemakers Committee,

> Federal and state law in the common law states, in general, do not give recognition to the economic and social value of the homemaker's contribution.

Speaking from her experience as an attorney and member of the House Ways and Means Committee, Mrs. Griffiths said that:

> Far from being the darling of the law, the homemaker is the most vulnerable woman in society, with the least knowledge available to her of the reality of her legal status.

It is indeed time to review our retirement plans and their effects on wage earners and their dependents. I applaud President Carter's decision to appoint a top level task force to study our pension systems. Because of his concern that the integrity of the American family be a factor in his administration's programs, I urge this task force to give careful consideration to the welfare of divorced spouses and widows. This administration can significantly upgrade protections for homemakers, so that in the future those persons who choose to dedicate their efforts to their home and family are not punished for that decision.

I would like to share with my colleagues the following article that appeared in the Los Angeles Times written by Riane Tennenhaus Eisler, author of a new book entitled "Dissolution."

[From the Los Angeles Times, July 22, 1977]

INEQUITIES FORCE WOMEN TO FACE SOCIAL INSECURITY

(By Riane Tennenhaus Eisler)

In recent years, many American women have been abruptly ousted from the ranks of the middle class and shoved into sudden—and very real—poverty. Who are these unfortunate women? They are former wives, now separated, divorced, or widowed.

Behind their plight lies a number of factors. Divorce courts are awarding support payments that are smaller and paid over shorter periods than was the case just a decade ago—a shift that has been ascribed, erroneously, to the push for women's equality. Deepening the problem for women who have spent years as housewives is the likelihood that those who do manage to find jobs will earn only 60 percent of what a man can make on the labor market.

Contributing to their impoverishment is our discriminatory Social Security system. Indeed, the poorest single segment of society is made up of widowed, single and divorced women aged 65 or over.

As it stands now, Social Security, which is supposed to protect all workers, fails to provide adequately for millions of women who have devoted their lives to marriage and family.

For example, a widow is not eligible to receive Social Security benefits until she is 60 years old—even if her deceased husband was the sole breadwinner. This law leaves many widows without support at a time when they may need it most. Furthermore, numerous older women, unable to find jobs after lifetimes as homemakers, are penalized by Social Security laws for following the only other course open to them: remarriage. If they take another husband before turning 60, they lose all widow's benefits, and only half accrue to them if they remarry after 60.

The plight of the older divorcee is even worse. Under current Social Security law, a divorced homemaker is not entitled to any benefits based on her ex-husband's earnings unless the couple had been married at least 20 years—and even in that event she cannot qualify until she is 62. This rule applies even to a divorced woman with children, whose former husband is disabled and cannot provide any support.

All these regulations ignore that marriage is, among other things, an economic partnership. While contributing valuable services to the maintenance of the family, homemakers enable their spouses to devote themselves to full-time jobs in the workaday world. Yet the wages earned by the partner outside the home (usually the man) are credited solely to him for purposes of Social Security insurance when, in effect, the couple have agreed to split his wages while sharing her contribution of maintaining the home.

Some lawmakers have proposed bills that would recognize this concept of income-splitting by establishing separate Social Security wage scales for homemakers. Several such measures were discussed earlier this week when the House Ways and Means subcommittee on Social Security held hearings on equal treatment of men and women. However, since subcommittee members have already indicated that their overriding concern for the rest of the present session will be to finance the perilously dwindling Social Security fund, all that proponents of equal treatment can realistically hope for is a commitment to study the feasibility of recognizing income-splitting between spouses.

But while Congress considers proposals to make Social Security laws fairer and more realistic, the Supreme Court has dealt a severe blow to the move to legally acknowledge the homemaker's economic contribution. This setback occurred in a recent case, Mathews v. de Castro.

Helen de Castro, 56, the mother of a disabled child, had been married more than 20 years at the time of her divorce. Ms. de Castro could not qualify for benefits on her own, and since she was not yet 62 years old, she could not draw old-age benefits on the basis of her ex-husband's earnings. However, the Social Security Act has a provision which states that a wife is entitled to benefits before age 62 if she has a dependent child in her care and a husband who is retired or disabled. So, at the time that her ex-husband retired and applied for his benefits, Ms. de Castro also applied for benefits under this provision. She was turned down because the rule permitted payments to wives—but not *ex*-wives.

To deny her payment solely because she was divorced, Ms. de Castro maintained, violated the equal-protection clause of the Constitution. A federal court in Chicago agreed, but the Department of Health, Education and Welfare appealed the decision, and the Supreme Court overturned it.

The underlying reason for the high court's decision, apparently, was concern for fiscal economy. But is it economically sound to force ever-increasing numbers of middle-class homemakers—and their children—onto the welfare rolls? Considering the exorbitant cost of the welfare bureaucracy, this approach hardly produces a net savings. Furthermore, the real cost—the human cost—we pay for such an attitude is lowered self-esteem and personal alienation among millions of citizens who come to believe that society is indifferent to their plight.

Clearly, the issue involves costs less than it does social priorities. Each year a million American families break up in divorce; one of every six children is raised by a divorced or widowed mother. At long last *all* homemakers—married, widowed or divorced—should be rewarded, not punished, for their years spent as wives and mothers.

By amending the Social Security Act to allow for income-sharing and give the American homemaker benefits in her own right, Congress would be taking a step in the right direction. As a start, coverage might be provided to all married women who file joint federal income-tax returns with their husbands; this would guarantee Social Security benefits for wives who do not work outside the home while providing fairer retirement payments to employed women who earn far less than their husbands.

Our lawmakers now have a chance to pay more than traditional lip service to the American homemaker. Perhaps our society errs in granting dignity and social recogni-

tion to its members by attaching a dollar value to their careers, but as long as we do so, we had better put up for mothers and homemakers—or shut up and stop pretending to venerate them.

THE AMERICAN SPIRIT FACES THE CHALLENGES OF THE TIMES

HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. BROWN of Ohio. Mr. Speaker, I had the privilege of hearing an address recently which I would like to share with my colleagues. It was delivered on Memorial Day by former Logan County School Superintendent John Stanfield in Bellefontaine, Ohio, in the Seventh Ohio District

Mr. Stanfield boldy takes stock of the challenges and crises facing the United States. Believe me, it is a discouraging assessment. Yet Mr. Stanfield's confidence in Americans and their spirit shows through in a shining optimism that we can meet the challenges we face and triumph over the ills which beset us. It is a message we need to hear, particularly as we conclude some hectic weeks of legislative business in which we too often get buried in the details and fail to see the whole picture.

As we return to our homes around this great nation to the districts and the people we represent, perhaps we should take a moment to think about America as it is today. Only then can we resolve to make it better tomorrow.

I commend the following remarks of Mr. Stanfield to my colleagues' attention:

REMARKS OF MR. STANFIELD

Mr. Brown, Honored Guests, Friends: Each time we take part in a Memorial Day program or attend ceremonies like these—as we watch the American flags wave in the breeze, hear the bands, we try in our hearts to understand and appreciate the trials, heartaches, moments of torment or happiness that those who have made America the country that it is. We are proud of them and thankful for them. Today is a day for remembering those earlier Americans who lived, struggled to build, and died under tremendous hardships to give us our heritage—this country, this community.

We often severely criticize some aspects of our national life, and perhaps it is good to be able to see where we are wrong and try to correct matters. But if you have ever lived for any time abroad you quickly learn that America is a country of which we can be proud. This concept was repeatedly brought home to me when I conducted American farm leaders on tours of Egypt and Pakistan a few years ago. Without exception the participants would say to me, "John, as I leave this country and return to American soil, I will get down on my knees and thank God that I am an American citizen!"

Did you every help a child make a kite and share with that eager questioning anticipation which is so much a part of the whole fashioning process? Will it fly? Will it gracefully ride the winds? What if a sudden squall comes up? Will it buckle and dart disastrously into a tree? It wasn't the calm and steady breeze that you needed to be concerned about. It was the turbulence that offered the real test of your kite-making skills.

Have you ever said, or heard it said, 'I don't want my child to have as hard a time as I did'? We forget that turbulence is the real test of whether or not we can successfully meet the challenges of life. Today we are beginning to see that a hard testing of our unselfish love of country is coming as we see that the rapid depletion of the world's natural resources will force us to change our lives, no matter where we live.

There are fundamental aspirations that Americans can hold, basic to our lives now, especially in the light of the rapid worldwide changes we are experiencing. Elmer Morgan has summarized those aspirations and ideals that have brought happiness, achievement and fulfillment to many Americans. He listed them as follows:

1. To be a good father, mother, sister, brother or friend.

2. To be dependable, faithful, a skilled worker in the home, school, office, Church, field or factory.

3. To be an intelligent, honest, useful and loyal citizen, with faith in God and a love of fellowman.

4. To recognize the brotherhood of man and live by the Golden Rule.

Some of these things may appear as common, ordinary . . . little things. But if carefully examined we will find them to be the most important factors for good in our lives!

The Common things in life are the things that have made the uncommon American!

Dean Rusk, former Secretary of State, was invited to a New England college campus to lead a discussion on "Values." He talked of little things, small things: such as Honor, love, faith, character, integrity, sacrifice, patriotism. Following the discussion, as Mr. Rusk walked from the room a dead silence fell over the group. Then . . . tremendous applause. They had understood what he said.

Men and women that we remember—as we look at the lives of those people we realize that they lived by values that: made their lives more meaningful, and the world in which they lived more liveable! This could be a realistic goal for each of us: A more liveable world in which to live!

While this day is for remembering those who sacrificed their lives in war to preserve our freedoms, we also remember those who returned to pick up the torn threads of their lives and those families at home who also suffered the pangs, doubts and losses of war. All felt loyalty and duty to country and were willing to pay a high price for the privilege of American citizenship.

What is an American citizen?

President Lincoln once said: "Let reverence of the laws . . . become the political religion of the nations." He was saying that laws are needed and it is necessary that we respect and observe them. Law is a great instrument for social justice—when applied evenly and fairly.

Another president, Theodore Roosevelt said, "No man is above the law, and no man is below it." He was saying "equal justice for all".

Thus both men highlighted the importance, and the correct application of law in the American way of life.

Again, I believe that the American concepts of compassion, dignity, honesty, integrity loyalty, patriotism, and love of fellowman that were woven into our Constitution and national life (by our founding fathers whose thinking was based on the Judeo-Christian ethic) are of everlasting value.

Not all believe this to be true! There are many thousands of people, many groups, that are doing all they can to destroy religion, the law, the schools, the family and the Constitution itself!

Let us think for a moment of some events in our national life. As I name them ask yourselves if you think they should become the accepted standards for our state or nation:

1. Graft, greed, lying, stealing and other crime in government circles.

2. The Supreme Court decision sanctioning abortion. How can we rationalize our righteous indignation of Hitler's slaughter of the Jews in the death camps of World War II, and yet accept this decision and the low value it places on human life.

3. The 'Do your own thing' concept—no matter the cost to others or self.

4. Media programming that is contrary to the basic tenets of Christianity.

5. The 'God is dead' movement with its far-reaching consequences on both youth and adults.

6. Food stamp scandals . . . workmens compensation scandals . . . welfare scandals, medicare.

7. The modern view of some that the family is out-dated.

8. Lotteries wherein the State exploits the weakness and greed of its citizens to secure funds. Historically, such governments have declined!

9. State-owned liquor stores, acceptance of prostitution, homosexuality, hard-core pornography.

10. Ruling prayer and expression of religion out of our public schools. I would like to enlarge on this subject a bit later.

Along these same lines Wm. J. Rogers, present Commander of the American Legion, speaks of America as a 'troubled land' and says that many Americans are filled with doubts; too many are asking if we have fallen victims of our own excesses, too many see old standards, old traditions crumbling, with little evidence of strong new standards rising . . . ordinary Americans are worried that values they fought for are slipping away. He continues:

"Terrorists seize hostages, kill innocent people, posture for TV cameras, mock the police and even demand conversation with the President of the United States.

"Discouragement or disillusionment with government at all levels borders on cynicism. Crime has spawned a silent fear that now pervades many once-proud cities.

"Concerned parents are pulling the plug on dubious, if not offensive, TV programs.

"Neighborhood theatres offer 'parental guidance' rated movies that make many parents blush, and X-rated fare that is artistically redeeming only in the eyes of judges wearing blinders!

"It is a cliche to say that this is a dangerous moment in our history. The phrase has been the editorial writer's prerogative for 200 years. But this is a moment of disquiet in America and it troubles many people. (Symptoms of this disquiet are found each day on the front pages of our newspapers and on each day's newscasts.)"

On the matter of ignoring prayer and religion in our public schools:

The Amendment to our Constitution in 1789 reads as follows: "Congress shall make no laws respecting the establishment of religion or prohibiting the free expression thereof."

In my judgment the founding fathers had no intention of eliminating everything religious from the official life of our nation. As witness to this we note the ff.

1. The existing numerous government documents and statements that recognize God as the Divine leader of our country.

2. Many mayors', presidents', and governors' calls to prayer and Thanksgiving proclamations.

3. Prayers in the Halls of Congress.

4. In the 1950's Congress added the words "under God" to the pledge of allegiance following the words 'one Nation'.

5. Oaths of office by government officials taken on the Bible.

There can be no question that our forefathers believed that independence was possible only when there is a 'Firm reliance on Divine Providence.' The above amendment, in my judgment, was to guarantee the separation of Church and State as institutions, wherein government was not to control the Church and no Church was to control the government. The reason for this was simple . . . the Founders remembered the evils that arose from such things in Europe. The amendment certainly does not eliminate all government controls over religious activities, nor does it eliminate all religious expressions from public life. A nation under God cannot run roughshod over the ideals of justice and honesty that are a part of our religious heritage.

In summary it appears to me that our country is faced with four crises and in the ff. order:

1. A religious crisis: When civilization is built upon technologies and machines that ignore the dignity of man, reject responsibility to God, then a type of Communism is the logical result.

2. A moral crisis: People have come to think they can do anything they want to, and get away with it. But society cannot endure without moral sanctions: It disintegrates!

3. A political crisis: As certain that night follows day, when society fails religiously and morally it is certain to fail politically.

4. Economic crisis: When economic problems are solved by selfish strife, greed, special interests, enslavement and war—at that moment we have created the ultimate moral/religious crisis. So the cycle continues until we destroy ourselves as a nation.

Government cannot provide all things to all people. We give up some right, freedom or independence for every function we turn over to government in return for more paternalistic catering to our many wants.

All the present-day claiming of "democracy" and "rights" will be meaningless unless a life worth living, a spiritual life, is achieved by the individual!

Josiah Gilbert Holland gave us these thoughts:

God, give us Men! A time like this demands,
Strong minds, great hearts, true faith and ready hands;
Men whom the lust of office does not kill,
Men whom the spoils of office cannot buy,
Men who possess opinions and a will,
Men who have honor; men who will not lie.
Men who can stand before a demagogue,
And damn his treacherous flatteries without blinking,
Tall men, sun-crowned, who live above the fog,
In public duty and in private thinking.
For while the rabble. with their little deeds,
Mingle in selfish strife, Lo, Freedom weeps,
Wrong rules the land and waiting Justice sleeps.

America has always had such men—men who have risen to many crises. I believe that the true American spirit still burns in many hearts and that her people will meet the challenges of these times.

THE PRODUCT LIABILITY INSURANCE TAX EQUITY ACT: HELP FOR THE UNINSURABLE

HON. DONALD J. PEASE

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. PEASE. Mr. Speaker, the product Liability Insurance Tax Equity Act, H.R. 7711, was introduced on June 9. I am pleased to have been one of its original sponsors.

In the past 2 months, the bill's chief sponsor, CHARLES WHALEN, has done an excellent job of pointing out how the legislation would help businesses and professionals who cannot afford the high cost of product or professional insurance.

As my coauthor has pointed out, the Federal tax code currently discriminates against those who seek to self-insure for all or part of their potential liability. But most of what has been said and written so far has concerned those who cannot afford commercial coverage that is otherwise available to them.

More and more frequently, though, manufacturers of certain inherently dangerous products are finding it impossible to locate an insurance carrier willing to sell them a product liability policy at any price. Yet when they attempt to establish a self-insurance reserve fund, which is their only alternative to "going bare" and operating without any protection against liability claims, then they run into two problems caused by our present tax laws.

First, today's tax code does not allow contributions to a self-insurance reserve fund to be treated as a deductible business expense. This means that a reserve fund must be built with very expensive after-tax dollars. In contrast, insurance premiums are permissible deductions and are purchased with pretax dollars.

Second, the Internal Revenue Service generally treats a product liability self-insurance fund as if it was undistributed dividends, subjecting the corporation to possible tax penalties. Thus, it is virtually impossible to build up any substantial reserve.

These problems may be quite troublesome and disturbing to a company that is faced with high premium costs and which would like to be able to consider self-insurance. But they are absolutely tragic for a company that must self-insure of necessity, not choice. I am aware of companies in several industries that are in this predicament.

Admittedly, their product lines are rather risky ones from the insurance point of view—certain medical devices, explosives manufacture and firearms assembly and distribution. And I find it hard to criticize private insurors for not wanting to cover those companies. But should the Federal Government compound the problem by making it virtually impossible for the small corporation to self-insure?

The free market economists say that insurance costs should be allowed to seek whatever levels they might. They argue that when these high costs are passed through to consumers, then a product's price will accurately reflect the risks that are inherent in it.

I have no argument with this. I just think that our present tax code distorts the free market unreasonably, preventing companies from exercising an option that should be available to them.

In the case of companies that have no commercial coverage available, we are forcing them to go uninsured, operating in peril of bankruptcy if they are sued and lose a big case. This kind of policy does not reflect the proper role of government, in my opinion.

To illustrate the problems discussed above, I would like to share with you a portion of a letter from a company in Florida. Their product line includes imported handguns:

We would like to briefly explain why (The Product Liability Insurance Tax Equity Act) is of vast interest to us and why, under existing law, we are innocently put in a very trying position for a small business.

(Our company), among other things, is an importer of revolvers and as an importer we take on some of the legal aspects of a manufacturer in that we are the original source of a product distributed in the U.S. market. . . . Over the years (we have) carried product liability insurance to cover those products imported and distributed for protection in the event of damage claims made against those products.

Due to the chaotic product liability situation now prevailing in the U.S. and, in particular with reference to the sporting goods industry, most major and substantial underwriters no longer will consider liability policies on our products or, if they do wish to quote, the premiums are astronomical. Therefore, faced with the inability to acquire product liability insurance, we decided that to protect ourselves and our customers and to stand behind our product which we market, we investigate the possibility of an alternative plan by insuring ourselves.

Our original thought was to set up an airtight trust fund or contingency fund of $200,000 or $300,000 that would only be used for legal defense and payment of any claims made on us through a court of law. Much to our chagrin, we discovered that the IRS codes look upon a fund such as this as regular income and fully taxable, and in our case that tax would be approximately 50 percent.

In essence, we found that as an ethical and reputable small U.S. business, through circumstances beyond our control, we are "mousetrapped" into a very serious and unfortunate position.

Bear in mind that we could simply set up no fund and have no liability insurance and disregard any and all claims made on us, but we do not feel this is the proper attitude for us to take.

Therefore, with reference to HR 7711, we certainly hope that consideration to this bill will be forthcoming and realize through this rather sketchy and informal explanation of one small business, that it is essential to the well-being of a great number of small businesses in this country.

Another Southern company, this one in the fireworks manufacturing business, also provides documentation of the problem. Here are the relevant portions of their statement:

We are most interested in a recent bill introduced by Congressman Charles W. Whalen to exempt product liability reserves from taxation when companies set up their own funds . . .

Under current laws, insurance premiums are allowable as tax deductions, however, the reserve funds are taxable as accumulated capital. Product liability insurance coverage, if obtainable, carries an extremely high premium rate even with high deductibles.

Of greater concern is the refusal of insurance carriers to write any kind of coverage of firms such as ours engaged in pyrotechnics and explosive ordnance manufacturing and assembly. The exception is automobile insurance, and because of state law, coverage is obtainable under assigned risk plans. There is no similar provision for contractors' or product liability insurance.

In view of this very serious situation, we request and support legislation that would allow businesses to set up non-taxable re-

serve funds for insurance purposes. In this manner, the small business concern can be assured of some kind of protection when the insurance carriers decline to provide it.

SBA'S WOMEN'S BUSINESS OWNERSHIP PROGRAM MARKS A NEW DAY IN WOMEN'S RIGHTS

HON. CLIFFORD ALLEN

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. ALLEN. Mr. Speaker, I want to commend the Small Business Administration for its announcement at the White House yesterday of a national women's business ownership program.

The SBA is the only agency in Government with the programs in place to effectively respond to the urgent need for a more important place in the economic sun for capable and creative women who have latent business talents and abilities.

This is an important step toward assuring meaningful equal opportunity for women.

I want to commend Ms. Margaret Costanza, Assistant to the President for Public Liaison, A. Vernon Weaver, Administrator of SBA, and Ms. Pat Cloherty, Deputy Administrator-Designate of SBA, for their leadership in moving forward with this timely proposal. I also want to commend Mr. Bill Keel, Assistant Administrator for Congressional Legislative Affairs at SBA, and Dr. Pat Burr, Assistant Administrator for Management Assistance, for developing the proposal for this program as members of the Carter administration's SBA transition team.

This is an outstanding program and marks an important milestone in the road to economic equity for women.

In this connection I place in the RECORD herewith the text of a White House press release announcing the program.

The release follows:

THE WHITE HOUSE,
August 3, 1977.

A national Women's Business Ownership Campaign by the Small Business Administration was announced today by Margaret Costanza, Assistant to the President for Public Liaison.

She made the announcement at the White House in a joint press conference with A. Vernon Weaver, Administrator of SBA, and Ms. Pat Cloherty, Deputy Administrator-designate, SBA, who will have overall direction of the program.

The program is designed to increase the number of women in small business through a combination of management assistance, financial assistance, seminars and conferences, and help in securing federal contracts and services.

"This program has my strong support and the President's strong support," Ms. Costanza said. "In the campaign the President discussed the need for such assistance by SBA for women entrepreneurs and this initiative follows through on his commitment to work to assure women equal economic opportunity."

Weaver pointed out that "SBA is going to have a 'new look'—internally, with greater emphasis on the appointment and promotion of women, and externally, with a strong, definitive program to encourage business ownership by women."

"We are committed," he said, "to the use of SBA as a major instrument to assist women in gaining entry into the small business sector of our economy."

Ms. Cloherty said the campaign would begin immediately and would be keyed to short-term goals designed to reorient SBA priorities, and a longer term strategy geared to developing specific programs.

She said the short-term program would include:

A series of some 110 seminars and conferences designed to inform women about SBA programs and how to get into business or develop a business.

More attention to the needs of women seeking business loans though lending programs administered by SBA district offices.

Management assistance, including training; use of the retired business people who are volunteers in the Service Corps of Retired Executives (SCORE) and the Active Corps of Executives (ACE) who provide counseling; the call contract program, which is a more specific form of counseling assistance; the Small Business Institute program, which harnesses university talents in the assistance of small business, and the pilot University Business Development Center project which brings together federal, state, local and other resources in universities to assist small business persons.

Contract assistance for eligible women-owned small businesses desiring to participate in government contract work.

Ms. Cloherty stressed that the key elements of this campaign are based on the maximum utilization of existing resources coupled with a reorientation and much sharper focus on women.

FORMER LBJ PRESS AIDE EXPOSES ERRORS IN ASSOCIATED PRESS ARTICLE

HON. J. J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. PICKLE. Mr. Speaker, Mr. Horace Busby served as the press secretary for the 1948 Johnson for Senate campaign. He later served with great distinction on the White House staff during the Johnson administration. From this vantage point, he is very familiar with that tumultuous contest which an Associated Press article recently referred to.

I think that Mr. Busby's straightforward, unemotional yet factual letter to the editor of the Washington Star amply illustrates that the article erred not only in commission, but also in omission.

I insert the letter mailed to the Star for the edification of my colleagues and to set the historical record straight. Horace Busby is one of the most respected journalists in America today, and he knows what he is talking about.

The letter follows:

AUGUST 2, 1977.

Mr. JAMES G. BELLOWS,
Editor, The Washington Star,
Washington, D.C.

DEAR MR BELLOWS: In 1948, I served as press secretary to Congressman Lyndon B. Johnson during his race in Texas for the Democratic nomination to the United States Senate.

May I, from that perspective, respectfully suggest that in the Sunday, July 31, articles regarding the outcome of that race, the Dallas bureau of the Associated Press has circulated a story which does not meet the standards of journalistic accuracy and responsibility expected of the Associated Press by its member newspapers.

In the order of their appearance in the article, let me cite the following instances of such inaccuracy:

Item: The photographs distributed with the article by the Associated Press are identified as being of the candidates and their respective wives. Governor Stevenson, at that time, was a widower.

Item: The article states that Justice Hugo Black of the Supreme Court "halted an investigation." The only issue to come before Justice Black was the validity of a North Texas Federal District Court injunction preventing the State Democratic Party from certifying Mr. Johnson as the Party's candidate for Senator in the November general election. Justice Black stayed that injunction. The article omits reference to the fact that in 1949 the full Supreme Court acted upon the case and unanimously affirmed the action of Justice Black.

Item: In the above instance and in a subsequent reference to "an aborted investigation," the article implies that no investigation of the Box 13 vote fraud was ever completed. The United States Senate, then under Republican control, initiated an investigation in the fall of 1948, sent teams of investigators into the counties in question, and issued a full report which found no cause for challenging Mr. Johnson's election. The article omits any reference to the fact of the Senate investigation or to the findings published in a public document.

Item: The article identifies T. Kellis Dibrell as a "former FBI agent" who got a "brief look at the Box 13 tally in the original investigation." The implication is that Mr. Dibrell saw the tally in his capacity as an FBI agent. In fact, Mr. Dibrell was, at the time, Governor Stevenson's attorney and political ally. As for the innuendo that only one person had a "brief look" at the tally sheet, it is fact that the records were seen, copied and reported by countless newspaper reporters and others.

Item: The article asserts that the "AP interviewed everyone connected with the case who is still alive to corroborate Salas' story." If so, not one word of corroboration is introduced into the article. More noteworthy, by journalistic standards, is the absence from the story of any interviews with persons associated with Mr. Johnson: among those still living who were directly connected with the case are several attorneys who represented Mr. Johnson as Mr. Dibrell represented Governor Stevenson, such as, to name two, Leon Jaworski and Abe Fortas

Item: The article states that between the July primary and the August second primary, "Johnson intensified his campaign," adding that "he went stumping" in the region where the Box 13 events later transpired. This did not occur. Shortly after the first primary, Mr. Johnson abandoned his campaign to return to Washington for the special session of the 80th Congress called by President Harry S Truman. He was out of the state for one-third of the brief campaigning period. Upon his return to Texas, Mr. Johnson concentrated his efforts in the state's populous metropolitan areas and did not go "stumping" in the region alleged.

Item: The article relates that seven days after the runoff, the "official statewide vote canvass" gave Mr. Johnson 494,191 votes and Governor Stevenson 494,104 votes. This did not occur. Seven days after the voting, the Texas Election Bureau, an unofficial tabulating operation of Texas newspapers and the Associated Press, suspended counting without declaring a winner since the 254 county reports were incomplete, unreliable

and subject to certification later. The vote figures cited in the article represent the official tabulation made by the State Democratic Executive Committee at the Party's convention in Fort Worth at mid-September, well after the election.

Item: Significantly, the article omits mention of the fact that, both before and after being declared winner of the election, Mr. Johnson repeatedly called for all ballot boxes in the state to be impounded so that the outcome could be determined under a court-supervised recount. As the winner, he had no legal standing to seek such a recount himself. The Stevenson forces refused to seek a statewide second count of the ballots. The report of the Senate investigation, which was ignored in preparation of this article, states that an accurate determination of the outcome of the election could only have been obtained by following the course advocated by Mr. Johnson.

Item Finally, in the last several paragraphs, the article implies that President Truman had given assurances permitting Luis Salas to be told, "Don't worry about the investigation." Then, by juxtapositioning of espisodes, the article casts a last innuendo: that, two days after the implied Truman assurance, Justice Black acted to end the investigation and put Mr. Johnson's name on the ballot.

Thus, with no corroboration whatsoever, the Associated Press article relies upon the results of three years of badgering of a 76-year-old former enforcer for a South Texas "godfather" to weave a story irresponsibly impugning two former Presidents and one former Supreme Court Justice, all now dead.

In writing this, I have avoided disputing the details of the article on the basis of purely personal "I was there" knowledge. While I believe the story entirely false, and malicious as well, its falsity and improbability are demonstrable from information available to any sincere research effort in the files of the Associated Press.

I realize that member newspapers of the Associated Press, as well as the national editors of that organization, could hardly be expected to know, at a distance of 30 years, the inaccuracies, innuendoes, misstatements and selective omission of publicly avaliable information out of which this article is fabricated and embellished. Considering the currently healthy willingness of newspapers to engage in objective examination of their news content, I am writing this in the belief that the Sunday article is deserving of such objective examination by responsible members of the profession.

Sincerely,

HORACE BUSBY.

A HISTORY OF THE TEXTILE TRADE

HON. HAMILTON FISH, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. FISH. Mr. Speaker, the Members are aware of the recent trade talks in Geneva concerning the textile/apparel industry which hopefully will lead to wide participation in a new multifiber arrangement. Many of us are concerned about the health of this vital American industry and I take this time today to advise the membership that Representative JAMES R. MANN, chairman of the Informal House Textile Committee, and I will be taking a special order after our return from the August recess to give Members an opportunity to express their concerns and to receive an update on developments in the international textile trade area. In the meantime, I am inserting the following remarks for the purpose of providing background information for Members who may not be familiar with the history of the textile trade:

This year marks a crucial moment in the long-time efforts of our country to preserve one of the most vital sources of employment for American working people. I refer to the discussions that were recently held in Geneva with regard to the textile and apparel trade that directly affect the more than 2.3 million people employed in this sector of the economy.

These workers make up the single largest body of factory workers in the United States. Their well-being is vital not only to them and their families, but to the nation as a whole that depends on their giant purchasing power. Their continued employment is especially significant in many small towns that are often totally dependent on this industry for employment and to several large cities where lower income people have traditionally turned to textile mills and sewing factories for their livelihood.

This year is crucial because a number of international arrangements and understandings, evolved over many years to regulate imports so as to prevent disastrous disruption in American production, and now up for renegotiation and renewal.

The central institution in these negotiations is the Multifiber Textile Arrangement (MFA) and the many bilateral agreements flowing from it. The original MFA, effective in 1974, is due to expire this year unless renewed. Both the major arrangement and the bilateral agreements have a history that is highly instructive in helping us to understand the nature of the problem, the progress and pitfalls of the past, and present needs.

The need to establish orderly marketing arrangements in the textile industry was recognized more than 40 years ago when a special committee reported to President Roosevelt in 1935 its recommendation "to deal with this special situation" by controlling imports "preferably by means of a voluntary and friendly agreement with Japan on limitations of shipments of cotton products to the American market."

It is significant that one of the members of this Cabinet-level committee was then-Secretary of State Cordell Hull, the father of Reciprocal Trade Agreements. The reference to Japan is due to the fact that Japan was then the great exporter and the reference to cotton was due to the fact that this fiber was then dominant in the trade problem.

The Committee recommendation was pursued. And in doing so, one year after the first Reciprocal Trade Agreement Act, it is clear that the problem of textiles was viewed as unique and "special."

This relevant piece of history was almost forgotten because during the war years the textile problem disappeared. Even in the early post-war years, the problem was virtually non-existent because the United States was the key nation with a major textile-producing capacity. It was not until the 1950's that the problem reemerged as the Japanese cotton textile industry surged back into operation.

From the 1950's on, our government—under different Administrations—has moved in many ways to grapple with a problem that has continued to grow so that what began as rather simple negotiations between Japan and the United States over cotton products has become a worldwide affair dealing with cotton, wool, man-made fiber textiles and a host of products containing these fibers. The evolution of this problem stresses our need to be well informed, to stay abreast of current developments and to pursue policies that are based on the realities of the moment.

In 1956, under President Eisenhower's directions, negotiations were concluded with Japan. As a result, Japan adopted its own five-year program of export restraints beginning January 1, 1957. But even as Japan's program of limiting the exports of its cotton textiles and apparel took effect, products began to pour in from elsewhere. Other nations began to export cotton textiles to the United States from factories that paid wages in penny pitances, from Hong Kong, Taiwan and elsewhere.

In the 1960's the problem took on an added dimension as wool and man-made fibers began to loom large in the textile and apparel trades. It was now painfully apparent that "market disruptions" resulting from the unrestrained flood of imports was a danger that had to be faced frankly so that appropriate formulae might be found to deal with impending chaos. The contracting parties to GATT (General Agreement on Tariffs and Trade) that met in Tokyo in 1960 recognized the problem of impending market disruption and defined it in very specific terms, as follows:

Market disruptions generally contain the following elements in combination:

(a) A sharp and substantial increase or potential increase of imports of particular products from particular sources;

(b) These products are offered at prices which are substantially below those prevailing for similar goods of comparable quality in the market of the importing country;

(c) There is serious damage to domestic producers or threat thereof."

With the problem defined—damage to a domestic producer arising from a sharp increase of low price imports—the next problem was what to do about it. In the election campaign of that year (1960), the spokesmen for both major parties favored international regulations over imports of textile and apparel. Said then-Vice President Nixon: "Nor does it make sense to me that an industry like cotton textiles bear an inequitable burden as a result of efforts to adjust wartime agricultural policies to peacetime needs. To the end of assisting the textile and garment industries and their workers to meet the problems ahead, I am determined to explore every constructive line of action." Then-Senator John F. Kennedy affirmed the same sentiments: "We must recognize that the Textile and Apparel Industries are of international scope and are peculiarly susceptible to competitive pressure from imports. Clearly the problems of the Industry will not disappear by neglect nor can we wait for a large-scale unemployment and shutdown of the Industry to inspire us to action. A comprehensive industry-wide remedy is necessary."

Almost immediately after his inauguration, on May 2, 1961, President Kennedy advanced a seven-point program to assist the U.S. textile industry. Point Six was aimed at international arrangements:

"I have directed the Department of State to arrange for calling an early conference of the principal textile exporting and importing countries. This conference will seek an international understanding which will provide a basis for trade that will avoid undue disruption of established industries."

The outcome of this call was a Geneva Conference in July 1961 that produced the Short Term Arrangement for Cotton Textile Trade to run from October 1, 1961 to September 30, 1962, during which time the parties would work out a Long Term Arrangement to cope with the problem of "market disruption" as defined in the early statement of GATT.

The Long Term Arrangement was renewed several times—in 1967 under President Johnson and in 1970 under President Nixon.

Although by 1973 there were some 32 governments who were signatories to the Long Term Arrangement, the essential problem was far from solved because cotton was being superseded by wool, by man-made fibers, and by blends thereof. To meet the new problem, some 50 governments participated in the negotiation of the Multifiber Arrangement.

The MFA that became effective in 1974 was foreshadowed by several bilateral agreements, negotiated directly by the United States with Japan, Taiwan, Hong Kong, and South Korea to cover products made of man-made fibers and wool in addition to cottons. Out of these beginnings there evolved the more inclusive Multifiber Arrangement.

We have now had several years of experience with the MFA and are in a position to make some evaluations of its pluses and minuses.

Its single greatest plus is the fact that the MFA provides an instrument through which nations may arrive at orderly marketing arrangements by negotiation and agreement. The alternative to such civilized procedures is the chaos of trade wars wracked by the anarchy of market invasions and market barriers.

It is for this reason that our Administrations have favored the renewal of MFA. I am glad to note that a proposal for its renewal for another four years was put forth in Geneva on July 24, and that protocol will be available for signature later this year. It is apparent that there are deficiencies in the Multifiber Textile Arrangement and in the bilateral agreements flowing from MFA. The reasons are numerous:

(1) Not all the countries with textile and apparel-producing operations or potential are included. Among those outstanding are mainland China, and several Latin America countries.

(2) The import quotas allowed under its umbrella have been made too high. Thus while government figures show the domestic apparel market growing at 2.8 percent per year, imports grew at the rate of 6.1 percent—an incontestible proof that imports were growing at the expense of American production and jobs.

(3) The MFA contained a number of technical loopholes, permitting the use of previous year's unfulfilled quota, or borrowing against next year's quota, or shifting product lines as a result of which, in product after product, the annual rate of import increase by far exceed the six percent.

There are other specifics on the MFA's and the bilaterals that are worthy of further discussion at some later point. The key fact is that in the last decade—despite our continuing efforts—144,000 jobs have disappeared in America's apparel trades alone.

Our loss is understated by this figure, however. During these years the American market has been expanding. If imports had not grown since 1961, there would be over 386,000 more men and women employed in apparel industry alone in this country.

From this altogether too brief and sketchy history of our efforts to maintain one of the most vital sectors of our economy, it is clear that our best intentions have been repeatedly frustrated because we have applied ourselves to solving yesterday's problems at the very time when new problems were emerging.

Admittedly even an agreement such as the Multifiber Textile Arrangement with all of its deficiencies is better than no agreement at all. But we must do everything that is possible to safeguard our jobs in this country even under its present imperfect provisions.

I see from the press that the protocol on renewal of the MFA for the next four years will be accompanied by a document giving signatory states the possibility, on the basis of bilateral agreements, of "reasonable departures from particular elements in particular cases" from the provisions of the MFA. It is essential for the U.S. Government, therefore, in negotiating future bilaterals to take full advantage of these provisions. We must do so because of the importance of the textile and apparel industry to our country and because of its sensitivity to the impact of foreign imports.

In the light of the renewed MFA we must negotiate realistic agreements with the exporting countries taking into account the capacity of the American market to absorb an additional volume of imports.

As we must make certain that countries not currently covered by bilateral agreements, such as the People's Republic of China, are also brought into the orbit of the MFA and the bilateral agreements concluded in accordance with its terms.

And there is another problem of which we must be conscious. At the present time, the United States is in the process of reviewing its duties in the course of another set of Geneva negotiations. There is no justification for lowering customs duties on apparel and other textile products. The existing duties have in no way kept foreign merchandise out of our market with the significant detriment to our ability to maintain jobs in textiles and apparel.

Reasonable restriction of imports has been the will of the nation from President Roosevelt's day to the present, irrespective of the administration in Washington. We must now find improved ways to give reality to this will.

THE EROSION OF OUR PURCHASING POWER

HON. RONALD A. SARASIN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. SARASIN. Mr. Speaker, we devote many hours in this chamber to finding remedies for the economic woes that plague our country. Yet the most serious problem—inflation—is alive and well. It threatens our economic well-being as it approaches double digit figures.

I would like to take this opportunity to direct the attention of my colleagues to an editorial which appeared in the Bridgeport Telegram that emphasizes the potential ramifications of Federal deficits and increases in the money supply. The editorial was thoughtfully sent to me by one of my constituents, Mr. Bertram A. Stroock, a well-respected resident of Newton, Conn.

If the Government continues to artificially increase the money supply without regard for the equilibrium of supply and demand, our future security will be jeopardized. Spiraling inflation erodes the purchasing power of each of us, but especially those who live on fixed incomes, principally the old, the disabled and the very poor.

If we allow inflation to run at a faster rate than the average American's ability to earn, then that American's initiative wanes. He will no longer be tangibly rewarded for hard work and diligence. This is tantamount to challenging the very roots of the American tradition. Something must be done to balance the Federal budget because continued inflation can only have a devastating impact.

The article is as follows:

[From the Bridgeport Telegram, July 2, 1977]

WARNING SIGNALS

Devastating inflation may be here again. Only a few economists—too few—seem aware of the danger.

"We are faced with the almost certain prospect of double-digit inflation for the balance of the year, and possibly into the next, not because of greedy business, or greedy labor, but because of spend-thrift government—a government that is printing money faster than we can produce goods," writes a specialist in economic affairs, Warren T. Brookes, in the Boston Herald American.

Another early-warning specialist, Dr. Milton Friedman, has commanded too little attention with his cautionary statements since last summer and his most recent observation that the government is expanding the total money supply at a rate of 8 to 10 per cent a year while the economy is growing at less than 5 per cent.

"That's inflation," Mr. Brookes states bluntly. "The only way government can correct it is to stop running $50–$70 billion deficits, and then printing money to cover them." The total money supply has grown four times as fast as our national output since 1967—just the opposite of what happened from 1950 to 1967 when inflation was less than 1.7 per cent per year.

Despite the four-fold acceleration in money supply over output, the consumer price index has not even kept pace.

"In other words," Mr. Brookes adds, "we still have built into our system another 25–30 points of 'unused' inflation just with the current money supply. Our money has already been devalued by 25–30 per cent more than prices have risen."

What few politicians seem to understand is that inflation cannot, and does not, occur unless someone does something funny to the money—and that has to be government or the Federal Reserve central bank, the Boston authority contends.

So what is the White House doing about all this? Almost nothing at the moment. If it won't stop printing so much money, then asking government to launch an anti-inflation campaign is a little like asking the Mafia to combat organized crime, Mr. Brookes says.

"The trouble is, Mr. Carter seems more likely to fall for the notion that government can fight inflation by controlling wages and prices, even while it runs these huge deficits and prints money."

Harry Truman used to say proudly, "If you can't take the heat, stay out of the kitchen." A few knowledgeable economists are warning the current chef that he can't cool overheated stew by putting the lid on the kettle and turning up the fire.

SUPPORT FOR THE PRODUCT LIABILITY INSURANCE TAX EQUITY ACT

HON. EDWARD W. PATTISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. PATTISON of New York. Mr. Speaker, in early June I joined with several of my colleagues to introduce the Product Liability Insurance Tax Equity Act, H.R. 7711. This legislation grew out of a study that was conducted early this year by the Ad Hoc Panel on Product Liability, on which I served.

One of the panel's most interesting

findings was that the Federal tax law discriminates against those who establish self-insurance reserve funds for product or professional liability. The money placed into such funds cannot be claimed as a deductible business expense, and the fund itself is vulnerable to very sharp tax penalties if the Internal Revenue Service chooses to declare it an unreasonable accumulation of earnings.

We felt that this tax policy amounts to an unjustifiable compounding of the problems of businessmen who cannot obtain or cannot afford commercial insurance coverage—21.6 percent of all manufacturers responding to our survey were in this situation. So we drew up the Product Liability Insurance Tax Equity Act to provide some direct and immediate relief to those who are hardest hit by the insurance crisis.

H.R. 7711 provides that a trust fund can be established for product or professional liability and that funds held in that self-insurance reserve, or funds paid out of it for qualified purposes, shall be tax exempt. And the bill allows business deductions to be claimed for reasonable contributions made to the reserve fund.

Mr. Speaker, there has been some publicity in my congressional district in New York regarding this legislation, and some of my constituents have written to me about it. From the study I conducted in conjunction with the product liability task force, we already know that insurance problems are significant in that area. So, I was quite pleased by the positive response I have gotten.

As a prime example, I wish to share with you this statement from a partner in a law firm in my district:

Our office represents a number of small companies which are finding themselves increasingly burdened with products liability costs. I represent a medical instrument company which, I am afraid, shortly faces a very serious problem trying to get products coverage at a cost which the company can afford. It may very well be that this little company, among others, will end up having to self insure and your bill certainly would provide substantial tax relief if that becomes necessary.

Also of interest is this statement from a company that has been operating in my area for over 100 years.

Your bill, the Product Liability Insurance Tax Equity Act, is, in my estimation, an initial step in the right direction. We have written to Juanita Kreps regarding this type of legislation and commend you for being the cosponsor of a bill that, once before Congress, will give the Legislature an opportunity to fully discuss the problems that the American manufacturer is presently faced with regarding product liability, law suits and settlements.

If we cannot obtain reasonably priced product liability insurance, then this seems to be a way of protecting ourselves while further legislation is contemplated that will finally take care of the problem.

As that writer implies, changing the tax treatment of self-insurance reserve funds will by no means eliminate the actual problem of product liability. Resolving the root problem, though, will be a complex and controversial process, most likely taking several years more to achieve. Consequently, we view PLITE as the most practical and efficient way to help businessmen stay out of bankruptcy while awaiting the needed reform of the tort law.

Now, I want to share with you this cryptic message from a company in a neighboring congressional district:

Congratulations on introducing legislation to end Federal tax discrimination against companies who choose to self insure for product liability. I would hope that this bill could get prompt attention, as it should not have opposition from trial lawyers who are currently the main beneficiaries of the present disastrous system.

Well, I am not entirely certain that trial lawyers can take all of the credit for rising insurance costs. In fact, members of the bar are themselves among those who are having increasing difficulties with professional liability insurance. See the CONGRESSIONAL RECORD of June 14, page 18844.

The chief sponsor of H.R. 7711, CHARLES WHALEN, informs me that there are now more than 50 Representatives who have joined as cosponsors of our bill. This is very encouraging, and I am hopeful that the Ways and Means Committee will take up consideration of the legislation in the fall.

In the meantime, I am writing to President Carter, urging him to include this revision of the Tax Code in the tax reform package he is preparing to send to the Congress in September.

THEY HAVE DUMPED FRANCES—SHE WAS TOO EFFICIENT

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. ASHBROOK. Mr. Speaker, Members of Congress who have been in Washington for any length of time need no introduction to Miss Frances Knight, the recently retired Director of the Passport Office, whose no-holds-barred battles with Members of Congress and the executive branch regularly made headlines over the years. As Director of that office for 22 years and a civil servant for 38, Miss Knight has won admirers and supporters for her willingness to take on all comers as well as running a tight, efficient ship at the Passport Office. Democrats and Republicans alike concede that her operation is worthy of emulation by other Federal units. Four Presidents, Kennedy, Johnson, Nixon and Ford, have praised her efficiency and dedication to good government. Presidents Kennedy and Johnson cited the Passport Office as a model of efficient management and public service.

In 1975 and 1976 her tenure was extended a year by the waiver required after reaching the 70-year-old retirement deadline. However, 7-day workweeks are no rarity to Miss Knight whose industry and dedication to her work help account for her exemplary record.

Unfortunately, this administration did not see fit to extend her service another year despite a 6-year project, now nearing fruition, which would revamp the passport system. Scores of letters from Senators, Congressmen. and the public have been addressed to the White House requesting an extension of another year to allow the program to be completed, but to no avail. To what extent the President is aware of the unusual congressional reaction is a matter of speculation. Whatever acknowledgements were received were strictly pro forma.

Of special significance in the retirement of Miss Knight is the project known as TDIS—the travel document and issuance system—which Miss Knight has directed for 6 years, combining efforts of the Passport Office personnel with experts outside Government to provide the technical knowledge necessary for this important overhaul of the present system which was developed by Miss Knight when she modernized the Passport Office in 1956.

New improvements would include an improved machine readable passport with greater security, reduced in size and made with a tough, durable, and greatly improved vinyl cover which will not crack or fade.

The new issuance system would replace the present obsolete manual-mechanical methods with faster, more reliable electronic production. Involved is the replacement of such obsolete pieces of equipment as the papertape-operated flexowriters which are no longer produced in the United States; low speed communications lines which in the past 2 years became overloaded; hot irons to secure photographs to the passport; and the expensive, cumbersome seal and legend machines.

The new system will use cathode ray tube input terminals, minicomputers, high-speed printers, encoding machines, and a special purpose computer.

Based on OMB criteria, the estimated savings over a 10-year period would be in the neighborhood of $38,000,000, if volume remained constant. The estimated savings in yearly costs would be approximately $1,320,200. Increased productivity through the use of the new equipment would range from the present maximum of approximately 3,000 passports issued per man-hour, which is the current limit, to as high as 10,000 passports issued per man-year under the new system.

It is difficult to understand why such vast improvements would have been opposed or delayed or questioned as they consistently were by the supervising Bureau of Security and Consular Affairs. The harassment was there, despite all sorts of queasy denials from Department officials.

The record is clear and it is an established fact that most of the opposition to Miss Knight's initiative and energetic support of economy, efficiency, and even-handed management comes from within the bureaucracy of the Department of State. Self-serving bureaucrats in their quest for enhancing or perpetuating

their own assignments have blocked the progress of many recommended Passport Office improvements by denying funds, delaying action on personnel recruitments and assignments, and engaging in repeated prolonged conferences and discussions over minutia. Such a record is clear but what is not clear is the continuing obfuscation emanating from the so-called spokesmen of the Department of State when asked for explanations. The overtones are clearly political.

Prudence would seem to demand that a project of the enormity of the TDIS be carried through with personnel offering the most experience and proven leadership in this area. If this administration were truly serious in its pursuit of efficient and responsible government at the Federal level, then the services of Director Frances Knight should have been retained, either in her present position or at least as a consultant to the Passport Office for another year, the estimated time required to develop the project, to a point of no return to undermining sabotage.

Indeed, it is strange that a Federal employee with a record of 38 years of service and with the national reputation for efficiency and dedication that Miss Knight enjoys, does not receive so much as an answer to her letter to the Secretary of State. Nor did she get a reply to her telephone call for an appointment. The only reaction from the Department was a short note from Richard Moose, who at the time of writing was the Deputy Under Secretary of State for Management, in which he informed Miss Knight that the Secretary's "considered decision" not to extend her employment for another year was made in the best interests of the Department. Mr. Moose since then was reassigned as an Assistant Secretary of State for African Affairs.

I insert at this point in the RECORD a column by James J. Kilpatrick, appearing in the Washington Star of July 14 and entitled "They've Dumped Frances—She Was Too Efficient":

[From the Washington Star, July 14, 1977]

THEY'VE DUMPED FRANCES—SHE WAS TOO EFFICIENT

Over at the State Department, they called her the dragon lady, the battleax, and the old witch of K Street, only they used a variant spelling for that last appellation. All the names applied to one wonderful lady: Frances Knight, director of the Passport Office. The bad news is: She's been dumped.

As of July 31, thanks to a cabal in Jimmy Carter's administration, Miss Knight will give up the office she has directed for 22 years. The President, whose favorite boast is that he wants efficiency in the federal bureaucracy, has himself approved the ouster of the most efficient agency head in Washington. Sic semper Franceses. It had to happen some time.

But it's too bad, all the same. The ostensible reason for firing the lady is that she will be 72 years old on July 22. If ever there were a walking, talking argument against compulsory retirement by reason of age, Miss Knight provides it.

The ulterior reason for all this, sad to say, is that Frances Knight has been a little too efficient, a little too independent, a little more fearless than official Washington can tolerate easily. The lady would never—well, she would never exactly "go along" in order to get along.

This became apparent when she first took over the Passport Office in the spring of 1955. As Willard Edwards describes her debut, she found the office "swarming with the sons and daughters of Foreign Service officials, enjoying summer vacations at the taxpayers' expense." She cleaned out the loafers, and incurred the lasting enmity of Foreign Service nabobs.

Miss Knight soon began to tangle with the high-and-mighty on the issue of diplomatic passports. Official policy in this regard could not have been established more clearly. The policy was based "upon a fundamental principle, which is that a diplomatic passport shall not be issued to a person who has not actual diplomatic status."

But the official policy, she discovered, existed to be winked at. In every administration, but especially in the Kennedy-Johnson years, directives constantly came her way to make exceptions—for retired Supreme Court justices; for retired ambassadors, for the grandchildren of retired ambassadors, for members of Congress and their wives and wandering offspring.

Miss Knight protested in vain against these abuses. Last November she put together a report documenting the issuance of thousands of diplomatic passports to bigshots and little-shots whose foreign travel was not even remotely related to the conduct of foreign affairs. She named names of lordly fellows. She objected bluntly "that the U.S. diplomatic passport is at an all-time low in respect and integrity since it is being issued like lollipops at a carnival." Her stubborn resistance got her nowhere—nowhere, that is, until her principles got her bounced a few weeks ago.

Miss Knight will survive. She has been happily married for many years to millionaire publisher Wayne Parrish. They travel widely. Their private art collection provides continuing pleasure. She has a book she wants to write. But it hurts to give up the devoted labors of two decades, especially at a time when her chief project, the machine-readable international travel document, is so close to fruition. And it rankles to see an office that for 50 years has been headed by a woman turned over to a male Foreign Service officer, 51-year-old Loren E. Lawrence, despite his good credentials for the post.

Until Lawrence's appointment was announced, there seemed a possibility that influential friends to Capitol Hill might save her one more time. Now she's accepted the decree. Among the possessions already packed up is a small sign, lettered in dog Latin, that used to hang above her desk. Its legend, in loose translation, Don't Let the Bastards Wear You Down. Trouble is, after all these years, they wore her down, but they were good years while they lasted.

OPPOSED TO FURTHER TAXES ON THE PRICE OF GASOLINE

HON. NEWTON I. STEERS, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. STEERS. Mr. Speaker, today the House of Representatives is considering amendments to the bill H.R. 8444, the National Energy Act, which would raise the cost of gasoline. I am opposed to any further tax on the purchase of gasoline at the pump.

During the debate that has taken place in the House on this issue, proponents of this measure have made it clear that the tax is not designed to reduce consumption by raising the price of gasoline. Rather its purpose is to raise revenues for the development of transportation systems. It is my feeling that this amendment will be inflationary without providing any real benefit to our citizens. Furthermore, I am not convinced that this amendment should be considered with the energy bill. As I have noted the tax has little relationship to energy demand or conservation.

This tax as proposed is regressive. It will impose the greatest burden on those who can least afford to shoulder the already increasing costs of gasoline. There are millions of our citizens who have a legitimate need to transport their goods and services as well as themselves and families, and who are faced with severe economic problems because of our energy problems. Rather than effectively relieving that burden and still conserve energy, we add to their financial crunch.

Finally let me say that I am also concerned over the use of these revenues. Each penny of the tax will realize an estimated $1.2 billion. Rather than putting this money to the development of alternate energy sources or more effective energy conservation technologies this revenue will be put to transportation systems that do little to realize the goals of the administration's bill. This amendment would be much more acceptable if the revenues realized were allocated, for example, to solar energy development.

Let me stress to all of my colleagues that I am not opposed to the development of mass transit systems. Montgomery County, Md., will have access to an areawide mass transit system in the 1980's. I realize that the cost involved with this system is high and increasing. However, I cannot in good conscience support this tax for the reasons I have outlined.

ECOLOGIST TURNS BUILDER: A SUCCESS STORY

HON. GARRY BROWN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. BROWN of Michigan. Mr. Speaker, in recent years we have witnessed a continuing clash between the interests of environmentalists, who want to preserve and protect nature, and those of businessmen and developers, who want to expand industry and create badly needed jobs. It is often difficult to balance these competing interests in deciding what is best for the Nation. I am, therefore, delighted to bring to my colleagues' attention a situation where environmentalists and developers are working together as partners—and where they are succeeding.

Rather than opposing new construction as many environmentalists are wont to do, Kalamazoo College Ecology Prof. H. Lewis Batts did just the opposite—he became a builder himself. Believing that the country needs better building, not less building, Mr. Betts, in a well-coordinated partnership with

innovative developer Burton H. Upjohn created an environmentally protected community that has proved to be economically viable. This exciting venture reflects a willingness to explore new avenues of dialog between business and academia and can serve as a demonstration project for the entire country.

The project, Parkview Hills, located in Kalamazoo, Mich., is more fully described in the May 22, 1977, issue of Parade, and I would like to share it with my colleagues. The article follows:

ECOLOGIST TURNS BUILDER: A SUCCESS STORY

(By Carl Norcross)

KALAMAZOO, MICH.—Parkview Hills is an unusual residential community whose creator is calling a truce in the battle between land developers and environmentalists.

The 280-acre project is the brainchild of Dr. H. Lewis Batts Jr., a professor of ecology at Kalamazoo College and director of the Nature Center there. While most environmentalists throw up roadblocks to stop new construction, Batts has turned builder himself.

His aim is to demonstrate that what the country needs is not less building but better building. Parkview Hills, now five years old, has about 450 families and is a little more than half completed.

Batts, 54, has a friendly smile and an easy approach to people. "He's a sweet and gentle man until the land or environment is threatened," says a close friend. "Then he's a tiger." His partner, Burton Upjohn, who runs the business end and directs the building, says, "A lot of people give lip service to environmental causes, but it's superficial. With Lew, it's for real."

Batts' aim in building Parkview Hills is to show that when a residential community is environmentally sound it is also a better place to live. While other apartments nearby have high vacancies, Parkview Hills has waiting lists. Batts' townhouses and condominium apartments are full, and the sale of single-family lots and houses has been brisk.

SATISFIED RESIDENTS

Parkview residents are satisfied because they are surrounded by features that most people look for. Consumer polls show these features to be trees, wooded areas, green grass, open space, nearby water and convenient shopping. Families at Parkville Hills have all that and more: peace and quiet, no through traffic, walking and bike paths, a variety of recreational facilities, and natural beauty.

Melanie and Bruce Flessner, just out of college, moved to an apartment there as honeymooners. They like the variety in age groups and family composition. "New neighborhoods need not result in tract-house sameness in looks or families," says Melanie.

"Dr. Batts is doing what the entire world must do: disturb natural environment to the least possible degree," says Walt Hajicek, a condominium owner. "People here live harmoniously along with geese, swans, ducks, pheasants, quail, groundhogs, etc. The view we enjoy from our balcony overlooking a wild area is a prized possession. There is a constant changing panorama of wild flowers. We feel we live in a private forest that includes lakes, streams, marshes, woodlands and meadows."

OUTSTANDING COMMUNITY

States city planner Gary Niemeck: "I regard it as one of the outstanding residential communities in the country. You can move from one type of housing to another as your life-style changes. We rent a townhouse. Now, five years and two children later, we'll build a home in the single-family section. Because of the club it isn't necessary to go outside for recreation." Among the club's facilities are indoor and outdoor pools, whirlpools, saunas, exercise rooms and tennis courts.

"It seems like living in the country," resident Cameron Davis reports, "but we are inside the city and have city bus, police and fire department services."

One of the big questions in the beginning was whether upper-income families would move to townhouses and apartments. Now, the affluent are moving to Parkview for an environment and facilities they cannot match in their big houses. And they do not mind that around the corner or even down the hall may live secretaries, very junior executives, or newlyweds pinching their pennies. Each group seems to enjoy the company of the others and the experience of living together in a complex that includes rental apartments from $200 a month and condominiums that have sold from around $35,000 to as much as $150,000.

What does an environmentalist do that an ordinary developer doesn't do?

"In land use," says Batts, "my number one priority is to preserve as much as possible in its natural state. When Parkview Hills is completed, over one-third will be open space."

Preserving nature means saving trees. Every tree with a diameter of four inches or more was plotted on a map and saved if possible. Scores of trees were transplanted. Others were brought in. Today, there are more trees than when construction started.

BEWARE THE BULLDOZER

In most projects the great destroyer of nature is the bulldozer. But at Parkview not a square foot of soil was disturbed needlessly. Landscape architect Larry Harris coached bulldozer operators to guide their machines between trees rather than knocking them down.

Marshland was preserved around Parkview's four lakes, providing cover for waterfowl, birds and small animals. Shrubs were planted to attract birds and the lakes stocked with fish.

Cars, Batts feels, "should not be seen when not in use." So they are hidden behind berms, screened by trees or kept in garages.

Batts strongly believes that the proper siting and placement of buildings is more important than their design. Buildings are designed to be looked from, rather than at, and are skillfully tucked into hillsides and partially screened by trees. As a result, nearly every resident has good views from windows and balconies.

ECOLOGICAL PRINCIPLES

Batts carries out his ecological principles at every chance, using catch basins to hold rain and snow water until it seeps back into the soil rather than draining into a river. In winter, sand is used on icy streets rather than polluting chemicals.

Lew Batts might have built a community for just one type of family, but he wanted diversity, "because in diversity there is strength. The diversity we're after is ecological, sociological, racial, political, by age and income." Burton Upjohn adds, "If it's a racial mix, we've got it."

Batts has limited Parkview to 850 housing units, a density of only 3.2 families per acre—extremely low for a community of this type, especially along the lakes. He prefers to keep the shores open for walking paths, picnic areas, a 300-foot sand beach, and for pleasant views.

GOOD ECONOMICS

His policies clearly cost more, but he believes that in the long run a good environment is also good economics. "When our project became successful to the point of outperforming our competition in the marketplace, we took this as proof that what is good for human environment can also be good for the balance sheet," he told a group of Kalamazoo businessmen recently.

And Parkview Hills is having an influence for good on many builders, who travel to Kalamazoo to study Batts' methods.

City officials are convinced that communities like Parkview Hills are the answer to the no-growth movement, which has stopped or delayed home building in many sections of the country.

CELEBRATION OF UKRAINIAN DAY

HON. CHARLES J. CARNEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. CARNEY. Mr. Speaker, today I join my colleagues and Americans of Ukrainian descent in commemorating the 46th annual Ukrainian Day, which will be celebrated this Sunday, August 7, and in saluting the Ukrainian nation for its centuries-old—but ever vigorous—struggle for self-determination.

This struggle has its beginnings in the late 14th century, when the kings of Hungary were extending their control over the Carpathian region of what is now known as the Ukraine, and the Polish Lithuanian dynasty was expanding toward the rest of the Ukraine, and imposing serfdom on its people. Preferring the hardships of nature over oppression by other men, many rugged souls fled into the steppe, a no-man's land. These fugitives, who were called "kozaks," meaning adventurers, settled the land and established a self-governing community of Zaporozhian Cossacks.

So successful were the Cossacks that in the 17th-century Poland requested their aid against incursions by the Tatars. Once the Tatars were repelled, however, Poland again attempted to subjugate their Ukrainian allies. Refusing to surrender their automony, the freedom-loving Cossacks turned to Russia for help. But Moscow used the resulting Russo-Polish wars as an opportunity to gain control of the Ukraine.

In 1793, after decades of battling against tsarist domination, the Ukraine was incorporated into Russia and its people were forced into serfdom. Ukrainian patriotism survived nevertheless, and was expressed through literature, songs, and folklore. By the mid-1800's, the resistance had assumed a political nature. In 1846, the Brotherhood of St. Cyril and St. Methodius, a secret society, was founded, as were several underground publications dedicated to the cause of Ukrainian independence. Although the tsarist regime outlawed the Ukrainian language and arrested most of the leading dissidents, the Ukrainian people's spirit could not be broken. In fact, Ukrainian patriotism gained impetus in the last quarter of the 19th century, when Carpatho-Ukraine established its autonomy from Hungary.

With the Russian revolution of 1917, the Ukraine declared itself an independent republic, thus establishing the first modern Ukrainian Government. But fighting alternately against the German Empire, the Red army, and White Rus-

sian forces, the Ukrainians were unable to prevent military occupation by the U.S.S.R. The Soviets, nevertheless, dared not attempt to relegate the Ukraine again to the status of a mere part of Russia, and admitted it as a nominal republic of the U.S.S.R. with a limited degree of autonomy. Stalin's efforts to force more centralized control over the Ukrainian people succeeded only after more than 3 million Ukrainians were killed.

Although the Germans who invaded the Ukraine during World War II were initially greeted as liberators by the Ukrainian people, they waged guerrilla warfare against their German captors when oppression continued unabated. Exhausted and battered from their fight against the German occupation forces, the Ukrainians were unable to repel the returning Red Army after the war's end.

Despite the certainty of Moscow's military dominance over their country, the Ukrainian people continue to strive for national independence. The Ukraine remains the largest and the most economically prosperous of all the Soviet captive nations. The fierceness of Ukrainian patriotism is recognized even by the Soviet leadership, who use manipulation of Ukrainian national symbols along with terror and thought control to maintain their hegemony over the Ukraine. However, the Ukrainian people, led by such dissidents as Mikola Rudenko and Oleksi Tikhy, are demanding Moscow's compliance with the provisions of the Helsinki accord which protect the rights of national minorities, as well as those which guarantee individual rights. This continued dissent by the Ukrainian people serves as a spark of hope for other captive nations within the U.S.S.R., and for the people of Eastern Europe.

As the 46th annual Ukrainian Day approaches, we salute both the efforts of the Ukrainian people to achieve self-determination, and the courage which enables them to persist in their centuries-old struggle.

HOW MUCH WILL YOUR FUTURE ELECTRICITY COST?

HON. HERBERT E. HARRIS II

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 4, 1977

Mr. HARRIS. Mr. Speaker, as we are now engaged in debating proposals designed to solve the energy crisis, one of the most serious problems confronting our Nation today, I would like to share with my colleagues a most timely article by one of my constituents, Mr. Paul Whittington. A retired mechanical engineer with 28 years of experience with the U.S. Army Research and Development, Mr. Whittington has conducted a meticulous study of electricity costs over the past years. In his article, which appeared in the Alexandria Gazette on Tuesday, June 7, 1977, he projects these figures 10 years into the future, using 850 kilowatt hours per month as the constant factor. He presents a grim picture for the American home owner. His forecast compels us to focus on the development of alternative sources of energy and the encouragement of their use. I urge my colleagues to direct their attention to the results of Mr. Whittington's research:

ENERGY SIDELIGHTS: HOW MUCH WILL YOUR FUTURE ELECTRICITY COST?

(By Paul E. Whittington)

The very critical energy problem has many facets—examination of any one facet of the total energy problem forecasts a striking change in our future life style. Read on and find out why.

The cost of electricity for a single family, three bedroom, 2 bath, with three adult occupants, electric domestic water heating but not space heating has been examined. Based upon the past four years use and costs, the next ten years have been forecast. As with everyone who analyzes future energy costs and use, even I have been startled.

This household used about 850 kilowatt hours of electricity a month. The study started in March of 1973 and ended in April of 1977. Total cost increased 95.44 percent in that time. This is an inflation rate of 23.86 percent a year and includes county utility taxes. Is the end of this inflation in sight? No. If anything, it will be at least as much and maybe more. There must be pity for the home owner who heats his home with electric resistance heat.

Projecting costs into the future, electricity for this household for ten years will cost a total of $5492. One half of this amount will be spent for heating domestic hot water. The electric cost in the first year will be $175 and in the tenth year, $1199. Under the strangulation costs alone, there will be stringent electrical conservation.

This study is not a condemnation of the electric power company. Without much that the electric company can do about it, costs have gone up and will continue to go up. They can be faulted for backing off on construction on two nuclear power plants.

We are in a transition period of changing over from oil and natural gas to coal and nuclear power. Both coal and nuclear power can and will be used in increasing amounts to run electrified railroads, metro trains, industry, and in ten to fifteen years, to run many more heat pumps for individual homes.

The above discussion leads to solar energy. What is its future? How much of a part will it play in the future? Right now estimates range from supplying 2 percent to 10 percent by the year 2000 A.D. The President's energy plan, if adopted, will encourage home owners to use more and more solar energy both for domestic water heating and space heating. Virginia has voted to approve a constitutional amendment which will eliminate property assessment increase for approved solar energy installation. The effective date is January 1978.

POSTAL SERVICE ACT OF 1977

HON. JAMES L. OBERSTAR

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. OBERSTAR. Mr. Speaker, one of the most frequently voiced complaints among my constituents is the increasing cost and decreasing quality of postal service in this country. In an effort to deal with those problems I have introduced the Postal Service Act of 1977, which would reassert a degree of congressional control over USPS, without jeopardizing the employees' collective bargaining rights. I would like to share with my colleagues the testimony I presented to the House Subcommittees on Postal Operations and Services and Postal Personnel and Moderization:

Mr. Chairman, thank you for this opportunity to testify on behalf of my bill, H.R. 8238, which is identical to H.R. 7700, the Postal Service Act of 1977.

Ever since the Postal Reorganization Act of 1970, I have been increasingly concerned about the failure of the U.S. Postal Service to carry out its mission to provide effective postal service to all the people of this country.

Service has deteriorated, costs have risen, small town post offices have been closed, and millions of dollars have been wasted on technological "improvements" of dubious value or effectiveness.

Postmaster General Bailar's support of the Postal Rate Commission's recommendation to eliminate Saturday delivery is the most recent example of USPS' tunnel vision. It shows why so may people feel USPS no longer deserves its name, because the "service" part of their mission has been relegated to a back seat role—which postal customers and employees alike deplore.

The Postal Service Act of 1977 would go a long way toward correcting these problems by reasserting a degree of Congressional control over USPS.

However, in attempting to reform USPS, we must be careful not to inadvertently undo some of the major accomplishments of the Postal Reorganization Act of 1970. Primarily, I am referring to the section which awarded postal employees the rights of collective bargaining. This right must not be weakened in any way, shape or form.

Since the legislation which this Subcommittee is considering is quite comprehensive, I will not discuss all the proposed amendments. There are, nevertheless, a few items which I feel are especially important. These are: Section 3 dealing with the methodology for setting postal rates; Section 4 dealing with authorized appropriation levels, six day delivery and rural post offices; Section 8 abolishing the Postal Service Board of Governors and reinstating presidential appointments of the Postmaster General; Section 9 dealing with post office closings and Section 11 dealing with major capital programs.

Mr. Chairman, I have no doubt that the members of this Committee will give this legislation their most careful and thoughtful consideration, and will report out a bill which will significantly alleviate the postal problems in this country.

I thank you for your untiring efforts on behalf of postal patrons and employees, and also for the this opportunity to share with you my concerns and those of my constituents.

A SAD ANNIVERSARY

HON. NORMAN F. LENT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. LENT. Mr. Speaker, August 12 marks an anniversary which should not be allowed to pass without notice. On that day, August 12, 1976, a petition signed by 91 Members of Congress urging Soviet leader Breshnev to grant fundamental human rights to Soviet Jews was delivered to the Soviet Embassy in Washington. In the 12 months since that peti-

tion was delivered there has been no reply. That brutal Soviet silence which has swallowed up so much hope of freedom and liberty for so many in Russia, and which coldly rejects those who try to break it, still stands unbroken.

As one of the 91 signers of the petition, I was particularly interested in one of the victims of inhuman treatment, Hillel Butman. He, like so many other Soviet Jews, is being punished for the courage of refusing to reject his religious convictions, and for his desire for freedom with his family in Israel.

Three years ago, I adopted Hillel Butman as my Prisoner of Conscience. Each week, since then, I have written letters to Soviet officials, urging them to reconsider Hillel Butman's case, urging them to grant him a pardon, and to give him better treatment. Each week, I have written Hillel Butman to let him know I was continuing my efforts to help him. Each week I have written Hillel Butman's wife in Israel, reporting the facts to her.

From these 3 years of letters to Soviet officials I have heard not one word in reply; not even an acknowledgement that my letters are being received. But, I am continuing to write, and will continue, until Hillel Butman wins the freedom he deserves.

Mr. Speaker, that is why I am calling attention today to the first anniversary of the presentation to the Soviet Embassy of that petition signed by 91 Members of Congress. Those of us who signed that petition need to keep reminding Mr. Brezhnev and the rest of the Soviet leadership that we do not intend to give up our efforts to win human rights for the Soviet Jews. And that we will continue to send petitions, to write letters, to demand Soviet implementation of the Helsinki accord, and to do everything else in our power to make sure the Soviet silence will not prevent the rest of the world from knowing of the inhuman treatment the Soviet regime inflicts upon its citizens.

Mr. Speaker, this message will be sent to President Brezhnev as a reminder that our petition of 1 year ago has not been forgotten, and that the signers will neither forget nor desert the unfortunate human beings for whom the petition was signed.

BAGS AND RIGHTS

HON. JIM GUY TUCKER

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. TUCKER. Mr. Speaker, Secretary of Transportation Brock Adams recently announced that automobiles manufactured as early as 1982 must be equipped with automatic crash protection. This is the next step in safety devices already mandated by the Federal Government, such as shatterproof glass, padded dashboards, impact-absorbing steering columns and fortified bumpers.

Some 46,000 Americans died in motor vehicle accidents last year. Another 1.8 million were injured. The Department of Transportation estimates that the air bag would save 9,000 lives annually over and above those now saved by seat belts.

I ask that an editorial on air bags that appeared in the Arkansas Democrat be included in the RECORD:

BAGS AND RIGHTS

We're on our way to auto air bags, finally—provided Congress doesn't nullify Transportation Secretary Brock Adams' order that installation begin with 1982 cars. Already the right-to-die crowd is ranting against mandatory passive restraints as a violation of individual liberties.

We can't agree with them, and though we don't often agree with Ralph Nader, we're with him in thinking that it's past time that the bags were installed. Sure, they'll cost, but a life is worth $100-$300, isn't it? The Transportation Department says as many as 12,000 lives a year will be saved and as many as 200,000 serious injuries averted.

But the main congressional argument against bags is libertarian rather than economic. The argument is that government shouldn't force us to save our lives against our will—that we should have a choice of buying or not buying bag-equipped autos.

That sounds good, but it isn't a true libertarian argument. Rights are individual matters, and the argument would be telling only if all cars carried only the driver. But most cars carry more than one person, and if the driver had the option of turning down the bags, he'd be involving the safety of others in his determination to risk his life. It's not as though mothers, wives and babies were to be polled to see whether they shared the individual's decision to take risks.

Government can be awfully intrusive in a lot of matters involving safety. We've seen what OSHA can do, and most of us have sworn a time or two at those buzzer devices that used to remind you that your car wouldn't start unless you buckled up. That was discontinued as the nuisance it was. Besides, nobody can make anybody buckle up—hence the air-bag, passive-restraint system that works whether you think about it or not.

It's good only in head-on collisions. but that's plenty, and it protects all front-seat occupants. For that reason no one should have the option of playing libertarian loner at the risk of other lives.

METRIC SYSTEM AND HOME ECONOMY

HON. ROBERT McCLORY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. McCLORY. Mr. Speaker, the schoolchildren of this Nation realize that we are moving rapidly, albeit haphazardly, toward a general conversion to the metric system of weights and measures. Recently a series of articles have appeared in the Hampshire Register, a newspaper published in Hampshire, Ill., in my congressional district.

A most sincere and forthright article composed by an eighth grader in the Hampshire Junior High School, Janet Elaine Connors, is worthy of our thoughtful consideration. The citizens in this small community in midwest Illinois recognize the conversion process which is taking place and the steps which we should take to facilitate the changeover.

Mr. Speaker, I am pleased to attach Janet Connors' article, as follows:

[From the Hampshire Register, July 27, 1977]

METRIC SYSTEM AND HOME ECONOMY

(By Janet Elaine Connors)

The United States is the only industrial nation that is not using the metric system.

In 1790 Thomas Jefferson turned the currency to the decimal system. He also asked Congress to change from the English system to a system a lot simpler.

When you buy products such as window cleaners, wax, dishwashing liquid, you will probably buy them by the liters.

The change to the metric system isn't going to be hard for me because I'm still young and in school. But for my grandmother it will be hard, because she is older and has been out of school for almost 40 years. She is used to English system of her life when she cooks.

Measuring cups, spoons, are going to change to liters, milliliters, and grams. Most economists say that the most economical way for people to change to the metric system as far as cooking utensils are concerned is to use the utensils you now have and get the new one after the old ones wear out.

Cookbooks are going to change. Recipes my grandmother has given me are going to have to be converted so I can hand them down to my children.

The metric system is more exact. This will make the prices of food go slightly higher, but we'll get more. The reason the price might be a little bit more is because we are going to be paying by weight instead of by volume. Some experts feel that this change might help beginning cooks cook better.

The change for my brother and sister won't be hard at all because they are just starting school.

AIR BAGS

HON. THOMAS J. DOWNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. DOWNEY. Mr. Speaker, according to a recently released Gallup poll, the American public is in favor of requiring car manufacturers to equip all new cars with airbags. Women and young people, in particular, are strong supporters of mandatory passive restraints. I would like to take this opportunity to insert the results of this Gallup poll in the RECORD:

PUBLIC VOTES 46 TO 37 PERCENT IN FAVOR OF REQUIRED AIR BAGS—WOMEN, YOUNG ADULTS MOST IN FAVOR

(By George Gallup)

PRINCETON, N.J.—Although most drivers fail to use their seat belts—and oppose laws that would fine a person for failing to do so—they nevertheless vote in favor of a passive restraint system in cars in the form of air safety bags.

The public votes 46 to 37 per cent in favor of requiring car manufacturers to equip all new cars with air safety bags. The air bag, which would cost $100 to $300 per car, is a balloon that inflates automatically when sensors detect a collision, keeping riders from slamming into the windshield, dashboard and steering wheel.

PASSIVE RESTRAINT SYSTEMS COULD INCLUDE SEAT BELTS

Transportation Secretary Brock Adams recently ordered passive restraint systems for all standard and luxury cars sold in the

United States starting with 1982 models. This system could include a seat belt harness that automatically covers the driver and passenger. Automatic seat belts, in use for several years on various models, wrap around passengers and lock into place.

The Transportation Department has estimated that passive restraints could save 9,000 to 12,000 lives each year and prevent 100,000 to 200,000 serious injuries.

Interestingly, it is among the nation's youngest adults, 18 to 29, who have the highest car accident and death rate, that support is greatest. Sixty-five per cent of persons in this age group favor requiring air bags in all new cars, compared to only 31 per cent among persons 50 and over.

When the results are limited to men alone, the proposal to have air bags installed is voted down, 47 to 42 per cent. Among women, on the other hand, support is heavily in favor, 51 to 27 per cent.

Sharp regional differences emerge as well, with Easterners considerably more inclined than persons in other regions to favor new cars being equipped with air safety bags.

Following is the question asked:

"Would you favor or oppose requiring car manufacturers to equip all new cars with air safety bags?"

[In percent]

	Favor	Oppose	No opinion
National	46	37	17
Men	42	47	11
Women	51	27	22
College	49	39	12
High school	48	37	15
Grade school	35	32	33
East	53	29	18
Midwest	41	47	12
South	48	33	19
West	44	38	18
18 to 29 yr	65	27	8
30 to 49 yr	48	37	15
50 and older	31	44	25

Further findings in the survey show the public to be overwhelmingly opposed to a law that would fine a person $25 if he did not wear a seat belt when riding in an automobile. Least opposed to such a law are Easterners and persons with a college background as seen in the following table:

"Wouldn't you favor or oppose a law that would fine a person $25 if he did not wear a seat belt when riding in an automobile?"

The results show opposition among all major population groups:

[In percent]

	Favor	Oppose	No opinion
National	17	76	7
Men	17	78	5
Women	18	74	8
College	21	76	3
High school	15	79	6
Grade school	16	67	17
East	21	71	8
Midwest	13	83	4
South	18	75	7
West	17	76	7
18 to 29 yr	19	77	4
30 to 49 yr	18	76	6
50 and older	15	76	9

Authorities also maintain that many lives could be saved with tougher laws on drinking and driving. The Gallup Poll recently revealed the public to be overwhelmingly in favor of stricter laws regarding drinking and driving. Eight in 10 want tougher legislation than presently on the books, including large majorities of persons who say they sometimes drive after drinking and majorities of those who say they have driven after excessive drinking.

The latest results reported today are based on in-person interviews with 1,526 adults, 18 and older, taken in more than 300 scientifically selected localities across the nation June 3–6.

THE BOUNDARY WATERS CANOE AREA: A WORKABLE SOLUTION

HON. JAMES L. OBERSTAR

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. OBERSTAR. Mr. Speaker, the Boundary Waters Canoe Area is an area of 1,030,000 acres of waterways and forest lands in northeastern Minnesota, entirely within the Eighth Congressional District of Minnesota, which I represent in the House.

It is a national resource with which I have enjoyed a life-long acquaintance.

The tranquillity of the boundary waters contrasts sharply with the often rancorous debate that has arisen over its future.

Throughout the 20th century, the BWCA has provided the people of Minnesota and the Nation with a wide range of recreational opportunities: paddle canoeing, motorboating, snowmobiling, and cross-country skiing.

Furthermore, since the 1880's, the BWCA has been an important supplier of the State's wood fiber needs.

The current debate centers on whether the entire 1,030,000 acres of the boundary waters will be closed to all but canoeing and cross-country skiing or whether the other established uses of the BWCA will be permitted to continue.

This debate has produced the oversimplification that the conflict is between narrow local concerns and the broad national interest in the preservation of wilderness.

That generalization is neither accurate nor conducive to the enactment of legislation essential to the resolution of the protracted debate.

The preservation of wilderness is a major objective of the legislation that I have introduced in both the 94th and the 95th Congresses. On August 3, 1977, I introduced H.R. 8722, a refinement of those earlier bills; it sets aside two-thirds of the current BWCA to be managed as total, pure wilderness.

The national interest will not be served, however, by total wilderness designation which ignores: first, the history of the BWCA, second, the legitimate interest of the people of Minnesota in preserving historically established uses and, third, the fact that over 30 percent of the motorized use of the BWCA is by people from outside of Minnesota.

Mr. Speaker, the only equitable solution to the Boundary Waters Canoe Area controversy is one which adequately addresses the many conflicting, but nevertheless, valid interests. The issue is not simple, and the solution will not be easy.

Mr. Speaker, the official history of the Boundary Waters Canoe Area began with this proclamation by President Theodore Roosevelt on February 13, 1909, establishing the Superior National Forest:

> There are hereby reserved from settlement or entry and set apart as a public reservation, for the use and benefit of the people, all the tracts of land, in the State of Minnesota, shown as the Superior National Forest on the diagram forming a part hereof.

The area then totaled 1,018,638 acres, just about half the acreage in Federal ownership today of the Superior National Forest. It was the first major action by the Federal Government in the long, turbulent history of this unique resource, and probably the least controversial.

MAN'S IMPACT ON ESTABLISHMENT OF THE BWCA

The BWCA actually predates President Roosevelt's proclamation.

Over 100,000 acres of the Superior had been logged beginning in the 1880's and the area continued to be managed principally for its forestry and recreational values until 1926, when Secretary of Agriculture William M. Jardine introduced a new concept with this announcement on roadbuilding and recreational use within the Superior National Forest:

> Not less than 1,000 square miles containing the best of the lakes and waterways will be kept as wilderness-recreation areas.

Jardine's order went on to make a key policy statement:

> A proper harvesting of the timber, as it becomes available for cutting and with the preservation of natural screens along lake shores, campgrounds and similar areas, is not inconsistent with preserving opportunities for wilderness recreation; and it will be the policy of the Department to utilize the timber produced on the Superior under careful methods of cutting that insure a continuous forest.

In that statement were sown the seeds of controversy which has engulfed this resource since its very inception: conflicting and competing uses, side by side within the same resource area. The conflicts have endured and intensified; they now must be resolved by act of Congress, because administrative and judicial attempts to clarify the issues and settle the controversy have failed. A new law is needed with a clear mandate and precisely written policy directives for the future management of the area in a way that best responds to the broadest public interest.

MULTIPLE USE AND THE BWCA

The U.S. Eighth Circuit Court of Appeals in its August 30, 1976, decision on logging in the BWCA said:

> The Boundary Waters Canoe Area has never been managed as a pure wilderness area.

That accurate and incisive observation has unfortunately been largely ignored in the public debate over the future disposition of the BWCA. Legislation affecting the future of the BWCA must recognize the fact that, historically, it has not been managed as a single use wilderness.

The present two-zone management concept, first established in 1941, set aside a 362,000 acre, no cut "northern" zone, and a 700,000 acre "southern" zone where timber harvesting was allowed. Although the "northern" zone included the most heavily traveled canoe routes, motor boats were allowed there as well as in the multiple-use "southern" zone. Motorboats traversing canoe routes,

snowmobiles traveling through a "wilderness" area, and timber harvesting under primitive-area conditions were activities almost destined to erupt into controversy on a national scale—and they did.

THE WILDERNESS ACT OF 1964

A provision of the Wilderness Act of 1964 initiated by Senator HUBERT H. HUMPHREY attempted to resolve the controversy by including the BWCA in the National Wilderness System—with an exception:

. . . with the general purpose of maintaining, without unnecessary restrictions on other uses, including that of timber, the primitive character of the area, particularly in the vicinity of lakes, streams, and portages: Provided, That nothing in this chapter shall preclude the continuance within the area of an already established use of motor boats.

The language was very carefully and thoughfully drafted with a view to protecting a long established history of use within the area and for the purpose of responding to the needs of the local economy and to the recreational pursuits of local area residents.

Although that language was intended to be a clear reffirmation to established use, rather than end controversy it served to intensify the public dispute. Congress had established "nonconforming" uses within a wilderness area—uses not allowed in any other segment of the National Wilderness System. The intent of the legislation was to permit the continuation of these uses, yet the Forest Service was required to provide for them under new wilderness guidelines, far different from the policy yardstick they had used in the past.

There were 20 active timber sales in virgin forest areas of the BWCA at the time the Wilderness Act was passed. Logging in the virgin forest was an "established use," and would continue under the new law, with significant changes in management, which now would emphasize the new "wilderness" policy.

THE FREEMAN DIRECTIVE

Complying with the letter and spirit of the Wilderness Act, substantial acreage was removed from timber harvesting, motorized travel routes were realigned and reduced in number, and a revised two-zone concept was announced by Agriculture Secretary Freeman in 1965, including an "interior" zone of some 618,000 acres which contains 90 percent of the waterways of the BWCA and a "portal" zone of some 412,000 acres.

Despite those changes, the overlapping uses continued: Motor boat and snowmobile travel was permitted in certain interior zone routes and both motorized travel and commercial timber harvesting were permitted in the portal zone. The BWCA, though included in the National Wilderness System, would still be managed as it historically had been: As a mixed-use area, some portions reserved for pure wilderness experience, some for other, "established," uses.

The essence of the BWCA is that it is "unique, pristine, endangered, rugged, primitive, beautiful and fragile"—as the 1973 management plan of the U.S. Forest Service so well states. To some the BWCA is treasured for its scientific, educational and primitive values, an opportunity for the urban dweller to escape to the solace and solitude of a remote land where one can experience the adventure of discovery, see the "primeval" land as man first saw it, travel through it as the fur traders did three centuries ago.

THE LOCAL IMPACT

To others, the local area residents who have no less an appreciation for those values, it is either their most accessible recreational area—and to most of them for only very limited day use—or the source of their livelihood, whether canoe outfitting, resort managing or timber harvesting. They never considered the BWCA a classic "pure" wilderness; rather, a combination of primitive and multiple use. A change in the law could not change the reality of the BWCA's character and management which they had experienced for generations.

Nature and man have combined to make the BWCA what it is today; only man stands at the crossroads of decision-making; only he can set policies for the area's future use—decisions that will affect the future of the people of northeastern Minnesota and of the rest of the United States, but whose impact will be felt most heavily by the people of northeastern Minnesota.

A COMPROMISE LEGISLATIVE SOLUTION

In the spirit of attempting to resolve the conflicting uses in a way that would respect the need for wilderness, the need for motorized recreational use and the need for wood fiber, both in the national and local economy, I set about devising a BWCA management plan that would resolve each of these issues under clear guidelines written in law for the future of this area. That plan is embodied in my bill.

That bill and its predecessors, which I introduced in the 94th Congress and earlier this year, are the outgrowth of 2 years of study, consultation, public meetings with local residents, national wilderness and multiple-use groups, and personal travel to other units of the National Forest System to observe firsthand a variety of management concepts.

My principal goals in drafting this legislation have been to fit the use to the resource, to respect the history of the area's use, and to carefully control that use.

BOUNDARY WATERS WILDERNESS

In that spirit, my bill designates 700,950 acres as pure wilderness. The wilderness includes all but 30,000 of the BWCA's more than 500,000 acres of "virgin forest," that is, forest which has not been previously logged over. That area, encompassing virtually all of the present BWCA interior zone, will be left to nature, untouched by man, except as he passes through, completely protected from logging, including in that protection the 30,000 acres of virgin forest to be located in the national recreation area. The wilderness will include nearly 1,000 miles of the area's most beautiful waterways set aside exclusively for paddle canoes—undisturbed by motorized or commercial use. It will remain an area of beauty, of historical and recreational significance left to the action of natural forces: no motor boats, no snowmobiles, no aircraft, no timber harvesting, no roads, no resorts, no private homes.

BOUNDARY WATERS NATIONAL RECREATION AREA

Not all people seek or desire wilderness, nor are all people equally equipped to experience the rigors of wilderness—particularly the elderly and the handicapped. There is also the special case of the local area resident, whether miner or merchant, who has only a limited time in which to experience the out-of-doors and who prefers to use a motor boat, particularly on the larger lakes, to make the best use of his time and who usually is a day user—out and back the same day. Likewise, the long, harsh northern Minnesota winter has been made somewhat more bearable by snowmobiling, a popular day-use recreational activity and a growing Minnesota industry. The present BWCA Portal Zone is also an important resource of softwood for Minnesota's wood fiber industry, third largest in the State.

With a view, therefore, to providing for these many and varied local, as well as national, interests, my bill introduces a new concept in the BWCA: a 412,397-acre national recreation area. Though the concept is new, it is based on historical principles of established use, tailored to the resource, and compatible with the present two-area management system of interior zone and portal zone.

The national recreation area will serve as a buffer zone to protect and enhance the wilderness area. Its management will generally be in harmony with the concept of wilderness but in a way that permits varied use, quite similar to the present portal zone.

MINING

Mining would be prohibited throughout both the wilderness area and the national recreation area.

To accomplish this objective, I have drafted the strongest possible anti-mining provisions, based on the law enacted by the 94th Congress in 1976 to prohibit mining in national parks, Public Law 94–429.

VISITOR USE

Visitors use of the BWCA clearly indicates that travel by motor canoe and motorboat is in the national interest, representing 40 percent of all BWCA summer travel, including travel by out-State and out-of-State visitors, according to 1975 U.S. Forest Service figures. Those figures also show that motorized travel has increased from 30 percent of all BWCA use in 1972 to 40 percent in 1975.

All BWCA visitor use has virtually skyrocketed from some 50,000 visitor-days in the mid-1950's to well over 1.1 million visitor-days in 1975. That explosive growth will have to be restrained in the future with firm visitor quotas for all modes of travel and more scientific dispersal of visitors through less-used entry points and less popular water routes. The establishment of a national recreation area will contribute significantly to a more balanced, restrained management

and, acting as a buffer, will serve to protect and enhance the more fragile wilderness area.

MOTORS

The NRA will permit travel by motorboats of limited horsepower: 10 horsepower on the smaller lakes, 25 horsepower on 17 specifically named bigger lakes. Snowmobiles would be allowed on the same routes specified on a map which accompanies the bill. Snowmobiling accounts for 81 percent of the winter use of the BWCA—a use that interferes with virtually no other person or activity in the area.

To recap: my bill sets horsepower limits on motor sizes, specifically designates the routes on which motors can be used, reduces the number of lakes open to motors, expands single-use wilderness, yet allows enough motor use to serve local economic and recreational needs.

VIRGIN FOREST AND TIMBER HARVESTING

Many northeastern Minnesotans believe very deeply that it is wasteful not to utilize forestry resources—or, worse, to allow them to be destroyed by insect, disease, or fire—especially when they will never be seen by recreational users, with cutting allowed only beyond the "military crest," or as far as the eye can see from the water's edge. They feel the forest is a living resource that should be managed on a sustained yield basis in compliance with modern scientific forest management principles, as much to assure a continuous forest and all its values as to provide for the local economy.

The wood fiber industry continues to be a vital sector of the total Minnesota economy and is particularly significant to northeastern Minnesota, with some 9,000 employees and a $100 million payroll. The NRA recognizes the legitimate role of timber harvesting as an important tool in forest and wildlife management. Harvesting will be permitted only in previously logged over, second-growth areas under a management plan that must be prepared publicly in full compliance with the National Environmental Policy Act—environmental impact statement process and in compliance with the principles of modern scientific timber management embodied in the Timber Management Act of 1976 passed in the 94th Congress.

The U.S. Eighth Circuit Court of Appeals stated the case for timber harvesting very clearly:

> All parties acknowledge that the vegetation in the BWCA must be managed in some manner. The art of prescribed burning has not been perfected. Logging is a legitimate vegetative alternative; timber harvesting is a controllable tool which can safely take the place of fire.

Yet there is a certain "mystique" about the virgin forest. It is something intangible, a sense of eternity on which no price can be put. To preserve that value, my bill provides that there shall be no logging of virgin timber, either in the wilderness or in the national recreation area.

Though the acreage open to logging in my proposed NRA is small, less than 1 percent of all Minnesota commercial timberland, it has the potential to yield on an annual basis 21 percent of the available softwoods in Minnesota's two national forests. Carefully and conservatively managed, the NRA could have an annual yield of 100,000 cords in a mix of 60 percent softwoods, 40 percent hardwoods of the species required for the future growth of northeastern Minnesota's wood fiber industry. My bill very carefully protects the environment by retaining the provisions of the Shipstead-Newton-Nolan Act of 1930, which prohibits logging within 400 feet of a water course and extends that coverage even to those lands added to the NRA from the present Superior National Forest.

Timber harvesting, under the foregoing conditions, will admittedly be difficult and costly—but it will be permitted. I believe, therefore, that the tight controls over timber harvesting should be appealing to conservationists who have long sought such restraints; the assurance of timber availability should be an encouragement to the wood fiber industry, which now operates under a cloud of uncertainty about its future.

WILDLIFE AND FOREST MANAGEMENT

The eastern timber wolf, virtually extinct everywhere in the United States but Minnesota and Alaska, depends heavily upon the whitetailed deer for its survival. The deer, in turn, depend upon young forest growth for their forage. As timber harvesting in the BWCA declined and, in the last 3 years, was stopped altogether, the deer population declined with it, as did the wolf population. Furthermore, the wolves declined in size and moved out of the wild country to farmed areas where they prey on livestock.

The U.S. Fish and Wildlife Service established a Federal-State eastern timber wolf recovery team to develop a "recovery plan" for that endangered species. The recovery team's report cites, "four main factors critical to the long-range survival of the eastern timber wolf," including these two: First, large tracts of wild land with low human densities and minimal accessibility; second, ecologically sound management." The BWCA fits the first of these, and logging fits the second.

The recovery team further recommended establishment of a wolf sanctuary, whose purpose is to "develop and maintain prey density—to support an average of 1 wolf per 10 square miles." To achieve that goal, the team proposes to "promote adequate hardwood and conifer composition in age classes and types to provide for maintenance or improvement of forest diversity," and "promote logging practices to provide adequate supply, distribution and age classes of hardwoods, with emphasis on aspen."

In short, the food chain, of which the deer and the timber wolf are so vital a part, is not complete without adequate browse for wildlife. The harvested forest produces more browse for animals than does the uncut virgin forest and, therefore, is essential to the recovery and maintenance of viable eastern timber wolf populations.

AIRCRAFT BAN

The ban on aircraft imposed by President Truman in 1948, limiting air travel over the BWCA to altitudes above 4,000 feet, will continue in both the wilderness and the NRA, with specific exceptions for seven lakes now in the Superior National Forest where float planes are presently permitted and which will be included in the proposed NRA.

Local residents have expressed concern about the safety of air travel caused by the altitude restrictions, particularly where aircraft must land at Canadian customs. Responding to that concern, my bill directs the Secretary of Agriculture and the Secretary of the Interior jointly to undertake "a study of the safety, noise impact, and cost factors associated with the airspace reservation" and report their findings and recommendations to the President and Congress. The President is directed to act on those recommendations within 90 days.

PAYMENT IN LIEU OF TAXES

Financially hard-pressed northeastern Minnesota counties will get much-needed financial relief from the Federal Government under the payment-in-lieu-of-taxes bill I authored and worked to get enacted into law during the 94th Congress.

Under the provisions of this legislation, counties where the Federal Government is a nontaxpaying landholder will receive up to 75 cents per acre for Federal land within their boundaries. That payment is a large increase over the present compensation of 35 cents an acre now paid to northeastern Minnesota counties for their BWCA lands. Payments to Cook, Lake, and St. Louis Counties, amounting to several hundred thousand dollars, will be made by the U.S. Treasury this September under the payment-in-lieu bill.

COMPROMISE

Mr. Speaker, my proposal admittedly is a compromise, one that concedes more to wilderness than to other uses, yet a balanced approach that reflects the area's history, that attempts to treat each interest as legitimate in its own right and to place each use in such a way that one does not conflict or overlap with another—use with careful controls.

It is a balanced plan; it does not yield the future of this area to any single use nor allow any one interest to dominate. It respects the concerns of local area residents who feel, with some justification, that their opinions and rights have not been recognized by people distant from and not familiar with unique local circumstances. This plan will open the area to the young and the elderly; the hale and the handicapped; the local residents and the distant, infrequent visitor. It fairly and responsibly serves both the local and the national interest.

WE NEED CLEAN AIR NOW

HON. RICHARD KELLY

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. KELLY. Mr. Speaker, though I voted against the House version of the Clean Air Act, when the House-Senate

conference came up for a voice vote I supported it. I have long been torn between a desire not to disrupt the economy and my concern for the Nation's air quality.

My change of mind on this legislation is attributable to a combination of events, including changes in the legislation itself, a complicated air purity situation with passage of the National Energy Act, and recent air quality conditions throughout the Nation.

The changes in the bill to which I refer concern the granting of greater flexibility to State officials in implementing EPA standards. First of all, the bill permits State governors to issue a variance for up to 18 days to areas designated as class I, clean air regions. Also, the State would be able to reclassify class II areas if they felt it necessary.

A second change involves EPA's ruling that in dirty air, class III areas, any increase in pollution from a new source would have to be offset by a decline in pollution from an existing plant. Under the terms of the conference bill, States would have the option of getting a waiver from this requirement.

Another reason for my supporting the bill is my fear that the coal conversion provisions of the National Energy Act may result in substantial shocks to our Nation's air quality. I believe we must make an effort to balance this possible shock by a decrease in automobile pollutant emission levels. The conference bill includes a serious attempt to do this.

Finally, the recent spell of intensely hot, humid days that blanketed much of the country, with extreme air stagnation, made clear in my mind the need for some action. Here in Washington, a city with no heavy industry, the air quality index logged in the hazardous range without relief for weeks. This is particularly unhealthy for our elderly and for people with respiratory conditions. Our people, in the great urban areas and across the country, deserve air that is fit to breathe.

HOUSING SPECULATION AND THE RISING COST OF HOMES

HON. MARK W. HANNAFORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. HANNAFORD. Mr. Speaker, recently many Americans have been plagued by fears of rising inflation and unemployment, diminishing purchasing power, and savings which have significantly eroded in value.

In recent testimony before the House Banking Committee, Chairman Arthur Burns of the Federal Reserve Board stated that "there has been some diminution in the rate of inflation lately." He added however, that "the rate of inflation this year is running higher than it did last year."

Unemployment declined to 6.9 percent in May, the lowest rate in 2½ years, and the wholesale price index during that month rose by only 0.4 percent. At the same time, the Consumer Price Index measured 6.7 percent higher than the May 1976 rate. The latest available rate of unemployment is 7.1 percent, with the wholesale price index for all commodities in June decreasing by 0.6 percent from May, and the June CPI rate 6.8 percent higher than that of June 1976.

In this atmosphere, the prospects of homeownership for many lower- and moderate-income families are steadily declining. Today, the average price of a new home is climbing well over $50,000. Furthermore, a report by the MIT-Harvard Joint Center for Urban Studies estimates that in 5 years the typical new home will cost $78,000. The National Association of Realtors also reports that over the last 12 months, the median sales price of existing single-family homes rose by 12.1 percent in the North Central region, 7.7 percent in the Northeast, 7.9 percent in the South, and by 28.3 percent in the West. The median sales prices of existing one-family residences in the West now hovers around $58,000.

Exacerbating the rising cost of homes are certain speculative activities which have been widely reported in California, and spreading to other areas such as Chicago, Seattle, and Baltimore. Speculators have concentrated on newly built single-family homes, buying and reselling them at high profits in some instances before closing escrow. In other cases, homes are purchased and rented at rates lower than monthly mortgage rates which the speculators must pay and then resold at inflated values in several months. Profits sometimes range from $15,000 to $20,000 in a few months on as little as a $1,000 deposit. Testifying before the House Banking, Finance and Urban Affairs Committee on July 29, Dr. Burns cautioned that this "speculative activity in the single-family sector * * * bears watching."

A cursory review of the rising price of homes since 1973, when the average price of a new home was about $37,000, shows that many regions of the Nation have experienced considerable increases in the cost of newly constructed residential units. As of April of this year, most of the 18 standard metropolitan areas surveyed by the Federal Home Loan Bank Board sustained gains in the average cost of a new home over the last 5 years of well over $10,000. In 7 areas, the increases amounted to $20,000 or more during the last 5 years.

Metropolitan area	April figures					Increase since 1973
	1977	1976	1975	1974	1973	
Chicago-Gary, Ill., Ind	$58,000	$49,000	$44,000	$46,000	$38,000	$20,000
Cleveland-Akron-Lorain, Ohio	59,000	50,000	50,000	42,000	39,000	20,000
Denver-Boulder, Colo	58,000	54,000	43,000	36,000	33,000	25,000
Detroit-Ann Arbor, Mich	49,000	41,000	47,000	43,000	37,000	24,000
Los Angeles-Long Beach-Anaheim, Calif	73,000	66,000	49,000	45,000	40,000	33,000
San Francisco-Oakland-San Jose, Calif	75,000	62,000	54,000	43,000	44,000	31,000
District of Columbia-Maryland-Virginia	68,000	64,000	56,000	50,000	42,000	26,000

The highest costs for new dwellings according to the above figures issued by the Federal Home Loan Bank Board were in California. Moreover, increases in the California metropolitan areas surveyed since 1973 indicate an acceleration of over $30,000 in the average price of a new home.

In many parts of California, average new, single-family homes now cost $90,000, with values increasing between 2 and 4 percent each month. With the growing demand for housing due to significant in-migration and a greater number of young families in the market, many people fear that there just will not be enough available housing at affordable prices.

The 1977 edition of the Tax Foundation's "Facts and Figures on Government Finance," indicates that as of 1975, 22 percent of families had an income range of $10,000 to $14,999 and 30 percent had an income range of $15,000 to $24,999. Another 33 percent earned between $7,000 and $9,999 or less. Also, during 1975, housing and household operation expenditures accounted for 30 percent of personal consumption expenditures, followed by 23 percent for food and tobacco expenses.

So far, many lending institutions have instituted measures designed to control speculative activities in the new single-family home market. Some practices include requiring mortgage borrowers to sign statements of intent that they will live in the house for which the loan is being made, and interest rate differentials on loans for non-owner-occupied home sales. Other lenders have initiated higher mortgage rates across the board, required higher downpayments, and raised the points or loan fees on residential mortgage loans. In April, the San Francisco Federal Home Loan Bank Board moved to restrict available funds to member S&L's by raising the short-term advance rate to 7.50 percent from 6.50 percent, and the long-term advance rate to 8.50 percent from 7.50 percent. Later, in July, the short-term rate was reduced to 7.25 percent and the long-term rate to 8.25 percent.

While these measures have had some impact on speculative buying of new homes, the prospective buyer should also be provided with information which will enable him to know if the price he is being charged represents an overinflated value. While this knowledge may not in all cases affect the prospective buyer's decision to purchase, such disclosure will put him in a better bargaining position and hopefully discourage speculators from unconscionable markups. Together,

this type of disclosure on newly constructed dwellings and other actions by lending institutions should curb speculative buying which prices many families out of the housing market. By tightening demand for "legitimate" home buyers, lending institutions will also be able to avoid a potentially dangerous posture. As the president of the San Francisco Home Loan Bank stated recently, the deluge of loan commitments in California S. & L., is rising at a fast rate—amounting to somewhere around $3 billion in March. With such loan promises facing the industry, appraisal requests are piling up, adding to the paperwork problem, and raising serious questions about the adequacy of hasty reviews to determine lending risks.

Such activity also raises questions of how this speculation affects rent values, property values, and property taxes, and intensifies regional variations in mortgage interest rates. Rapidly escalating housing costs are imposing burdens on current homeowners, whose property tax assessments are soaring at rates which, in most instances, are not commensurate with gains in income. The inflated property values which result from speculation not only penalize growing families, but many senior citizens who are on fixed incomes and find themselves paying out a larger proportion of their income.

Mr. Speaker, I am introducing a bill today requiring simple disclosure provisions by the seller to the buyer on sales involving federally related mortgage loans. This disclosure will be directed at residential units on which both construction and a sales transaction has been completed within 1 year. Thus, the thrust of this proposal is aimed at new residential structures. I welcome the comments of my colleagues on this legislation and also urge that we consider longer term proposals to lower the cost of homes so that they are affordable to low- and middle-income families throughout the Nation.

TRIBUTE TO LT. COL. KURT CASEY McDONALD, MIA

HON. LEO J. RYAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. RYAN. Mr. Speaker, although only 4 years have passed since the end of our Nation's involvement in the Vietnam war, our remembrances of those days tend to become hazy. As a result, I feel an obligation to bring to the attention of my colleagues those Americans who still remain somewhere in Vietnam, our POW's and MIA's.

August 19, 1977, marks the 43d birthday of Lt. Col. Kurt Casey McDonald. He was reported missing on December 31, 1964, while on a reconnaissance mission in South Vietnam. Lieutenant Colonel McDonald is one of some 1,300 men who are still unaccounted for in Vietnam. His family is not unlike the other families who must bear the burden of not knowing their son's fate.

I hope we will continue to remember the men who are still listed as MIA's and POW's and their families, that we will insist upon some final accounting of these men by the Communist Government of Vietnam before we begin any meaningful negotiations for trade with that Government, and that we will one day see an end to the conflicts which this war has caused.

THE WANBLI ARCHERY CO.—AN AMERICAN SUCCESS STORY

HON. LARRY PRESSLER

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. PRESSLER. Mr. Speaker, I would like to tell you, and my colleagues here in the House of Representatives, about an exciting and inspiring "American success story" that has taken place in my home State of South Dakota.

Later this month, on August 26, the Wanbli Archery Co. located on the Pine Ridge Indian Reservation in South Dakota will have its grand opening. The story began, however, when a Connecticut Yankee, named Tom Loomis, decided to use his expertise to set up an arrow manufacturing factory.

When Tom started looking for a source of startup funds for his operation, he first thought of going through the Veterans' Administration since assembly of arrows—which would not necessarily require sight or full use of limbs—could provide employment for our handicapped veterans. While his negotiations were still in the preliminary stage at the VA, though, Carl Janis and John Husman, planners for the Oglala Sioux Tribe at Pine Ridge, S. Dak., heard about Tom's plans. They decided to encourage him to locate his factory on the Pine Ridge Indian Reservation, a high-risk area for an employer or industry to locate, but a sure source of manpower.

Like so many communities in our economically depressed Indian reservations, the little town of Wanblee could offer little or nothing by way of employment opportunities. About 400 people live in Wanblee and the surrounding area—which is equal to the metropolitan area of Washington, D.C., in size. The nearest major community, Rapid City, is 125 miles away.

At this point in the story—just a little over 2 months before the Wanbli Archery Co. began to train its first employees—Tom began to learn what good cooperation between Federal and State governments—and local people who have a dream—can do. The Oglala Sioux Tribe wasted no time in contacting Tom—and the week before Thanksgiving they pledged $18,000 in startup funds from their tribal treasury. Shortly after the Tribal government offered their financial support, the Bureau of Indian Affairs came through with $20,000 in grants and $25,000 in loans for the arrow factory at Wanblee. The State of South Dakota, which was in dire financial straits because of a severe drought, granted $3,500 and agreed to pay for an 8-weeek training program for 15 trainees through the South Dakota Job Service. The contracts were signed on February 1, 1977 and training began March 21. At the end of the 8-week session, none of the trainees had dropped out of the program—a major concern of employers on Indian reservations—and the Wanbli Archery Co. was on its way.

Tom Loomis' pipe-dream has become a reality. The first shipment of 9,000 arrows—each one hand-painted with the special design of the individual Indian artisan—went out on Thursday, July 28. The Wanbli Archery Co. is 100 percent Indian owned—by the members of the Eagle Nest District of the Oglala Sioux Tribe. In another 6 months, Tom expects that the company will be under 100 percent Indian management.

Nationwide, the archery industry does an $80 to $100 million business—and 60 percent of that can be attributed to arrow sales. If the initial success of the arrow factory at Wanblee is any indication, the company should be a $1,000,000 industry within 3 years. In fact, company production is already sold out for the years of 1977 and 1978.

I congratulate the Wanbli Archery Co., its 22 employees, and especially Tom Loomis for once again proving that the individual can make a real contribution to society in this country. With the support of Federal, State, and local governments—and direct citizen participation—the work ethic and our American free enterprise system have given Wanblee job opportunities for its people, community pride, economic growth, and the promise of a better tomorrow.

We in Congress need to devote more time and consideration to legislation—like the "Operation Bootstrap for American Indian Reservations" that I introduced earlier this year—to help individuals, and communities like Wanblee, help themselves. Indeed, the success of the Wanbli Archery Co. is proof positive of such an approach—and I hope it serves as an inspiration to us all.

AUGUST 6—84TH BIRTHDAY OF THE LATE WRIGHT PATMAN

HON. HENRY B. GONZALEZ

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. GONZALEZ. Mr. Speaker, there are very few men we come to know in our lifetimes, who are considered both great and kind.

One of the greatest men I have ever known, who was kind, and who I termed at the time of his passing "the gentle prophet", was Wright Patman.

Saturday, August 6, marks the 84th anniversary of Wright Patman's birth at Patman's Switch near Hughes Springs in Cass County, Tex.

I could not allow this day to pass without paying tribute to one of the most dedicated servants of the people to ever serve in Congress.

It was my honor and privilege to come to serve in Congress at a time when

Wright Patman was chairman of the House Banking and Currency Committee.

The former district attorney of the Fifth Judicial District of Texas served a little more than 47 years in the U.S. House of Representatives. During the last 14 years—during the time I knew him and served with him—he never deserted his principles. In all the hard and bitter fights he had while I knew him, I never saw him lose his grace or temper.

Wright Patman's mission in life was the cause of the plain people—the ordinary folk. Whatever would help the little people, Wright Patman was for. Whatever would hurt them, he opposed. Everything he did was founded in his vision that plain people counted, and that Government was intended to serve them. If the Federal Reserve followed monetary policies that hurt ordinary people, Wright Patman demanded different policies; if big business hurt small business, he demanded fair treatment; if big banks harmed the interests of modest folks, he called them on the carpet.

The accomplishments of Wright Patman on behalf of the ordinary folk during his lifetime comprise one of the greatest legacies ever left the people of this country by one who asked to serve.

For example, he was the one who was instrumental in establishing credit unions, and the House employees credit union now bears his name.

No man ever served the people with greater faith and fervor than Wright Patman. A few served as long as he did, but none with greater love for the people.

No one could truly be a substitute for Wright Patman, but it surely would be commendable for anyone to try.

The Congress, the people, are always in need of a Wright Patman.

AIRLINE DEREGULATION COULD BE BAD FOR ARKANSAS

HON. JIM GUY TUCKER

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. TUCKER. Mr. Speaker, President Carter and Secretary of Transportation Brock Adams have now indicated their intentions to move forward with some type of airline deregulation proposal.

Until the final form of this proposal is determined and a bill comes to the floor, I cannot make a firm judgment as to how I might vote on such a proposal.

But, my friend Bob McCord of the Arkansas Democrat recently wrote a most interesting article on deregulation that reflects some of the deep concerns and apprehensions that Representatives from States like Arkansas must have.

I include his article at this point in the RECORD.

AIRLINE DEREGULATION COULD BE BAD FOR ARKANSAS

(By Bob McCord)

In Washington hearings have just been completed on proposals to deregulate the airlines. It's a three year old effort that probably will produce a bill this year.

This sounds very dull and foreign to us, but it shouldn't be regarded that way because places like Arkansas will be the real losers if deregulation comes . . . especially total deregulation, which is what Senator Ted Kennedy, D. Mass. and others are proposing.

Depending on the degree, deregulation will take the trunk airlines (like American) and regional airlines (like Texas International) from under the control of the Civil Aeronautics Board and give them the relatively free status of commuter airlines (scheduled Skyways).

All airlines could then set their own roots, leaving or entering any market they choose and establish their own fares. In theory, this would result in 1. cheap fares, 2. more direct flights, and 3. a reduction in tax spending, since the airline subsidy, which the government gives airlines for serving unprofitable markets, would be reduced (incidentally, subsidies are paid in all six Arkansas cities that have airline service).

Practically and ideologically this sounds very good. The catch is where you stand to do the listening. If you are in Boston, for instance, deregulation undoubtedly would enable you to fly to Washington more often and for less than the current fare of $55, which is more than an unregulated airline now charges to make a longer flight from San Francisco to Los Angeles (the most heavily travelled air corridor on earth). Airlines freed of regulations would rush to places like Boston and cut prices, add flights, and do anything else to get business.

But, if you are standing in Harrison, Arkansas, deregulation means something different. Harrison is one of those marginal places the airlines would rush from, despite the subsidy that has enabled cities like Harrison to keep minimal airline service. A planeload of customers out of Boston every half hour pays better than a ¼ load out of Harrison, once a day, no matter how high the subsidy.

Ralph Disheroon, manager of the Hot Springs Airport for 32 years says that there was no doubt that total deregulation would take scheduled airline service out of his city. In fact, Eddie Holland, director of the Arkansas Aeronautics Commission, estimated that only four cities would still have service following deregulation—Little Rock, Texarkana, Fayetteville, and Fort Smith.

Furthermore, service in these cities would be curtailed. For example, Little Rock Airport Manager Robert Crisp, said he believed Braniff would leave Little Rock if deregulation took effect. Now, trunk and regional carriers couldn't leave a city unless the CAB agrees, and it usually will do so only if the airline gets a commuter service to move in and offer some kind of service.

For example, El Dorado, Jonesboro, and Pine Bluff are the latest cities in the state to lose airline service. They are now served by Air Illinois and Royale, which transport people to Memphis and Shreveport where they can board trunk or regional carriers. (Commuter airlines have a better chance of making a go of it in small markets because they fly 18 rather than 100 passenger airplanes, have non-union pilots, and are not regulated by the CAB.)

Holland said that for most small towns, commuter service was all the future held. So what's wrong with that?

Well, for Hot Springs, it would be quicker for people to drive 50 miles to Little Rock to use the airport rather than to catch a commuter flight to Little Rock, according to Disheroon. Hot Springs livelihood depends on visitors, and when 150 convention delegates want to go home the small commuter planes can't handle them. We will put a lid on a lot of small cities if all they have are commuter lines because cities with airline service grow four times as fast as those without.

Actually, arbitrary rate setting also could reduce service. Crisp said he is worried about this. A trunk airline could drop its rate on a popular flight out of Little Rock (making up the money somewhere else) and force regional or commuter carriers to give up the route and maybe leave Little Rock completely.

Why complain if the traveller got a lower rate? Well, what about the other, less popular places the regional or commuter carrier serves out of Little Rock? That service would be lost if it left town.

Then there's another factor. The airlines that land in Little Rock pay landing fees and rentals amounting to almost one million dollars of the airport's total annual income of 2.3 million dollars. This money is used to operate the airport, of course, but also to pay a half million dollars in debt service. Like most airports, Little Rock's has millions of dollars in outstanding revenue bonds, backed in part by long term leases with the airlines. Changing or moving CAB regulations would be a means to break these contracts. Small wonder that Crisp's main fear about deregulation is the uncertainty; the airlines could leave at any time. Planning under these conditions would be nearly impossible.

Even if it meant a reduction in service, would deregulation save tax money? I doubt it. Congress is just not going to let towns die for lack of air service. This means that the government will have to start paying subsidies to commuters, because under deregulation they would be the only airplane company left in most towns. This would lead to an increase, not a decrease, in federal spending. Now Holland, Crisp, and Disheroon are not opposed to all the deregulation; they know the airlines have the lowest profit of any major business and need help. But, they want deregulation that they say will assure better service—elimination of what's called "regulatory lag" and more flexibility in setting rates, for instance.

These things won't result in lower fares, but these three aviation veterans don't think this is very important anyway in a developing state like Arkansas. Service is what counts. The Department of Commerce, for instance, says that scheduled airline service is an important factor in selecting locations for 64% of the nation's businesses.

"I hear a lot more complaints about a lack of service to New Orleans or Denver than I do about the price of airline tickets," Crisp told me. Disheroon added that people going to conventions didn't worry about the cost of airline tickets anyway.

THE NEED TO CONSERVE ENERGY

HON. CHARLES A. VANIK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. VANIK. Mr. Speaker, the June 1977 issue of the Department of Commerce's publication, International Economic Indicators, contains an interesting table on the value of petroleum imports among seven major industrial nations. The data indicate that the United States, which has larger domestic sources than most of the other industrial nations, has been increasing the value of its imports at a faster rate than the others. This table appears to show that the United States, more than any of the others, is failing to conserve energy and reduce its demand for foreign oil:

IMPORTS OF PETROLEUM—ANNUAL COST, INSURANCE, AND FREIGHT

Period	U.S. transaction value [1]	France	Federal Republic of Germany	Italy	Netherlands	United Kingdom	Japan	Canada
1960	1.5	0.7	0.7	0.5	0.5	1.4	0.1	0.4
1969	2.6	1.6	2.0	1.6	.9	2.1	2.3	.6
1970	2.8	1.9	2.3	1.9	1.3	2.2	2.8	.6
1971	3.6	2.4	3.2	2.4	1.8	2.9	3.6	.7
1972	4.6	3.0	3.3	2.6	2.1	2.9	4.5	.9
1973	8.1	3.9	5.7	3.6	3.0	4.1	6.7	1.2
1974	26.1	10.8	12.5	10.4	5.6	10.6	21.1	3.1
1975	26.6	11.0	11.8	9.3	5.8	9.3	21.0	3.5
1976	34.2	13.3	14.0	10.2	----	10.0	23.3	3.5
Percent increase, 1973–76	422	341	245	283	----	243	347	291

[1] Includes crude petroleum imports into the Virgin Islands, most of which are refined and sent to the United States, but are not in U.S. import statistics because the Virgin Islands are not part of the U.S. customs area, and U.S. trade with this (or any other) possession is not included in U.S. foreign trade data. Prior to 1974 Customs values are shown; full alongside ship.

Note: Please see note 13, p. 89.

COMPLETING THE NATION'S ENERGY PROGRAM: PETROLEUM PIPELINE DIVESTITURE

HON. HERBERT E. HARRIS II

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. HARRIS. Mr. Speaker, the enactment of a national energy program is truly a landmark step for the country and I am pleased to vote for H.R. 8444, the National Energy Act, a bill which I believe seriously addresses the many complicated and critical energy needs of our country. Continuing controls on natural gas, expediting coal conversion, reforming utilities, encouraging home weatherization, setting auto and appliance fuel efficiency standards, and creating solar energy programs are certainly key elements of our new program which I hope will get us on the road to sensible energy use as a nation.

I believe, however, there is a missing element in the national energy program that this Congress must still deal with: oil company pipeline divestiture. We cannot continue to let the oil companies reap ruthless profits and gouge the people. It is that simple. The oil companies have just "had it too good."

That is why I have introduced H.R. 8506, the Pipeline Divestiture Act of 1977, and am urging the Judiciary Committee, on which I serve, to move promptly on the divestiture issue. For too long we have tolerated a situation under which a handful of large companies have monopolized the supply of domestic crude oil, these monoliths have been able to restrict entry into refining and limit the competitiveness of independent refiners. They have "controlled" energy prices from start to finish, from the oil well to the kitchen stove. This, in turn, has enabled them to force on the consuming public a wasteful, inefficient, and inordinately expensive system of marketing. In short, it is the "oil boys" who are making the money and it is the average family that is paying.

I do not see why pipelines should not be treated like other common carriers and why shipper ownership of pipelines should not be prohibited. There is an inherent and obvious conflict of interest between a company as owner of a carrier pipeline and the same company as shipper on the pipeline. Competitiveness is the name of the game in American business and oil company ownership of pipelines is not competitive. And for this absence of competition it is the consumer who is paying the cost.

Energy means food, life, comfort and peace of mind for people and for our society. The lack of it can mean human misery. I am ready to loosen the strangle the oil companies have over people's lives. And I believe that this bill is one such way.

THE DIVESTITURE BILL

H.R. 8506, the Pipeline Divestiture Act of 1977, is patterned after S. 2387, the Petroleum Competition Act of 1976, which was reported by the Senate Judiciary Committee during the 94th Congress. Under H.R. 8506, it would be unlawful, 5 years after the date of enactment of the legislation, for any corporation that owns a petroleum pipeline to own or control any interest in an energy production, refinery, or marketing asset. H.R. 8506 would also prohibit a pipeline company from transporting, through its pipelines, any energy resource or refined product in which the company had an interest. To facilitate the judicial supervision of the divestiture required by H.R. 8506, titie II of the bill establishes a temporary petroleum industry divestiture court.

ADMINISTRATION WANTS CLOSE STUDY

In recent months, both Attorney General Griffin Bell and Assistant Attorney General John Shenefield have indicated, during their appearances befor Congressional committees, that pipeline divestiture may be necessary. The following exchange occurred during the Attorney General's appearance on May 11, 1977 before the Subcommittee on Antitrust and Monopoly of the Senate Judiciary Committee:

Attorney General BELL. Assistant Attorney General Baker testified last week on the pipeline problem and what we are doing in that area.

Senator KENNEDY. He mentioned that he does support divestiture in terms of pipelines. Is that your view?

Attorney General BELL. Yes. I have studied his testimony and talked with him and others, and it seems to me that there is a good deal of merit in the position he has taken.

In his testimony of June 21, 1977 before the Subcommittee on Energy and Environment of the Interior and Insular Affairs Committee, Assistant Attorney General John Shenefield stated:

The relevant inquiry, therefore, is whether the petroleum industry is workably competitive at each and every level.

Our analysis of ownership of producing assets by vertically integrated firms suggests that when it comes to crude oil and petroleum products pipelines we may be dealing with a special situation. Substantial arguments have been made for prohibiting pipeline companies from owning producing properties, Federal or otherwise. Because pipelines are natural monopolies, rate regulation is necessary to prevent throughput restriction and monopoly profits. Where pipelines are owned by vertically integrated firms, however, rate regulation can be evaded. A vertically integrated firm can restrict the capacity of or access to its pipeline, thus forcing competitors to ship their products by less efficient, higher cost alternatives.

This will increase the downstream delivered price of crude oil since the marginal barrel of oil sets the price of all sales in the downstream market. The owner of the pipeline, shipping his product through the more efficient pipeline, will be able to sell at the higher downstream price and pocket the efficiency benefits of pipeline transportation.

It should be noted that H.R. 5709, by prohibiting petroleum pipeline companies from acquiring Federal leases, would address only part of the problem. A more comprehensive approach, if divestiture is seen as a solution, would be to prohibit all crude oil and petroleum product pipelines from transporting any commodity in which they have an interest. Pipelines would become truly independent common carriers with incentives to increase rather than restrict the efficient transportation of petroleum.

I believe joint ownership of pipelines by the major oil companies creates an extraordinary opportunity for anticompetitive behavior. In any market where a few firms maintain a dominant position, parallel behavior is more than suspect. In a situation where a few dominant firms in a highly concentrated industry communicate on a regular basis on matters of common concern, communications concerning prices and products are likely. While such communications would normally be illegal, where the competing firms jointly own an asset, such as a petroleum pipeline, communications are inevitable.

Although the administration has not formally endorsed divestiture legislation, the Nation's key law enforcement officials have indicated that they believe that this issue deserves careful study. I agree. Further I believe that the public policy decision on pipeline divestiture should be made by Congress. I hope that the Monopolies Subcommittee of the Judiciary Committee will soon begin consideration

of this bill. Divestiture is desirable, and I believe divestiture could better be achieved by legislation rather than litigation.

I will work to see that this Congress acts quickly to restore competition to the oil industry and to keep energy costs under control for the average family.

ENERGY AND THE CITY

HON. HERMAN BADILLO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. BADILLO. Mr. Speaker, last year when New York was in the depths of its fiscal disaster, it fell to the House Banking Committee to find a viable and effective way to assist the city. At that time I came to know HENRY REUSS well, and to understand the depths of his sensitivity and affection for New York. I also came to know of his deep commitment to urban problems and to the search for their solutions. This commitent, and his determination to carry it out, was translated into action this year with the organization of the Subcommittee on the City of the Banking Committee. I have the privilege to serve with HENRY on this subcommittee, and I know that under his leadership we will develop a workable and visionary urban policy for our country.

Recently, HENRY REUSS spoke before the National League of Cities about the energy problems of the Nation's cities and their solutions. I am pleased to include a copy of his speech, and I hope you will all consider what he says carefully as we seek to better assist our urban areas in the coming years:

ENERGY AND THE CITY

(Remarks of Representative HENRY S. REUSS)

By the end of this Congress, I am confident we will be able to say that we have made a good start on a sensible national energy program. At this point, however, we are still in the first stages of our deliberations. The various House Committees have readied their portion of the energy program, and next week the Ad Hoc Energy Committee will start to put it all together.

We have yet to appreciate the city form as naturally energy efficient. We must find means to effectively enlist our local governments in the national effort to conserve energy.

The Subcommittee on the City of the House Banking, Finance and Urban Affairs Committee this September will begin hearings on Energy Policy and the Cities. I invite you to participate in these hearings.

We all know that energy consumption is concentrated in our metropolitan areas. At the suburban fringes of these areas, profligacy reigns. The typical pattern of detached single family dwellings, dispersed centers for shopping, employment, and recreation, and heavy reliance on the auto to get from here to here, make for wasteful use of energy.

As we approach our urban cores, the picture becomes different. Higher densities and greater concentrations of employment and stores make possible more trips by foot and mass transit. Attached dwellings and apartment buildings permit more efficient use of heating fuel. On a per capita basis, the energy required to maintain the city's infrastructure of sewers and streets, and to deliver services such as sanitation and police and fire protection, is less than in the sprawling suburbs.

I will not contend that all our cities, or even any of them, are as energy-efficient as they might be. But their potential is great. And energy scarcity is a certainty. Hence we ought to be doing more to encourage cities to realize their energy-conserving potential.

Here are two ways in which cities can help conserve energy:

1. City officials must help make and carry out a national energy policy.

If we are to get Americans to lower their thermostats, insulate homes and buildings, and make more use of transit, we will need your cooperation and exhortation close to home. How you use your city vehicle fleets and your zoning powers will make a difference. So will your management of municipal utilities and amendments to municipal building codes.

2. Urban development and land-use policies should be redirected to save the goal of energy conservation.

We can't roll back the sprawl that surrounds our urban centers, or the highways and beltways that have helped it leapfrog into the country side.

What we can do is get rid of some of the incentives that might feed a new wave of development, and concentrate our resources on preserving what is in place in our cities and close-in suburbs. This will not only make for more efficient energy use. It will also help us economize on scare land and capital.

a. Historically, the *tax code* has been one of the strongest incentives to decentralization in our metropolitan areas. It has favored investment in new commercial, industrial, and residential buildings over the maintenance and repair of older structures. It has encouraged the construction of owner-occupied, single-family housing over multi-family, rental apartments.

The Administration has promised us a tax reform package later this year. We should take this opportunity to re-examine those provisions that are skewed in favor of new suburban development.

In particular, we should take a careful look at homeownership deductions with the idea of limiting their availability, at least to the taxpayer's principal home. With increases in the standard deduction, it has become obvious that these deduction are chiefly available to the affluent, who itemize on their returns. And it is this group that is most apt to build far out in the suburbs, and dot the exurban landscape with vacation homes.

b. Our interstate highway program also need new scrutiny, with the aim of curtailing new construction and using the funds for badly needed maintenance of routes in place. It is now possible to remove unwanted inner-city legs from the system and divert the money to transit. But I can testify from my own experience that the procedures required for this laudable, neighborhood-saving option are interminable. I hereby enlist you in another battle against red tape.

c. Another thing we should be aiming for, I suggest, is compact new communities within our urban areas, where residences are mingled with work places and facilities for shopping and recreation and other day-to-day needs. In some of our cities which are still growing, we can create these communities by in-filling land that has been bypassed in the spread outward. An appropriate vehicle is at hand in HUD's New Communities program, which is being redirected to encourage energy-conserving new towns-in-town.

d. In many of our older cities, the neighborhood framework for mixed-use communities already exists. These neighborhoods need more flexible zoning. If we modify the typical single-use ordinances, we can get rid of artificial separations between housing and shopping. We can bring in offices and light industry where appropriate. And we can provide a better base for the mix of incomes that makes for healthy neighborhoods.

e. What we do not need to do is tear down and build anew. Instead, we should give priority to rehabilitation of existing physical structures. This is the least expensive way of providing decent housing. It preserves the character and variety of existing neighborhoods. And it can be carried out without large-scale displacement of residents.

Two caveats, however: First, in order to avoid displacement of low and moderate income residents, we will need to provide housing subsidies so that they can own or rent rehabilitated homes. The return of young middle-class couples to cities is a healthy trend. It should be encouraged, but not at the expense of those who are in place.

Second, we need added incentives to induce lending institutions to keep their money in the cities instead of sending it beyond the beltway. Present law, if properly enforced, enables us to detect red-lining. Government funds alone cannot revitalize our city neighborhoods. Private investment is also needed.

In this drive for using the city as the Great Conservator of energy, we must do all we can to see that the impact of the continuing energy crisis does not worsen the lot of the poorer regions of our country and the poorer people.

1. The burden of energy shortages and rising costs should be shared as equitably as possible among regions and states.

We can ill afford to follow beggar-my-neighbor policies on energy. The economic health of the nation depends on the economic health of each of its regions. Yet lower energy costs have been one factor in the shift of industry and jobs from the Northeast and Midwest to the South and Southwest.

It is time for those regions that have easy access to domestic supplies to pay more for what they consume. This will be in their own best interest because it will reduce waste. You will, I predict, see quite a struggle on this issue in Congress in the weeks ahead.

As for the hard-pressed cities in the Northeast and Midwest, who pay through the nose for the energy they use, we may have to consider some form of special relief such as the one-shot fuel use refund that Congress mandated for last winter.

Industries and utilities that convert from oil to coal will create particular hardships for cities that are struggling to meet nationally mandated air quality goals. Here also, if energy policy is not to degrade our urban environments, we may have to provide Federal assistance, by direct subsidy or tax credit, for the installation of pollution control devices in private plants.

2. National energy policy should demand equality of sacrifice from our citizens and serve the goal of equal employment opportunity.

We cannot piggy-back all our social welfare and full employment objectives on national energy policy. But we can ask that energy policy not worsen the plight of the disadvantaged who live in our central cities. And we can also ask that insofar as energy-related jobs are created, a special effort be made to see that they go to the hard-core unemployed.

Increases in energy prices are likely to mean increases in the costs of all of life's necessities. Our urban poor will be the first to suffer. The Administration proposed crude oil tax rebate may provide some relief, but it will be a flat amount for all adults regardless of income. If we go the route of rebates, a case can be made that those who feel the energy pinch most should be rebated the most.

But why not instead use these new revenues to tackle some priority items on the urban agenda—for example, Federal assump-

tion of the costs of welfare, medicaid and other programs for those unable to work; improvements in our urban transit systems; and meaningful job placement and training programs for the unemployed?

Energy is a national problem; so also is urban poverty. We cannot let our quest for more energy sufficiency result in more dependency for our urban populations and their fiscally hard-pressed governments.

Job opportunities will be created by investments in the retrofitting of physical structures, energy-conserving technologies and the development of renewable sources.

I refer not just to crash programs to insulate our homes and public buildings. As we come to realize that it makes more sense to rehabilitate housing and recycle commercial structures than to build anew, we will get more labor-intensive job projects where we need them—in our older urban centers.

We need a modernized nation-wide railroad network for transporting coal. We also need it for the day when we may have to switch back to the train from our autos and trucks. Here also there will be jobs in upgrading road-beds and other rail facilities that we have left untended.

We must then make sure that training programs are oriented to these new opportunities. State employment offices should far surpass their previous performance in telling job-seekers where the jobs are. Relocation assistance, which has to date been a much-buffeted orphan among our Federal jobs programs, should emerge as an important way to serve the twin goals of energy conservation and urban revitalization.

If we pursue the policies I have outlined, we can enhance our cities as places to live and work and play. And we will also save on energy.

Instead of abandoning our existing urban infrastructure and duplicating it elsewhere at enormous expense, we can put it into shape to serve new generations living at energy-efficient densities. Instead of giving the auto a new lease on life, we can make it possible to walk to work or use bicycles and buses to get about the city. Instead of trying to make our suburban strips and low-density communities energy-efficient, an almost impossible feat, we can target our efforts where large numbers of people are concentrated and where they will count most.

If we make the preservation and revitalization of our cities a goal of national energy policy, we will give them a new reason for existence. And if we are attentive to the burdens as well as the opportunities that energy policy will create for cities, we can ensure that our cities survive, and survive for the benefit of us all.

ANNIVERSARY OF THE CZECH INVASION

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. ANDERSON of California. Mr. Speaker, August 21, 1977, will mark the ninth aniversary of one of the saddest chapters of modern history. For it was on that day in 1968 that 650,000 Soviet, Bulgarian, East German, Polish, and Hungarian troops brutally crushed the liberalized regime of Czechoslovakia.

Today, 9 years later, foreign troops are still occupying this Eastern European nation, and an imposed regime is vigorously trying to erase the last influences of the Prague Spring—the brief regime of Alexander Dubcek, who tried to apply the basic concepts of freedom and humanity to Soviet-style communism. Unlike the brutal crushing of the Hungarian revolt in 1956, there was no uprising or rebellion to spark the 1968 invasion. Instead, it was a fear by the leaders of the Soviet block of the example Czechoslovakia might give to their own oppressed peoples that caused them to invade the Czech frontier.

On August 14, 1970, we in Congress passed House Concurrent Resolution 817 protesting the occupation of Czechoslovakia. The American people have not forgotten this outrage against the people of a nation which historically has been an island of freedom and independence in Eastern Europe.

Perhaps one day the reforms instituted and crushed in 1968 will once again become a reality for the people of Czechoslovakia, and other nations where they are currently denied. But August 21st will remain a sad day in the history of all men and women who cherish liberty, freedom, and the rights of individual and national self-determination.

FINANCIAL PROBLEMS CONFRONTING THE SOCIAL SECURITY SYSTEM

HON. RICHARD L. OTTINGER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. OTTINGER. Mr. Speaker, last week the Social Security Subcommittee concluded extensive hearings on the President's plan to solve the financial problems confronting the social security system. I submitted a statement on the President's proposals as well as several other measures I felt deserved the attention to the subcommittee.

I wish to insert in the RECORD the statement I presented to the subcommittee:

STATEMENT OF THE HONORABLE RICHARD L. OTTINGER

Mr. Chairman, I appreciate the opportunity to submit these remarks to the Subcommittee on Social Security in conjunction with your hearings on the Administration's proposals to refinance the Social Security system. First, I would like to address some of the problems of our present system, then comment on the Administration's plan, and wind up with a few other measures I feel deserve the attention of this subcommittee.

The fiscal soundness of the Social Security system is of critical importance to all Americans. Practically every American is a beneficiary, a contributor or a dependent of a contributor. More than 33 million Americans receive a Social Security benefit check every month; over 104 million pay into the program each year. For millions Social Security is the sole source of income. Amid reports of Social Security's deep financial trouble, there is a growing sense of anxiety and alarm among Americans—particularly older Americans—that the trust fund soon will be depleted, and benefits will be reduced or cut off. Since public support for the program depends on confidence in its solvency, we must act *now* to restore financial integrity to the system and to assure people that their Social Security protection is secure.

ADMINISTRATION PROPOSALS

On May 7th, President Carter fulfilled a campaign promise and proposed a comprehensive plan to meet both the immediate and long-range problems of financing the Social Security system. Overall I think the Administration has put together a sound package that deserves careful consideration by this subcommittee and the members of Congress.

I would like to comment on several major elements of the Administration's plan, and then offer some suggestions for further improvement of the financial soundness and equity of the Social Security system.

First, the Administration calls for instituting a special counter-cyclical system of financing from general revenues which would replace the Social Security taxes that are lost when the unemployment rate exceeds 6 percent. I wholeheartedly support the use of general revenues to finance part of the Social Security program. Only in this way can we help to remedy the very regressive nature of existing Social Security taxes which bear most heavily on the already overburdened middle income workers.

Using general revenues is not a new idea. In fact, the Committee on Economic Security, the group that drafted the Social Security Act, predicted the system would need general revenue financing by about 1965. Most foreign governments already have a government contribution in addition to deductions from workers' earnings and payments from employers.

The Administration would restrict the use of general revenues to years when unemployment is above 6 percent. This temporary feature would operate through 1982 when the next Social Security Advisory Council would review the results and make a recommendation whether it should be made permanent. I think the President's proposal is modest. In the past, I have co-sponsored legislation to provide permanent authority for Social Security benefits to be funded in part from general revenues. That bill, sponsored by the Chairman of this subcommittee, would have *lowered* Social Security taxes, raised to $25,000 the amount of wages taxed and provided one-third of the trust fund requirements from general revenues. I prefer this formula to the Administration's more limited use of general revenues.

I would not use general revenues for more than one-third to one-half of Social Security's funding. The limited use of general revenues, phased-in over a number of years, would maintain the important Social Security principle of an *earned* benefit. I believe this principle contributes significantly to preserving the dignity of the recipient and to maintaining broad public support for the program.

In addition, authorizing the use of general revenues would underscore the Congress' determination to meet future obligations of the social security system. I hope such a plan will be part of the recommendations of this subcommitteee.

President Carter has proposed advancing to 1985 the one-quarter of one percent increase in the Social Security tax that currently is scheduled to go into effect in the year 2011 and advancing the remaining three-quarters to 1990. I have very serious reservations about this proposal because a rate increase falls on all wage earners—low paid as well as high paid. Instead, I favor increasing the amount of wage or salary on which an employee must pay Social Security taxes as also proposed by the Administration.

When the Social Security program began in 1937, 97 percent of all those in covered occupations had their full earnings subject to the Social Security tax. In 1977, the maximum wage base of $16,500 covered the full earnings of only about 85 percent of workers. Under the President's scheme, the remaining 15 percent would pay more. The lower income workers would pay no more tax.

The Administration has proposed relatively small increases in the amount subject to the payroll tax. The maximum wage base would

be raised by $600 in each alternate year beginning in 1979 through 1985. These increases would be in addition to the automatic increases included in the present law. The Social Security Administration estimates that the wage base would be raised to $30,300 in 1985 instead of $27,900. I support this measure because it would help meet the Social Security fund's revenue needs in a reasonably equitable manner, and would help reduce the regressiveness of the Social Security tax.

Another feature of the Administration's Social Security financing proposals deals with the over-compensation for inflation built into the 1972 Social Security amendments. Almost half of the long range deficit is due to this faulty method of adjusting benefits for inflation.

The 1972 amendments provided that the taxable earnings base would keep step with inflation to provide more tax revenue, and that the formula for calculating the initial benefit payment to a newly retired person would increase with the cost-of-living. However, increasing the earnings base while increasing the benefit formula means that future retirees will be doubly compensated for inflation. Clearly benefit adjustments for retirees and workers must be separate or "decoupled."

The President's "decoupling" provision is probably the least controversial in his package. It is supported by the AFL-CIO, the National Council of Senior Citizens, the American Association of Retired Persons, the last Advisory Council on Social Security, and many others, because it insures that the replacement ratio of benefits for future retirees will be no lower than for current retirees. Quick action to correct this overcompensation for inflation should be an immediate priority for this subcommittee.

Finally, I would like to comment on one other provision of the President's program, a provision that troubles me. This provision, which changes the test which determines whether an individual may claim Social Security benefits as a dependent, is in response to Supreme Court decisions requiring men and women to be treated equally. This provision is inadequate; it avoids the full range of inequities that are built into our system—inequities based on outdated assumptions regarding the role of women in the United States.

The present system is based on the faulty assumption that most workers are men with dependent wives and children. Although half of all married women are employed, the current system disregards their social security contribution and penalizes two-earner families. For example, in many instances, upon retirement or a spouse's death a working woman recives no more benefits than if she never had worked. Another example of inequity—in one family the husband and wife both work, earn relatively low wages, and pay tax on the full amount of those wages. When they retire they receive *less* than a couple in which only the husband has worked and earned the equal of the two-worker family's combined income.

Social Security treats the worker as an individual for the purpose of collecting taxes, but as a member of a family unit for receiving benefits—this is fundamentally unfair. Retirement benefits should be paid on an individual basis just as the taxes are collected. And, of course, men and women should be treated equally.

I support Congressman Fraser's plan to establish in the Department of Health, Education and Welfare an "Equal Treatment Task Force" to address *all* equal treatment issues: women vs. men; married women who work vs. married women do not work; single persons vs. married person; and working persons 65-72 who work vs. non-working persons 65-72. This group would recommend ways to restructure the Social Security system into a logical part of our total system of taxes and social benefits.

TWO CRITICAL UNMET NEEDS

Now, Mr. Chairman, I'd like to turn to two issues which were not addressed in the President's proposals, but which are of critical importance to Social Security recipients—passing through Social Security cost-of-living increases to recipients and eliminating the current earnings limitation on Social Security recipients.

Earlier this month, 33 million Social Security recipients received a 5.9-percent cost-of-living increase in their Social Security check. Unfortunately, at the same time many of these recipients suffered cutbacks in other need-based programs such as food stamps, veterans benefits and subsidized housing. For example, the increased Social Security benefit may move a food stamp recipient into a higher income bracket, where he or she is no longer eligible for food stamps. Clearly, Congress didn't intend to create this kind of situation when it provided for automatic adjustments for inflation. We should act without further delay to insure that those Americans who are entitled to adjustments in their Social Security benefits are not adversely affected by either increased charges or decreased benefits in other programs. We should insist that increases in Social Security be passed through to those in need.

The other provision I believe we should enact immediately is a repeal of the limit on earnings of Social Security recipients. By inhibiting the elderly from working, we are depriving them of a means of financial support, and undermining an objective of the Social Security program—to supplement retirement income.

In 1977, a Social Security beneficiary stands to lose $1 in benefits for every $2 he or she earns in excess of $3,000. is incurred in addition to the usual deductions from those earnings, including income and social security taxes. The nature of the monthly earnings test seems even more unconscionable when we consider that it applies only to earned income and not income earned from investments. Thus the earnings test affects the lower income retirees even more severely, since they have greater need to supplement their Social Security benefits and are unlikely to have investment income.

Removing the earnings limitation fits well with ending mandatory retirement for federal employees and lifting the private retirement age to 70, actions which themselves will contribute substantially to increasing the Social Security fund.

OTHER PROPOSALS

Mr. Chairman, I would like to call your attention to two additional proposals which I believe merit this subcommittee's attention.

As we all know, recent inflation has had a disastrous effect on the standard of living of Social Security recipients and others living on fixed incomes. The Social Security Amendments of 1972 included a cost-of-living escalator to provide annual increases in benefits whenever the Consumer Price Index increased more than 3 percent. At the time this provision was enacted we assumed price increases would be relatively moderate. Now it is plain that more frequent adjustments are needed to keep pace with rapidly rising prices and to prevent purchasing power losses due to time lags between the time an adjustment is calculated and the time it is received by beneficiaries. Therefore, I support legislation to provide semi-annual rather than annual cost-of-living adjustments in Social Security benefits.

Along this same line, we know that the spending patterns and needs of a person on a fixed income differs dramatically from those of the average urban wage earner as measured by the CPI. Food, housing, transportation and medical care account for 90 percent or more of a typical older persons' budget. We need a more precise measure of the impact of inflation on senior citizens. Therefore I join with many others in urging that a special CPI for the elderly be devised in order to determine fairly future cost-of-living adjustments.

Mr. Chairman, I would like to conclude my remarks with some brief comments on the Supplemental Security Income program, which also is in desperate need of reform.

The basic problem with the program is federal benefits are too low. In many areas, SSI benefits are lower than the poverty level and beneficiaries cannot meet expenses for even the most basic necessities. I continually hear from SSI recipients that they have no money to buy food by the end of the month or that they live on a food budget of $1 a day. Others face eviction from their apartments because they cannot pay the rent. We cannot continue to tolerate this situation.

I support legislation to provide a regional cost-of-living differential in the federal SSI benefit to take into account high differences in costs between urban and rural retirees and other sectional differences.

In addition, I feel that one of the more effective ways of providing relief to SSI recipients in high cost areas is through a special housing allowance for those who spend more than one-quarter of their income on housing. I have introduced a bill to provide a federal SSI supplement equal to the difference between what an SSI recipient is paying for shelter and what constitutes 25% of his or her income, up to a maximum of $1,200 per year.

Finally, Mr. Chairman I believe we need to enact legislation to establish an SSI contingency fund to help SSI recipients meet large unanticipated emergency expenditures, such as moving expenses. I hope these proposals will receive favorable consideration by this Congress.

To sum up my views, Mr. Chairman, I believe the wisest policy at this time is to enact changes to assure the financial soundness of the Social Security system and rebuild public confidence in the program. Once the viability of the system has been guaranteed, Congress can focus its attention of the important changes that are needed to eliminate the present inequities in the Social Security and SSI programs. In the meantime, we in Congress should make every effort to drive down unemployment, which includes promoting employment opportunities among older people, so that more and more people will be working and contributing to the trust fund.

I look forward to working with you to develop this kind of legislation and appreciate the opportunity to share my views with you today.

REAL OPERA LOVERS ARE MAKING THE TREK INTO SANTA FE'S HILLS

HON. PETE V. DOMENICI

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Friday, August 5, 1977

Mr. DOMENICI. Mr. President, I would like to bring my colleagues' attention to an article published in the August 1, 1977. Wall Street Journal by June Kronholz entitled "Real Opera Lovers are Making the Trek into Santa Fe's Hills".

Mr. President, for the 21 years of its existence, the Santa Fe Opera Company has served a great purpose in introducing countless thousands of New Mexicans and people from all over our Nation to the world of opera, and has greatly enhanced the cultural life of our State.

This company has not only maintained exemplary standards in its presenta-

tion of standards operatic literature, but has been the proving ground for new operas by both American and foreign composers. American premieres of original operas have included Igor Stravinsky's "The Rake's Progress." Benjamin Britten's "Owen Wingrave," and Alban Berg's "Lulu." Santa Fe's 1976 production of Virgil Thomson's opera "Mother of Us All," the story of Susan B. Anthony, was recorded and released for public sale by New Word Records, the first Santa Fe production to be so honored.

The Santa Fe Opera's apprentice program is considered to be one of the finest in the Nation. First established in 1960, it has provided many young singers, costumers, and stage technicians from colleges across the Nation with training and background to aid them in achieving highly rewarding professional careers in opera.

All of this is the result of a dream of one man, who has seen through to reality his dream of making Sana Fe a center of the opera world. John O. Crosby was the founder and is still the driving force behind the Santa Fe Opera. He has also made great contributions to cultural activities in Albuquerque between seasons of the Santa Fe Opera Company.

Mr. President, I ask unanimous consent that the full text of this article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

REAL OPERA LOVERS ARE MAKING THE TREK INTO SANTA FE'S HILLS—INNOVATIVE OPERAS, PREMIERES, YOUNG SINGERS LURE MANY TO NEW MEXICO FESTIVAL

(By June Kronholz)

SANTA FE, N. MEX.—A man in a tuxedo and a Western string tie is rubbing shoulders with a New York diva. A woman in an Indian blanket and moccasins is cooing over an Italian composer. The parking lot is bumper-to-bumper with everything from Jeep Cherokees to plush BMW Bavarias.

It's opera month in Santa Fe. What has prompted this eclectic group to gather high in the New Mexico mountains is an opera company that has earned an international reputation by introducing bold new operas and bright young stars.

"Anyone who's interested in good opera goes to Santa Fe," says Robert Jacobson, editor of Opera News. And so they do. Among the 60,000 fans who come each year are opera directors, music reviewers, vacationing musicians and also tourists, fresh from visiting the Indian pueblos nearby.

Such is the appeal of Santa Fe that composer Nino Rota, who didn't show up to receive his Academy Award for scoring "The Godfather, Part II," came from Italy for the opening night of his opera, "The Italian Straw Hat"—and rewrote part of the clarinet score during intermission.

SUPPORT FROM STRAVINSKY

"Everyone knows the reputation of Santa Fe," says Mr. Rota. "It was an honor. I had to come." Igor Stravinsky was so taken with the idea of seeing his operas performed in Santa Fe that even before the theater was built in 1957 he agreed to supervise production of "The Rake's Progress" in it, and returned for the next seven years.

The wonder is that Santa Fe could afford an opera at all. It's a town of only 48,000 people, without even a commercial airport. John O. Crosby, a New York conductor who wanted an opera of his own to conduct, built the first theater 21 years ago with a $200,000 loan from his father. Even this year, when all 36 performances are expected to sell out, the opera will depend on government and foundation grants and private contributions for more than half its budget.

While many summer music festivals live on a diet of re-heated family favorites, Santa Fe has made its reputation by mounting the American premieres of 16 operas and the world premieres of four. "We shouldn't count on living on Giuseppe Verdi forever," warns Mr. Crosby. "If we don't present the promising material currently being composed, what will happen 50 years from now?"

A HUNGRY HORSE

If Mr. Crosby has his way, we may be listening to "The Italian Straw Hat." Under various names, it was a French farce, a silent film and a Broadway play before Mr. Rota turned it into an opera in 1954. It is a pleasant confection that involves the embarrassing consumption of a lady's straw hat by a horse, a frantic search of Paris for a replacement, a crashing thunderstorm and a warm-hearted finale in which the starring lovers are reunited.

Not all Santa Fe's productions are so frothy. Other premieres have included Paul Hindemith's "Cardillac," Hans Werner Henze's "The Bassarids," Benjamin Britten's "Owen Wingrave" and Alban Berg's "Lulu," in which everyone commits suicide, dies of a stroke, or is done in by Jack the Ripper.

Opera critics contend that Santa Fe's fondness for premieres is partly a public-relations gimmick. "It keeps Santa Fe on the operatic map by pulling in the reviewers," says Irving Kolodin, music editor of the Saturday Review, who has been here five times.

The ploy seems to work amazingly well. Last year Santa Fe presented Gertrude Stein and Virgil Thomson's off-beat opera, "The Mother of Us All," written in the mid-1940s, the story of Susan B. Anthony and her imaginary encounters with Daniel Webster, Andrew Johnson, Lillian Russell and two characters named Chris the Citizen and Jo the Loiterer. The opera not only sold out, but attracted reviews in publications as diverse as Time magazine, New West magazine and this newspaper.

Mr. Crosby, who is general director of the company and conducts two of the five operas each year, acknowledges that the media blitz is calculated. About half his patrons come from opera centers in the Midwest and on the East and West coasts. "Why would they bother to come unless it's to obtain an opera experience they can't get at home?" he asks. "You can't run a museum of opera in a little mountain town."

Nor can you find a chorus or a costume maker. So in 1960 Mr. Crosby started an apprentice program for American singers. Three years later he added a program for would-be designers, prop men and theatrical electricians and painters. The two programs supply the company with eager young workers and give the workers a chance to break into opera.

"We were chasing our best young singers to Europe," Mr. Crosby says. Large American opera houses weren't interested in untested singers fresh out of school. The singers therefore were going to Europe where there was an abundance of smaller houses.

Now, would-be Figaros and Violettas come to Santa Fe. By day, apprentice singers learn dancing, drama and such practical sides of the business as how to attract an agent and read a contract. By night, they understudy lead roles and sing in the chorus.

So popular are the apprenticeships that 800 singers auditioned for 40 spots this year, and the technical program had four times more applicants than it could hire. The pay is only $100 a week, but because the Santa Fe season is well attended by agents and directors, an apprenticeship here can launch a career.

A USEFUL PLACE

Former apprentice Ellen Shade made her Metropolitan Opera debut in "Die Meistersinger" last winter. "That once-in-a-century voice can make it to the top without Santa Fe," she says. "The rest of us need this place."

Rising young stars like Miss Shade take the leads in most Santa Fe productions. But occasionally an older, established, star joins the company at its headquarters, a dude ranch seven miles north of town. Two years ago, Thomas Stewart, a Metropolitan Opera baritone, broke in on the title role in "Falstaff." This summer, Evelyn Lear, a Metropolitan soprano who is Mr. Stewart's wife, is doing the same with "Fedora," When the Santa Fe season ends Aug. 27 both will sing their roles in Europe.

Miss Lear says she's being paid "about half" her usual fee for singing "Fedora." Voice coaches, stage managers and technicians, who would be out of jobs anyway because their opera companies close for the summer, also work for less than union scale. "You have to look at it as a paid vacation," says Ken Fischer, a New York dance instructor. Still, it is costing $1.7 million to mount five operas this summer, even though three are revivals and will reuse old costumes and scenery.

A PICTURESQUE SETTING

Contributions and grants helped re-build the opera house after it burned to the ground in 1967, taking most of the season's sets, costumes and music with it. The new $1.9 million redwood and stucco theater is perched on a mesa between the Jemez and Sangre de Christo mountains. The scenery sometimes is used for dramatic effects. For the revivals of "Madam Butterfly," which is set in Nagasaki, the rear doors of the stage are thrown open and the lights of Los Alamos twinkle below

In recent years the opera has spawned a musical comedy series and a music festival, whose guest conductor this summer is Aaron Copland. But the opera fans rule Santa Fe; restaurants offer opera night specials, hotels have opera ticket offices and society matrons open their dining rooms and country clubs to the company.

A radio announcer gives opera weather reports. Traffic lines up on what's become known as Opera Hill. And it's opera month again in Santa Fe.

A DUBIOUS DECISION, AND A DISTURBING PATTERN

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. BOB WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

A DUBIOUS DECISION, AND A DISTURBING PATTERN

(By Vincent T. Hirsch, President, Navy League)

President Carter's recent decision not to go forward with production of the B–1 bomber has provided editorial boards of newspapers from coast to coast one of the most magnificent opportunities to pointificate they have had in decades. And take advantage of that opportunity they have!

For the most part, the editorials we have read have supported the President's decision. Most have praised it glowingly, describing it in terms ranging from "daring" to "stupendous." The President, of course, was deemed "courageous" by almost all who took pen in hand to address the subject. And one

could almost assume from the tone of those favoring his action that the American public had collectively heaved a mighty sigh of relief because such an overwhelming burden had been lifted from the shoulders of all of us taxpayers.

As is the wont of those who must address even the most complicated subjects in a few short paragraphs, most columnists and editorialists sought to explain the decision in fairly simple black-and-white terms. The gist of their explanation was that the President had junked the B–1 because of its high unit cost, thus saving billions of dollars, and would rely instead on the much ballyhooed cruise missile fired from refurbished B–52 aircraft. The inescapable conclusion was that the B–52/cruise missile combination was almost as effective and certainly far cheaper than the B–1 with both bombs and missiles, and therefore, for far less expenditure of funds, the nation's strategic striking power would still be maintained. If indeed that conclusion were completely accurate, one could not blame John Q. Citizen, who has been beleaguered enough by both man and nature of late, for rejoicing at the apparent great wisdom of his leader.

Unfortunately, it isn't all that simple. Here's why:

Our military strategy for the next two decades called for the triad of the Poseidon/Trident sea-based missile system, the Minuteman land-based missile system, *and* the combination of B–1 and the cruise missile as our means of delivering nuclear weaponry. It foresaw utilization of the aging B–52 bombers *only* until B–1s were rolling off the production line; it never envisaged the B–52/cruise missile combination as the air arm of the triad in the 1980s and 1990s.

Anyone who has ever owned or operated a car, a boat, or an aircraft for any length of time knows that over a long period of time, even without extensive usage, and despite effective preventive maintenance, the particular vehicle concerned is going to deteriorate. The more frequent the usage, the more rapid the deterioration. The Navy has had for years various programs designed to extend *the* usable life of certain of its ships; it just proposed another one, this time for its carriers, during this session of Congress. Yet it knows that such programs are stop-gap measures at best, and that at some time in the future it must replace these ships with new ones. So it is with combat aircraft. And no matter how skillful are those given the task of prolonging the life span of the B–52s, the fact remains they are a product of the 1950s living on borrowed time in the 1970s and being asked, if need be, to fly against the sophisticated antiaircraft defenses of the 1980s and 1990s. How well will they and their load of cruise missiles fare? We wonder.

The savings to be realized by not going forward with B–1 production are going to be nowhere near the optimistic predictions of foes of the B–1. There are contract termination costs in the multimillions. Large sums of money now must be spent on refurbishment of the B–52s, and those costs are subject to inflation, too. A production team has been broken up, and it is entirely possible that some thousands of employees of the prime contractor, Rockwell, and of some subcontractors, who have been and are being let go will wind up on the unemployment rolls. And, as one thoughtful student of this subject has pointed out, to get the same bomb and missile load the B–1 could carry will require *two* B–52s, so immediately higher operating costs will be incurred.

The planned research and development program of the B–1 is estimated to require two more years. This program requires few personnel. After it is completed it is estimated by the Secretary of Defense that five years would then be required before B–1's could be produced in volume. That doesn't leave the President much of a choice in the event he might consider the B–1 *is* needed as an integral part of the strategic triad. Five years is a long time.

Much of the commentary on the President's decision implied that the B–52/cruise missile combination could be readied for possible use within a comparatively short time, whereas the B–1 was some years away from being ready. Not so! The cruise missile still is in the development stage, and the B–52 modernization hasn't commenced. All of which means that if cruise missile development should be less successful than is optimistically forecast, then our air component of the triad at the time the B–1s were to become operational would be B–52s carrying only bombs.

If the B–1 decision were an isolated one in the overall defense scheme of things, we'd not be quite so uneasy about it. But it's not. This administration still has not pressed forward resolutely toward a 600-ship Navy. It decided against the fifth nuclear-powered carrier, although Congress is balking at that decision. It stretched out the construction of the only surface effect ship authorized and is seeking to kill the already sharply curtailed hydrofoil project, although Congress may yet force the administration to spend funds appropriated for it last year. It is vacillating on whether to proceed with the further development of the M–X missile, the vastly more effective land-based missile of the future. And it is apparently concluding, if the many recent discussions in the press of Presidential Review Memorandum 10 are accurate, that—in stark contrast to the conclusions of the two previous administrations—the Soviets are not steadily outstripping us militarily but have slowed in their efforts to increase their capabilities. Ergo, we don't need to invest as many of our assets in maintaining our defenses; in fact, we might even be able to cut back our forces.

The pattern is disturbing. In some ways it smacks a bit of a determination to fulfill campaign promises and damn the consequences. In others it is mindful of the Kennedy-McNamara ploy of letting the Soviets gain "parity" with our strategic forces in the belief that once this happens the Soviets would realize the futility of it all and curb their military build-up. Unfortunately, Soviet momentum didn't cease after they overcame our clearly established lead in strategic weaponry, and suddenly it was we who had to play catch-up ball. Now we hear that familiar theme again, with Paul Warnke, the President's top arms-control negotiator, urging the Soviets to react to the killing of the B–1 with "matching restraint on one of their weapons programs."

There is nothing in our country's history, ancient or recent, that indicates this sort of an approach is more effective than that reflected in the adage with which we all have become familiar, "The best defense is a good offense." For that reason, we wish the President and his Secretary of Defense would act to *insure* we have the best posible offense. We know we have no defense, so our hope for the future must lie in maintaining the strength to deter. We don't believe his B–1 decision is providing us that insurance.

AQUACULTURE

HON. ROBERT L. LEGGETT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. LEGGETT. Mr. Speaker, I address my fellow colleagues today on a matter of national importance. As you know, I am a strong supporter of aquaculture. Aquaculture is the planned raising of aquatic animals and plants raised in large numbers. This rearing is done in a controlled environment for economic or social benefit.

My message is primarily of an educational nature. That is to say, before you can adequately study the current proposals, it is helpful to have an understanding of the positive results of their future implementation. I also remind you of the need to move legislation promoting aquaculture forward. The time we stand idle before enacting legislation is time that could be used in the production of food and the establishment of a strong aquaculture program. The National Aquaculture Organic Act of 1977, H.R. 1883, would develop much needed water food supply to the United States.

The reasons for this needed program become more apparent every day. If the population continues to increase, a shortage of fisheries products can be expected in 10 years. This worldwide shortage is caused by the expanding population. At the same time, increase in food supply is not adequate to supply the needs of the people. The world population at the present time is approximately 4 billion, and at the current rate it is expected to be 6 billion by the year 2000. The average consumption of fish in the world is 24 pounds a year. This consumption ranges from a low of less than 1 pound in Afghanistan to 79 in Japan and Iceland.

A steady increase in the production of aquaculture products has been observed in the past decade. In 1975 it was estimated that six million tons of fish were produced through aquaculture. The major part of this increase came from countries where a new system of aquaculture has been adopted. These countries have higher increases of seafood production than many of those with no such program. Also associated with these countries of higher production is the emphasis given to investments and support services.

The first step to achieve the needed aquaculture production depends on current technology. Without this technology, the knowledge that dedicated people have given us, we can do nothing about these matters. The knowledge of how to achieve the desired results is of primary concern. No matter how strongly the Congress supports these projects, we need to promote the advancement of technology first. To do this we need financial investment, suitable legislation, intensive research and manpower training.

In 1973–1974, aquaculture accounted for only 3 percent of all the fish and shellfish consumed domestically. However the knowledge is there and only needs to be implemented. When this is done the harvest America will reap will be dramatic. To illustrate what can lie ahead for the United States, note what countries currently using modern methods of aquaculture are accomplishing. Japan has increased aquaculture production 5-fold in only 7 years. A 32-percent increase in the Philippines and a doubling in Romania, a 4-fold increase in Poland all in only 3 years.

It has been shown that the knowledge is there. However, to achieve the 5- to 10-fold increase that aquaculture is able to

support, we will need the essential components mentioned above. Primarily we need sufficient financial investments to help establish this technology to a degree that will in time help support the nutrition needs of millions of people.

A look to the future of what can be expected when legislation is passed, I feel, is in order. What will the commercial aspects of aquaculture hold in store for the small businesses as well as the corporations of America?

A recent article in Business Week describes the threshold of the aquaculture industry. I feel this article will prove very informative and sets the foundation for the markup of the National Aquaculture Organic Act in my Fish and Wildlife Committee in early September.

The article as it appeared in Business Week, June 20, 1977, follows:

[From Business Week, June 20, 1977]

FISH FARMERS GET READY TO HOOK INTO PROFITS

What might Union Carbide Corp. and Weyerhaeuser Co. have in common except that they are both very big corporations? For one thing, they are both in the salmon-growing business these days. And their commitment is not just a quirksome diversification. It may be viewed as a signal that businessmen have now begun to take a very old science—mariculture—very seriously. After decades of high promise but low performance as a commercial enterprise, mariculture, the nurture and harvest of salt-water species in a controlled environment, now seems on the threshold of profitability.

A combination of circumstance and market forces is responsible for mariculture's newfound favor:

The price of fish has turned steeply upward. According to the National Marine Fisheries Service, part of the National Oceanic & Atmospheric Administration (NOAA), the average market value of all species has risen 39.2% in the past four years, and 13.3% since 1976. By contrast, the price of all meats and poultry has actually dropped in the past year.

Scientists no longer regard the potential supply of fish from conventional sources as limitless. The most sanguine estimates today are that 150 million tons of fish would be the maximum sustainable yield worldwide, as opposed to some 64 million tons that are now taken annually. If the world's population growth continues at its current rate, demand will outstrip supply within 10 years.

It is much more expensive to catch fish today. The worlds' fleets face increased legal restrictions on their activities as well as mounting labor, equipment, and energy costs as they compete ever more fiercely for dwindling stocks of prime species. In the Gulf of California, for example, twice as many commercial boats catch the same volume of fish today as was caught five years ago.

Researchers are now solving many of the technological problems associated with mariculture. More important, both production costs and risks are being reduced.

Man has cultivated fresh- and salt-water fish for thousands of years, but the practice, known generally as aquaculture, has usually amounted to little more than stocking farm ponds with carp or developing protected bays for shellfish beds. Nevertheless, the practice is widespread enough to account for a harvest of 6 million metric tons last year, roughly 10% of worldwide fish production. With proper encouragement, says the United Nations & Agriculture Organization (FAO), aquaculture production could expand tenfold by the end of the century. Already, nearly half the oysters, a third of the salmon, and practically all the trout consumed in the U.S. are cultivated by man in some way.

PEN-REARING

Perhaps the best known American aquaculturists are the catfish and crawfish farmers of the Midwest and South, who produced a combined harvest of 58 million lb. last year. But what has corporate planners busily refiguring their diversification options is the market for luxury species such as lobster, salmon, and various kinds of shrimp. Right now the U.S. imports some 60% of the shrimp it consumes, and domestic producers have seen their wholesale price for some species jump to more than $4 a lb. from $1.25 in just two years. Maine lobsters, which sold for 35 cents a lb. following World War II, now commonly fetch 20 times that amount in West Coast supermarkets. Salmon from Alaska and the Pacific Northwest sell for as much as $7 a lb. in New York City.

Those figures and the pace of mariculture research advances were in part responsible for an internal memorandum prepared recently for Standard Oil Co. (Indiana) that concluded: "Entry into the mariculture business now would be timely."

Standard has yet to take the plunge, but others have. Domsea Farms Inc., a Union example, will grow 1 million salmon this year. The company also is looking into shrimp cultivation in Central America and salmon farming in Chile.

To cultivate its current product, a pan-size salmon of up to ¾ lb. suitable for home or restaurant use, Domsea incubates its own salmon eggs. After two months the young fish, called fry, are transferred to freshwater tanks. In another six months the growing salmon are moved by truck and barge to floating enclosures anchored offshore in Puget Sound. The salmon are ready for market six to nine months after being moved. Domsea, which has been developing this "pen-rearing" approach to mariculture since 1971, says it has now cut the marketable age of its salmon in half.

COMBINING PROCESSES

Weyerhaeuser is not nearly so far along, but it is in the midst of an ambitious, $10 million project to raise salmon in Oregon. If its research and market surveys are correct, Weyerhaeuser will be harvesting 30 million salmon a year and realizing $40 million in gross annual revenues within ten years.

The key to the lumber giant's plans are the 3 million acres of forest land that it owns in the Northwest, some of it bordering on streams, lakes, and ocean shores. To exploit that resource potential, it bought control of a small "oceanranching" company in Oregon six years ago. With its acquired team of experts, Weyerhaeuser is building a salmon hatchery next to the company's Springfield (Ore.) pulp mill.

When they are cultivated in river water warmed by effluent from the mill, the salmon grow much more quickly than they do in their natural habitat. And by selectively controlling just how warm the water is, Weyerhaeuser expects to fine-tune the salmons growth rate.

After six months in the hatchery, Weyerhaeuser's smolts will be trucked 100 mi. to Newport and Coos Bay, Ore., where they will be introduced to salt water, vaccinated, then released from the mouth of a stream to swim free in the ocean, as is their habit. In nature, 1% to 6% of a generation of salmon will return to its home stream to spawn. Weyerhauser is figuring on 3% of its released salmon to swim home to company nets for harvesting.

HOW RISKY?

Companies as diverse and substantial as Westinghouse, Walt Disney Productions, Ralston Purina, Dow Chemical, and General Mills also have either investigated mariculture or are now involved with growing fish. Most maintain a low profile, and some observers say they do so to protect successful new techniques from current and future competitors.

Ironically, news of their involvement is just what mariculture boosters hope to disseminate because, they say, the failure of many small, undercapitalized companies to make a go of mariculture has made the business seem overly risky. "It takes real money to enter this business," says Robert D. Wildman, associate director for operations at the National Sea Grant Office at NOAA. "You pretty much have to stand losses for the first three years before the profits start coming in."

Yet a number of small companies gamely continue to make a go of mariculture. For example, Aquaculture Systems, Inc., of Guilford, Conn., has spent the past four years developing its lobster farms. Next year, the company will begin breeding and hatching lobster at its Connecticut plant. Then it will ship juvenile lobsters to Georgia where they will be reared in half-acre, open-air ponds. Later, they will be separated into cages because lobsters are fiercely cannibalistic. Accordinging to Aquaculture President Barry White, the cultured lobsters will reach market size in two years, as opposed to the seven to eight years they require in the wild. The first crop will total 200,000 lobsters, White says.

Tankultured Foods in Chicago began to raise a tropical fish called the tilapia in an enclosed 20,000-gal. tank system eight years ago. The company fed its tilapia used malt from a brewery but, President Paul Shackter recalls, "the neighbors complained of the smell." Subsequently, the whole operation moved to Florida. This year Tankultured will produce 500,000 lb. of tilapia, which Shackter describes as tasting "like a French turbot" and looking like "a black bass." So far, though, the company has not turned a profit.

PRAWNS FOR PROFIT

Perhaps the most tenacious of all has been Marifarms Inc., of Panama City, Fla. For 10 years Marifarms has been developing a shrimp farm on a rented, 3,100-acre site at St. Andrew Bay in northwest Florida. Working from a system originally developed in Japan, Marifarms has invested 350 man-years in learning how to cope with the weather, disease, transportation, engineering, and regulatory problems.

Now Marifarms is finally poised on the edge of profitability—if, as President John R. Cheshire anticipates, it harvests 1.2 million lb. of shrimp this year. Two years ago, Hurricane Eloise blasted through St. Andrew Bay and washed Marifarms' entire harvest out to sea.

Mariculture may prove to be a particular boon to Hawaii where sugar cane, once the major industry, has fallen on hard times. Federal and state funding for programs at a variety of island research institutions has led to schemes for the cultivation of practically everything from aquarium fish to mullet. Even the farming of bait fish, used to catch bigger fish such as the skipjack tuna, is being explored.

Two weeks ago, Kahuku Farms Inc. introduced its first crop of oysters in the island's Safeway supermarkets. C. Brewer & Co., meanwhile, is pushing ahead with construction of a 300-acre prawn farm that is expected to produce 900,000 lb. of prawns a year. According to the First Hawaiian Bank, the prawn farm should realize up to $3.5 million in annual revenues—about as much, the bank points out, as the gross revenues realized by the Kilauea Sugar Co. from its 4,800-acre cane plantation before the company closed down in 1971. "Aquaculture," the bank noted recently, "has finally

made a start, and the prospects for its growing into a major revenue earner appear favorable."

GOVERNMENT SUPPORT

Protein precedes profitability in the minds of many fish culturers. The FAO, for example, is involved in 22 separate projects with $15 million in funding. These projects are seeking to introduce low-technology, labor-intensive fish farming to developing nations. The U.N. agency even introduced the idea of eating farm-pond fish in the first place to villagers in landlocked Swaziland.

But FAO officials emphasize that the development of mariculture and aquaculture will require active encouragement and support from national governments. The U.S. spends only some $15 million a year on research, with around $5 million coming from the National Sea Grant Office and the Marine Fisheries Service. The figures have remained constant for the past few years. but a bill in Congress would provide for more than twice as much total funding plus the planning of an overall strategy for future development.

The most vivid example of a national commitment is that of Japan, where necessity has dictated development. The Japanese consume 79 lb. of fish per capita each year, more than five times the American average. Since March 1 and the advent of a protected U.S. fishery, the price of fish has doubled in Japan. In response, Prime Minister Takeo Fukuda's government has begun to implement a seven-year program that calls for spending more than $600 million to foster the expansion of fish farming—especially for yellowfin tuna, a prized species. The program's target is an increase in production of 1 million tons a year by 1983. In 1975 Japan cultured 772,741 tons of salt-water fish, twice the amount cultured in the previous ten years.

The mariculture research effort around the world is mainly focused on the study of animal life cycles, nutrition needs, and methods for controlling disease. A growing amount of attention also is being given to the genetic improvement of wild stocks, much the same as the domestic chicken and cow have been bred for meat yield and feed-conversion improvement.

Among the more interesting developments in recent years:

Scientists at the University of Miami have successfully spawned female shrimp. Commercial application of their work would allow companies such as Marifarms to breed their own shrimp, rather than having to collect wild, fertilized females as they now do.

In Delaware, a team led by marine biologist Ellis Bolton has succeeded in spawning oysters and growing them to market size in one-third the time it takes in nature. The project has demonstrated that oysters can be grown efficiently in an enclosed environment that requires only a 10% recirculation of water each day. Soon, the researchers hope, they will be capable of formulating a seawater substitute, thus making an oyster farm feasible for a place such as, say, Omaha.

A team at Scripps Oceanographic Institute in La Jolla, Calif., has crossbred a Maine lobster with a European species. The resulting hybrid grows faster, produces more meat, and resists disease.

Scientists at the University of California at Davis are breeding a prawn that they say could be produced at one-fourth the cost of present-day prawns.

The mariculture business is already big enough to attract a number of ancillary ventures. A number of engineering companies now are working on designs for fish "factories" such as the one Ellis Bolton's Delaware team envisions, as well as other equipment. A British insurance company now offers a line of mariculture protection. And a company in Colorado is busily formulating vaccines for cultured species.

"We are now coming to the point where people—serious people—are more than just interested in mariculture," says Bolton. "We have shown here that the major technological barriers are behind us and we think we have shown that there's money in mariculture. In some ways, you can think of it as almost inevitable."

LAND CROPS ADAPT TO SEAWATER IRRIGATION

Seawater culture is not just for fish. Emanuel Epstein, a plant nutrition expert at the University of California at Davis, has produced a strain of barley that will grow in soil irrigated exclusively with salt water.

Working at the University of California's Bodega Marine Laboratory, Epstein has crossbred types of barley known to have saltwater tolerance, and after hundreds of such crossings he has produced a plant impervious to salt damage. "What we are doing is a very conventional breeding technique," he explains. "When a plant is exposed to disease, you take a broad variety of those plants and expose them to the disease agent. Then you crossbreed the ones that survive."

A SMALL YIELD

Soil and water salinity, which is poison to most food crops, bedevils farmers around the world, especially in areas where irrigation is the primary means of bringing water to plants. Natural salts tend to accumulate where irrigation water has run off or evaporated, and such concentration can render otherwise fertile farmland useless.

So far, Epstein and his team have been able to produce a yield of some 900 lb. per acre from their salt-water barley, less than half the average harvest for conventionally grown barley in the U.S. But until recently no one thought barley or any other land-based crop could be grown in salt water at all.

The barley would most likely be grown along sandy coastal areas that receive little or no rainfall in the U.S., that might not be practical because cultivation would run into competition from land developers, or it might be barred from sites designated for public use. On the other hand, Epstein says that his barley's salt tolerance means that it could be introduced as a cash crop to such salty-soil areas as parts of the San Joaquin Valley in California or the lower Colorado River basin.

Outside the U.S., countries such as Mexico, Israel, and many of the Arab states have vast stretches of currently unproductive coastal land that are suitable for salt-water irrigation.

TOMATOES AND WHEAT

Epstein has also turned his attention to tomatoes, and he reports success with them as well. In 1974 he visited the Galapagos Islands off the coast of Ecuador and discovered several types of tomato growing close to the shoreline. Six species of the wild tomatoes were found to tolerate a diet of 40% seawater and 60% fresh water. They were then crossbred with commercial tomatoes, and the researchers are now endeavoring to push the resulting strain of cherry-size tomatoes toward greater salt-water tolerance. "We don't know how far we can drive the tomato," Epstein concedes.

As is commonly heard from scientists, Epstein says that right now "our problems are more financial than they are scientific." The speed with which his work can be proved out, he continues, will depend upon how much more he has to spend than the modest $40,000 a year he now has.

Even so, the California scientists have begun to look at wheat, too, as a seawater crop. although the plant has no natural resistance to salt. "We chose wheat," says the indefatigable Epstein, "because if we can make it with wheat, we will really have something. It's the world's foremost crop."

DUAL COMPENSATION AND RETIREMENT IN THE FEDERAL GOVERNMENT

HON. LEE METCALF

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Friday, August 5, 1977

Mr. METCALF. Mr. President, no one in America is more responsible for the use of skilled technicians in the Navy in the development and utilization of the nuclear Navy than Admiral Rickover. The recruitment, training, continued employment and retirement of nuclear experts has been a constant concern for him.

His observation of other employment and retirement practices in the military over a long and distinguished career motivated him to testify before the Committee on Post Office and Civil Service of the House of Representatives on the question of dual compensation and retirement in the Federal Government—as well as in industrial systems. In view of his experience and background, his testimony is forceful and persuasive. I ask unanimous consent to have it printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF ADM. H. G. RICKOVER

DUAL COMPENSATION AND RETIREMENT IN THE GOVERNMENT

You have asked for my views on dual compensation, so-called double-dipping, in the Federal Government Service.

I cannot debate the technical details of retirement systems as would an actuary or administrator of a retirement program. However, I can and will give you my observations from more than a half century of experience with the Navy, the Federal Government, and private industry.

Double-dipping is an emotional issue receiving increasing attention in the press, in Congress, and in the executive Branch. The term is commonly applied to anyone who draws a Government salary and Government retired pay simultaneously. Although the problem can exist in other areas, most attention has been focused on retired military personnel in civil service jobs.

In announcing these hearings, Chairman Nix pointed out that:

There are more than 141,000 retired military now holding jobs in the Federal Government.

There may be as many as 10 retired generals and admirals whose combined military pension and Federal civilian salary exceed the total salary paid the Vice-President and Chief Justice of the Supreme Court, and as many as 25 more who receive more than the members of the President's Cabinet.

Moreover, the amount of double-dipping has increased substantially during the 1970's to a level of 141,000—five percent of the entire Federal civilian work force—as of June 30, 1975.

From these figures, one can see that although the most startling cases involve retired flag-rank officers, the problem of double-dipping also involves lower ranking officers and enlisted men. The problem is not simple. Historically, Congress has approached it from various directions.

In 1894 Congress passed a law providing that no person could hold two Federal Government offices if the salary attached to either was $2,500 or more. At that time Congressmen earned $5,000 and the equivalent

of today's top civil servants earned $2,500. However, the 1894 statute applied only to regular military officers; reserve officers, enlisted regulars, and enlisted reservists were exempt as were elected officials and officials appointed with Senate confirmation. At the time the law was enacted, it affected only 390 retired officers—lieutenant commanders, majors and above. These retired officers were prohibited from holding other jobs with the Federal Government. In 1924 the law was amended to add officers retired for disability in the line of duty to the list of those exempted.

In 1932 another law was passed, and subsequently amended in 1956, to permit regular officers and certain "temporary" officers retired for "noncombat" disability to hold another Government job providing their combined federal income did not exceed $10,000 annually. No restriction was placed on reserve officers and enlisted.

In 1963 there were over 400 different laws and about 200 separate Comptroller General decisions involving dual compensation. To straighten out the confusion a Dual Compensation Bill was introduced and referred to the Post Office and Civil Service Committee. The intent of the original bill was to permit hiring any qualified military person; to simplify conflicting statutes; and to treat all military equally—regular, reserve, officer, or enlisted. As finally passed, however, the Dual Compensation Act of 1964 restricts the pay of regular officers only, not the pay of reservists or enlisted. It liberalized earlier laws by permiting a retired regular officer to draw a full civil service salary and a reduced retired pay consisting of the first $2,000 of his military pay plus half his remaining retired pay in excess of $2,000. This $2,000 figure is subject to cost of living increases; the figure is now $4,000. In other words, a retired regular officer, employed in the Civil service, forfeits half of his military retired pay in excess of $4,000. There is no reduction of retired pay for reserve officers or retired enlisted personnel in civil service jobs.

The Civil Service Commission has authority to waive the Dual Compensation Act for retired regular officers. Also, because of the apparent shortage of qualified people in 1964 to meet the then urgent needs of the space program, the National Aeronautics and Space Administration (NASA) was provided statutory authority to exempt 30 NASA jobs from the restrictions of the Dual Compensation Act. With the NASA exemptions and the Civil Service Commission waivers, there are now some 42 retired admirals and generals drawing their full military retired pay as well as their full salary as Federal civilian officials. A retired four-star admiral or general with a waiver of the Dual Compensation Act can be employed as a GS-18 and paid $7,200 per year by the Government.

In my opinion, there should be no waivers or NASA exemptions from the Dual Compensation Act. These loopholes benefit only a small group of retired senior officers, generally those who happen to be in positions of influence prior to retirement. I find it difficult to believe that their services, past or present, warrant federal pay greater than a Congressman's salary. Moreover, it is inconceivable that any retired military officer can be so vital to the operation of a Government agency that his job could not be filled with another fully qualified person willing to work for the salary that position commands.

Another form of double-dipping exists which falls outside existing restrictions on dual compensation. This occurs when retired Government personnel—either civilian or military—draw retired income from the Government but use their influence with former co-workers to indirectly obtain a lucrative salary through Government contracts for consulting services, studies, or special projects. For example, a Navy officer who has become an expert in some area—entirely at Navy expense—can start drawing retired pay from the Navy after but twenty years of service and also sell his expertise back to the Navy under a consulting contract or under a study contract with one of the "think tanks."

I have seen case after case where the Navy contracts for special studies on the basis that the Navy itself does not have sufficient expertise. These contracts, however, go to "think tanks" that assign retired officers to the job as "experts." Thus, we have a curious phenomenon—an officer becomes sufficiently expert to perform Navy work only after he has left the Navy. This is a separate problem which warrants attention.

Even when the pay restrictions of the Dual Compensation Act are applied, many retired military people draw combined incomes far in excess of their civilian pay. It is difficult for their civilian counterparts to understand why retired military people should receive a much larger income from the Government when doing the same job.

As I mentioned, the Dual Compensation Act reduces the pay only of retired regular officers. This group constitutes less than 4 percent of the 141,000 retired military working as federal civilians. Over 96 percent of these so-called double-dippers are reserve officers or former enlisted personnel who, because they are exempt from the Dual Compensation Act, receive their full civilian pay plus their full military retired pay, with no reductions. If restricting dual compensation is a sound concept as a matter of public policy—and I believe it is—the principle should be applied across the board.

In private industry, and elsewhere in Government, employees do not receive both full retired pay and a full salary from the same employer. If civil servants continue to work for the Government beyond the date at which they are eligible to retire, they can draw no more than the pay prescribed for the position held. However, they continue to earn retirement credits. The same principle applies in most retirement plans used in private industry. I believe it should also apply to retired military personnel who decide to work for the Government.

The military retirement system is considerably more liberal with respect to early retirements than are Federal Government civilian retirement systems and most private industry retirement programs. Private industry, state, and local governments generally start paying retirement benefits at age 60 to 65 depending on the number of years served. Civil Service pays retirement benefits at age 55 if the employee has 30 or more years of service; at age 60 after 20 years of service; and at age 62 with 5 years of service. It is because the military grants immediate retirement income at such a young age that the double-dipping problem arises.

The Government has no moral commitment to pay a full civilian salary plus retired pay to retired military personnel. This is particularly so in the case of new hires. Some exceptions to dual compensation restrictions may be appropriate in the case of retired military currently in the employ of the Government. However, as a matter of public policy, no Government agency should have to depend on retired military personnel to staff its organization. Frequently filling vacancies with persons drawing retired pay from the Government tends to demoralize career civil servants who might otherwise have had a chance to fill these positions. Military persons drawing retired pay have the option to seek employment outside the Government if restrictions on dual compensation are unpalatable.

At one time the liberal retirement provisions for the military were thought to be compensation for the fact that military pay was lower than comparable wages in the private sector. Today, however, military pay is generally conceded to be comparable to civilian pay. Yet the right to early retirement and a lifetime retirement income remain.

The question arises whether early retired pay, for other than disabled persons, is necessary in order to treat military people fairly and to encourage young people to remain in the military. Today the military services face serious personnel problems. There is concern at what many view as a continuing erosion of their earned military benefits. There is also the problem of maintaining an all-volunteer defense force; the increasing rate of desertions; and the serious shortage of people with special skills.

I recognize the importance of having good people in the military as much as anyone. For example, it is difficult to attract and retain the highly skilled personnel we need to man our nuclear ships. To help remedy this problem, I have pushed successfully for legislation authorizing special reenlistment bonuses and other incentives.

I believe that throughout the military the people should be paid properly for the work they do and the special hazards some face. The military must not be treated or considered as second-class citizens, economically or otherwise.

It does not follow, however, that the best interests of the military or of the public are served by continuing costly retirement practices which do not accomplish their purpose. The special problems of the military should be dealt with as directly and specifically as possible. I think it is wasteful and inefficient to provide an overly generous retirement system to all members of the military and justify it on the basis of conditions that are the exception rather than the rule.

Military personnel should be paid adequately for the performance of duties unique to the military—for duty in combat and other hazardous situations—and for arduous or undesirable duty. But, I question whether providing *all* members of the military the option of a lifetime retirement income after only twenty years service is an effective or just means of compensation. It makes more sense to provide adequate special pay or bonuses to those who perform unusually difficult or hazardous duty during the times they are performing such duty. By attempting to compensate for special situations through retired pay, the serviceman behind a desk gets the same benefits as those who undergo hardships in the field. Further, I doubt that to a young person the promise of retirement income twenty or thirty years hence provides as much incentive per dollar spent as special pay would provide.

The practice of trying to enhance the attractiveness of the military through benefits may be far less effective per dollar spent than simply increasing salaries. One reason many military people continue to believe they are underpaid is because, for comparable real income, the military man has a smaller paycheck than his contemporaries on the outside. In my opinion, the morale of the military would be better promoted by higher salaries and fewer benefits.

It is sometimes said that war is young man's business and that offering twenty year retirements with lifetime retirement income is one way to maintain a young and viable military. Actually there are today few jobs in the military that cannot be performed by persons up to 55 years of age or even older. For those jobs requiring special demands there should be qualification requirements as there are for aviators or for underwater demolition teams. For those jobs that do require extraordinary risk or unusual hardship, differential pay allowances would seem to be more appropriate compensation than increasing retirement benefits for the entire military.

The twenty year retirement income is

sometimes explained as needed to thin out the ranks and enhance promotion opportunities within the military. But it is questionable that providing an early retirement income is the most appropriate way to accomplish this.

While twenty year military retirements provide some marginal people an incentive to remain in the military, they also provide an incentive for many of the best people, those who can command higher salaries on the outside, to turn to civilian careers immediately upon completion of twenty years service. Moreover, the existing rule which requires at least twenty years military service before earning any right to retired pay, at any age, makes it difficult to discharge unwanted or unneeded people before they complete twenty years. There is an understandable reluctance to discharge a person from the military after, say 10 to 15 years service, since he would not be eligible for any military retirement benefits at any age. Consequently there are marginal people who tend to bide their time in the military until they complete twenty years service and can draw retired pay.

In contrast to military retirement rules, most federal, state, and local government retirement systems permit those who have served five, ten, or fifteen years to start drawing some retirement income after reaching age 62, 60, and in some cases 55, depending on the number of years served. Under the Pension Reform Act of 1974, private industry retirement plans offer employees a *deferred* retirement income once they have completed at least five years—in some cases ten years—of service. Obviously, the amount of such retirement checks is much smaller for those retiring early than for those who pursue full careers. However, allowing people to earn the right to a deferred retirement income with less than a full career, helps alleviate many problems associated with separating unwanted or unneeded people. Similar arrangements should be made for the military.

In my opinion, the concept of promising all enlisted people—regardless of their military specality—retired pay after only twenty years service should be reexamined. In addition, a thirty year career for military officers—except those who are disabled—should be required. Officers passed over or selected out prior to completion of thirty years service could be entitled to retired pay starting at age 62 based on the number of years served. A lump sum payment would also be proper in such cases to ease the transition to private life. Those who continued to meet the military's requirements would serve the full thirty years before being eligible for retired pay.

Coincident with a move to thirty year retirements, the entire officer grade structure should be reduced and a more reasonable grade/age relationship established. As I testified before the Senate Subcommittee on Manpower and Personnel in April 1977, the present military rank structure is top heavy and results in an officer corps that is far too young with respect to the rank held. I want to make it clear that I am not commenting on how much military salaries should be and how often a military man should get a pay raise throughout his career. I am pointing out that the grade structure is distorted and needs to be corrected.

Also, to be equitable, persons with military service should be able to fully transfer retirement credits in the military to other federal retirement programs. Today, military time is counted toward civil service retirement and used initially in calculating retired pay. However, because of a quirk in the law, all military time does not count in the calculation of civil service retired pay received after age 62. At that age, the civil service retiree loses all civil service retirement credit for the time he spent in the military after 1956, and gets instead a social security annuity for those years. During the time he is in the civil service he does not come under the social security program. Therefore, he is generally entitled only to minimum social security payments based on contributions he made while in the military, years earlier. The effect is that federal employees with prior military service receive a much lower retired pay after age 62 than they receive from age 55 to 62. In fairness, this anomaly should be corrected.

On the other hand civil servants who are members of the military reserve should not get double retirement credit for military service. Under present rules, a reservist's active duty time is credited toward civil service retirement. It also counts toward his eligibility for a military retired pay at age 60. Thus, his years of active duty are counted twice—once for civil service retirement and once for a military retirement. This loophole should be eliminated.

Although I have focused on the military, the same problems can arise elsewhere in government and in industry. I believe a hard look should be taken at all levels of government as well as in private industry at the wisdom of using liberalized retirement rules and early retirement incomes as devices for attracting and retaining the right people. I am concerned that the national trend toward early retired pay is inefficient, counterproductive, and costly.

In revamping its retirement systems, the Government must not break faith with those who have committed themselves to a career with the understanding that certain benefits would accrue. Therefore, changes should provide a phase-in period designed to avoid inequities.

In examining the problems of double-dipping and retired pay, one cannot help but become concerned at the deteriorated financial condition of retirement programs in government and in business. The New York Times recently reported that the 55 Federal Government retirement funds have a projected deficit totaling $350 billion dollars; in addition the military retirement program deficit constitutes about $200 billion. The Washington Post reported that America's 100 largest industrial corporations have promised their employees $38 billion more in pensions than the companies have put aside to meet these requirements. These deficits are technically referred to as unfunded liabilities. These unfunded liabilities are estimates of the current value of how much a pension program must pay in retirement income for all its workers, minus what has already been set aside, or is scheduled to be set aside in future years to meet these obligations. The estimates vary, depending on what assumptions the actuaries make regarding death rates, interest rates, and inflation.

One reason the unfunded liabilities of the military retirement system are so large is that the Defense Department does not have a military retirement fund from which to meet its retirement obligations. Instead, the Defense Department includes in its annual budget only enough to cover retirement checks to be issued that year. Thus, when you read in the press that military retirement costs have increased tenfold since 1964, and that they are rapidly approaching 10 percent of the entire defense budget, remember that these figures represent but a fraction of the full cost of military retirement. Another reason for the large unfunded liability in the military retirement system is that it is noncontributory. The Civil Service retirement system and the retirement plans offered by most state and local governments and by private industry generally require employees to contribute from 3 to 8 percent of their salaries to the retirement fund. The employer also contributes to the fund. Under the military retirement system, the Government alone funds the retirement program. There are no deductions from military pay for this purpose. Without employee contributions, the unfunded liability of the retirement system gets much larger than it would otherwise be.

From a short range viewpoint, Government agencies have a strong incentive to fulfill their needs in ways that have minimum impact on current budgets. For example, the military system of pay and allowances results in certain tax credits that are not available to the civil servants or to persons in the private sector drawing a straight salary. This is a tangible benefit, but whose cost does not have to be included in the Defense budget.

A similar situation obtains with retired pay. The promise of liberal retirement benefits can be used immediately for recruiting purposes. Yet, the full cost of these benefits does not have to be included in the Defense budget where it would have to compete with weapons programs for available funds. The result is that neither Congress nor the public sees the cost of these hidden benefits in the budget until later years when it is too late to do anything about it. We are now beginning to see the effects of this phenomenon. Unless prompt action is taken to start setting aside today sufficient funds to meet future retired pay commitments, future Congresses will be faced with the funding of overwhelming retirement commitments.

The finances of the Civil Service Retirement Program are handled differently than those of the military retirement system. Under the Civil Service System, each Government agency budgets funds to match employee retirement contributions. Also, Congress is supposed to appropriate funds sufficient to cover increases in unfunded liability resulting from salary increases or revised statutes which change retirement benefits. To date, however, the Government has not been budgeting for, or making, full payments to the Civil Service Retirement and Disability Fund. Similarly, the federal budget does not reflect the current value of the expected increase in liabilities resulting from inflation. As a result, according to Civil Service Commission figures, the unfunded liability of the Civil Service Retirement and Disability Fund—the largest of the federal civilian retirement systems, has increased from $53 billion in fiscal 1970 to $150 billion in 1976.

In my opinion, the main purpose of a retirement program should be to take care of those who are no longer employable. This basic function could be served more effectively and efficiently by consolidating the various retirement plans into a single retirement system for the entire Federal Government, with the retirement credits earned in any part of the federal service fully transferable to any other part. Agencies should not compete with each other for personnel by using differences in retirement benefits. Varying conditions of employment, hazards, and so on should be handled directly through salary differentials, lump sum payments, or similar direct means. Such direct payments can be more readily assessed by Congress and the agencies and more properly administered from a financial standpoint. Too often the benefits of various retirement programs have been obfuscated to the point that even the individual himself has no appreciation of his true earnings.

The problems are not confined to the public sector. In private industry, for example, the pyramiding of retired pay, severance pay, and salaries for high officers is carried to an extreme. As a condition of employment, company presidents and senior officers are often guaranteed a lifetime salary or large severance sum even if they are removed from their jobs. As a consequence, it is not unusual to find senior corporate officers drawing large sums simultaneously from both current and former employers. Al-

though these arrangements are costly to the consumer, I doubt the Federal Government can inject itself directly. But it can take special care to insure that the income tax laws are rigorously applied to them to insure that they pay their fair share.

I recognize that others are attempting to deal with many of the subjects I have addressed. President Carter has appointed a nine member Commission on Military Compensation to investigate the problems of military pay and benefits. Congress has legislated some important reforms in the area of private pension plans. The sponsors of the various federal and non-government retirement funds are also starting to pay more attention to the problem of retirement funds.

This Committee can also do an important job in the area of Government retired pay. The Civil Service Retirement System is by far the largest one covering federal employees. Therefore, I recommend that this committee, which has cognizance of the civil service, take the lead in developing standards for all federal retirement systems—civilian and military—and develop a single retirement system which could be used throughout the Government.

Here are my specific recommendations for strengthening the Dual Compensation Act, the Civil Service Act, and the Federal Government retirement systems:

First, prohibit waivers of the Dual Compensation Act. There is no valid justification for the Government to pay some retired military officers combined civil service salary and military retired pay which is greater than the salaries paid to the Chief Justice of the Supreme Court, the Vice President, and Members of Congress.

Second, dual compensation restrictions should apply to all retired military personnel—regulars, reservists, officers, enlisted. There is no valid reason to discriminate against regular officers in applying dual compensation restrictions.

Third, retired military personnel subsequently employed under civil service should be compensated in the same manner as a civil service employee who continues to work for the Government after he is eligible for retirement. Namely, he should continue to earn retirement credits, but he should not be paid in total more than the approved civil service salary for the job he is doing.

Fourth, a schedule should be established for fully funding all Government retirement funds on a "pay-as-you-go" basis so that future generations will not be saddled with today's retirement commitments. Budgeting on the basis of meeting only the current year's "pay out" requirements should be prohibited.

Fifth, agencies should be required to budget enough annually to cover the retirement pay liability for present and previous employees. The cost impact of changes in retirement benefits should be identified in the budget and specifically approved by Congress at the time authorized.

Sixth, consideration should be given to making all Government retirement systems contributory so that actual salaries and personnel costs are fully visible to the individual, the agency, and to Congress.

Seventh, the 50-some Government retirement plans should be consolidated into a single system which would include the military. Retirement credits among Government retirement systems should be fully interchangeable. Civil servants should not get double retirement credit for time in the military, as presently is the case for military reservists. Conversely, any military time that is creditable toward civil service retirement should continue to count throughout retirement instead of being eliminated at age 62.

Eighth, all Government retirement systems should defer retired pay until at least age 55. Our citizens should not be encouraged to believe they can expect a salary and retired pay during their working years.

Ninth, all Government retirement systems, not just the Civil Service Retirement System, should provide rights to a deferred retirement income of some amount, with payments starting at age 62, for persons who have served a prescribed minimum time, say 5 years.

Tenth, discharge of unneeded or undesired persons before completion of a full career in military service should be compensated for by lump sum settlement rather than by offering relatively young people lifetime retirement income. Such persons would still have their years of service credited towards retirement at a later age.

Some of my recommendations have previously been proposed by others. Despite wide recognition of the problems and increasing costs, little has been done.

I believe that by implementing the recommendations I have made, and others which I am sure will occur to this committee and the President's Commission, Congress would be making substantial progress toward responsible management of Government retirement programs—and at the same time would be treating Government civilian and military people fairly.

EFFECTIVENESS OF THE EXPORT POLICIES OF THE DEPARTMENTS OF COMMERCE AND STATE

HON. MICHAEL T. BLOUIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. BLOUIN. Mr. Speaker, after reviewing the recent report of the House Government Operations' Subcommittee on Commerce, Consumer, and Monetary Affairs, "Effectiveness of the Export Policies of the Department of Commerce and State," I asked the Department of Commerce to review their programs which are involved in export promotion and asked how they applied to my home State of Iowa.

Oftentimes we read of Government programs and how they are supposed to work, but it is more interesting and useful to see how they impact on people that we know best, the men and women of our districts and States who use these Government programs and services to boost their companies profits and make them more dynamic and effective.

I believe that the information the Department of Commerce has submitted on the extent and overwhelming success of Iowa firms in overseas markets will be of great interest to the members of the House Government Operations Committee and to the Members of the full House as well.

The report states that Iowa's participation in the Department of Commerce's Domestic and International Business Administrations' overseas events is the highest in proportion to the number of manufacturing firms in the State than anywhere in the country. Cedar Rapids, Iowa, the largest city in my district, has the largest amount of export sales, per capita, of any city in the United States. In 1976, over $273 million dollars in Iowa exports came from the Cedar Rapids area. Moreover, about 18.6 percent of the people employed in Cedar Rapids are dependent upon exports and most of the firms are considered small to medium, being of less than 200 employees.

Based on the information provided by the Department of Commerce, I feel that I must state that the criticisms leveled at this country's export promotion programs are overly harsh and based on questionable information. Moreover, I feel that it would be premature not to allow the new administration the opportunity to thoroughly examine existing export promotion programs and make changes if they are deemed necessary.

At this time, I wish to briefly review the objectives and programs of the Domestic and International Business Administration's export promotion programs.

The purpose of DIBA's export promotion programs is to extend U.S. exports in order to contribute to an improved U.S. economic, trade, and payments position.

DIBA seeks to accomplish this mission by expanding the export base of U.S. firms and increasing the activity of current exporters.

There are presently an estimated 25,000 U.S. firms engaged in exporting and another 25,000 firms which have the potential to export but for a variety of reasons do not. Given DIBA's goal, its programs are designed to overcome or minimize factors which impede the business community's desire and ability to engage in export trade. These impediments fall into five categories:

First. Attitudinal.

Second. Informational.

Third. Operational/Resource Limitations.

Fourth. Foreign Buyer Resistance.

Fifth. Foreign Competitive Factors.

These categories group impediments corresponding to what can be described as DIBA's "pipeline approach." This method may be described in the following manner: rather than indicating an ordering of impediments according to priorities or importance, the "pipeline approach" recognizes the various stages a U.S. firm must pass through to successfully enter or expand exporting. The individual U.S. firm must—

First. Be motivated to export;

Second. Decide how and where to export;

Third. Devote manpower and resources to marketing efforts; and

Fourth. Aggressively compete in the overseas marketplace, while overcoming foreign competitive factors.

Firms may only encounter difficulties or have problems in one or more of these phases, but it is assumed that a firm cannot progress to the next phase without overcoming impediments encountered in prior phases. This applies no matter whether a firm overcomes impediments and then proceeds to the next phase on its own or with Government or private sector assistance.

DIBA recognizes these five impediments and offers services to help U.S. firms in each; however, the program emphasis is on self-sufficiency. It is hoped that assistance provided to U.S. firms is temporary and provided only because a firm cannot help itself. Assistance is provided so that a firm can proceed through succeeding phases on its own, only rely-

ing on such services again when impediments appear. It is expected that the small new-to-export firm would require assistance through a complete "pipeline approach" while the larger more experienced firm may only require assistance at one or several phases of difficulty.

DIBA's programs fall into two major groups of activities designed to: First, stimulate an increased desire to export and second, to help firms pursue their market entry objectives.

OBJECTIVE I

Activities designed to increase interest in and awareness of the benefits of exporting:

Media campaigns, which are conducted through the facilities of the Ad Council, utilizing the American business press representing some 2,300 publications, to promote the image of exporting as beneficial to participating firms as well as the Nation;

"E" and "E Star" Awards, which are granted to firms that have achieved outstanding export success as a means of demonstrating to others, by example, the benefits of exporting;

Domestic publications, which are broadly disseminated to familiarize the business community with services available in the Department and elsewhere to assist them in exporting;

Seminars, which are sponsored or cohosted to provide information to U.S. firms to stimulate their interest in exporting; and

Multiplier activities, in which the support and cooperation of appropriate private sector groups and firms, such as banks, trade associations and so forth, are enlisted to use their resources and influence to stimulate interest in exporting and to counsel new exporters.

Activities to increase knowledge and understanding of how and where to export:

General business counseling services, which provide orientation-type information to companies interested in exporting and in need of advice on how to proceed; and

Country information and analysis, by which U.S. firms can obtain, from a wealth of DIBA publications and reports on specific countries, and from a staff of country specialists in Washington, extensive information on marketing techniques and prospects in nearly every country in the world, and detailed guidance and advice on how best to develop and exploit commercial opportunities in those countries.

OBJECTIVE II

Activities to alert U.S. firms to specific commercial opportunities abroad and assist them to follow through with successful bids:

The trade opportunities program, which provides U.S. firms with specific trade leads abroad through a computer-based notification system;

The major projects and overseas product sales activities, which apprise U.S. firms of specific "big ticket" opportunities abroad—namely large scale engineering, design, and construction projects, and major product and equipment sales opportunities—and directly assist them to compete successfully from contacts and orders; and

Overseas products investment opportunities services, which apprises U.S. firms of specific overseas investment and licensing leads having an "add-on" export effect, and assists them to overcome investment obstacles.

Activities to assist U.S. firms to identify and contact potential overseas agents, distributors and buyers:

The foreign traders index services, which provide requesting U.S. firms and official users with specialized lists of foreign buyers and representatives in select countries for select product categories;

The agent/distributor service, which provides requesting U.S. firms with the names of specific potential foreign representatives;

The World traders data reports service, which provides requesting U.S. firms and official users with commercial information about individual potential foreign buyers and representatives; and

The overseas information services, which provide requesting U.S. firms with on-the-spot counseling in the overseas market at trade and international marketing centers.

Activities to assist U.S. firms to establish effective representation overseas and to conclude export sales:

Trade centers and international marketing centers which provide U.S. firms with scheduled opportunities to demonstrate their products in major markets and regions abroad;

Trade and industrial exhibits, which provide U.S. firms with scheduled opportunities to demonstrate their products under Commerce sponsorship in major or specialized international trade fairs or "solo" exhibitions abroad;

Catalog shows and video catalog exhibitions, which provide U.S. firms with scheduled opportunities and facilities to display their product catalogs and sales literature in developed and emergent markets abroad;

In-store promotions, which provide U.S. suppliers of consumer goods with scheduled opportunities to expose their products to the overseas public through Commerce-sponsored events held in select foreign retail stores; and

Specialized and industry organized Government approved (IOGA) trade missions, which provide groups of U.S. firms with scheduled opportunities to travel abroad under Commerce sponsorship to meet directly with potential foreign buyers and representatives.

Activities to assist foreign buyers and distributors to identify and contact prospective U.S. suppliers:

The foreign buyer program, which encourages groups and individual foreign buyers to come to the United States to purchase goods and services, and assists in making contacts between potential buyers and U.S. suppliers;

Technical trade missions, which provide foreign buyers and representatives with scheduled opportunities, to learn about the latest product/industrial technologies in the United States available from potential U.S. suppliers;

The new products information service, which disseminates information abroad on U.S. firms having newly developed or manufactured products available for export; and

The exporter/agent information system, which identifies sources of U.S. supplies in microfilm cassette libraries at U.S. trade centers abroad.

Mr. Speaker, the people of Iowa and my district recognize the importance of the export market as it relates to this country's balance of trade and the economy as a whole. Not only does it stimulate the fiscal growth of our country, but it provides jobs for hundreds of thousands who would otherwise do without. I have faith that those currently in office will not let the American businessman and worker down, but rather seek to refine those programs that are vital to the health of our Nation's economy.

Therefore, I would like at this time to insert in the RECORD that information requested by myself from the Department of Commerce as it relates to Iowa's export market:

IOWA INTERNATIONAL TRADE DATA

(The Department of Commerce's Domestic and International Business Administration (DIBA) Programs and How They Impact Upon the State of Iowa.)

In 1972 the State of Iowa exported $500 million in manufactured products. In 1976 it is estimated that $1.1 billion of Iowa manufactured goods were exported to foreign countries.

The Iowa economy is considered well balanced. In addition to a broad based manufacturing complex, Iowa is one of the major agricultural states in the United States. In 1976 Iowa agricultural exports reached $1.75 billion, second only to Illinois. The state exported $482.3 million in soybeans, 15.7% of the U.S. total, and $36.2 million in hides and skins, which is 6.5% of the U.S. total.

Recent statistics released by the Iowa Department of Agriculture rank Iowa first in meat production; second in feed grains (barley, wheat, corn, oats), soybeans, lard and tallow, and fourth in hides and skins.

There are six Iowa outlets for hides and skins. Three are currently selling 25% of their output to overseas markets. Two firms utilize local contacts for their output while one sells all hides in the Chicago area. It is expected that some of these local sales enter the international trade channels, but statistics are not available to substantiate amounts.

It is estimated that 20% of the 3,400 Iowa manufacturing firms are in the export business, in comparison to a national average of only 8%. Iowa firms have made use of Department of Commerce programs over the years with a majority of the users being small to medium size firms.

Some of the Iowa firms identified as major users of the Department's export services and who have expressed satisfaction with DIBA international programs are:

1. *Shivvers Enterprises', Corydon, Iowa.*—Manufactures corn dryers. The firm has used DIBA services since 1973. They have participated in Commerce Trade Center Shows and Trade Missions, and have used the Agent/Distributor Service (ADS) and the New Product Information Service (NPIS). As a result of these services, the firm is now exporting corn and coffee dryers to many overseas countries.

2. *Geo-Sonics, New London, Iowa.*—In 1973 this firm had six employees. They now employ over 30 person and sell their lapidary equipment in over 40 countries. To develop this outstanding growth, the firm used the ADS, Trade Opportunities Program (TOP) and NPIS. They had particularly great success with the New Product Information Service.

3. *Welty-Way Products, Cedar Rapids, Iowa.*—This firm has used virtually all of the programs provided by DIBA. They have purchased numerous ADS's, which were suc-

cessful; subscribed to TOP, and participated in overseas Trade Fairs. The President of the company, Mr. Roger Welty, was named the "National Small Businessman of the Year" in 1975.

4. *Wayne Engineering, Cedar Falls, Iowa.*—This firm manufactures refuse compactors. They felt their product was too large to sell overseas, but with the help of the Commerce Department, they have sold their products in many countries. As a result of recent participation on an Industry-Organized Government-Approved (IOGA) mission to Africa and the Middle East, they expect sales of $200,000.

5. *International Livestock, Inc., Ames, Iowa.*—This manufacturer of veterinarian equipment has successfully marketed its products overseas as a result of Trade Show participation with the Department of Commerce in a Joint Export Establishment Promotions (JEEP) in Verona and Frankfurt. They have also used NPIS and TOPS successfully.

6. *Ertel Company, Dyersville, Iowa.*—As a result of utilizing the ADS and TOP programs, this firm has expanded their overseas markets considerably.

7. *Thermolyne, Inc., Dubuque, Iowa.*—Has used DIBA programs for a number of years and received the "E" Award in 1976 as a result of export excellence. The President of this company, Mr. Burton S. Payne, Jr., is a member of the District Export Council. (DEC).

8. *Amana Refrigeration, Amana, Iowa.*—This important Iowa manufacturer has used virtually all of the DIBA export promotion programs. It has successfully participated in Trade Center Shows, and Trade Missions and was invited by the Soviet Union to display their products in Moscow. Amana has enjoyed outstanding success with the TOP program and a company spokesman said, "TOP is the best thing we have come across to support our overseas operations." Amana has recommended TOP to many other Iowa firms.

9. *McCracken Concrete Pipe Machinery, Sioux City, Iowa.*—As a participant in the Building and Construction Equipment Exhibition in Tehran, Iran, the firm's representative stated, "the potential for our equipment is growing rapidly; Iran is one of the real markets of the world. The help given by the U.S. Trade Center has been invaluable." Mr. Frank Ladue, Chairman of the firm, participated in the Small Business Workshop on Exports sponsored by DIBA in March of 1977.

10. *Corry's Machine and Tool Company, Bonaparte, Iowa.*—This firm participated in the recent Iowa IOGA Mission to Africa and the Middle East. The firm's representative stated "The Department of Commerce has been very helpful and is to be commended for its performance under very trying conditions." The firm expects sales to approach $2 million within the next year and predicts six representation agreements will be signed. This firm has less than 100 employees and is relatively new to international commerce.

11. *Triple "F" Feeds, Urbandale, Iowa.*—This firm participated in the Iowa IOGA Trade Mission to Bulgaria in 1975. The company "expects much business to follow" and predicts sales of $200,000 to Bulgaria of their soybean extruders.

12. *Iowa Development Commission, Des Moines, Iowa.*—The Iowa State Development Agency has used DIBA services extensively. Six Iowa IOGA Trade Missions have been staged since the beginning of the program, and the state recently participated in an off-site agricultural show in Mexico sponsored by the U.S. Trade Center in Mexico City. The Des Moines DIBA District Office has an Associate Office relationship with this agency and maintains close liaison with them involving DIBA export programs. A Foreign Service Officer (FSO) has been assigned to this agency under the Pearson Amendment. They publish a monthly digest with extensive coverage on export opportunities for Iowa business.

Mr. Dean Arbuckle, of the Iowa Development Commission, has reported that "approximately $10 million has been added to the Iowa economy as a result of the recent Iowa IOGA Trade Mission to Nigeria, Sudan and Saudi Arabia." Nine Iowa firms participated in the event. The projected successful results far exceeded expectations, as most missions average $1 million in sales. This is the fourth IOGA mission for the Iowa Development Commission since 1971. A fifth is planned for South America in January of 1978.

13. *Cedar Rapids Chamber of Commerce ("E" Star Award), Cedar Rapids, Iowa.*—This DIBA Associate Office has its own International Trade Bureau. Cedar Rapids has the largest amount of export sales, per capita, of any city in the United States. The Chamber, and its member firms, have used virtually all of the export services which are offered by DIBA. Prior to the establishment in 1964 of the Department of Commerce DIBA District Office in Des Moines, the Chamber provided basic export needs to Iowa firms. They were required, though, to refer most companies to the DIBA Chicago District Office for extensive export assistance. The Director of the Chamber's International Trade Bureau, Mr. Richard Petska, states that "many more Iowa companies in the small to medium size range are now able to take advantage of DIBA's export programs." In 1976 over $273 million in Iowa exports came from the Cedar Rapids area. About 18.6% of the people employed in Cedar Rapids are dependent on exports. Most firms which export are considered small to medium, having less than 200 employees.

Iowa participation in DIBA overseas events is higher in proportion to the number of manufacturing firms in the state, than elsewhere in the country. Iowa manufacturers participated in two of the initial Joint Export Establishment Promotions (JEEP) held in European locations. The Livestock and Veterinarian Supplies JEEP was held in Verona, Italy, and Frankfurt, West Germany, with three Iowa participants. The Farm and Garden JEEP in Paris, France, also had Iowa participants.

The services of DIBA's Major Export Projects/Products area have been utilized by Iowa firms. The services include assisting manufacturers to obtain sales in major overseas infrastructure projects, including foreign government tenders. The following Iowa firms have been served by DIBA in the Major Products field: Fisher Controls, Marshalltown, Iowa; McCracken Concrete Pipe, Sioux City, Iowa; Bantam Division, Koehring Corporation, Waverly, Iowa; Gomaco Corporation, Ida Grove, Iowa; Iowa Manufacturing Company, Cedar Rapids, Iowa; Curb-Master of American, Inc., Cedar Falls, Iowa; FMC, Crane and Excavator Division, Cedar Rapids, Iowa; and Collins Radio, Cedar Rapids, Iowa.

IOWA EXPORT AWARENESS PROGRAM IN COOPERATION WITH THE DEPARTMENT OF COMMERCE

An extensive export awareness program is conducted throughout Iowa by the Department of Commerce. Utilizing DIBA programs and techniques, Iowa businesses have been able to profitably expand their overseas markets. During World Trade Week, 1977, a variety of export awareness events took place. Governor Robert Ray proclaimed World Trade Week for the State of Iowa. Outdoor advertising billboards displaying "Iowa Exports Create Iowa Jobs—World Trade Week—May 22-28" were placed by the District Export Council in key locations in Des Moines, Cedar Rapids, Cedar Falls, Burlington, Davenport, and Waterloo. The Department of Commerce World Trade Week poster was reprinted and distributed throughout the state. Three export promotion meetings were held in Fort Madison, Bettendorf, and Cedar Falls. The Iowa District Export Council members taped television and radio spots and participated in radio interview shows.

On an annual basis the Des Moines DIBA District Office, in cooperation with local world trade entities, stages three-day seminars and workshops throughout the state during the autumn. DIBA representatives have participated in three previous conferences when Venezuela, Nigeria, and the Near East were featured. Latin America and the Caribbean are proposed for 1977.

Over 1,600 Iowa business firms and Chambers of Commerce received the Des Moines DIBA District Office Newsletter. Approximately 136 of the newsletters are sent to firms in the Cedar Rapids area. Each edition includes both domestic and international subjects. It has been particularly effective in stimulating interest and participation by Iowa firms in DIBA overseas events and trade missions in addition to conveying key country market information to the recipients.

Successful exporting activities are officially recognized by the Department of Commerce and the President of the United States with the "E" Award program. Since the inception of the President's "E" Award for excellence in exporting, thirty-three (33) Iowa firms have received the coveted award. An additional eleven (11) firms have received the "E" Star Award for continued excellence in exporting. The most recent recipients since 1975 are: Thermalyne Corporation, Dubuque, Iowa, "E" Award; Welty-Way Products, Inc., Cedar Rapids, Iowa, "E" Award; Thompson Engineering Company, Des Moines, Iowa, "E" Star Award; W. A. Schaeffer Pen Co., Fort Madison, Iowa, "E" Star Award; Den-Tal Ez Manufacturing Co., Des Moines, Iowa, "E" Star Award; Fisher Controls Company, Marshalltown, Iowa, "E" Star Award, and Winpower Corporation, Newton, Iowa, "E" Award. The Winpower Corporation recorded the proceedings of their recent May 13, 1977, "E" Award ceremony and their Export Sales Manager, H. V. Harned had the following to say about the Department of Commerce export services:

"Exporting is not new to Winpower—but we stopped upon the retirement of our Export Manager a few years ago. When new management arrived on the scene, we started back in the export business. With the help of Jess Durden of the Commerce Department we started to look for agents and have now expanded into some fifty-two countries. We presently sell 32 percent of our products overseas. The export programs of the Department of Commerce and the assistance provided to us by the Des Moines DIBA District Office have contributed to our success."

AID TO AMERICAN SURVIVORS OF HIROSHIMA

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. ANDERSON of California. Mr. Speaker, tomorrow, August 6, is the 32d anniversary of the dropping of the first atomic bomb on Hiroshima. Normally, I would make no attempt to take notice of this event.

This year, though, I am happy to do so, for the occasion can serve to help U.S. citizens who survived the blast. My distinguished colleagues from California, Congressmen ROYBAL and MINETA, have introduced legislation which will provide Federal payments to cover medical expenses incurred by the survivors for treatment of physical injuries resulting from the Hiroshima and Nagasaki blasts.

I am proud to be a cosponsor of H.R.

8440 which benefits only U.S. citizens and resident aliens. Although there are about 750 of these survivors in the United States, only an estimated 130 will require assistance. These are victims of the bombing for whom it can be demonstrated that their illness is "directly attributable" to the blasts or the resulting fallout. Additionally, of these 130, the Government will be obligated to reimburse payments just for those medical services not covered by insurance or other compensation.

The wisdom of America's decision to unleash these weapons in World War II is not at question here. What is being addressed is the Government's responsibility to help alleviate the problems this decision imposed on people who are now, 30 years later, our friends and citizens.

LESS GOVERNMENT

HON. JAMES M. COLLINS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. COLLINS of Texas. Mr. Speaker, America is not great because of what Government did for people but because of what Government permitted a free people to do for themselves. Our free enterprise system—more than anything else—has produced greater wealth and distributed that wealth more widely to a greater percentage of our people than any economic system in the history of the world. In America today, two-thirds of the people who live below the so-called poverty line live lives of luxury compared to the better-than-average family in most of the nations of the globe.

We need to remind ourselves that even with our current problems, we have more energy per capita, more food per mouth, more clothing per body, more homes per family, more cars per driver, more freedom per individual, and more opportunities per dream than any people who ever lived on the face of this earth.

Gradually in this country there is an erosion of freedom as citizens are allowing big Governmnt to be so dominant as to regiment every phase of our lives. Have the American citizens forgotten the advantages of private enterprise compared to this nationalized state of socialism.

Here are some of the primary advantages of private enterprise.

First. Worship in the church of your choice.

Second. Live with your family.

Third. A free and independent press.

Fourth. Right to work or to quit work for any business we choose.

Fifth. Independent education for our children.

Sixth. The best medical facilities in the world.

Seventh. No one in our community goes hungry.

Eighth. A nation at peace.

Ninth. Live in any city or farm where we choose to locate.

Tenth. Being able to buy your own home.

Eleventh. Opportunities for promotion.

Twelveth. Opportunity to own an automobile, television set and telephone.

Thirteenth. Gasoline at $0.60, where most of the world pays $1.50 a gallon.

Fourteenth. Right to elect office holders.

Our big Government gives us nothing but headaches. The best benefits and joys of life come from our family and living in a free society so we can do things for ourselves.

INTERCONNECTION AND POOLING OF ELECTRIC RESOURCES

HON. THOMAS B. EVANS, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. EVANS of Delaware. Mr. Speaker, under the bill, the Federal Power Commission will control, directly or indirectly, most important management decisions of the utility industry. For example, section 451 relating to interconnection, pooling and wheeling deletes the "voluntary" aspects of interconnection between regional districts and further states as its goal:

> To assure maximum competitive opportunity for the purchase of electric energy at wholesale at the lowest possible cost.

This is contrary to the purpose stated elsewhere in the act that—

> Rates for providing electric service to electric consumers shall be designed to the maximum extent possible; particularly, to reflect the cost of providing electric service to such consumers.

The Federal Power Commission, on its own motion:

> Shall by order direct an eletcric utility to . . . establish physical connection of its transmission facilities with the facilities of any other electric utility . . . sell or deliver energy to or exchange energy with such utility . . . provide pooling for such utility . . . provide wheeling or otherwise transmit energy for such utility . . . or otherwise coordinate with such utility.

In short, these and other provisions bring questions relating to reliability and quality of service within the purview of the Federal Government. The record for providing electric service in this country has been excellent. Despite occasional interruptions on individual systems, pooling and interconnections on a voluntary basis have been provided. The power network in the United States has a proven record of providing excellent service and adequate capacity on a timely basis. There is no justification for a bill which gives to Federal Government the responsibility for the operation of the electric utility industry.

This bill will leave the heavy responsibility for financing and operating the companies in private hands while the real authority to manage will be assumed by the Government. Such a scheme of separating responsibility and authority will result in neither adequate financing nor good management; rather it is the prescription for inefficiency and high cost, and ultimately for shortages of capacity which would limit the growth of the whole economy.

The electric power industry is the Nation's instrument for the vital service of electric power supply. It should, of course, be regulated but to create conditions which will impair the quality of management is not in the Nation's interest.

FRANCE AGREES TO JOIN UNITED STATES IN A 2-YEAR STUDY ON NUCLEAR SAFEGUARDS

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. BROWN of California. Mr. Speaker, the President's long-term policy aimed at reaching international safeguards and control of plutonium achieved yesterday a significant step forward. Valery Giscard d'Estaing, the President of France, sent President Carter a telegram indicating that France is ready to join in a 2-year study on nuclear safeguards. France has already agreed not to export any more nuclear facilities that could be used for making nuclear explosives. An article in today's New York Times describes this favorable announcement by the French Government. I believe it is important for Members to take note of this development, because it demonstrates that world opinion is beginning to work in favor of President Carter's initiatives on nuclear proliferation and on reevaluating reactor designs which pose a danger to our nonproliferation goals, such as plutonium breeder reactors.

The article follows:

[From the New York Times, Aug. 5, 1977]

FRANCE SET TO JOIN 2-YEAR STUDY TO DEVISE NEW ATOM SAFEGUARDS

PARIS, August 4.—The French Government said today that it would take part in an attempt to work out a new international code of safeguards against the spread of nuclear weapons, first proposed by President Carter.

The French decision is conditional on the Soviet Union's also taking part. Diplomatic sources said Moscow had been invited to join and was expected to accept.

The decision ends two months of uncertainty about the French attitude toward this international attempt to find a way of insuring that nuclear power reactor fuels are not misused to make weapons.

At a meeting of seven Western leaders in London last May, President Carter proposed restrictions on the manufacture and use of plutonium, which is suitable for making nuclear weapons. The approach proved unacceptable to most Western European countries, which expect to derive a substantial portion of their energy from plutonium-burning breeder reactors.

As a compromise, the seven Western leaders agreed in principle on a broader study to evaluate other ways of insuring that the increasing use of power reactors does not also enable more countries to make nuclear weapons. The results of that study would be the basis for a new code of safeguards.

Diplomatic sources said today that President Valery Giscard d'Estaing of France made clear that he would not agree to participate until he was sure the study would not be biased in favor of President Carter's own curbs on plutonium.

Since May, experts have held several meetings in Paris to draw up terms of reference for the study. France's decision today suggests that President Giscard d'Estaing is now satisfied with what they have decided.

There is speculation in diplomatic circles that France is now trying to put pressure on Moscow to participate, thus insuring that another government sharing many of Western Europe's reservations about the Carter proposals contributes to the study.

The study is expected to take about two years. During this time, Western European countries as well as the Soviet Union are expected to continue their research and development of the breeder and the use of plutonium as a nuclear fuel.

However, the Western European countries will also be continuing their efforts to devise new and more secure methods for manufacturing and storing plutonium to insure that it is not diverted for warlike uses, European officials insist.

Along with the United States and the Soviet Union, these countries have already agreed not to export any more nuclear technology that could be used for making explosives, although France and West Germany are still committed to make controversial sales of such technology to Pakistan and Brazil contrary to the United States' wishes.

HUMAN RIGHTS AT HOME: WHY I OPPOSE THE PRESIDENT'S PROPOSALS ON UNDOCUMENTED ALIENS

HON. HERMAN BADILLO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. BADILLO. Mr. Speaker, yesterday, the President sent to the Congress a series of proposals to deal with the critical problem of undocumented aliens in in this country. When he took office, I was impressed that the President expressed a concern for dealing with the problem, and I had hoped that his approach would be thoughtful and humane. What has emerged in his proposals is a callous, careless, and expedient approach to dealing with the very lives of hundreds of thousands, probably millions of people residing on American soil.

The President's proposals include an amnesty for aliens who have been in this country prior to 1970, and a "temporary resident alien" status for all those who entered the country between 1970 and 1977. This status would preclude these aliens from ever becoming citizens of this country, it would preclude them from even voting as Americans, it would preclude them from receiving any social benefits from this country.

President Carter has taken a hard line on the human rights of foreign nationals in their own countries, but he seems to take a different view of foreign nationals in this one. He seems to forget that full rights and benefits under the law are supposed to exist for all legal residents of this country. However, for the first time in American history, an American President is attempting to create a new class of resident in this country. If this law is passed not only will there be people in this country who will never have the opportunity to become citizens, but at the end of 5 years when a review of these aliens' status will be made, if a different President with a different philosophy is in office, these people face the possibility of deportation because they have been identified. And if the President's idea becomes law, it will institutionalize the lying and deceit that many aliens have been forced into in order to find the documentation to make them eligible for resident alien status.

However, the practical implications of these proposals are even worse. I am appalled at the ease with which the White House has passed the buck to local governments. It is well known that the flow of illegal immigration into this country has radically increased since 1970, and nowhere is that increase more dramatic than in major urban areas like New York, where the resident illegal population is estimated to be 750,000. Now these people are invisible, and make little demand on the social services available to them. But if the President's proposals become law, you may be certain that they will want their fair share of health benefits and SSI and welfare. And the burden for paying for these services will fall on localities.

I urge my colleagues, as we begin to consider these proposals, to keep in mind their implications. We must have the determination to assure that the estimated millions of undocumented aliens, and the urban centers that must serve their needs, get a fair and humane deal from the Government of the United States.

PUBLIC FINANCING OF HOUSE ELECTIONS

HON. MORRIS K. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. UDALL. Mr. Speaker, I noted with disappointment the action of the other body earlier this week in deleting the public financing provisions from the campaign financing reform legislation it was considering. That action was taken after it became apparent that the filibuster which had tied up the Senate for more than a week was not going to be broken at this stage.

Although the public financing title was stricken, the Senate did pass the remainder of the bill dealing with other changes in the Federal Election Campaign Act.

This means that the House can now move forward to pass its own bill and go directly to conference. I have always believed that public financing was an incremental process. My 1976 experience with the new law providing public financing of Presidential campaigns last year convinced me that, while there is room for improvement, it was on the whole a major success. Now is the time to take the next logical step and extend public financing to congressional general election races. If the Senate is not interested in taking this step at this time, that is their business.

The House must make its own decision on whether it will allow the discredited status quo to prevail in 1978 House races.

I still firmly believe that the prospects for enacting public financing for House races remain excellent in this body. The bill that I introduced along with Representatives JOHN ANDERSON, PHILLIP BURTON, TIM WIRTH, and more than 120 cosponsors demonstrates strong support in the House for the issue.

I urge my colleagues on the House Administration Committee to move quickly into markup when the House returns in September so that we can still obtain House action on this issue during 1977.

YOUTH EMPLOYMENT AND DEMONSTRATION PROJECTS ACT OF 1977

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. BROWN of California. Mr. Speaker, President Carter today signed the Youth Employment and Demonstration Projects Act of 1977. As a cosponsor of Mr. SIMON'S comprehensive youth employment bill, one of the major components of the act signed today, I am pleased with the speed with which this much needed legislation was approved. This addition to the existing CETA program focuses on one of the most neglected segments of our population. Youth unemployment rates are two to three times as high as the rate for adults. And among black teenagers the current unemployment rate reaches 40 percent in urban areas, a figure that is a national disgrace.

With the program signed today, we can help reduce these figures and encourage a more positive attitude toward employment among these forgotten citizens, an attitude that will continue to return benefits to society in future years. At the same time, we can work on some of the major problems facing this country's economy and environment and give the youth participating in the program academic credit for their training and work. Watershed and wildlife management, reforestation of millions of acres of national forest lands, energy conservation and new energy technology are only a few of the areas that will receive attention.

I know that my constituents will welcome this act. The reduction in the numbers of idle youth and decrease in unemployment compensation payments will benefit taxpayers currently burdened with the cost of providing services for this group. And the many excellent existing local programs utilizing CETA participants will be able to expand and further benefit the community.

One project in particular, the San Bernardino West Side Community Development Corp., exemplifies the positive benefits to be derived from this program. This group is using CETA participants to rehabilitate housing and in-

stall solar hot water heating in a number of Veterans' Administration-owned homes. These CETA participants are being trained in many general construction skills and are learning specialized skills in solar installation, skills that will prove to be very valuable as we increase our emphasis on solar energy. This group is currently planning the development of a solarized industrial park and a facility to cure concrete using solar-generated, low-pressure steam.

This type of multifaceted program will mesh well with the intent of this act and I am sure that they are encouraged by the action we have taken to deal with the youth unemployment problem.

LEAVE THE HATCH ACT ALONE

HON. ROBERT J. LAGOMARSINO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. LAGOMARSINO. Mr. Speaker, I would like to bring to the attention of my colleagues the well written editorial from the Santa Barbara News-Press entitled: "Leave the Hatch Act Alone":

[From the Santa Barbara News-Press, Aug. 1, 1977]

LEAVE THE HATCH ACT ALONE

Working for the federal government isn't quite like working in the private sector or even like other public jobs. In return for the advantages of federal employment such as job stability, good retirement benefits and a paycheck that the bank never declines (other public workers have been paid with warrants during hard times), all federal workers must try to avoid any hint of conflict of interest.

This is prelude to the circumstance that plans are afoot to revise the Hatch Act, a law that for 38 years has provided a screen between federal employes and the most overt stages of partisan politics such as running for partisan office. A bill that would change important aspects of the Hatch Act has passed the House of Representatives. If approved by the Senate and signed by the President, federal employes could seek partisan offices or work actively in next year's local, state and congressional elections. We think that would be a very bad idea.

Relaxing the Hatch Act would politicize federal workers and give their unions a lot more clout. There is no doubt, in fact, that the big push for change has come from outside sources. Why? Because nearly three-fourths of the federal employes surveyed in a poll said they were against gutting the Hatch Act. Even the Federal Times, a weekly newspaper for federal employes, has come out strongly against a change, terming the legislation (HR 10) "a bad bill that, if approved by the Senate and the President, will come back to haunt us all." The many voices raised against revising the Hatch Act include the strong, liberal one of Common Cause.

Advocates of HR 10 argue that it would only give federal workers the same democratic rights that other U.S. citizens have for total participation in politics. Terming this a "tired, old fallacious argument," federal workers point to the good features of the Hatch Act which protect Civil Service workers from such things as harassment, demotion, job transfer and even dismissal for refusing to make political contributions or do political chores that a government superior might request.

This is the "can of worms" that would be opened if the Hatch Act were defanged. Federal workers know this. A few of them can remember the turbulent times of the 1930s when federal workers as far down the ladder as WPA workers were fired because they wouldn't make campaign contributions or attend political rallies. Such abuses brought about the Hatch Act. It's good law. Why change it?

JOHN REDDIN—GIFTED EDITORIALIST

HON. ROBERT W. KASTEN, JR.

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. KASTEN. Mr. Speaker, Members of Congress sometimes disagree with the editorial writers of America's great newspapers, but I have found there is always a healthy respect for their concise analysis and opinion-leading ability.

One of Wisconsin's most effective, incisive editorial writers, John Reddin, chief editorial writer for the Milwaukee Journal, died recently.

Leaders of our State and elected officials of both political parties always held him in high regard. As an expression of respect, I submit the following editorial from the Journal, written by those who knew him best and respected him most:

JOHN REDDIN—GIFTED EDITORIALIST

John Reddin—colleague, counselor, good friend—is dead. He presided over these editorial columns for most of the past five years and contributed pungently to them for the past 28. He will be missed—by all of us at The Journal, of course, but also by many faithful readers of these columns who may never have known him.

Reddin's mental ability to store away vast quantities of knowledge and draw upon it quickly in his prolific production of editorials was unequaled among us. Moreover, his wise counsel and firm guidance, based on decades of experience, helped us all penetrate murky issues and avoid dangerous journalistic pitfalls. Thus, he significantly influenced far more editorials than the thousands that he wrote himself.

He also injected courage, toughness and insight into Journal editorial policy at crucial times. His unflinching commitment to civil liberty was well illustrated when Sen. Joseph R. McCarthy posed a rising threat to freedom. Reddin wrote penetrating editorials alerting Journal readers to the dangers of this home state demagog—at a time when the Communist scare was at its peak and McCarthy sharply questioned the loyalty of any publication that dared to challenge his high-handed methods.

A decade later, Reddin was among the early questioners of this nation's ill fated Vietnam policy. Long before it became politically "safe," Reddin was writing repeatedly that the only way for the US to extract itself from the morass of Vietnam was "just to get out"—as, finally, the nation did under the Nixon and Ford administrations.

In another way was John Reddin a much valued colleague. While he could be gruff and impatient with those whose views he believed shallow or ill conceived ("Nonsense!" was a favorite pejorative), his heart was soft. He delighted in interrupting whatever he was working on to relate the latest news of his infant granddaughter. And as boss, he could be at once professionally demanding and warmly understanding of a staff member's personal problems. Thus, a great deal of affection for him grew among his colleagues..

Reddin died as we imagine he would have wished—on a working trip abroad in pursuit of more knowledge to file away in that great storehouse of a mind. It won't be the same around here now. But just as "editorial row" may always retain a hint of Reddin's ever-present, long cigar, we hope it also retains the journalistic integrity, wisdom and fortitude that John Reddin exemplified.

U.S. PANAMA CANAL AND CANAL ZONE: SENATE HEARINGS, JULY 22 AND 29, 1977

HON. JOHN M. MURPHY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. MURPHY of New York. Mr. Speaker, one of the most vital issues now confronting the Nation and the Congress is that of the sovereign control of the U.S.-owned Canal Zone and Panama Canal. The strategic location of this area and its transit facilities have been recognized for centuries and the value of the canal to national defense and interoceanic commerce has been fully established by experience in both peace and war.

The Subcommittee on Separation of Powers of the Senate Committee on the Judiciary on July 22 and 29, 1977, conducted hearings on the constitutional aspects of the State Department's projected surrender without prior congressional authorization of U.S. sovereign control over the Canal Zone and canal to the Republic of Panama, which country is closely allied with Soviet Cuba. These hearings, which necessarily covered many angles of the immensely complicated canal subject, including the intentions of the executive, will be published at a relatively early date and thus be widely available.

I testified on July 22 and expressed some very positive views derived from my study of canal history and problems as well as from many personal observations during official visits in the Canal Zone.

Among the statements submitted to the subcommittee on July 29 was one by Adm. John S. McCain, Jr., retired, former U.S. Commander-in-Chief, Pacific, whose earlier career included service on submarines operating from Coco Solo, Canal Zone. In his statement, which is based upon an extensive study of the subject, as well as his naval experience, he urged a positive six-point plan of action for our Government in the interest of hemispheric security, national defense, and interoceanic commerce.

Mr. Speaker, because of the relevance of the two indicated statements to the present national debate, I quote both as parts of my remarks:

STATEMENT OF HON. JOHN M. MURPHY, CHAIRMAN, COMMITTEE ON MERCHANT MARINE AND FISHERIES, BEFORE SENATE JUDICIARY SUBCOMMITTEE ON SEPARATION OF POWERS

Mr. Chairman, thank you for this opportunity to testify before this subcommittee on one of the most important contemporary issues with respect to the separation of

powers—the congressional power to dispose of U.S. property and territory, especially as it relates to the Panama Canal and Canal Zone. This issue has long been of concern to me. As chairman of the House Panama Canal Subcommittee in the 92d Congress, I chaired several days of hearings which addressed this question and gave firm proof that congressional authorization is required for any transfer or conveyance of the lands of the Canal Zone or Panama Canal property to the Republic of Panama.

Let it be unmistakably clear—the United States has title to the Panama Canal and a vested property interest in the Canal Zone. These two facts have been acknowledged not just by many in the Congress today, but by Presidents, Secretaries of State and U.S. representatives who were involved in the writing and interpretation of canal treaties. These facts have even been acknowledged by the representatives of Panama. Indeed, any U.S. official who chose to deny these facts would be contravening the position of successive administrations since the time of Theodore Roosevelt.

The overriding reason that the United States possesses such extensive powers on the Isthmus of Panama is that the taxpayers and Congress of the United States would never have allowed the investment of such large sums of U.S. money in the construction of an interoceanic canal and its defense without the necessary legal authority—jurisdiction, sovereign power and title—to protect that investment.

The basic 1903 treaty with Panama gave the U.S. property rights. In article VIII of that treaty, Panama granted to the United States, and in article XXII, Panama renounced all reversionary claim to all rights, interest and property connected with previous canal concessions. Moreover, that treaty either granted to the United States or authorized the taking of all real property in the Canal Zone, and provided for a land commission to compensate private landowners. Landholders or landowners subsequently deeded property to the United States and were indemnified, and in this way, the United States acquired property rights ranging from fee simple title to release of squatters' claims. In fact, the total compensation paid by the United States to various entities in connection with the canal property purchases has amounted to $166,362,173, as of 1974.

In 1907, the U.S. Attorney General confirmed the satisfactory title to the property the United States acquired from the French Canal Company, including land and stock.

Also in 1907, in the historic case of *Wilson* v. *Shaw*, the Supreme Court indicated that the title of the United States to the Canal Zone was sufficient for the expenditure of U.S. funds.

It is hypercritical to contend that the title of the United States is imperfect, and that the territory described does not belong to this Nation, because of the omission of some of the technical terms used in ordinary conveyances of real estate.

Thus, Mr. Chairman, without addressing all of the specific foundations of U.S. property interests with respect to the Panama Canal and Canal Zone, it is clear that the United States is the owner of assets of the Panama Canal Company and the Canal Zone Government, and that we have ownership of the waterway, appurtenant installations, buildings, and other structures in the zone. Further, the assets of the Panama Canal organization and military departments and agencies of the U.S. Government in the zone are assets which are property subject to article IV, section 3, clause 2, of the Constitution.

The United States, then, has property interests which can only be disposed of with proper constitutional authorization. Even if the Republic of Panama were to regain sovereign power over the Canal Zone in a new treaty, that would not accomplish of itself the reacquisition of title or rights to the land, assets and property of the Panama Canal. In behalf of our property interests in the Canal Zone, the U.S. has paid—and paid—and paid. Our expenditures have included the initial $10 million payment and annuity payments made to the Republic of Panama through the 1903 Treaty and its modifications; the $40 million paid to the French Canal Company in 1903; the $25 million payment to Columbia in 1922; and, finally, the $7 billion in investment by the U.S. in the Canal and Zone.

Having established that the U.S. is a bona fide property holder in the Canal Zone, what, then, is the answer to the chief question which the Subcommittee is addressing? Can the property rights of the United States in the Zone be disposed of by treaty without implementation or authorization by the entire Congress, including the House of Representatives? The answer, Mr. Chairman, is, in my view, definitely not—prior practice, judicial interpretation, and the tenets of real democracy do not allow it.

The Presidential power to negotiate treaties, stipulated in Article II, Section 2, of the Constitution cannot be viewed in isolation. Article IV, Section 3, Clause 2, of the Constitution is one clear limitation on the Article II power. It provides:

"The Congress shall have Power to dispose of and make all needful Rules and Regulations respecting the Territory or other Property belonging to the United States; and nothing in this Constitution shall be so construed as to Prejudice any Claims of the United States, or of any particular State."

Since it is the responsibility of Congress to dispose of U.S. property, if the President proceeded to negotiate and press for consent to ratification of a treaty which ceded or transferred U.S. property without Congressional consent, then he would be proceeding on an unconstitutional course. As the Supreme Court has said, the treaty power does not extend to what the Constitution forbids (*Geofroy* vs. *Riggs* 133 U.S. 258).

Moreover, treaty arrangements which are complex in nature and require implementing legislation, like those which would likely result from present Canal treaty negotiations, are most advantageously handled by the entire Congress and the Excutive because of the many interests which are affected. In addition, the depth of feeling of the people of the United States on the Canal issue invites a democratically superior policy of maximum participation of the Legislative Branch. Indeed, the people of this country rightfully feel that their tax dollars and resources are greatly responsible for the Panama Canal—and they want the influence of the House of Congress charged with appropriation of monies to be felt.

In debate in previous years on this question of Congressional approval of disposal of U.S. property, representatives of the Executive Branch have frequently cited U.S. treaties with Indian tribes as precedents for disposing of U.S. territory without full Congressional approval. What must be pointed out, however, is that these Indian treaties had some fundamental differences with the Panama Canal situation. Not all of these treaties involved a transfer of title. Moreover, in those few cases in which title was transferred, the U.S. retained residual rights as the sovereign in lands granted to the Indian Tribes. In the Panama situation, we will probably find lands being conveyed to a foreign power with no residual U.S. rights.

Also, you may hear the Department of State citing some isolated instances where transfers were made by treaty alone in order to support the proposition that the treaty-making powers are concurrent with that of the Congress with regard to transfer of properties. The fact that Congress chose not to exercise its power in instances involving 43 gallons of whiskey in an Indian treaty, or some very minor parcels of property in Panama, does not mean that Congress does not have the disposal power and does not denigrate the powers granted by the clear and unequivocal language contained in Section IV, Article 3, Clause 2.

With regard to the specific question of disposal of Panama Canal property to Panama, prior practice demonstrates what must continue to be the rule. Property of the U.S. associated with the Panama Canal enterprise has been disposed of in the past only in accordance with Congressional authorization with the exception of some small tracts of land which were conveyed as part of 1955 boundary adjustments and in which the Congress acquiesced. Certainly, if House as well as Senate authorization was necessary heretofore to dispose of appurtenant facilities of small tracts of land in the Zone, then there must be full authorization for, in effect, transferring the entire Canal Zone and most or all Panama Canal property as we may see it in a draft treaty.

Allow me to cite the precedents for transfer of Canal property. In 1932, in order to build a legation building on land that had been a part of the Canal Zone, Congress authorized the Secretary of State to modify the boundary line between Panama and the Canal Zone.

In 1942, a House Joint Resolution permitted the transfer to Panama, free of cost, of the sewers and waterworks systems of Colon and Panama City, as well as certain railroad lots. This Resolution was passed in the Senate despite some objection that the transfer should have been accomplished by treaty without House participation. In the debate that confirmed this important legislative requirement, the then Chairman of the Senate Foreign Relations Committee, Senator Connally, stated:

". . . under the Constitution of the United States, Congress alone can vest title to property which belongs to the United States. The Constitution itself confers on Congress specific authority to transfer territory or lands belonging to the United States. . . . The House of Representatives has a right to a voice as to whether any transfer of real estate or other property shall be made either under treaty or otherwise."

Finally, in 1955, in the treaty of Mutual Understanding and Cooperation with Panama, major property transfers were made dependent upon the Congressional authorization given in 1957. During hearings on the consideration of the 1955 Treaty, a representative of the State Department admitted that legislation would be needed to implement the transfer of all the territory and property mentioned in the treaty.

Thus, Mr. Chairman, the prior practice with respect to the Canal Zone is clear. Based on the facts of this situation, our U.S. negotiators should proceed on the assumption that the House of Representatives and the Senate will both have to approve any agreement binding on the United States. In view of past practice, if the State Department does not want full Congressional authorization of disposal, the burden is on them to show that we do not own the Canal Zone or any properties therein.

I would urge that the only treaty the Senate ought to accept is one which includes Congressional authorization for disposal of U.S. Canal property as one of its provisions. Absent that provision, the draft agreement should be remanded to the negotiators. This is especially important in view of the fact that the U.S. is negotiating with a military dictatorship in Panama whose treaty agreement on property rights could be overturned tomorrow.

Mr. Chairman, if the Executive is permitted to sidestep the House of Representatives on this vital constitutional issue of disposal

of Canal property, it will try to sidestep the Senate on another issue, and the Judiciary on still another. The very fundamental precepts of the Constitution are at stake and we have already had one instance in which the Executive Branch attempted to expand its powers, resulting in the worst scandal in our nation's history—Watergate.

In addition to my personal views on this subject, I appear today because the House Committee on Merchant Marine and Fisheries, which I chair, must be intensely interested and rightfully insistent on its prerogatives with respect to the Panama Canal. If the U.S. is to be a primary operator of the Canal under a new treaty arrangement for the next 25 years or so, then the Committee will presumably have legislative responsibility for such items as the structure of a new Canal operating entity; the basis for vessel tolls; the lands and waters and property rights relevant to the Canal; assets of the Canal entity; options for Canal modernization or a new sea-level Canal; the neutrality and international guarantees for the Canal; and ancillary operations. It would be disastrous for the Committee and the Congress to have to deal with a treaty wholly or mostly deemed by the Executive to be self-executing. To do this would be to make a farce of democracy.

For this reason, I strongly urge that the Senate Committee forcefully act to retain appropriate Congressional powers and to ensure effective participation in any projected arrangements with Panama regarding the Canal. The Constitutional language of Article IV is clear and unequivocal. Congress has the power to deal with U.S. property—it is the intent and duty of Congress in matters of such vital importance to assert its power.

In conclusion, I would like to express the gratitude of the Members of the House of Representatives for the service which this Subcommittee is rendering in holding these essential hearings.

STATEMENT BY ADM. JOHN S. MCCAIN, JR.

Mr. Chairman and members of the Subcommittee: My name is John S. McCain, Jr., Admiral, U.S. Navy, retired. My last active duty was a U.S. Commander-in-Chief, Pacific, 1968–72, which was during the height of the Vietnam war. My previous experience included duty with submarines based at Coco Solo, Canal Zone, prior to World War II. Throughout my active career I have been a student of sea power in the defense of the United States. In this defense, the Panama Canal is the strategic center of the Americas and as such a crucial element of U.S. sea power in the current drive for world domination by the USSR. This includes the predominating effect of economic security.

Records show that at the height of the Vietnam war, the Panama Canal transited U.S. Government vessels as follows: in Fiscal 1968 a total of 1,505; in 1969, 1,376; and in 1970, 1,068. These vessels consisted largely of combatant units and logistic support groups for the U.S. Armed Forces in the war. Had the Panama Canal not been available, the war could not have been effectively conducted.

In my capacity as Commander-in-Chief, Pacific, I worked in close collaboration with the Chiefs of the Army, Navy, Marine Corps and Air Force. I have read the July 22 statement before this Subcommittee by Admiral Thomas H. Moorer and concur fully with his evaluation on the vital importance of the Panama Canal to our Armed Forces and national survival.

As a student of Panama Canal history, I have long admired the vision of the framers of our Isthmian Canal policy for all sovereign control over the Canal and its protective strip of the Canal Zone territory. Both are closely inter-related and should not be separated or have their sovereign control in any sense whatsoever diluted as is now being proposed.

To surrender one square inch of the Zone territory, as known by experience, will only lead to future greater demands and eventual loss of the Canal itself to a small and weak country that could not possibly stand up against the pressures of stronger powers. Soviet Russia and the communists, both terms synonymous, are making every effort to gain control of the Canal.

Mr. Chairman, I have also read the recent letter to the President by four greatly distinguished former Chiefs of Naval Operations. My experience as Commander-in-Chief, Pacific, fully justifies the views that they so powerfully expressed.

The United States is now facing the gravest period in its history. It has suffered successive defeats all over the world and the loss of sovereign control over the Canal Zone would result in transforming the Caribbean and Gulf of Mexico into Red lakes, with grave consequences in Latin America.

One of our country's outstanding strategists, General Thomas A. Lane, a student of Panama Canal problems with Canal Zone experience, foresaw what is now transpiring. In an editorial in the Strategic Review, he made this significant statement:

"The belief of some officials that U.S. operation and defense of the Canal under treaty provisions, instead of under sovereign authority, would eliminate the friction of recent years is a calamitous misjudgment of the present scene. Marxist-Leninist subversion would be intensified by such a retreat. Friction would mount and the U.S. position would become intolerable. The United States would be compelled to use force against the Republic of Panama, or to withdraw and allow the Canal to be operated and defended by another (power). That is a prospect which no President should impose on his successors." (Strategic Review, Winter 1974, p. 5.)

The Canal Zone sovereignty question transcends all partisan considerations and must be decided on the highest plane of national interest if our U.S. future is to be safeguarded. Under no circumstances should U.S. sovereign control over either the Panama Canal or the Canal Zone be diluted.

In Latin America, the national qualities that win respect are strength and decisiveness. It is time for our country to stop COWERING, cringing and to act the part of a great and powerful nation with a positive and constructive program. We have nothing to be ashamed of. Nor need we apologize for all the foreign aid and technical assistance we have given to other nations beginning with the Marshall Plan. I would urge in the interest of hemispheric security the following:

1. Emphasis by the Senate and House of Representatives on U.S. sovereign rights, power and authority in perpetuity over the U.S. Canal Zone and Panama Canal (H. Res. 92);

2. Major modernization of the existing Panama Canal under existing treaty power for "expansion and new construction" (H.R. 1587);

3. Authorization for the election by U.S. citizens residing in the Canal Zone of a non-voting delegate in the Congress (H.R. 1588);

4. Reactivation of the pre-World War II U.S. Naval Special Service Squadron with homebase in the Canal Zone; and

5. Stationing of a unit of U.S. submarines at Coco Solo, Canal Zone. This force served a worthwhile purpose when it existed. It had a stabilizing effect and would do so again. It may be needed sooner than we like to think.

Some day a Soviet naval task force will be operating in the Caribbean-Gulf area. This will happen in the not-to-distant future. In the area of international relations, we must be prepared in peace in order to be prepared to fight in war.

6. The Naval Air Station at Coco Solo should be retained and we need the return of Old France Field, which was recently leased without prior congressional authority to Panama for 15 years. We need these two air facilities to increase U.S. air capability in the Gulf-Caribbean area in lieu of the shortage of aircraft carriers for the area.

BILL BERLIN WINS OUTSTANDING USAF EDUCATION SERVICES AWARD FOR 1976

HON. JAMES L. OBERSTAR

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. OBERSTAR. Mr. Speaker, the U.S. Air Force's highest honor in the field of education has been awarded to Mr. William A. Berlin, formerly a resident of my congressional district, and now education services officer of the U.S. Air Force base at Misawa, Japan. The outstanding USAF Education Services Award for fiscal year 1976 means that Mr. Berlin's education program is the very best worldwide in the entire U.S. Air Force. This is the second time Mr. Berlin has won the award, an unprecedented distinction.

To those who know Bill Berlin, the award comes as no surprise. He is a product of Minnesota's Iron Range, where our immigrant forebears gave education the highest priority when they settled this area at the turn of the century. Bill Berlin exemplifies the finest tradition of Iron Range excellence in education.

He was born of immigrant parents on a mining location near Buhl, Minn., and began his career in public service early in life, serving in the Minnesota State Legislature from 1938 through 1942, one of the youngest legislators in the State at that time.

At the outset of World War II, Berlin resigned from the legislature and joined the Army Air Corps, where he learned to appreciate the value of off-duty education. Following 20 years of service in the Air Force, Mr. Berlin undertook a new career teaching government in the University of Maryland's overseas extension program.

Bill Berlin's strong personal commitment to education as a means of career development for armed services personnel led him to his present position as Air Force educational officer in 1968.

His first worldwide recognition came in 1972 when he had developed such an outstanding education program at his Air Force base in Turkey that 75 percent of the military personnel there were attending school on off-duty time.

In 1974, Berlin moved to the Misawa Common Defense Installation in Japan, and in 2 years advanced that education program from among the least effective to the top in the entire U.S. Air Force. Such dedication to serving others deserves the highest recognition that has so rightfully been awarded to Mr. Berlin.

I join the U.S. Air Force in congratulating Bill Berlin on an outstanding career of service to his fellow man and to his country.

I invite my colleagues to read the following detailed account of Mr. Berlin's education program as reported in the May 13, 1977, edition of Northern Light, the base newspaper of the U.S. Air Force base at Misawa, Japan:

[From Northern Light, May 13, 1977]

THE MORE YOU KNOW THE HIGHER YOU GO!

Everybody at Misawa knows that our Education Office is the best in the Air Force, but now it's official. Under the leadership of William A. Berlin, Misawa's education program has grown by leaps and bounds in the last two years and earned the Outstanding USAF Education Services Program Award for Fiscal Year 1976.

Success here is measured by the scope of services offered and the number of students enrolled. With more than half of the officers assigned here enrolled in graduate programs and 100 per cent of the enlisted force completing high school requirements, enrollments have tripled since 1974.

The testing program, another service here, administers to military and civilians from as far away as Korea and Tokyo, who travel to Misawa to take the Law School Aptitude Test, National League of Nurses Exam, Medical College Admissions Test, Engineering Certification Exam and National Teacher's Exam. Misawa is the only center on mainland Japan authorized to administer these tests. Other exams offered are too numerous to mention, but are well worth looking into.

Testing receives special emphasis here. By simply assuring that testing materials are on hand, an increased number of people have been able to upgrade their educational status. "We can give two years of college in four to six weeks," stated Mrs. Lynn Champa, testing specialist, explaining how the College Level Examination Program (CLEP) can accelerate a person who already has the knowledge to pass college level exams. "Why take the class when you know the work?" Mrs. Champa administers about 15 subject exams every week to people who can receive college credit at no cost to themselves.

Two years ago, Misawa had no graduate program. Now there are two graduate programs offering three majors. The 26 classes, offered this term by the University of Maryland and the 19 by Los Angeles Community College, represent a two-year growth rate of more than 230 per cent and 430 per cent respectively and a study is underway that could soon bring a doctorate program to Misawa.

Realizing that all college students are not necessarily degree seekers, Los Angeles Community College specializes in useful courses such as photography, auto repair and typing. Foreign language courses offered by the Education Office range from a free conversational Japanese course, to the only spoken English class in the Pacific designed to help foreign-born military dependents who speak English as a second language.

The colleges participating at Misawa should be very proud of the outstanding work being done by their field representatives, Marcia Carnahan, University of Maryland and Los Angeles Community College (LACC); Lynn Champa, University of Oklahoma; Geri Sheets, University of Maryland; Lindia Shultz, LACC; and Bridgett Wilson, University of Southern California.

Professional Military Education (PME) continues to be an important element in career advancement. MSgt. William L. Nichter and TSgt. William R. Champion teach Phase One (required by senior airmen to be awarded noncommissioned officer—NCO—status) and Phase Two for supervisors. The five-phase program incorporates the various NCO academies and leadership schools and adds to it, thus creating a building block program. "PME is the first sequential development program designed to enhance the quality of the enlisted force," stated Sergeant Champion.

Much of the in-service training received by military people can count toward college credit through the Community College of the Air Force (CCAF). It is fully accredited and recognized by the Southern Association of Colleges and Schools to award college credit for in-service training and schools. This is yet another program whereby a person can get a college transcript without enrolling in a civilian college. Mrs. Pam Hilderbrand, education specialist and acting Noncommissioned Officer in Charge, offered this example. "A few years ago, we sent a team to the Hill to review college credits. In a round-the-clock session with an entire flight, 89 years of college were examined and documented."

Misawa's academic program has grown so fast, that every available classroom space on base is being used to accommodate the 9,000 annual enrollments. Classes are held in the fire station, civil engineering air conditioning shop, credit union, photo lab, chapel lounge and anywhere instructors can find a classroom or a place to sit a group. The 17 scattered classroom locations have given Missawa the unofficial name, "The Campus."

How did the Misawa Education Office get to be the best in the Air Force? "Just plain hard work," was how it was explained by Mr. Berlin, education services officer. As another staff member put it, "Mr. Berlin is a master salesman. The more students we have, the more extras we can provide. People are the capital that the Education Office functions with."

One hundred per cent of all incoming Air Force personnel receive Mr. Berlin's personal briefing on educational opportunities. His aggressive technique is virtually legend and emulated around the world. Judging from critiques, only 10 percent of incoming personnel have ever received a briefing on educational services, although it is mandatory by Air Force regulation.

While the Misawa Education Office is usually viewed in Air Force terms, services are extended to all base personnel—Army, Navy, Air Force and Marine military, as well as dependents and Department of Defense civilians. In this regard, some people feel that this office should be considered the best in the world—not just Air Force!

Misawa now has a full time education counselor, Dr. Mike Imphong, who supplements Mr. Berlin's briefing with a personal interview of each newcomer. Dr. Imphong reviews each person's background and advises on educational opportunities and needs, helping the individual set goals.

Keeping education records on Misawans is very important to students and it's a task the Education Office handles well. One of the unique services offered by Mrs. Hildebrand and education clerk SrAmn. Kathy Crace, is the automatic update of military records so that students completing classes will receive immediate official academic credit.

Enrollment in the Extension Course Institute, CCAF, Airman Education and Commissioning Program, AF Reserve Officers Training Corps and tuition assistance are provided regularly. It is not by accident that of the 43 Basic Education Opportunity Grants recently awarded in the Pacific area, 39 were from Misawa.

The theme of the Air Force Education Services Program is "Everyone a Professional." Everyone working in the Misawa Education Office is a professional and they are working hard to upgrade the professional level of every Misawan who is smart enough to listen.

Mr. Berlin summed it up this way: "Keep 'em in class and off grass!"

EDUCATION OFFICE GETS RECOGNITION FOR BEST PROGRAMS IN COMMAND

The man who informed Misawans to, "think of education as a service you can demand," is meeting education demands from thousands of scholars, according to a recent message released by Security Service officials.

William Berlin, education services officer here, and his staff were recently selected as having the best education program in Security Service. The office is also being considered for Air Force-wide recognition.

"People should learn to demand education services as vociferously as they would other services, such as plumbing, telephone, dental or medical," stressed Mr. Berlin.

The education officer personally conducts mandatory education briefings for newly arrived personnel. As a result of increased enrollment efforts, Los Angeles Community College enrollments have mushroomed from 48 enrollments in fiscal year 1974 to 1,106 in fiscal year 1976 for a growth rate of 434 per cent according to statistics released by the Education Center.

Total enrollment for the University of Maryland for fiscal year 1976 was 1,722. Maryland's 688 first term enrollments reflect the largest enrollment figure for a single term at the base Education facility.

The Education Center also offers a variety of college aptitude tests, college board tests and graduate record exams.

PRESIDENT MAKARIOS

HON. BENJAMIN A. GILMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. GILMAN. Mr. Speaker, I was deeply saddened to learn of the untimely death of the President of Cyprus, Archbishop Makarios. His passing is a profound loss to his people and to his nation.

As the President of Cyprus since its independence in 1960, he has come to symbolize the character and destiny of his homeland and he gained respect throughout the world as a great statesman.

This humble son of a shepherd rose to become head of the Greek Orthodox Church and head of State through personal courage and compassion with the single goal in mind of creating a modern independent Cyprus.

To this end, he helped create a modern, thriving, and progressive nation, well on its way to economic as well as political independence. The unfortunate tragedies that have fallen upon his country, including the Turkish invasion, subsequent occupation, partition and general disruption have dealt a heavy blow to the work he had so carefully completed.

But even in these troubled times, he worked hard in seeking the withdrawal of Turkish forces and to obtain an ever-elusive political settlement.

I recall on one of his recent visits to this country, the Archbishop met with the members of the House International Relations Committee. All of us at that meeting felt the sincerity and compassion contained in his remarks.

President Makarios has earned the re-

spect of the world. His life has had a significant effect on his homeland. His memory will serve as an inspiration to future Greek-Cypriots. It is my hope that the void caused by his passing will be filled with men of equal ability to continue his efforts in seeking unification and peace. The people of Cyprus could not provide a more fitting tribute to their fallen leader than by achieving his dream of returning once again the political freedom and tranquillity that Cyprus so richly deserves.

THE MARITIME LOBBY'S TRIUMPH

HON. THOMAS B. EVANS, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. EVANS of Delaware. Mr. Speaker, this week the House Merchant Marine and Fisheries Committee, of which I am a member, ordered reported H.R. 1037, cargo preference legislation. Five of us on the committee opposed the legislation, but unfortunately for the American consumer we were outgunned by the special interests pushing this boondoggle of a bill.

This legislation will cost the American consumer some $7 billion over the next 5 years. If we are serious about holding down inflation, then we should defeat this measure when it comes to the floor after the recess.

Mr. Speaker, I insert two editorials, one from the August 2 Washington Post and the other from the August 4 Wall Street Journal, which zeroed in on this victory of the special interests, to be included in the RECORD:

THE MARITIME LOBBY'S TRIUMPH

The maritime lobby, with its money bags has scored a great political triumph. The costs will be borne over coming years by everyone who buys oil products. It's another defeat for the enlightened trade policy that President Carter keeps proclaiming but never quite manages to put into practice.

The maritime interests—ship builders, ship operators and unions together—already enjoy more different kinds of subsidy than any other American industry. Despite this torrent of aid, they have worked their freight rates up so high that nobody uses American-flag shipping unless the law requires it. The maritime lobby has now obtained President Carter's misguided support for its perennial bill to force part of this country's oil imports into those American-flag tankers. The proportion of imports affected will be small at first, but it will rise steadily.

It's called a cargo preference bill, and it is 200-proof protectionism. It would violate American treaties with other nations. It would be inflationary. It would add still another layer of subsidy, this time paid directly by consumers in the form of higher oil prices. As national policy, it's got absolutely nothing going for it but the lobbying muscle and the extensive campaign contributions of the people who wanted it. But that turned out to be enough to get the President's support.

Mr. Carter's whole trade policy is rapidly deteriorating. He keeps talking in terms of the most highminded commitments to open trade and international competition but, unfortunately, the actual record points the other way. There have been three major cases so far, and three times the administration has caved in to the protectionists.

In the case of the color television sets from Japan, Mr. Carter resorted to an Orderly Marketing Agreement. That term is a euphemism for an agreement by the exporting country to limit shipments. In the shoe case, the administration imposed another couple of Orderly Marketing Agreements on Korea and Taiwan. THey will save some jobs in American shoe factories; they will also cost some jobs in American retail stores as well as increase prices to American consumers. But at least an Orderly Marketing Agreement is limited in duration and is a legal procedure under the general trade rules that this country has bound itself to. The cargo preference bill is neither.

It's a strange performance for an administration that foresaw trade troubles and staffed itself with people to meet them constructively. Those people, led by Treasury Secretary Michael Blumenthal and Under Secretary of State Richard Cooper, have been walloped in each successive test. The President has been mainly following the advice of Robert S. Strauss, currently his special trade representative and formerly chairman of the Democratic Party. Like most party managers, Mr. Strauss thinks in terms of constituencies and grievances: a factory here, a union there. He apparently does not work in terms of broader concerns, like consumer interests in general, or American productivity, or the future of the highly competitive American industries whose overseas markets are now threatened by foreign retaliation.

If Mr. Carter will not resist protectionists pressure, he cannot expect the fragile governments of Western Europe to do better. He may get heat from aggrieved unions—but unlike, for example, the president of France, he does not face an election next year that might bring the Communists to power. In May, at the London summit conference, Mr. Carter joined in a pledge to support firmly the principle of open trade and a growing world economy. The people who heard him must wonder what he had in mind when they now read the cargo preference bill that he has promised to support.

THE MARITIME PAYOFF

Back during the 1976 primary campaign Jesse Calhoon of the Marine Engineers Beneficial Association put together some $200,000 in maritime industry contributions for Jimmy Carter. Mr. Calhoon doesn't work for nothing. The payoff for his efforts is making its way through Congress, with the support of the President.

The payoff, of course, is the cargo preference bill, reported out of the House Merchant Marine Committee this week by a comfortable 31-to-5 margin. "Cargo preference" is a euphemism for a shipbuilder and maritime union hijacking of American consumers. It will add another $7 billion or so to fuel bills over the next five years.

East Coast consumers, who depend heavily on imported oil, will be among the hardest hit. Constituents of Merchant Marine Committee Chairman John Murphy, (D., N.Y.) can expect to pay an added $50 a year just for this bit of special interest legislation.

The way money is transferred from Mr. Murphy's constituents to well-paid merchant seamen and rich ship owners and shipbuilders is simple. The cargo preference bill requires initially that 4.5% of all oil imported into the U.S. be carried in U.S.-flag vessels. The percentage will move up to 9.5% over the next five years.

It costs about 2.3 times as much to operate a U.S. flag tanker as a foreign flag tanker currently. With the added demand legislated by the act, that cost gap is sure to widen.

U.S. flag tanker owners already are reaping a bonanza through government policies even before the cargo preference bill becomes law. Under the Jones Act, U.S. coastal shipping must move in U.S. flag vessels. Alaskan oil and the government's crude oil stockpiling program both have expanded coastal shipping, sharply increasing demand for U.S. flag tankers. The rate for chartering a U.S. flag tanker has about doubled over the last year. If you add a provision that 4.5% of imported oil must move in U.S. bottoms as well, it's hard to guess how high these tanker rates might go. Currently, they are four to five times foreign tanker rates.

The government subsidizes the operation of U.S. flag vessels to the tune of some $400 million a year, which means that most of the salaries of Mr. Calhoon's 6,000 MEBA members are paid for with tax money. The average U.S. flag seaman earns some $24,300 per year and MEBA members do considerably better than the average. While the cargo preference bill does not call for additional subsidies, they will hardly be necessary considering the charter rates the operators will command.

As to ship owners, consider this: The Federation of American Controlled Shipping estimates that the crude carrier Stuyvesant, just completed in the Brooklyn Seatrain shipyard and chartered to Sohio, will gross $30 million in three years on a $9 million equity investment. The government paid a $27 million subsidy on the $63 million ship and also insured a mortgage for the sums borrowed to build it. Not a bad deal.

An added point is raised by Lawrence C. Ford, president of Chevron Shipping Co. of San Francisco. Since Mr. Carter's energy legislation calls for wellhead taxes on domestic oil to bring its price up to the level of imported oil, any added importing costs will affect domestic fuel costs as well. So the $7 billion in direct shipping costs is only the beginning of the total cost to American consumers. Windfalls are bad if oil producers get them, good if they go to the maritime industry, so we would gather.

The maritime lobbies put up arguments that their raids on American pocketbooks serve the public interest, but they are not very convincing. National security is one such argument, but national security can hardly be said to depend on what flag a ship flies. It seems very unlikely that the U.S. will go to war with Liberia or Greece or that American oil companies would give up ships that fly Liberian or Greek flags, even in the event of war.

As to jobs created or preserved the estimate for cargo preference is 3,500. That figures out, according to Mr. Ford, to a cost of about $440,000 per job. It might be a little cheaper to simply pay 3,500 people to do nothing.

Mr. Ford's opinion of the cargo preference act is summed up simply: "It's the worst I've ever seen." We can hardly improve on his appraisal.

LEST WE FORGET

HON. MARILYN LLOYD

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mrs. LLOYD of Tennessee. Mr. Speaker, despite the fact that the Vietnam war has ended, and despite the fact that Vietnam was recently admitted to the United Nations, with the support of the United States, it still remains that there are many families in our country who have still not been told the status of their husbands, sons, and fathers. I believe that we should all be deeply sympathetic to the emotional strain which has been placed on the families of those

men who still remain unaccounted for. It is unconscionable that these people should have to continue to live with such uncertainty. We must use every means possible to persuade the North Vietnamese to provide for a full accounting of all MIA's and POW's.

Capt. Samuel L. James, who is the son of Mr. and Mrs. Sam James of Hixson, Tenn., and who is missing in action, was 32 years old on July 24. It is my hope that his parents will receive some information on Captain James in the very near future.

FEDERAL RESERVE IS DOING ITS JOB

HON. THOMAS B. EVANS, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. EVANS of Delaware. Mr. Speaker, I happen to believe that the Federal Reserve System serves as one of the cornerstones of our economic system, and is one of the prime reasons for this Nation's unmatched prosperity over the last several decades.

I also believe that the present Chairman of the Federal Reserve, Dr. Arthur Burns, is a man of unquestioned integrity, honesty, and brilliance to whom Americans owe a deep debt of gratitude. Dr. Burns has done much over the years to educate the American people about the complex but important meaning of economic trends and activities, and, as one who considers himself a student of Dr. Burns, I look forward to his regular and frequent appearances before the Banking Committee.

Thus, it concerns me greatly when attacks are made in the press which call into question either the workings of the Fed, or, even worse, the character of Dr. Burns. Generally these attacks are made by people who apparently, judging by their comments, know little about the strengths of our economic system.

However, occasionally an article appears in the public media which cuts through the haze of misinformation. One such article appeared recently in the Philadelphia Inquirer in the form of a letter to the editor from Mr. Allen J. Simpson. Mr. Simpson was answering a column by Mr. Nicholas von Hoffman, but his comments shed new light on the responsibilities of the Federal Reserve.

I insert Mr. Simpson's comments in the RECORD:

[From the Philadelphia Inquirer, July 13, 1977]

AND BURNS, TOO: FEDERAL RESERVE IS DOING ITS JOB

To the Editor:

"Pulling the Fed in From the Cold" by Nicholas von Hoffman, appearing in the June 27 Inquirer is a disservice to the American people. The inaccuracies and misimpressions in the article indicate that the author has failed to research the topic even superficially. The article strikes me as hearsay.

While it is true that the Federal Reserve System is not well-understood, that is not the Fed's fault. The system publishes many pamphlets and books describing its purposes and functions. In addition, there are scheduled tours of the Fed facilities and movies explaining its activities. The truly interested person can learn a great deal about our system.

The original purposes of the Federal Reserve System were to create an elastic currency, to provide facilities where commercial paper could be discounted, and to improve the supervision of the commercial banking industry. In a broader sense, the Fed's purposes were to help counteract inflationary and deflationary pressures that develop and to foster favorable economic conditions over the long term.

It becomes obvious as one's understanding of Fed operations increases that secrecy is an essential part of the program. Secrecy about operations permits the Fed to talk a hard line, or talk a very soft line on domestic monetary policy, while actually maintaining a moderate course in an operational sense.

In this way, objectives can frequently be reached without the application of strong measures that have undesirable side effects. Secrecy aids the Fed's effectiveness and benefits the public.

In addition, during the course of business, the Fed is called upon to assume major financial risks. For example, while stabilizing the dollar in recent years, the Fed took major positions long and short in various foreign currencies. If the Fed's position had become known at the time, it could have resulted in large capital losses and even a crisis in world business confidence. Without secrecy, effective operations are impossible.

Von Hoffman and Rep. Henry Reuss criticize the Fed for urging commercial bank assistance to the troubled mortgage trust and utility industries. In this instance, the Fed anticipated multi-billion dollar bankruptcies that would have made the Penn Central crash seem small.

Some assistance to those industries seemed in the public interest and the banks seemed a better source of credit than an arm of the government. Fortunately, crisis was not allowed to come to disaster.

This involvement by the Fed did bring forth charges of credit allocation and interference; but what criticism has there been of Federal aid to New York City, a direct act of credit allocation? The point is that this activity in credit allocation to the mortgage trusts and utilities was in the national interest, not for the benefit of a specific sector of the economy. If credit allocation had been aimed to benefit only a part of the economy, it would have been wrong.

The criticism of Dr. Arthur Burns is most unfair. No chairman in the history of the Federal Reserve System has done so much to lift the cloak of secrecy. Through public appearances, publicaiton of FRB monthly meeting results, announcements of monetary growth targets, and through countless meetings with elected officials, Burns has tried to make clear the actions and intentions of the institution.

He has the great strength of character and integrity required for his position in addition to the highest professional skill. Yet, he is subjected to constant second-guessing, Monday-morning quarterbacking, and criticism. Seldom is there praise.

Much of past criticism of the Fed has come from Congress, because of the Fed's reluctance to disregard its monetary policy goals in order to finance the Federal budget deficits caused by excessive congressional spending. As the Fed pursues sound monetary policies and speaks critically of deficit spending, Congress is thwarted from passing even larger and more popular spending bills. There is evidence that deficit spending is one of the major causes of inflation worldwide; therefore, it appears doubtful that increased congressional control of our monetary system would be of benefit to the public.

ALLEN J. SIMPSON.

NATIONAL ENERGY ACT SERIOUSLY FLAWED

HON. WILLIS D. GRADISON, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. GRADISON. Mr. Speaker, I would have liked to vote "yes" on the National Energy Act, H.R. 8444, but the final version was such a disappointment that I had to vote "no". This country badly needs a coherent energy policy, and I had hoped that the leadership of a new President would allow us to make a fresh start toward such a policy. Along with so many of my colleagues from both parties, I have worked hard to try to improve the energy plan submitted to Congress by President Carter, but I feel compelled to oppose this bill because it is fundamentally flawed in several respects. First, the legislation concentrates on conservation to the almost total neglect of production. There is no doubt that conservation is called for. For too long, Federal policy has encouraged wasteful use of energy by keeping energy prices at artificially low levels.

But the whole thrust of H.R. 8444 is to use taxes to raise costs to consumers, an approach which neglects the need for stronger production incentives. In this way, consumers will end up getting the worst of both worlds. They will pay more for energy but will not derive any benefit from increased production incentives.

The second basic flaw in this legislation is that it primarily relies on regulation through our tax system. When running for President, Jimmy Carter called our national tax system a disgrace and pledged to reform it. Yet his energy plan included 5 new taxes and 10 new or expanded tax preferences. Unfortunately, the House bought this approach of using the tax system to try to solve our energy problem. The result will be to add further complications and inequities to a tax system, which is already a disgrace.

A third basic flaw in the National Energy Act is that it would result in a tremendous increase in the degree of Government regulation of the energy industry. It is this same Government regulation which was primarily responsible for the shutdown of schools and factories due to the natural gas shortage in Ohio last winter. It is this same Government regulation which has subsidized oil imports through the operation of the entitlements program. At a time when we are increasingly questioning the benefits of Government regulation in other industries, it makes absolutely no sense to increase the burden of regulation in the energy industry, where such regulation is already a proven failure.

Because of these flaws, I have concluded that the enactment of this bill in

its present form would be worse than no bill at all. This legislation does not represent the national energy policy we so desperately need. It is in reality a plan to create deliberate energy shortages and then attempt to manage those shortages through increased bureaucratic interference. Even viewed as a shortage management policy, it is woefully inadequate. I have listed below what I see as some, but by no means all, of the serious specific defects of H.R. 8444 at this point:

DEFECTS OF THE NATIONAL ENERGY ACT (H.R. 8444)

1. The so-called "gas guzzler" tax is an unnecessary and inequitable tax. It is unnecessary because existing law already mandates very significant fuel economy improvements between now and 1985. The mandatory fleet fuel efficiency standards under present law are 18 m.p.g. in 1978 and increase yearly to 27.5 m.p.g. in 1985. Any additional savings due to the "gas-guzzler" tax would be minor. The tax is inequitable because it would raise prices sharply to larger families who have no alternative but to buy a full-size car.

2. The energy insulation tax credit is an unjustified complication to our tax system. It will cost the Treasury $2.1 billion and will mostly pay people for what they would have done anyway. In addition, the fiber glass insulation industry is having difficulty just meeting existing demand and a tax credit will make this situation tighter and drive up prices.

3. The tax credit for residential solar and wind energy equipment is simply not cost effective. The Congressional Budget Office estimates that under this credit the government will pay $2 and the homeowner another 50c for each $1 that fuel bills are reduced. Because of the high cost of solar and wind equipment, only a relatively few higher income families will be able to take advantage of this credit.

4. The macroeconomic effects of H.R. 8444 on production, and unemployment were not adequately considered. Chase Econometrics Associates Inc., in a study entitled "The effect of Alternative Energy Policies on the U.S. Economy," has estimated that the President's energy plan would in 1985 reduce GNP by $55 billion, reduce exports by more than 25%, and increase unemployment to 6.7%.

5. The combination of the crude equalization tax and the industrial users tax will result in American industry paying oil costs in excess of world prices. This will obviously result in a negative impact on our ability to compete with other nations.

6. This bill does not provide for deregulation of natural gas despite the fact that every reputable study estimates that there are vast quantities of gas left in the United States and that deregulation would significantly expand supplies. Studies by the federal government itself (the U.S. Geological Survey and the Energy Research and Development Administration) have reinforced these conclusions but the President and the House have unfortunately chosen to ignore these studies. For every cubic foot of natural gas we do not produce, consumers must acquire more expensive energy sources. Consumers will pay an estimated $50 billion more for energy between now and 1990 under this bill than they would if natural gas were deregulated.

7. This bill extends natural gas price controls to the previously unregulated, intrastate market. This will discourage production in these markets.

8. This bill gives the federal government substantial power over an area which has traditionally been and should remain under the control of individual states. Under this bill, the federal government would tell state regulatory commissions (like the Public Utilities Commission of Ohio) what information to collect and how to set rates. In addition, the federal government could challenge any rate increases in federal court. This increased federal intervention has the potential for causing long delays in getting new powerplants approved and could well lead to increased brownouts and blackouts in the 1980's.

9. Under this bill, some public utilities may be forced by the federal government into the business of installing insulation. Since public utilities generally have no experience in this area, this would not be in the consumers best interest.

10. Section 536 of the bill contains a prohibition on any rate increase by any electric utility which is not in compliance with all the very complex provisions of subchapters B and C. Even on technical violations, federal litigation could tie up utility rate increases for long periods of time, leading eventually to deterioration of service.

11. The bill contains provisions designed to generate time-consuming litigation on utility matters. Section 551 provides $5 million to be given out to consumers who want to participation in state regulatory proceedings. Section 552 establishes an Office of Public Counsel within the Federal Power Commission. This would be a mini-Consumer Protection Agency which could sue the Federal Power Commission or state commissions.

12. The bill contains a rebate provision which is intended to prevent the crude oil equalization tax from impacting on home heating oil. This is inequitable because it is intended to benefit only those who use home heating oil to the exclusion of those who heat with other energy sources, such as natural gas.

13. This bill fails to address serious deficiencies in the present system of crude oil price controls. Incredibly, Republicans on the Ad Hoc Energy Committee were not even allowed to raise this issue because it was ruled nongermane. This despite the fact that a study of the energy conservation potential of bicycles was considered germane.

14. The mandatory coal conversion program is probably the worst example of bureaucratic excess in the bill. The bill would give the FEA vast authority to order coal conversion by even small industrial users. Coal conversion is a laudable goal and it is already taking place to a great extent because of market forces. But the program in this bill ignores the many real economic and environmental costs associated with coal conversion, especially in urban areas. It is worth noting that the 1977 Clean Air Act Amendments make coal burning more difficult. It is also important to note that we have had a coal conversion program since 1974 and that the FEA has badly bungled this existing program.

15. This whole energy bill is predicated on a very sharp increase in coal production. Again, this is a worthwhile goal but this bill does not deal in any way with obstacles which stand in the way of increased coal production such as environmental regulations and shortages of tarnsportation capacity.

16. In another case of bureaucratic excess, the bill requires the FEA to mandate efficiency standards for a wide range of home appliances from television sets to ovens. All appliances together use 2.7 percent of our national energy consumption. Because of the economics of energy consumption by appliances, these standards will almost certainly end up costing consumers more than they save in energy costs.

17. The natural gas users tax presented by the Administration failed to take into account technical reality in that it would have taxed many gas users who could not possibly convert to coal. Such uses as glass making and food processing simply cannot be converted. The Ways and Means Committee exempted some uses, but there are probably more uses which should have been exempted. Unfortunately, we will find out about these other uses only after this bill has passed.

18. The bill contains differing incentives for production of oil and gas without any economic or geological justification.

19. The various parts of this bill are not sufficiently coordinated despite the fact that this was the job of the Ad Hoc Energy Committee. What happened was that the Democratic leadership, in their haste to get this bill passed, did not allow the Ad Hoc Committee enough time to work. An example is the natural gas users tax. This is intended to bring about coal conversion despite the fact that mandatory coal conversion can be ordered under another section of this bill.

20. Finally, this energy plan will not meet its goals. The Congressional Budget Office, the General Accounting Office, and the Office of Technology Assessment all agree that the plan will fall short of its stated goals.

BLACK BASEBALL GREATS ENTRY INTO HALL OF FAME IMPERILED

HON. J. J. PICKLE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. PICKLE. Mr. Speaker, the Washington Post ran a very interesting article this past Sunday on the great black baseball players who many people in this Nation were unable to see in action because of the "Jim Crow" attitudes of major league owners and the Nation, as a whole.

Of course, we have little film or other hard primary evidence, other than eyewitness accounts about the real ability of some of the players in the old Negro leagues but there is a general consensus that several of them surpassed the skills of blacks who played in the majors after Jackie Robinson and Branch Rickey broke the color line in 1947.

We have come a long way since that time, but as the author of the article notes it does seem illogical now to penalize the recognized great black players just because they played in an earlier day.

I was quite proud to note that one of the greats mentioned, Willie (Devil) Wells, mentor of Monte Irvin and others, now resides in my hometown of Austin, Tex.

I enclose this article in the hopes that the members of the Hall of Fame will not close the door on the many great blacks yet to be enshrined in baseball's elite circle:

BASEBALL HALL A MOCKERY OF ITSELF IF DOORS ARE SHUT ON BLACK GREATS

(By John Holway)

Just 30 years after Jackie Robinson first pushed open the big-league doors to his race, baseball is threatening to slam them shut again. This time it is the heavy oaken doors of Cooperstown that may clang shut—perhaps forever—on the dozens of great black players who, unluckier than Robinson, were never allowed to play in the white major leagues.

The special committee headed by ex-Giant great Monte Irvin and all-time Dodger favorite Roy Campanella, both Negro League veterans themselves, named nine black oldtimers to the Hall of Fame. The panel then

voted to disband effective Aug. 8, in effect closing the door forever on dozens of black greats, who were playing—and beating—the best of the whites: Ty Cobb, Babe Ruth, Walter Johnson, Bob Feller, etc.

Contrary to popular belief, the two races played each other often, and profitably, in the fall and winter during those long apartheid decades. Newspaper box scores have been found for more than 400 such inter-racial games. The whites won 168; the blacks 268.

Traditionalists are unimpressed. A fluke, they say. The whites were loafing.

Would Ty Cobb loaf? He sailed to Havana in November, 1910, after leading the American League in batting with .385 and in stolen bases with 65, to join his Detroit Tiger mates in a series against two Cuban squads loaded with U.S. blacks. Among those blacks was shortstop John Henry Lloyd, who will be enshrined in Cooperstown this August.

In the first game, Cobb bunted safely, then roared into second with spikes flashing on a steal attempt. Little Bruce Petway, the black catcher, nailed him with the throw, and Lloyd tagged the Georgian out, catching Cobb's spiked foot with a well-padded shin guard and flipping him into center field.

Three times in all, Cobb tried to steal and three times he was thrown out. (The last time, he didn't even complete the steal attempt but turned and trotted back to the dugout in disgust.) At bat, he hit the Cuban pitchers at a .369 clip. But Lloyd topped him with a mark of .500 against the Tiger pitchers. Cobb was so furious he stomped off the field and vowed never to play blacks again.

They called Lloyd "the black Wagner," after Pirate immortal Honus Wagner. Wagner was so intrigued that he went out to see Lloyd play with the New York Lincoln Giants. He returned saying he was proud to have a player of that caliber named after him.

Connie Mack, the gentle owner of the Philadelphia A's, agreed. He often said, "You could put Wagner and Lloyd in a bag together, and whichever one you pulled out, you wouldn't go wrong."

Lloyd will be enshrined along with Martin Dihigo, the big Cuban who played eight positions and may have been the most versatile man the game has ever seen, black or white. One Negro League veteran, ex-outfielder Ted Page, who was also a close personal friend of the late Roberto Clemente, insists that Dihigo had a better arm than the Pirate star.

Says Johnson: "Dihigo would throw a runner out at home plate then fall down on the ground laughing, 'You no run on me, boy, you no run on me'!"

Lloyd and Dihigo are the eighth and ninth black old-timers to be admitted to Cooperstown. The others are Satchel Paige; Washington slugger Josh Gibson (who hit the longest home run ever seen in Yankee Stadium) and his roommate Buck Leonard; Irvin; speedster Cool Papa Bell; Johnson, and Oscar Charleston, the Willie Mays of his day who was considered by some whites who saw him to be the greatest player of all time of any race.

Charleston was sometimes called "the black Cobb." Both men ran the bases with the same savage fury, and both sprayed line-drive hits to all fields. But unlike Cobb, Charleston could also pull the ball with power over the most distant fences, and in the field he ran circles around the Georgian. No wonder then that many who saw both men disliked the comparison. Cobb, they said, should be called "the white Charleston."

These are only nine of the hundreds of black stars of baseball's segregation era. Why is the door being closed now, just 30 years after the unknown Jackie Robinson pried another door open by being the first of his race to enter the white majors?

Ted Williams may have been instrumental in opening Cooperstown's doors to black veterans with a graceful call to admit them as part of his speech at his own inauguration into the Hall of Fame. Traditionalists resisted, however, and only begrudgingly agreed to admit the legendary Satchel Paige in 1971, in a special section—"at the back of the bus," so to speak.

The stigma of a special section was removed, and the door, now slightly ajar, was opened a crack more to admit "five or six" black old-timers from among the hundreds who had played baseball going back to the 1880s.

The quota was arrived at by Campanella and New York Daily News columnist, Dick Young. Just how it was decided on, with some 130 white veterans in the Hall of Fame, is not clear.

At any rate, Campanella, Irvin and the rest of the special committee met to nominate others to follow Paige. "We had a list of 25 candidates," says Irvin, now an assistant to Commissioner Bowie Kuhn. "You could probably put all 25 guys in there. But realistically, the committee knew if it had tried to do that, the whole thing would have been lost. Our main worry was the board of directors of the Hall of Fame. They had the power to amend any decision we might make."

The Irvin committee's first choice was a natural. Satchel Paige was the world's most famous (if not necessarily its best) black player. The dead Josh Gibson, subject of a long Sporting News profile, was the logical second choice, along with his home run twin of the Homestead Grays, Buck Leonard.

Next, the committee named Irvin himself, well-known to fans since his brief career with the New York Giants. Cool Papa Bell, coming off a spate of publicity because of a Sports Illustrated article, was the fifth named. No. 6 was third baseman William (Judy) Johnson, also a member of the Irvin group.

That might have closed the books, but a flurry of protests at the rumored ending of the committee kept it alive a bit longer, long enough to name Charleston.

Except for 1972, when Gibson and Leonard were named together, the practice had been to name one black old-timer a year. This was dictated by a second quota, the limit of six total names to be enshrined in any one year. Since the baseball writers usually named two and, sometimes, three men, and the white veterans' committee named its quota of three, that left Irvin's committee with one, at most. This year, however, the writers named only one man, Ernie Banks, thus giving the black committee a chance to name two—Lloyd and Dihigo. Then, already four over its original quota of five, the committee announced it is disbanding.

The announcement made Irvin's old owner, Effa Manley of the Newark Eagles, "furious." In a heated letter to C. C. Taylor Spink, publisher of The Sporting News, Manley, a white woman, recalled the bad old days "when the so-called national pastime was as lily white as the Ku Klux Klan," and branded the decision to name only nine to the Hall of Fame as "insulting and irresponsible." She could have named 100, she wrote, "but I probably would have settled for 30."

On Manley's list—and on virtually everyone's—is Irvin's old manager at Newark, veteran shortstop Willie (Devil) Wells. "He taught me all I knew," Irvin says simply.

Wells, now living in Austin, Tex., vies with Lloyd for the title of best shortstop in blackball annals. He is often compared to Hall of Famer Lou Boudreau of the Cleveland Indians. Both had weak arms, yet both were uncanny judges of hitters and generally managed to beat the runner by half a step. Wells was also an excellent sign stealer, shrewd developer of talent (Irvin, pitcher Don Newcombe, Larry Doby) and a good spray hitter. He hit .332 lifetime in the Negro leagues, .392 in 40 games against white big leaguers.

In October, 1929, Wells and his Chicago American Giants swept a three-game series against a team of white all-stars. The team they beat included three Hall of Famers—Heinie Manush, Harry Heilmann and Charles Gehringer. The last-named now sits on Cooperstown's board of directors and will cast one of the 15 votes in August on whether to shut the Hall of Fame door in Wells' face or hold it open for him and others.

One of those others will surely be lefty Bill Foster, who remembers losing only one game in his life to a white big league squad. And he says he has a one-game edge over Satchel Paige in the 15 duels they waged in their careers, the best black righthander of his day against the best black lefty.

Foster almost made the Hall of Fame this year. He was voted down only when Irvin's committee decided to limit itself to two names.

Foster's older half-brother was the immortal Andrew (Rube) Foster, the preeminent figure in the history of black baseball. He was Christy Mathewson, John McGraw, Al Spalding and Kenesaw Mountain Landis all rolled into one.

On the mound, Rube earned his nickname by beating the Philadelphia A's great lefty, Rube Waddell, in 1902. McGraw wanted the squat Texan for his New York Giants. Failing that, he at least hired the Rube to teach Christy Mathewson and other Giant hurlers the screwball. (Matty called it a "fadeway.")

It is Rube Foster's omission from Cooperstown that has caused the greatest single outcry from knowledgeable fans.

Probably the second-loudest outcry is from partisans of Smokey Joe Williams, the big half-black, half-Indian who was probably the greatest black pitcher in the history of baseball. The two most authoritative all-black all-star teams—that of Cum Posey in 1945 and that of the Pittsburgh Courier in 1952—both rate Williams tops. Satchel Paige placed second in the Courier poll of experts; he finished no better than third on Posey's list, behind Williams and Cannonball Dick Redding.

Paige admits he faced Smokey Joe twice during their careers. Satch won the first game, 3-2, and lost the second, 2-1. But it is also true that Williams was 20 years older than Satch at the time.

Williams was so fast, recalled ex-pitcher Sam Streeter, that it took two catchers to hold him. One would go five innings before retiring, his hand too swollen to play any more.

Twenty-five times Williams faced the best of the white big leaguers in postseason play. He won 20, lost four, tied one.

The tie game was 1-1 in 10 innings against Rube Marquard and the New York Giants in 1911.

Of Willams' four losses, two came in 1932 when he was 46 years old.

His greatest game of all was also a loss. It came in October, 1917, against the National League champion New York Giants with their World Series lineup intact. Williams pitched 10 innings of hitless ball, striking out 20, only to lose, 1-0 in the 10th on an error.

Williams, Wells, the Foster brothers—these are only four of the great black stars before 1947 whom most fans in America were denied the chance to see. These players had the big-league doors slammed in their faces throughout their lives. Now the Cooperstown doors are about to be slammed on them, too, unless Bowie Kuhn and the other members of the board of directors prevent it.

Ironically, there is, of course, no longer a color line at Cooperstown. Robinson, Campanella, Clemente, Banks have all gotten in. Willie Mays, Hank Aaron, Frank Robinson, Bob Gibson, Lou Brock and many more blacks will follow. The black old-timers, then, are victims of a new prejudice—age.

Now it's O.K. to be black—if you're also young (as Banks is). It is also all right to be old—if you're white (as Joe Sewall and Amos Rusie are). But it is not O.K. to be both black and old.

There are many more who could go into Cooperstown:

Raleigh (Biz) Mackey, Campanella's old mentor who, Roy freely admits, taught him everything he knew. Often compared to his white contemporary, Mickey Cochrane, Mackey was a line-drive switch-hitter who led the league in 1923 with a .440 average.

George (Mule) Suttles, Norman (Turkey) Stearnes, Louis Sandtop and John Beckwith—four of the most powerful sluggers in black baseball history.

Spottswood Poles, Vic Harris, and Ted Page, three of the most feared base runners in baseball. Poles hit .487 in the Negro league and .610 against the best big leaguers before World War I—Bender, Alexander, Marquard, etc. Page, who rivaled Cool Papa Bell for speed, had a .429 average against big leaguers and reputedly hit Satchel Paige like a cousin.

Infielders Ray Dandridge, George Giles, Sammy T. Hughes, Jud Wilson, and Dick Lundy; pitchers Dick Redding, Bullet Joe Rogan, Jose Mendez and Chet Brewer—these are among the men who were not admitted to the majors when they could play and perhaps will not be admitted to Cooperstown now.

Wilson, a burly, barrel-chested slugger, looked more like a pro wrestler than like one of the three greatest men who ever swung a bat. At least, that's what Satchel Paige calls him. Paige faced Ted Williams, Joe DiMaggio and Stan Musial, but he ranks Wilson, Josh Gibson and another black, Charlie (Chino) Smith of New York, as the three toughest outs.

The foghorn-voiced Wilson played third base for many years for the Washington Homestead Grays, Baltimore Black Sox and Philadelphia Stars, and his widow still resides in the District of Columbia (as does the widow of Joe Williams).

If Cooperstown should ever admit Wilson, he would be the fourth member of the fabulous Grays so honored, joining Gibson, Buck Leonard, and Cool Papa Bell—an honor shared by few other teams.

The present Hall of Fame includes almost 150 players. In talent they range all the way from Babe Ruth to, say, Joe Tinker. How good were the black veterans still outside the hall? Most observers say the men I've mentioned rank at the upper end of the spectrum, closer to Ruth than to Tinker.

They earned their place there. As Satchel Paige's old catcher, James (Joe) Greene quietly put it: "I still say we made a big contribution to baseball, even if nobody knows about us anymore. They say Jackie Robinson paved the way. He didn't pave the way. We did."

ESTABLISH A DEPARTMENT OF HEALTH

HON. JOSEPH A. LE FANTE

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. LE FANTE. Mr. Speaker, today I have introduced a much needed bill which would create a Department of Health in the executive branch, separate from the present Department of Health, Education, and Welfare. It is imperative that the Federal Government take a more active and responsive role toward the health needs of all Americans.

Over the years, the health industry has expanded into the third largest employer in the country, providing jobs for 6 percent of the labor force. Its expenditures account for 8.6 percent of the gross national product, compared to 4.6 percent in 1950. An industry of that size and importance deserves the attention of a Secretary in direct contact with the President.

A lack of administrative coordination and an uncontrolled budget has left the Nation's health system in near chaos. The result, thus far, is that an increasing number of Americans cannot afford decent health services, particularly minorities, poor city dwellers, rural Americans, and the aged.

The reasons for this disparity are obvious. Hospital costs have risen dramatically since medicaid began in 1966. The average cost for a day in the hospital in 1966 was $40. Today it costs on the average of $124 per day. Private—nongovernmental—expenditures nationwide for personal health care services have risen from $19.5 billion in 1960, to $68.6 billion in 1975. Overall, a 60-day stay in the hospital has risen from $1,540 to $4,774 in 10 years, leaving medicare recipients liable for $3,234 more in hospital costs.

Over 40 million people in this Nation are still without any health insurance. Health officials say the reason for such inadequate coverage is the lack of appropriate health information available to the consumer regarding choice, use, and monitoring of health services, as well as the cost of coverage. The average annual cost for individual health insurance, including public and private insurance, has risen from $124.50 in 1960, to $551.50 in 1976.

Mr. Speaker, America needs a Department of Health. A seat in the President's Cabinet would make the Department of Health directly accountable for its actions, and would provide the impetus for a more constructive national health policy.

An independent Department of Health would eliminate the fragmented and wasteful operations in the various health offices of HEW. Accordingly, a Secretary of Health would provide the leadership and expert assistance needed to enforce a reliable preventive health program, that is, immunizations, protection against environmental hazards, and individual medical care.

My bill will eliminate the redtape of health policy decisionmaking by providing for the orderly transfer of all health functions in HEW in the new Department of Health.

The bill also provides for the development of a national plan to meet the Nation's health needs for the next 10 years.

An identical bill has been introduced in the Senate by Senator CHARLES MATHIAS of Maryland.

This Nation, which claims to have the "finest health care in the world," cannot continue to make such a claim as long as the existing system remains mismanaged and economically insecure. Congress must show its concern for the health needs of the people by creating a Department of Health.

CHILDREN'S SLEEPWEAR

HON. JAMES M. COLLINS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. COLLINS of Texas. Mr. Speaker, the recent ban on the use of Tris has brought an end to the first chapter in the continuing saga of Government intervention. Our liberal Congress has cost businesses and consumers millions of dollars but more important it has possibly exposed an unknown number of children to cancer. For all this, our children have received little in the way of measurable protection. While many Government agencies swear they never mandated the use of Tris and cannot be held responsible for the effects of Government regulation, the evidence before us points to the contrary. The Congress seriously erred in many instances.

First, the standard was apparently based not on a known number of deaths or injuries caused by sleepwear but rather on individual cases selected and studied at random which numbered only a few hundred a year. In a letter to me the Consumer Product Safety Commission—CPSC—said:

> Indepth investigations provide a description of the causal factors . . . However, because the indepth investigations do not constitute a statistically valid sample, the data base cannot be used to make estimates of the total burns that occur.

In 1973, 119 computers were installed in emergency rooms across the country in order to collect data on various accidents—the national electronic surveillance system. It was instigated to support the basic legislation but the system is now considered to be of little statistical value as the figures show:

Total estimated number of burn injuries related to sleepwear—all ages

Year:	Number of sample cases	Estimated number
1973	29	438
1974	20	828
1975	17	238
1976	23	418

Thus, the Commerce Department did not have and still does not have any accurate figures on the number of actual burned cases from children's sleepwear.

Second, this regulation was promulgated when there were not sufficient technological capabilities to produce a practical flame-resistant garment. Richard O. Simpson, former Chairman, has stated that the regulation was a technology forcing standard. Some fabrics were inherently flame resistant and there were other chemicals that could make a garment meet the standards. But Tris treated nightwear was the only marketable choice the industry had. The practical effort of the standard was to mandate the use of Tris. The Commission, then, forced the use of Tris without ever thoroughly testing for toxic or al-

lergic effects. They were warned on many occasions that hasty Government action would be bad for all. Below are excerpts of letters from the Carter Co. to various Government agencies:

February 26, 1970:

Within the framework of current technology, there is a strenuous likelihood that durable flame retardant chemicals would lead to allergenic problems affecting many more wearers than flammability itself.

December 4, 1970:

We further strongly urge the Department of Commerce to arrange for additional testing through government agencies which would determine the dermatological effects of appropriately treated knit fabrics.

January 14, 1971:

Home wear testing indicates the strong possibility of a very serious skin rash problem when treated fabric is exposed to urine. We are also seriously concerned about toxicological dangers since children frequently chew or suck on their clothing. While we ourselves are following up on these two problems, we feel that further research should be undertaken by appropriate government agencies immediately.

May 17, 1971:

In the light of this experience, we would be remiss, I believe, to release the production trial garments without some assurance that no significant portion of the wearers would be adversely affected.

Furthermore, as Dr. Harris testified before the Commerce Committee's Oversight and Investigations Subcommittee, "when the information first became available, Dr. Ames' mutagenistic tests and other tests in Columbia, the CPSC basically ignored the information . . . They did nothing to try to reduce the levels used in children's sleepwear or even to voluntarily ask the industry to move away from this chemical to perhaps a safer one.

I can only express my sincere disappointment at former Chairman Simpson's statement "In hindsight, I'd do the same thing again." This Government boondoggle was not unforeseeable. It is typical of regulatory mandates that are neither supported by statistical data showing a need for Government intervention nor thoroughly investigated for possible future effects. What this country needs is less government not more. In this case alone, our Consumer Product Safety Commission increased the cost of garments 32 to 35 percent, decreased its wear life by 50 percent, and possibly exposed millions of children to cancer.

We have too much government in America. We legislate when legislation is not needed. Let us have a thorough review of the history leading up to the children's sleepwear mandate for cancerous chemicals. Let Americans have freedom of choice as to how they live and how their children live.

PERSONAL EXPLANATION ON MISSED VOTES

HON. LEO J. RYAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. RYAN. Mr. Speaker, on June 23 and July 14, I was absent when the House voted on two pieces of legislation, on which I would like to be recorded. Had I been present, I would have voted as follows:

Roll No. 375—June 23, 1977, H.R. 7797, making appropriations for Foreign Assistance and related programs, was agreed to by a vote of 208 to 174: "Yes."

Roll No. 416—H.R. 2777, July 14, 1977, providing for creation of the National Consumer Cooperative Bank Act, passed by a vote of 199 to 198: "Yes."

JOINT TAX RETURN OF REPRESENTATIVE VOLKMER

HON. HAROLD L. VOLKMER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. VOLKMER. Mr. Speaker, I am today making public the 1976 joint tax return of my wife and myself, together with a statement of our net worth as of August 2, 1977. I appreciate having this opportunity as I believe that financial disclosure by all public officials is of utmost importance. I also welcome this statement in compliance with the newly enacted code of congressional ethics.

The material referred to follows:

1976 TAX RETURN

The 1976 joint Federal Tax Return of Harold L. and Shirley R. Volkmer, 715 Country Club Drive, Hanibal, Missouri:

Two dependent children: Elizabeth and John.

Line 6(f), total exemptions, 4.

Line 9, wages (Missouri House and Hannibal School District) $8,560.

Line 10, dividends, $10, exclusion, $10, net $0.

Line 11, interest income, $109.

Line 12, other income: Loss on law practice, $334, gain on rental property, $957. Net gain $623.

Line 13, total of above, $9,292.

Line 14, less adjustments: moving expense to Washington, D.C. $230.

Line 15(c), adjusted gross income, $9,062.

TAX COMPUTATION

Line 43, adjusted gross income, $9,062.

Line 44, standard deduction, $2,100.

Line 45, subtract line 44 from 43, $6,962.

Line 46, exemptions (4) x $750, $3,000.

Line 47, total taxable income, $3,962.

Line 16, Federal tax (from tax table), $616.

Line 17(a), $35 time the number of exemptions, $140

Line 18, balance (line 17c from line 16), $476.

Line 19, credits, none.

Line 20, balance, $476.

Line 21, other taxes (self employment tax), $126.40.

Line 22, total, $602.40.

Line 23(a), total Federal income tax withhold, $805.56.

Line 23(b), 1976 estimated tax payments, $200.

Line 24, total payments, $1,005.56.

Line 26, amount overpaid, $403.16.

Total 1976 amount asked in refund, $403.16.

NET WORTH OF HAROLD L. AND SHIRLEY R. VOLKMER

(As of August 2, 1977)

Assets

Cash on hand or in banks, $2,119.31.

Savings Account (Farmers and Merchants), $2,450.

Cash value of Life Insurance, $6,000.

Stock in Great River Marine, $1,000.

Law office (furniture, equipment, library, estimated), $2,000.

Automobiles (book value): 1975 Buick, $3,500. 1974 Pontiac, $2,500.

Missouri Legislative Retirement, $4,000.

U.S. House of Representatives Retirement, $2,491.49.

Furniture and personal property (jewelry, clothing etc. for family estimated), $4,000.

Notes payable to Harold L. Volkmer by Volkmer for Congress Committee, $14,850.

Rental Property value (Hannibal), including furnishings, purchased 1961 for $16,000, estimated value, $20,000.

Residences (estimated value): Hannibal (built in 1961 for $21,500, improvements 1961–1975, $10,000, $31,000, cost), $42,000.

Arlington (purchased January 16, 1977 for $77,000), $80,000.

Liabilities

Loans on Life Insurance, $5,500.

Loan on Rental Property (Hannibal), $7,621.56.

Loan from Farmers and Merchants on Hannibal residence, $36,332.47.

Loan from Kenneth and Julia Braskett (mother and father in-law), $2,500.

Loan from First Federal Savings and Loan of Arlington, Va. on Arlington residence, $55,000.

Totals assets, $186,910.82.

Total liabilities, $106,954.03.

Total net worth, $79,956.79.

REPUBLICAN TASK FORCE ON CAPITAL FORMATION

HON. WILLIS D. GRADISON, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. GRADISON. Mr. Speaker, the Republican Task Force on Capital Formation, which I had the opportunity to chair, recently issued its report on the subject of productivity and investment in the American economy. This report emphasizes the importance of increased capital formation to the American people in terms of its impact on wages, unemployment, and the achievement of social goals. I believe the findings and recommendations of the task force will be of interest to my colleagues and I would therefore like to insert our report in the RECORD at this point:

TASK FORCE ON CAPITAL FORMATION

FINAL REPORT, AUGUST 1977

The Task Force on Capital Formation was created under the auspices of the House Republican Research Committee in response to widespread concern about lagging investment and productivity in the American economy. The issue is of crucial importance because what is fundamentally at stake is the well-being of the American worker.

This report is the result of our study of the problem and it indicates first of all our judgment that concern about lagging productivity and investment is well-founded. We believe that the evidence points to the need for a more constructive policy towards savings and investment. Such a policy must contain two basic elements. The first element consists of steps to reduce and control inflation. The second is a tax system which will be favorable to economic growth. We believe it is essential that the tax reform package which will be forthcoming from the Administration contain measures designed to increase the rate of investment. The goals of simplification and equity

should receive high priority, but unless tax reform has positive effects on jobs and productivity, it will prove to be a cruel hoax to the American people.

WHY WORRY ABOUT CAPITAL FORMATION?

One way of gauging the problem is to look at the trends in objective indicators. For instance, productivity increases have slowed down dramatically in the past decade. Between 1966 and 1973, productivity increases in the private economy averaged 2.1%, down from an average of 3.3% per year in the 1949–1966 period. Growth in capital per hour of labor input, which is one of the factors which determines productivity, has also evidenced some deceleration. It averaged 3.1% per year in the 1948–1966 period, 2.8% per year in the 1968–1973 period, and appears to have fallen further since 1973 to an average 1.7%, after adjustment for cyclical factors.

Secretary Blumenthal cited another disturbing trend in his recent speech to the Financial Analysts Federation. "In recent years, the rate of capacity growth in manufacturing has slowed from 4.6% over the period from 1948–1968, to 4% from 1968 to 1973 and 3% from 1973 to 1976. One consequence of this lagging investment is a decline in productivity growth that means less growth in real incomes and increased propensity to inflation."

Concern over these trends has been reinforced by the fact that capital spending has not recovered from the recent recession in pace with the general economy. As of the first quarter of 1977, real spending for nonresidential fixed investment was still some 8.4% below its pre-recession peak level twelve quarters earlier.

But merely citing figures fails to indicate adequately the importance of capital formation in our economy. Too often, capital formation is discussed in abstract terms as if it were far removed from the more pressing economic problems of inflation and unemployment. Nothing could be further from the truth.

How much we as a nation invest will determine to a great extent how fast real wages increase and how rapidly standards of living improve. Paul McCracken aptly summed up the importance of capital formation to the average worker in this way. "Whether we get investment activity more solidly based in the American economy probably will not make a great deal of difference in the way residents of the carriage district or occupants of mahogany row offices live. It will make a great deal of difference to those behind the store counters or out in the factories who aspire to the doubling of material levels of living each generation which the American economy has historically delivered."

Capital formation has important effects on living standards in other ways as well. The achievement of major social goals will require large amounts of capital over and above that needed to expand our productive capacity. Goals such as a cleaner environment, a safer workplace, and development of alternative energy sources could be thwarted by insufficient savings and investment.

We wish to emphasize that we do not consider capital formation a goal in and of itself. Rather, increased capital formation is important because it means more jobs, better paying jobs, and the achievement of social goals. It is with the aim of promoting the achievement of these goals that we present our recommendations for a more constructive policy towards capital formation.

As a precondition for a new growth-oriented policy towards investment and savings, we find that certain economic myths must be refuted. These myths have gained a secure foothold in Congress and seem to be the guiding force behind much of the economic policy emanating from Washington.

We must somehow alter the misconception that more consumption is always good for the economy, while more savings is necessarily bad. We must break away from the idea that profits are always a rip-off for the consumer and contrary to the best interests of workers. A fundamental change in attitudes must go hand in hand with the policy recommendations discussed below.

INFLATION

More than any other factor, we find that the current weakness in investment is attributable to inflation. In fact, it would be difficult to overstate the devastating effects of inflation on investment and entrepreneurship.

Inflation makes extremely difficult the planning which is essential for rational investment. It destroys confidence. It makes investment projects riskier since relative price dispersion increases with inflation.

Inflation causes serious distortions in both the personal and corporate income tax systems. It also aggravates the bias towards debt as opposed to equity finance which is already built into our tax system.

Our experience in 1974 and 1975 also demonstrated that unchecked inflation can in itself lead to recession. This lesson has not been lost on either businessmen or consumers, which accounts for the general unease over any signs that inflation may be accelerating once again.

Discussions about capital formation have tended to center on possible ways to stimulate savings and investment through the tax system. This approach should not be neglected, but we assign primary importance to fiscal and monetary policies which will contribute to the achievement of noninflationary growth.

A separate task force of the Research Committee, the Task Force on Fiscal Policy, has issued detailed recommendations which, if implemented, would go a long way towards assuring a non-inflationary fiscal policy. We strongly concur in their recommendation that we should be aiming to achieve a balanced budget as the economy enters the fiscal full-employment zone, which is currently between 5% and 5.5% unemployment. We note that based on the administration's most recent economic projections, this implies a budget approximately in balance in fiscal 1980. While we applaud the President's promise to balance the budget, we are disappointed that the President's actions on spending to date have not inspired much confidence that this goal will be met.

It is important to note the strong connection between fiscal policy and capital formation. A balanced budget at full employment has the effect of freeing more of the economy's savings for use to create jobs in the private sector, in addition to its salutary effects on inflation.

With regard to monetary policy, we strongly endorse the announced policy of the Federal Reserve Board gradually to reduce the growth rate of the monetary aggregates to non-inflationary levels. Past reductions in the announced targets for aggregates have provided assurances that the Federal Reserve Board will remain firm in fighting inflation, and we believe that further gradual reductions will have beneficial effects on actual inflation and on expectations.

It would be foolhardy, we believe, to follow the advice of those who say we can lower interest rates, and thus increase investment, by increasing the monetary growth rates. This policy can at best temporarily lower interest rates. It will inevitably be self-defeating in the long run and most likely ineffective in the short run as well, due to adverse effects on inflationary expectations.

TAXES

One of the principal tools at society's disposal to influence the rate of capital formation and economic growth is the tax system. Among the proposals in this area are faster depreciation, indexing of capital recovery allowances, reduction in corporate tax rates, integration, and an expanded investment tax credit. The report of the Task Force on Capital Formation of the House Ways and Means Committee analyzes the major options available in altering the tax system to encourage capital formation.

We have considered these options and consulted with experts in the field from academia, business, and government. We have found that opinions vary widely as to which of the various tax reform options would be best. Therefore, we have no single solution to propose. Rather than argue the case for or against any specific tax proposal, we stress that what counts is the overall impact of the tax structure—viewed as a whole. Rather than "fine tuning" of the tax system we might gain the greatest benefit for the American people by straightforward, across-the-board tax cuts for individuals and businesses.

We do offer the following in the way of general principles which we believe should be observed in designing tax reforms to stimulate growth. In offering these principles, we hope to contribute constructively to the review of tax policy which is currently ongoing within the Administration.

1. Discussions of the effects of the tax system on economic growth are often confined to the corporate income tax. We find that this is too narrow a focus. The personal income tax structure is also important. For example, investment in education and training by workers is a major determinant of economic growth. The returns from this type of investment, often referred to as human capital, are taxed as wage and salary income. It is the total tax burden on productive activity, at both the corporate and personal levels, which should be considered. Furthermore, savings by individuals are influenced by tax rates, and such savings affect investment not only in corporate securities but directly in farms, homes, and small businesses.

2. The level of taxes with respect to GNP determines the overall tax burden. No matter how well-designed a tax system is, a higher burden of taxes with respect to GNP will still involve disincentive effects. The ratio of government expenditures to GNP has been generally trending upwards since 1930. A continuation of this trend will have an adverse effect on economic growth. We urge the President to halt the upward trend in the ratio of federal expenditures to GNP while balancing the budget.

Continuing inflation causes unlegislated tax increases for both individuals and businesses. Congress has partially offset these increases but the distribution of these offsetting tax cuts has been haphazard in relation to the inflation-generated tax increases. Complete indexation of the tax system, while involving additional complexity, would insure that inflation does not act to drive up the ratio of tax revenues to GNP. We stress that indexation should in no way be considered a substitute for controlling inflation.

3. An argument which continually arises in discussions about capital formation is that tax changes designed to promote investment or savings necessarily make the tax system more regressive. This is incorrect because with any given degree of progression there are tax changes which can be designed so as to make the tax system more or less progrowth. In advocating the design of a tax policy which is more favorable to growth, we are not advocating that anyone be relieved of their fair share of the tax burden.

4. We recommend as a basic principle of equity that the government should not take more than half of any income. Thus we recommend that the tax reform package should include an elimination of all marginal rates in excess of 50%. By avoiding rates over 50%, we could reduce to a great extent the non-

productive activity which now is devoted to minimizing tax.

5. Integration of the corporate and personal income taxes is a possible tax change which has been in the forefront of discussion recently. We find that elimination of the double tax on all or part of the income arising in the corporate sector can be supported on equity grounds. However, we consider it advisible to proceed cautiously on integration of corporate and individual rates, because of possible adverse effects on capital formation.

Depending on the exact method of integration chosen, and there have been many variants suggested, integration could lead to increased pressure on corporations to pay out more of their income as dividends. This effect could be particularly pronounced if integration were combined with an end to capital gains treatment. While increased rates of payout are not necessarily adverse to capital formation, they could be so and for this reason, the effects of any particular integration scheme need to be studied carefully.

6. We note with approval that the Administration is taking a critical look at all existing tax preferences to determine if their continuation can be justified. By broadening the tax base and reducing both corporate and individual marginal rates, elimination of unjustified preferences can be beneficial to economic growth. At the same time, the Administration has been inconsistent in proposing unjustified new tax preferences such as the solar energy tax credit and the insulation tax credit. We urge the Administration to avoid proposing new preferences as well as working to eliminate unjustified old preferences.

7. The Administration has indicated that it may propose an end to capital gains treatment. This preference should be reexamined along with others and its elimination may be consistent with a pro-growth tax reform package. This step could contribute a great deal to simplification. It is important to realize, however, that capital gains are not limited to the very rich. Edwin Cohen has noted that in 1975, 48% of capital gains were reported in returns of individuals with adjusted gross income of less than $30,000 while 63% of all capital gains were reported in returns of individuals with adjusted gross income of less than $50,000. This fact needs to be carefully considered in designing compensating tax reductions to avoid substantial tax increases on the middle class. This is particularly true in view of the fact that permament tax reductions enacted in 1975 and 1977 have not even offset inflationary tax increases for those with incomes above $15,000.

It is also important to realize that without inflation adjustments, the elimination of capital gains treatment will result in taxing as ordinary income fictitious gains resulting from inflation. Taxation of capital gains in full without allowing for inflation adjustments would be inherently unfair, as it would actually amount to a capital levy, rather than an income tax.

8. While to a great extent the factors inhibiting investment are common to businesses of all sizes, small businesses also face some special problems. To cite two examples, the burden of complying with federal regulations and the skyrocketing costs of product liability insurance have hit small businesses particularly hard. Because of these special problems, we recommend that careful attention be devoted to the needs of small businesses in the upcoming tax reform package. Alternatives which should be considered include reduction of the lower bracket corporate rates and an increase in the surtax exemption level.

9. Finally, the timing as well as the substance of tax changes is important. Judicious use of phase-in provisions can help to minimize potential disruptions, as well as allow the close tailoring of revenue effects to fiscal policy needs.

GOVERNMENT REGULATION

In many sectors of our economy government regulations play a necessary and socially beneficial role. Excessive regulation, however, is counter-productive and creates impediments to investment. Similarly, conflicting regulations and uncertainties as to future regulations act to inhibit the development of long range investment plans. Excessive regulation also leads to the inefficient use of resources which means that what investment does take place will be less productive.

Federal involvement in the energy field is an extreme example of how excessive government regulation can discourage investment and production. This situation will be greatly aggravated by the new layer of controls and taxes which the President has proposed to enact on top of existing regulations. Both legislative and administrative action are required to relieve the burden of excessive regulation. Initiatives like that recently announced by the Administrator of OSHA to reduce employer recordkeeping and reporting requirements and to exempt very small employers entirely from recordkeeping requirements should be encouraged. To insure proper legislative attention to the question of federal regulations, Congress should enact comprehensive sunset legislation to mandate periodic review of every federal agency and function.

Fiscal policy, monetary policy, regulatory reform, and tax reform are all essential elements of a constructive policy towards investment and productivity. The greatest obstacle to such a constructive policy is a lack of understanding about the role of investment and savings in our economy. We will continue to take the case for action to increase investment and productivity to the American people. We are confident that if the impact of capital formation on inflation, unemployment, and improved living standards becomes better understood, the American people will demand that Congress institute the necessary policy changes. As Republicans we favor permanent tax cuts which will produce a tax system which viewed as a whole will encourage economic growth and the achievement of social goals.

AMATEUR TRADE TEAM HURTS CONSUMERS

HON. JOHN N. ERLENBORN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. ERLENBORN. Mr. Speaker, the penalty for inexperience is often great, and in the case of the Special Representative for Trade Negotiations we hope the impact on footwear consumers will not be unbearable. President Carter's Special Trade Representative—STR—Robert Strauss, may be a politically astute Texas lawyer and former Democratic Chairman, but he is devoid of international trade experience. The present STR team is woefully amateurish compared to the Herter-Blumenthal combination of the early 1960's, which possessed both experience and stature in the international field.

My attention was drawn to this problem when I read Assistant STR Stephen Lande's statement on the recently negotiated Korean and Taiwanese orderly marketing agreements—OMA's—on footwear. To my amazement, Mr. Lande told the press that this administration had not analyzed the possible consumer costs of these import cutbacks Mr. Lande surprised observers by saying that such a study would have been "very difficult."

This is a rather startling admission from an administration that has been clamoring for a consumer protection agency. Moreover, similar studies have been made in the past. They indicate that mandatory quotas on footwear would cost consumers between $400 million and $1.7 billion.

The STR's lack of attention to the consumer impact also runs counter to the Trade Act of 1974, which states:

> The President shall take into account . . . the effect of import relief on consumers (including the price and availability of the imported article and the like or directly competitive article produced in the United States) and on competition in the domestic markets for such articles.

Protectionism in the form of quotas is always costly to consumers. The administration claims to have avoided protectionism by rejecting the tariff rate scheme suggested by the International Trade Commission. However, observers are just now beginning to realize that the mandatory quotas forced on the two shoe-exporting nations are protectionism in its worse form.

We must be realistic—OMA's are involuntary quotas. As the Washington Post in its May 20 editorial pointed out:

> A U.S. negotiator tours the Third World countries of the Pacific, accompanied by a delegation from the U.S. footwear manufacturing industry, browbeating governments into restricting competition.

The President cannot for long ostensibly espouse the principles of open trade, as he did at the London economic summit, while his principal trade adviser travels around the world imposing OMA's As Treasury Secretary W. Michael Blumenthal, the President's chief economic spokesman, has warned, the proliferation of OMA's would bring about defacto quotas, and, I might add, higher prices.

Barry Bosworth, Director of the Council on Wage and Price Stability, commented upon the significant inflationary factor of OMA's in his recent confirmation hearing. Coincidentally, a Congressional Budget Office study released July 1 cited OMA's as a cause of inflation, because they reduce the aggregate supply of goods.

Adding fuel to the fire, the President now wants to replace the consumer watchdogs within various Federal agencies with a single consumer advocate. In other words, department and agency officials can forget about inflation, and any other consumer impact of their actions and decisions. The STR's lack of concern about consumers is about to become official policy.

THE NEED FOR TV EDUCATION

HON. BARBARA A. MIKULSKI

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Ms. MIKULSKI. Mr. Speaker, the July 26 Wall Street Journal carried an extremely thoughtful essay by Horace Newcomb, associate professor of American studies at the University of Maryland, regarding the need for education of the public to the nature of the television medium.

While I do not agree with Professor

Newcomb's view that the public campaign against TV violence will lead to attempts at program censorship, I do believe his article makes an important contribution to the ongoing dialog regarding television programing. For that reason, I commend Professor Newcomb's observations to the attention of my colleagues:

[From the Wall Street Journal, July 26, 1977]

THE NEED FOR TV EDUCATION

(By Horace Newcomb)

Television has become a powerful cultural force in America, yet for all its undeniable influence we still seem unable to decide whether its impact is good or bad, healthy or unhealthy. Moreover, we seem unwilling to take the step that would allow us to coexist more easily with TV: educating ourselves and our children about television.

A few courses teach the use of portable video equipment, and many colleges offer courses in the context of TV's cultural implications. But these do not deal with problems at the level that concerns parents and teachers.

We have avoided these problems because we have been continually embarrassed by television—ashamed of our fascination with it, the hours we've spent viewing it, in some cases our actual dependence on it. Like discussions of sex, we have avoided serious discussions of television with our children, and when we have gotten riled up it was usually over something like TV violence.

Indeed, crusaders against TV violence have had a good year. Action for Children's Television joined with the PTA and the AMA in a national campaign, holding hearings in major cities to alert the public to the alleged menace of fictional violence. While they are by no means convinced that the war is over, most of them seem to think that a major battle has been won. They think that they have proved that the network can be made to respond if enough public pressure can be applied where it really hurts, to advertising revenues and public good will.

CAMPAIGNS AGAINST INDECENCY

But it is the classic Pyrrhic victory, brought on by the classic liberal dilemma. Already campaigns are being mounted against all other sorts of real and imagined sexuality, against the use of profanity, against certain political points of view and against all other sorts of real and imagined "indecency."

Thus, leaders of the fight against violence soon will find themselves called upon to join these battles, and more than likely they eventually will find themselves levelling charges of censorship and manipulation against former allies. It's a familiar pattern in war, politics and the wars of cultural politics.

Actually, what appeared to be a frontal attack was a rear guard action, fought from a position of fear. The victory, then, is symbolic not of new power over the networks, but of yet another abdication to them. Like the push for "pro-social" programming, it leaves the final decisions over content in the hands of network executives, their advisers and advertisers.

The only alternatives are to avoid television altogether or exercise careful parental control of what comes into the home. And most parents, especially those who reject the notion that no TV should be in the home, are quick to admit that they make subjective program choices. They determine what to watch in terms of available time, habit and attraction to a star, rather than on an informed understanding about what might be acceptable for them or their children.

What is needed, therefore, is massive public education of a very basic sort, beginning in kindergarten and extending through high school.

We can immediately help kindergarten children arrive at answers to some of their most pressing questions. How is television transmitted? Are those people really in that box? Is what I see on the screen happening now, this minute, or was it filmed long ago? How does the film show me the picture now? We can discuss the relationship of cartoons to live action. We can talk about the physical distortions that appear in commercials. We can help students understand why toys do not perform for them as they do for the children on television.

Different versions of these questions can be worked into the curriculum at almost any level.

Questions for high school students should deal with the realities of the news. Or about the manipulation possible in documentaries as well as in commercials. About why real life political and social systems do not work as they appear to work in television series. About why real families do not seem to be able to solve their problems as easily as television families.

Entire courses need not be devoted solely to these topics. But I do think it possible that some time could be devoted to such questions during every school year and for optional courses to be available for advanced high school students.

The model for such an approach is the language and literature curriculum. We expect literacy to give the student some control over the language. We use literature to examine basic human questions. Even so, we generally accept the fact that not all literature is suitable for children.

Yet television demands no essential literacy level. Children view "adult" programs from infancy. So far we've done nothing about it except try to find out how they've been hurt, and to make those bad people in New York and Hollywood stop hurting them.

If we expect to have control over television we must understand television's special qualities. Instructions can cultivate an awareness of this richness and variety, so that children neither accept it all uncritically nor feel ashamed of enjoying it.

CREATING AUDIENCE AWARENESS

The goal of such a curriculum would be creation of a critically aware audience. Young children will learn to make distinctions. They probably will not choose to forego all violent programs, but they will be able to think about what they see rather than merely react to it. In a matter of years perhaps we will have developed an audience capable of making informed judgments beneficial to its own children.

Robert Lewis Shayon wrote in a collection of television criticism that, "That critical spirit is the supreme manifestation of human intelligence which sets man off from the animals. It is the world's best hope." Abandonment of this spirit in the face of television, its replacement with our pathetic displays of embarrassment and fear and sputtering outrage, will someday intrigue scores of sociologists and educators.

Meantime, we should begin to nurture the critical spirit in our children so that they unlike their parents will deal creatively and imaginatively with television. In the end neither the networks nor the crusaders will control television. It will be controlled by an audience of alert and capable critics who insist upon public responsibility.

CONCEDING DEFEAT IN EUROPE

HON. LARRY McDONALD

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. McDONALD. Mr. Speaker, the defeatism and retreat of the Carter administration becomes more apparent as on one hand as the list of weapons and weapons systems cancelled grows longer, while on the other, the retreat from Europe and Asia, in order to match our reduced capabilities to respond to attack, goes on. Thus, we announce retreat from Korea, cancel the B–1 bomber and now we prepare a strategy of partial surrender in Europe.

A recent newspaper column by Evans and Novak that appeared in the Washington Post of August 3, 1977, reveals that in place of having forces second to none in Europe, we are going to concede one third of West Germany to the U.S.S.R., in the event of an attack, and let them face the "political consequences" of world opinion, U.N. disapproval and U.S. mobilization. And, we all remember how effective world opinion was in saving Hungary in 1956 and Czechoslovakia in 1968 do we not? The U.N. in both the cases of Hungary and Czechoslovakia did nothing.

Lastly, U.S. mobilization will mean little to the Soviets. The U.S.S.R. is prepared to fight a nuclear war and win. We are not prepared to fight a nuclear war and survive. Mr. Brzezinski and the whole National Security Council ought to go back to school and learn some history. There is little time left to redress the balance.

The column by Mr. Rowland Evans and Robert Novak follows:

President Carter late this week will be presented by his national security advisers with a new defense strategy that secretly concedes one-third of West Germany to a Soviet invasion rather than seek increased defense spending, which these advisers say would provoke Moscow and divide Washington.

PRM–10, the Carter administration's top-secret strategic study, suggested that this policy could be made palatable to Western Europe by simply not admitting its implications. This course was wholly adopted in high-level meetings July 28 and 29 by Zbigniew Brzezinski, the President's national security adviser. There was dissent from the senior officials assembled.

The strategic policy paper to be given the President (about three pages of single-spaced typing) makes no mention of surrender or duplicity in central Europe but talks of a commitment to a "minimum loss of territory" in NATO. To achieve a broader perspective Carter ought to look at the minutes of the July 28–29 meetings of his Senior Coordinating Council (SCC) on national security.

The SCC agreed on a 3 percent annual increase in defense spending, fulfilling Carter's promise to his NATO allies earlier this year. But, according to verbatim notes taken by one of the participants, Brzezinski declared: "It is not possible in the current political environment to gain support in the United States for procurement of the conventional forces required to assure that NATO could maintain territorial integrity if deterrence fails. Therefore, we should adopt a 'stalemate' strategy. That is, a strategy of falling back and leaving the Soviets to face the political consequences of their aggression."

Brzezinski went on to declare that these "political consequences"—world opinion, U.N. disapproval, U.S. mobilization—would help deter a Soviet invasion. There was no dissent from those present, including Vice President Mondale, CIA Director Stansfield Turner, Chief Disarmament Negotiator Paul Warnke, Deputy Defense Secretary Charles Duncan and Joint Chiefs of Staff Chairman Gen. George Brown.

Brzezinski continued: "We agree there

must be a gap between our declared strategy and actual capability. We cannot for political reasons announce our strategy." Again, there was no dissent, though some officials voiced the opinion there would be hell to pay if the Germans learned what was happening.

All this follows the script of the June 20 draft of PRM–10, which lists four options for lower-range defense spending. Each would stop a Soviet offensive at a line formed by the Weser and Lech Rivers, surrendering about one-third of West Germany (including Saxony and most of Bavaria).

These four options, according to PRM–10, do not "plan" to stop "a determined Warsaw Pact conventional attack. . . . If the Soviets persist in their attack, a U.S.-NATO conventional defeat in central Europe is likely." Yet these options are certainly not rejected out of hand.

"Many of the adverse political implications" of the reduced defense options (such as independent German rearmament or, conversely, European accommodation to Moscow) "probably could be avoided if the U.S. continued to publicly support" present strategy. Adverse reactions by Western Europe "could be signficantly softened . . . if the U.S. were to avoid any statements to the effect that a loss of NATO territory would be acceptable."

PRM–10 predicts any increase in defense spending would generate "divisive debate" and warns an across-the-board hike in defense capability "is likely to find little domestic support." In general, the options calling for decreased strength are seen as causing less trouble; in particular, the option calling for approximately the present military level but with less sustained power in Europe is described as "probably the most anodyne [option] in terms of its domestic impact, unless it were only described as a lowering of our sights."

These views were implicitly accepted last week by Brzezinski and the other senior officials. So the President is about to adopt a policy boiling down to this: Instead of seeking greater defense spending to defend central Europe, rely on political pressures to deter Moscow while secretly conceding a military defeat. Whether this reflects a "political environment" as claimed by Brzezinski, it certainly reveals the environment within the Carter administration.

A VISIT WITH MAKARIOS RECALLED

HON. C. W. BILL YOUNG

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. YOUNG of Florida. Mr. Speaker, on August 3, 1937, with the death of Archbishop Makarios of Cyprus, Americans of Greek descent throughout the Sixth Congressional District of Florida paused to mourn his passing. Some had known the prelate as a boy in their native Cyprus. Others had befriended him when he had come to the United States as a young priest to study. Most recalled his visit to Pinellas County in October 1974, as the then exiled President of Cyprus, and his resolve to return to his homeland in an effort to work for a united and independent Cyprus still burns in their hearts.

Most recently, James Scofield, the chief librarian of the St. Petersburg Times, visited with Archbishop Makarios in Cyprus. Mr. Scofield was there as press secretary for an AHEPA fact-finding mission, and yesterday he recalled that visit for local residents:

A VISIT WITH MAKARIOS RECALLED

(By James Scofield)

Archbishop Makarios appeared paler than usual when we met with him in his presidential office in Nicosia on June 24.

But if you did not know, you would never have guessed he had suffered a serious heart attack in April.

He was alert, smiling and seemed to relish the opportunity to reminisce about his days in the United States, to ask about old friends and to discuss the critical issues facing a divided Cyprus.

During the 45-minute meeting, he told us of his concern about the lack of international initiative toward solving the Cyprus crisis. He said that the political instability in Turkey "should not be used as an argument to justify Turkish unwillingness to engage in meaningful negotiations." He said that Cyprus "cannot be a victim to the chronic upheavals and problems within Turkey."

Makarios pledged to continue "for the days which God will grant me" his personal struggle "for a united, sovereign and independent Cyprus free of occupation by aggressor forces." He said he wanted majority rule for Cyprus with guarantees for Turkish Cypriots" so that together we can build a great nation."

But he wondered aloud why the human rights violations against Greek Cypriots by Turkish soldiers reported by the European Commission of Human Rights to the Council of Europe did not seem to be of great concern to the United States government, which had proclaimed its concern for human rights elsewhere.

He expressed his gratitude to the American people and especially to Congress for "their support and belief in our cause."

These words reminded us of his statement in an explosive interview given to The St. Petersburg Times in October 1974, during his visit to the Tampa Bay area. He said then: "I am optimistic because I believe in the moral power of our cause." He was preparing to return to Cyprus. Asked if he would return as president, Makarios smiled confidently and said: "I think so." He did in December.

During the traditional photo-taking at the conclusion of our Nicosia meeting, Makarios showed more public relations flair than most government leaders by helping position to best advantage those photographed with him and by instructing the chuckling photographers just how to shoot the photos. They cheerfully followed the directions and the pictures turned out fine.

This brought to mind the humorous incident in 1974 when he was posing for a photo with Jack Barrett, St. Petersburg Times artist, who presented the archbishop with his portrait of Makarios that had appeared on the cover of Crossroads—The Times magazine of religion.

The archbishop told Barrett: "Thank you so very much. It certainly flatters me." Then he took note of Barrett's beard. "I certainly like people who grow beards. My, you look like a miniature Makarios," he laughingly told Barrett as he looked up at the much taller artist.

Mr. Speaker, Wednesday night, and again this coming Sunday, services in memory of Archbishop Makarios will be held in Greek Orthodox churches throughout Pinellas County. We know that in death the Archbishop has found the peace he could not bring to his troubled land. As his people pause, it is fitting for us, too, to honor this man, to pray with his flock that his dream of a sovereign Cyprus may be realized, and especially that "his memory be eternal."

TOWARD A NATIONAL ENERGY POLICY

HON. ROBERT W. KASTEN, JR.

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. KASTEN. Mr. Speaker, throughout this week the House of Representatives has been debating one of the most important pieces of legislation to come before us in a long time. H.R. 8444, the National Energy Act, is the first major step toward enactment of a comprehensive national energy policy.

The bill is 580 pages long and represents the collective work of five major standing committees. H.R. 8444 embodies 113 separate legislative initiatives. Its size and complexity make it difficult to understand; yet its mandate and ramifications for our future life on this planet will be experienced by each and every citizen.

It was not until the Arab embargo and OPEC's success at controlling world petroleum prices that Americans were forced to come to grips with a grim set of statistics. Actually, the figures and their disturbing significance had been present for years. Few heeded their warning. The United States, with 6 percent of the world's population, was consuming one-third of the world's energy. More ominous, during the decade of the sixties, U.S. dependence on foreign imports for a critical share of its energy supply increased steadily. In 1976 imports were 7.3 million barrels per day or 42 percent of U.S. oil demand.

The costs of dependence to both individuals and to society were vividly registered when the embargo was imposed. Energy dependence contributed to one of the worst unemployment cycles in American history, prices soared, gasoline lines stretched for blocks, and the specter of rationing loomed in the background.

For the first time Americans realized the far-reaching significance of energy to their lives, and the stakes were high. Without adequate supplies of energy, the economic structure of the country began to shake, and the reverberation from that quake will not be forgotten soon. A viable economy to employ millions cannot survive without energy. A healthy agricultural economy to feed America and the world's starving millions will collapse without energy. Investment, growth, jobs, standard of living, and food production are essential to the American economic system. Without adequate supplies of energy, each will slowly wither.

In many ways, the dark days of the Arab embargo seem long past. But, the message is inescapable. No longer can Americans take energy for granted. No longer can we continue a policy that discourages exploration, development, and production of domestic resources. No longer can we live in a world of unlimited choices.

Quite the contrary is true. Options are indeed limited, and their price is high. A population of 216 million with an insatiable energy appetite has reached the

point when supply can no longer keep pace with demand.

This realization dictates a fairly simple set of policies. Demand must be curbed; energy conservation must be encouraged. Supply, particularly domestic supply, must be increased. The means to achieve those policy goals, however, have formed the basis of the debate we have been engaged in this week.

HOUSE ENERGY BILL—A GREAT DISAPPOINTMENT

President Carter's energy program, submitted to Congress April 20, provided a framework from which we could begin to draft a comprehensive energy program for the Nation. But, it was a framework only.

It was our hope that through the committee process and floor debate, the President's proposal could be improved and balanced so that the end product would be a truly comprehensive policy to guide the Nation's energy future.

That hope gradually faded. It became vividly apparent that debate on the most important bill before the 95th Congress would be so structured that little meaningful opportunity would be provided for the general membership of the House to work its will. Instead, we are confronted with a parliamentary situation that excludes reasonable opportunity for legitimate efforts to improve and strengthen the bill.

MAJOR FLAWS IN COMMITTEE BILL

Thomas Jefferson once made the sagacious observation, "Were we directed from Washington when to sow and when to reap, we should soon want for bread."

The President, and now the majority in Congress, will have us adopt an energy policy that is to be directed from Washington. I fear that Jefferson's advice will ring true again. The energy plan, as embodied in H.R. 8444 assures us of more Government regulation, more taxation, higher prices, and little guarantee that energy supplies will increase.

H.R. 8444 is not an energy bill. It is a tax bill. It proposes to further reshape the tax code into a punitive device—admonishing citizens for "gluttonous" energy consumption, burdening business with increased costs of operations, and flogging the energy industry for insufficient production.

It is a negative program that lays the entire burden for solving the energy problem on American consumers. While it may force conservation, it does little to increase energy supply which is absolutely essential if we are to reduce our dependence on foreign nations.

If H.R. 8444 is enacted without sufficient changes, the American people will no longer have to worry about being "ripped off" by the energy companies. The Federal Government will be the culprit, reaping the windfall profits from their tax dollars and redistributing them at the direction of the bureaucracy.

A BETTER ALTERNATIVE

The committee bill represents half of an energy policy. There are elements in the package which are attractive and merit support. I believe that conservation must be a key element of our national strategy. Our wasteful use of energy has laced an incredible strain on our environment. Conservation is a quick, cheap source of energy. Not only does it buy us time to search for alternative, renewable resources, it also preserves our environment.

But, conservation is not enough. We must look to the demand side of the equation, and that is where I believe several key improvements could have been made to the committee bill.

NATURAL GAS PRICES MUST BE DEREGULATED

I am very disappointed that the House has chosen to retain price controls on natural gas. A recent study shows that deregulation would result in about 25 trillion cubic feet more gas production over the next 13 years than would the administration's natural gas price control approach. We have only to recall last winter's natural gas crisis to realize that increased supplies are desperately needed.

PRICE CONTROLS ON CRUDE OIL MUST BE REMOVED

As with natural gas, the committee bill retains price controls on crude oil. Instead, the cornerstone of the program is a crude oil equalization tax which is nothing more than an artificial device to raise the price of oil to the world market price. By using a tax rather than competitive market pricing, the plan fails totally to provide adequate incentives for new domestic oil and gas exploration.

While the committee has recognized half of the economic truth—prices can no longer be depressed without further depleting scarce supplies—they fail to recognize the obvious corollary which is to remove controls and let the price be determined in the marketplace. Gradual decontrol, coupled with an effective plowback provision as an incentive for further production, is the long-term solution. Congress should reject the short-term, politically expedient approach embodied in H.R. 8444.

REJECTION OF THE GAS TAX—A VICTORY FOR THE PEOPLE

Perhaps the only satisfaction of this week's debate was our rejection of two amendments to increase the Federal tax on gasoline. This tax was discriminatory and regressive. It would punish the worker who depends on his automobile and the rural American who must of necessity travel long distances by car. To punish in such a harsh fashion—with no assurance of any reduction in demand—makes absolutely no sense. Fortunately, the gas tax amendments were soundly defeated.

A MORE RESPONSIBLE AND WORKABLE ROLE FOR UTILITIES

One of the more disturbing sections of H.R. 8444 is part V relating to the role that utilities will play in meeting our energy demands. While modifications were made to the recommendations originally proposed by the President, this section remains a gross intrusion by the Federal Government into areas of responsibility previously reserved exclusively to the States. Rather than coercion, I believe the Federal Government should work with the States and utilities toward adoption of demand-saving, rate-making policies.

MINORITY SUBSTITUTE

While I wanted to briefly enumerate several of the key areas where I believe the Congress could have made responsible changes to the President's energy program, there are numerous other improvements that could have been made. These will be offered in the form of the Minority Substitute. While we have little hope for passing our substitute, I think the record will show that when given the opportunity, the President and his party in Congress, voted against an energy program which would provide the basis for a sound, comprehensive national energy policy—one that is less punitive on the individual consumer and one which would provide the basis for development of new sources of energy supply.

An analogy which accompanied the minority committee report expressed my feelings about H.R. 8444:

> As a Nation we once used whale oil for lighting, but coal gas later proved more efficient. Subsequently, we found that natural gas was cheaper and cleaner. Eventually our investiveness led to lighting our homes and doing many other things with electricity.
>
> If President Carter and those who have supported this program had been in charge, at the start of our energy evolution, we would now be taxing whalers and lamp manufacturers in order to reduce demand for diminishing supplies of whale oil; we might have never discovered coal gas; natural gas or electricity; our standard of living would be so far below what it is today that it would be unrecognizable in a modern context.

When the American people realize that this bill is not the energy policy they had expected, I am confident we will be back to do the job that should have been done this week.

KLEARTONE TO RECEIVE AWARD

HON. JEROME A. AMBRO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. AMBRO. Mr. Speaker, for over a decade, Sears, Roebuck & Co. has awarded it top suppliers with the coveted "symbol of excellence." In 1977, 592 companies will be so honored, 142 for the first time. I am happy to note that this year, one of Long Island's leading corporations, Kleartone Transparent Products Co., Inc., of Westbury, will be among the first time recipients.

Kleartone, a packaging supplier, is particularly honored to receive this award because the usual recipients are merchandise suppliers. The magnitude of the honor becomes apparent when one considers that Sears, Roebuck & Co. deals with over 12,000 suppliers on a worldwide basis. The committee chosen to select the top corporations represents all facets of Sears, Roebuck & Co., including retail, catalogue, plants, service, quality control, personnel, testing and merchandise development. The criteria used in selection considers several factors: Promptness of delivery, reliability, and initiative displayed in the development of new products. Sears, Roebuck & Co. intends the "symbol of excellence" to honor not only Kleartone's president, Alfred W. Levy, but each of the company's nearly 100 employees. It is their hard work and dedication to craftsmanship that has won Kleartone this special

honor. Reliability of service and goods is achieved only by teamwork; indeed, this spirit of employee cooperation has always been a valued characteristic of Long Island business and industry.

On August 23, there will be a luncheon at Salisbury Restaurant, Eisenhower Park, Long Island to celebrate Kleartone's acceptance of the coveted "symbol of excellence." Top representatives of Sears, Roebuck & Co., will be present as well as many of Long Island's leading government and business leaders.

Mr. Speaker, I am proud to call to the attention of my colleagues the superb achievements of Kleartone Transparent Products, its president, Al Levy, and its employees. I look forward to learning of their future accomplishments.

A SPECIAL RELATIONSHIP—THE UNITED STATES AND THE PHILIPPINES

HON. GLENN M. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. ANDERSON of California. Mr. Speaker, on July 4 the American people traditionally celebrate Independence Day, marking as it does the anniversary of our birth as an independent Nation: However, July Fourth also marks the Independence Day of another nation—the Philippines.

In the 32d Congressional District of California, which I am pleased to represent, Americans of Philippine ancestry comprise a strong and important community in an area known for its rich ethnic diversity. Since they celebrate the independence of both their native and adopted lands on the same day, it seems entirely fitting that July 4 is also known in our community as Philippine-American Friendship Day.

Our two nations have always shared a close relationship which has held steady over the years. The following article from the July 22, 1977 edition of the Los Angeles Times gives an excellent account of how special the relationship between the United States and the Philippines truly is:

ASIA LEGACY: FILIPINOS FEEL SPECIAL TIES WITH AMERICA

(By George McArthur)

MANILA.—Back in 1972, just before President Ferdinand E. Marcos declared martial law, there was an amazing popular movement to lead the Philippines into American statehood.

Within a year it signed up perhaps 7 million people willing to surrender the independence granted by the United States after World War II. This despite the fact that the movement's leader and guiding spirit, one-time congressman Rufino Antonio, was a man of modest attainments, no visable charisma and tainted by the ordor of political chicanery that touched almost all Philippine politicians of that time.

He was dismissed by some as a crackpot, branded a traitor by young nationalists and was a considerable embarrassment to both the Philippine government and the American Embassy.

He was not dismissed so lightly by the Marcos government. Immediately after martial law was declared, Antonio says, he was told by Defense Minister Juan Ponce Enrile to stop his statehood campaign.

But untold numbers of the country's more than 42 million people still carry the membership card of "Philippine statehood, U.S.A." The cards pledge, "I shall offer my life and soul in the pursuance of remedial reforms and as a last recourse without reservation of purpose of evasion I shall work and vote for the incorporation of the Philippines as a full-fledged and coequal state of the United States of America."

The membership records now molder in dusty cartoons stacked 8 feet high in two storerooms of Antonio's business headquarters—a showroom where Antonio makes his money selling Japanese motorcycles.

To those who question whether the statehood movement was real and voluntary, Antonio opens the storerooms and says, "Look for yourself. Pull out anything. Take what you want."

The files are real, box after box crammed with applications in their original mailed envelopes from all over the country. They came mostly from simple people, but they also came from doctors, lawyers, university students, priests, policemen, soldiers, businessmen and even cadets at the Philippine Military Academy. Antonio kept all the letters, even the scattering calling him such things as "A foul curse on the nation."

The letters accompanying some applications clearly showed there was a large element of simple protest in the movement. A multitude of Filipinos were fed up with the chaotic politics that made their outward democracy meaningless—a sentiment that made martial law popular initially when Marcos disarmed political goons, clamped down on crime and gave the impression that he would set the economy right (He hasn't. Real wages are lower now than five years ago.)

Still, the unabashed desire of millions to get back under the American umbrella showed that a lot of Filipinos believed they had a "special relationship" with the United States.

In government-to-government relations, that phrase has vanished in the past five years—the victim of declining American influence in Asia plus the professed desire of Marcos to steer a more independent international course, including recognition of the Soviet Union and China.

In the decades of generally benign colonialism and early independence that phrase was the stuff of commencement speeches and veterans rallies. No candidate—including Marcos—made it to the presidential palace without openly embracing the "special relationship."

Antonio contends that this basic sentiment is unchanged and that his statehood movement would grow even larger if permitted.

That claim is questionable in a volatile country where population growth is so rapid that 60 percent of the people are under 21. The Anti-American flavor of student demonstrations so prevalent before martial law clearly showed shifting attitudes. Public opinion samplings by the American Embassy, however, show undiminished affection for the United States. An overwhelming majority of Filipinos favors retention of the big American bases, for example.

As one university professor admitted somewhat ruefully, "The special relationship still exists whether we admit it publicly or not."

It derives largely from history—the shared World War II battles, liberal educational policies that were immensely welcomed in colonial days and the fact that such Americans as William Howard Taft and Douglas MacArthur were sent to the Philippines. Only a decade ago, Philippine historian Teodoro Agoncillo wrote that during World War II, the occupying Japanese "were in truth exasperated to realize that the Filipinos were hopelessly pro-American."

It derives also from an American economic presence of over $2 billion, two vast military bases at Clark Field and Subic Bay that account for about 5 percent of the nation's economic structure, and a continuing belief by most Filipinos in "the American dream"—something that seems to elude them at home.

Although President Marcos, in the wake of Vietnam, is increasingly paying more attention to his Asian neighbors and the Third World, his people still look eastward. While Marcos continues to haggle over a new base agreement, he adds that "the problem of the American presence in the Western Pacific is one the American people have to decide for themselves. But from our point of view the United States is not only welcome but encouraged to be here."

That sentiment is apparent to anyone visiting the countryside. It is somewhat unsettling when a young plantation worker descends from a coconut tree, his bolo chopping knife in hand, and asks a visiting American if, by any chance, he knows his sister in San Diego.

"You can't go anywhere in the Philippines without finding dozens of people with relatives in the United States," an American diplomat said.

Official census figures put the Philippine population of the United States at about 500,000. These figures are certainly conservative. Within a decade the Filipinos will probably outnumber the Chinese and Japanese to become the biggest Asian minority in America

The jammed U.S. consulate in Manila is jokingly known to some as "Ellis Island West," and has waiting lists seven years long for some categories of immigrant visas. Still, it issues 60,000 visas annually, half of them for permanent immigrants.

The ambassador's office commands a stunning view of Manila Bay, overlooking the very site where Adm. Dewey turned to his gunnery officer in 1898 and said, "You may fire when ready. Gridley," thus destroying the Spanish Pacific squadron and beginning the American military presence in Asia.

Since that time, virtually every American career officer has done at least one tour in the Philippines.

There are now, also, about 35,000 American civilians living in the Philippines, apart from the military establishment. It is one of America's largest overseas communities.

The embassy is unlike any other American overseas establishment.

"It is funny, but sometimes you get the feeling around here that the Filipinos think this is their embassy," one American said with a shrug.

This is what Charge d'Affaires Lee Stull calls "interpenetration." He says, "There is a vast network of expectations and obligations stemming from an intensive United States presence for over 80 years."

This network of expectations and obligations—plus a mutual defense treaty that no one questions—makes American relations with its former colony unique. It also places constraints on any Philippine president, including Marcos.

As one old American resident said, "Marcos can complain about tariffs and protest over 'irritants' and ask for more money for the bases and everybody says that's fine. It is part of the game. But he is much too smooth a politician to let it get out of hand and get offensive. He wants to keep that 'American connection' too."

"The base agreement legally runs until 1991. Discussions on a revised agreement were suspended after last year's U.S. elections, and the shape of future negotiations remains unclear. There is little pressure from either side to resume the talks.

The embassy is unusual in other respects. It includes the only overseas office of the U.S. Veterans Administration. Director Howard Price, who has succumbed to the lure of the islands and served four tours in Manila,

estimates there are 472,000 potential VA beneficiaries in the Philippines—survivors and families of the guerrillas and Philippine scouts who fought at Bataan and elsewhere during World War II.

Present yearly payments go to about 70,000 people and amount to $87 million. Philippine veterans are cared for in a $10 million hospital built by the United States. The hospital receives $2.1 million annually.

Although Japan is pressing hard, the United States remains the Philippines' biggest trading partner, as it has been since New England ship captain Ezekiel Hubbell landed in 1817 and later set up a trading firm.

"They like to do busineses with us," said an American businessman. "The government is trying to branch out, like buying an oil rig from Romania, but the individual businessmen prefer the United States. Half of them have degrees from Harvard or Stanford.

The tendency of well-to-do Filipinos to send their sons and daughters to the United States—President Marco's eldest daughter Imee was sent to Princeton—is a continuing part of the "special relationship."

The most striking monument to Philippine-American relationships is the American military cemetery at Ft. Bonifacio just outside Manila. It contains the graves of 17,000 World War II dead.

On weekends the green and peaceful site is a favorite spot for family picnics and the guest book at the gate shows that far more Filipinos visit the cemetery than Americans. It is also, by general admission, the biggest single tourist attraction in Manila.

"I have taken my children there many times," said Eduardo Vargas, a 53-year-old onetime guerrilla who now makes a living as a mechanic in the town of Angeles. "I want them to know how it was."

REACHING NATIONAL HEALTH GOALS

HON. WILLIAM LEHMAN

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. LEHMAN. Mr. Speaker, many claims are being made and many are being refuted about what a national health insurance system can and cannot accomplish. It is time for a realistic look at the contribution a reasonable national health insurance plan, like the health security program, can make to the much needed goal of providing adequate medical care to all Americans at manageable cost.

The average American spent $638 for health care in fiscal year 1976, equal to a month's income. Medical care inflation has been rising steadily since the end of the economic stabilization program in 1974 at a rate considerably higher than the general inflation rate. There has been double digit inflation in hospital care expenditures, which now comprise 40 percent of the Nation's health bill, for over a decade. More Americans are spending greater portions of their income on health each year. The percentage of the gross national product going to health has increased to the point where 8.6 percent of the U.S. GNP is involved, up from 8.3 percent last year, and reflecting a maior increase from the 5.9 percent of GNP devoted to medical care in 1965.

Many people cannot afford the heavy cost of illness.

Each year, 1 in every 25 Americans spends more than one quarter of his income on illness. The United States is unusual among industrial nations because it is one of the few such nations where, for a considerable portion of the population, medical care expenses can still result in financial ruin. Private insurance plans are available, but too expensive for many of those who need them most. Others are excluded entirely, due to past medical histories, age or other reasons.

Though Federal efforts such as medicare, medicaid, and the Veterans' Administration programs have helped to ease the burdens of some of those who are unable to purchase private insurance, there remain an estimated 22 million people, 12 percent of the U.S. population, with no health insurance whatsoever. Further, there are an additional estimated 19 million Americans with skimpy, inadequate coverage.

Many of the uninsured are poor. A majority of the rural poor do not qualify for benefits under medicaid. To make matters worse, medicaid, like medicare and much of private health insurance, encourages the use of hospital and other specialized care, rather than the primary care so desperately needed. When payments are not guaranteed, doctors are hard to attract, leaving 133 counties in the United States with no practicing physician.

Many unemployed persons and working poor are similarly not covered by any type of insurance. There are fewer doctors in the inner city areas than in the upper and middle-class neighborhoods. Poverty has been on the rise in recent years, and with poverty come increased health problems. Karen Davis, presently Deputy Assistant Secretary of the Department of Health, Education, and Welfare, has pointed out:

> Chronic illnesses limit the daily activities of the poor at a rate two and one-half times that of the nonpoor. Arthritis, diabetes, hearing and visual impairments, heart conditions, and hypertension are two to three times as prevalent among low-income families as those above the median income level.

And yet, it is these persons who find themselves without readily available basic care. The Health Security Act, which would cover physician visits for all Americans, would eliminate these inequities.

The U.S. infant mortality rate is significantly higher than those of a dozen other industrialized nations, and our life expectancy statistics also compare badly with other countries. It has been demonstrated that one of the few changes in medical care that would actually improve statistics like the infant mortality rate and life expectancy in the United States, is an increase in specific types of care for the poor, such as prenatal and infant care. These are precisely the types of care that would expand most under the health security program due to extended coverage to those of the poor and near-poor who are not now eligible for or able to afford insurance.

The high cost of health care is a serious problem for the Nation as a whole in addition to its effect on individuals. The advanced budgeting provision of the health security program would establish an effective means of controlling health care cost inflation.

The Health Security Act cannot do everything. If we want to dramatically improve the health of the average American, we are going to have to convince him to change some of his unhealthy habits: drive his car more carefully, watch his weight, cut down on his smoking, for example. We are going to have to stop polluting the air and the water. But health security can calm the fears of financial disaster associated with our present system. And, it can extend quality health care to those Americans who desperately need treatment, but cannot now afford it or find it.

There is a great deal that we can realistically expect from a proposal like health security. I hope the Congress will keep these benefits in mind and work for quick passage of this reasonable health insurance plan.

ARCHBISHOP MAKARIOS

HON. LUCIEN N. NEDZI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

The SPEAKER pro tempore. Under a previous order of the House, the gentleman from Michigan (Mr. NEDZI) is recognized for 5 minutes.

Mr. NEDZI. Mr. Speaker, Archbishop Makarios was a giant in the history of Hellenism as few have ever been.

His unexpected passing is a serious loss, not only to Cyprus but, I believe, to the world.

He was a remarkable man, the son of an illiterate shepherd, and he was a world figure for over 20 years. Only Tito remains from among the major Third-World figures who attended the Bandung Conference in 1955.

Many obituaries are being published of Archbishop Makarios, some accurate, some inaccurate.

I would like to submit for the RECORD an unusual down-to-earth interview conducted by the fiery Italian journalist, Oriana Fallaci, in September of 1974, and appearing in her book, "Interview with History":

ARCHBISHOP MAKARIOS

At a certain point I said to Makarios, "You remind me of Jane Austen's advice." Makarios smiled. "What advice of Jane Austen's?" "An intelligent woman should never let others know how intelligent she is." Makarios smiled again. "But I'm not a woman." "No, but you're intelligent, so intelligent that you're doing all you can to keep me from realizing it," I said. And then his gaze hardened, something in him arched, like the back of a cat preparing itself for combat. I too arched myself, waiting for the blow of his claws, and ready to give it back. The blow didn't come. With the same rapidity with which he had flared up, he regained his composure and went on with his story. "As I was telling you, I'm lucky. I know already what the newspapers will write when I pass to a better life. Last July I read such nice obituaries about myself. They gave me up for dead, remember? The cables to my ambassadors were nice too. The nicest came from

Lord Caradon, the last British governor of Cyprus and a great enemy. I met Lord Caradon in London. We got to talking about the old days when we used to quarrel over the British bases on Cyprus. I told him those bases had been good for just one thing: to give me refuge after the *coup d'état* and help me leave the island." Every time his mind wanders and he forgets Jane Austen's advice, you're a little sorry. You want to shout at him, "Pay attention!" And it goes without saying that in this interview his mind often wandered. Almost always. Which is one of the reasons I like Makarios.

I hadn't liked him before. Once I had even tried to show him that I didn't, with the result that I had received his blessing. It was in Athens, at the time of the wedding of Juan Carlos and Sophia. He was staying at the Grande Bretagne, and I was staying there too. One evening he came down to the lobby, and as soon as he appeared, all dressed up like an icon, shining with gold and jewels, and gripping his pastoral scepter, the lobby became a chapel. Some bowed till their noses touched their navels, some knelt on the floor, some tried to kiss his hand or at least his vestments. The only erect head was mine, very visible besides, because I had remained seated on a high armchair. The chair was situated between the elevator and the exit, and he noticed me at once. And his eyes pierced mine like needles of indigation, surprise, sorrow. Who was I? How did I dare? However, he continued his solemn advance, and, as he passed in front of me, he imparted to me that blessing.

Needless to say, I could have done happily without it. To the mind of a layman, he is irritating to say the least. Let us not forget that he represents the most solid fusion of the temporal power with the spiritual. He is like a pope who sits in the Quirinale instead of the Vatican; he is the head of the Greek Orthodox Church on Cyprus and the president of Cyprus. So, you never know whether to address him as a religious leader or a political one, whether to call him Beatitude or President, Archbishop or Mr. Makarios. Nor does the fact that he was democratically elected help you to forget a bitter reality: he gets those votes thanks to his relationship with heaven. For the peasants of Cyprus, voting for him is almost a sacrament. While handing in their ballots with his name, even the communists make the sign of the cross. And yet, yet . . . he's one of the few heads of state before whom it's worth the trouble to get to your feet if not to kneel down. Because he's one of the few with brains. Along with brains, courage. Along with courage, a sense of humor, independence of judgment, dignity. A dignity that approaches regality, and God knows where it comes from. The son of an illiterate shepherd, he guarded sheep until the age of twelve.

Many people cannot stand him. They accuse him, for instance, of devoting or having devoted too much attention to women, of being in no sense an ascetic. I believe it. They also accuse him of governing through lies, intrigue, and opportunism. And this I don't believe completely unless by lies you mean Byzantinism, by intrigue, elasticity, by opportunism, imagination. His character cannot be judged by the yardstick we use in the West. He does not belong to the West. He belongs to something that is no longer the West but is not yet the East, something that sinks its roots into a culture that is sophisticated and archaic at the same time, and which has mastered the art of survival. He has the gift of survival, gained and regained through fast stepping, contortions, cleverness, lucidity, cynicism. Four times they tried to kill him. Four times he escaped. Twice they sent him into exile. Twice he came back. And only once did he seem to have lost for good—after the coup of July 1974. Instead, those who lost were those who were thought to have won—as a result of that coup, the Greek military junta fell and now finds itself under arrest. If I close my eyes on the subject of the archbishop-president, I can't help accepting Makarios and taking him seriously even when he tells me he's a socialist.

I interviewed him twice, for a total of six hours. The interview as written skips over such well-known incidents as the attempts on his life and his flight. I interviewed him in his suite in the Plaza Hotel in New York, where he had gone to keep an eye on Kissinger and the UN. No longer dressed up in gold and jewels, he wore a plain blue cassock and seemed older than his sixty-one years. His attitude was mild, deliberately humble. His vice was soft, deliberately suave. He said "he's a criminal" in the same tone with which he might have said "he's a good man." I wasn't bored for a minute, and indeed enjoyed myself. He knows how to be so brilliant. And at several moments I admired him. He cares so much about freedom. We parted friends. In the doorway, he whispered, "That advice of Jane Austen's . . . it goes for you too. What a pity you're a woman." And I answered, "What a pity you're a priest."

ORIANA FALLACI. An abrupt question, Beatitude: are you going back to Cyprus or not?

Archbishop MAKARIOS. Of course I'm going back. Certainly! I'll go back in November. At the latest, the end of December. The date depends entirely on me. I haven't gone back as yet because I was waiting for the Greek government to withdraw and replace the officers responsible for the coup against me. And also because I wanted to follow the UN debate on Cyprus from near by. I don't understand why there should be any doubt about my return—after all I didn't resign. Nothing and nobody is against my going back, except those who are afraid of being tried and punished, something I don't intend to do since it would hurt the unity of the country. Mind you, that doesn't mean I intend to let history have a distorted version of the facts. On the contrary, I want the world to know what happened. But I want to avoid any punishment, any revenge. I'll grant a general amnesty, and anyone who's anxious about my return can calm his fears. Besides it's only a question of a few individuals. The people support me today even more than before the coup. And they're eager to have me back. They're ninety-nine percent for me.

O.F.: Ninety-nine percent of the population includes the Turkish Cypriots. And I don't think they're so eager to have you back, Beatitude.

M.: Of course. I don't think either that the majority of the Turks are in favor of me. I'm sure Mr. Dektas, the Turkish vice-president, is anything but pleased with the idea of seeing me arrive. But this doesn't worry me, and anyway it won't be up to me to negotiate with Mr. Dektas and the Turkish community. That will still be done by Clerides, who's an excellent negotiator and knows Dektas better than I do. Oh, naturally it's understood that Clerides won't make any decisions without my consent. It's understood that when I speak of going back to Cyprus, I mean to go back as president. I'm the president, I'll go back as president, I'll never agree to go otherwise. And the question of whether I'll remain president for a long time or not concerns me alone. I'll make that decision when I'm back in Cyprus. I'm saying I don't exclude the possibility of retiring from the presidency after a certain period of time. I'll have to decide on the basis of the situation. Should a bad agreement be reached, for instance, I wouldn't care to stay as president. But this, I repeat, we'll see later on.

O.F.: What do you mean by a bad agreement?

M.: Turkey is going to insist on a geographical federation, and I will never accept a federation on a geographical basis. It would lead to a partition of the island and to a double *enosis:* half of Cyprus consigned to Greece and half to Turkey. It would mean the end of Cyprus as an independent state. I'm more than ready to discuss a federation, yes, but on an administrative basis not a geographical one. It's one thing to have areas governed by Turks and areas governed by Greeks; it's quite another to divide ourselves into two parts. It's one thing to group, for example, two or three Turkish villages and entrust them to a Turkish administration; it's quite another to shift more than two hundred thousand people from one end of the island to the other. The Turkish Cypriots are scattered all over Cyprus. How can you say to them, "Pack up your things, leave your house, your land, and move elsewhere because we're going to have a federation"?! It's inhuman, to say the least.

O.F.: Is this really what worries you, Beatitude? I mean the tragedy of the Turkish Cypriots? It doesn't seem to me that so far they've been the object of much concern. They've been treated like second-class citizens and . . .

M.: That's not true! It's not true! Though they're a minority, they've had a lot of privileges, and they've behaved as though they represented the majority. We haven't been the ones to mistreat them, it was their Turkish leaders, by forcing them to live in separate villages, blackmailing them, keeping them from cooperating with us even economically, and from progressing. They didn't even let them do business with us, or help us to develop tourism. They weren't our victims, they were their victims. Nobody can deny that a true democracy, and a good one, exists in Cyprus. In their newspapers the Turks could abuse me and insult me as much as they liked. They could come to see me at the archbishop's palace whenever they liked. The trouble is they were obliged to come secretly, without their leaders knowing it. In mixed villages we had no problem living together, in the past and at the time of the Greco-Turkish war as well. What you say isn't true.

O.F.: And is it true that you deprived them of many constitutional privileges, Beatitude?

M.: I deprived them of nothing. I simply complained about those privileges because they only served to hamper the functioning of the state. The Constitution provides that they be represented in the government at the ratio of thirty percent. And very often the Turkish Cypriots didn't have people capable of filling that thirty percent. There was, for example, a post that could have been filled by an intelligent Greek and it had to be given to an illiterate Turk just because he was a Turk Once they voted against taxes. I tried to explain to them that a state can't survive if the citizens don't pay taxes, and they refused anyway. So I forced them to pay all the same. Was that an abuse? Another time, when I was about to go to Belgrade for the conference of nonaligned countries, Mr. Dektas tried to stop me from going by exercising his veto power. I told him, "Exercise it all you like. I'm going just the same." Was that an abuse?

O.F.: Beatitude, whether you're right or wrong, the reality today is different. The Turks occupy forty percent of the island and . . .

M.: And I don't accept it. Because I can't recognize a fait accompli, I can't legalize with my signature a situation created by the use of force. So-called realists advise me to negotiate a geographical federation with the Turks; they say I should be less rigid. Instead of holding on to forty percent of the island, they repeat, the Turks might be content with thirty percent. So be flexible. I don't want to be flexible.

O.F.: Flexible is a word dear to Henry Kissinger. Is he the one who says that?

M.: Kissinger has never clearly told me he was in favor of a geographical federation. He's never told me clearly what he's doing.

He's always talked about a "solution acceptable to both sides" and always repeated "we don't want to say openly what we're doing to persuade Turkey." So I can't state that he's actually preparing the agreement that I reject, but I can tell you we're still in disagreement on many things. Many. If it wanted to, the United States could play a more decisive and precise role in this matter. Doesn't it supply economic aid and arms to Turkey? Isn't it the only one that could persuade or even force Turkey to be more reasonable?

O.F.: Beatitude, do you think that what happened in Cyprus would have been possible without the tacit authorization of Kissinger and the Americans?

M.: Ah! I think the United States and other countries knew in advance that the Turks were preparing the invasion of Cyprus. And perhaps they were fooled by the Turks, perhaps they fell into the trap when Turkey said it would be a limited operation—a police action to restore constitutional order in two days. Perhaps they understood only later what Turkey's real plans were. But all the same they could have prevented what happened. They could have stopped the continuous arrival of Turkish troops. I had a long discussion with Kissinger about it. And I expressed to him all my disappointment; I told him in no uncertain terms how dissatisfied I was with the attitude held by his country.

O.F.: And he?

M.: He answered that he didn't agree with me, that he had tried to persuade Turkey, that he had acted behind the scenes. But again he didn't want to explain clearly what he had done.

O.F.: Beatitude, many people feel that Kissinger's responsibility and that of the United States go well beyond the Turkish invasion of Cyprus. Let's not forget that the invasion took place following the coup carried out against you by the junta in Athens and that . . .

M.: Of course! The first chapter of this tragedy was written by the Greek military junta. Cyprus had been first of all destroyed by the intervention of Greece. Turkey came later, like a second evil. And I'm sorry to say so. I'm sorry because the present Greek government is behaving well toward me, in a frank and honest manner. I've not met Karamanlis or Averoff, but I've known Mavros. And I like Mavros. He's a good man. He's sincere, open, and that's more than enough for me. But the fact remains that Greece would not have regained its freedom if Cyprus hadn't lost its own. The fact remains that Turkey woud never have dared intervene if the previous government, the junta, hadn't offered it the pretext. The Turks had been threatening to invade us for such a long time, and yet they'd never done it. They'd never found an excuse.

O.F.: Yes, but don't you think the United States and the CIA had something to do with that *coup d'état*? There are rumors that the CIA wasn't exactly unhappy about the attempts on your life.

M.: As regards those attempts, I don't believe it. Before the last one, in fact, it was people at the American embassy in Nairobi, during a trip I took to Africa, who informed me my life was in danger. They came to me and said, "We know that when you go back they'll try to kill you. Be careful." A few days later, in Cyprus, they confirmed the information to me, adding that the attempt would take place within two weeks. As indeed happened. As for the *coup d'état*, on the other hand . . . I don't know. Kissinger told me, "It wasn't in our interests to have that *coup d'etat* against you." I suppose I ought to believe him, but should I? There are plenty of indications that show just the opposite of what Kissinger told me, and still I have nothing to go on. I've even asked for information from Athens; I've tried to find out more. No use. I have to keep my idea without being able to offer any proof that it's correct. Kissinger added, "Naturally we were following the situation and it was known to us that neither Ioannides nor the rest of the junta liked you. But we had no concrete information as to 'the day' when the *coup d'état* against you would take place."

O.F.: Maybe it was helped along by the letter you wrote to Gizikis in July.

M.: Let's say that that letter speeded things up. If I hadn't written it, the coup more than decided on; all that remained was to set the date. I was too big an obstacle to *enosis*, and they were too anxious to have *enosis*. Every time we were on the point of reaching an agreement between Greek Cypriots and Turkish Cypriots, officials in Athens intervened by shouting about *enosis*. "We don't care about your local agreements, our goal is *enosis*." I remember one of these officials who came to me one day and said, "You must declare *enosis*. Anyway it will take three or four days before the Turks can send troops to Cyprus. In the meantime the United States will intervene and keep them from invading the island. In a week *enosis* will be a *fait accompli*." Maybe they really believed that annexation to Greece was a viable alternative. Anyway they expected me to take orders from Athens, they wanted me to obey like a puppet, and that's absolutely impossible with my temperament. I obey only myself.

O.F.: So you too were expecting the coup.

M.: No. I never thought they'd be so stupid as to order a coup against me. In fact, to me it seemed impossible that they wouldn't consider its consequences. I mean Turkish intervention. At the most I thought they might do such a thing by making a deal with Turkey, that is, authorizing Turkey to intervene so that Greece could then respond, to be followed by partition and double *enosis*. I went on thinking so even after the coup, when I got to London. It took some time for me to realize that Ioannides had simply acted out of a lack of intelligence. And yet I knew him. In 1963 and 1964 he had been in Cyprus as an officer of the National Guard, and one day he came to see me, accompanied by Sampson, in order to "explain to me secretly a plan that would settle everything." He had bowed to me, he had kissed my hand most respectfully, then: "Beatitude, here's the plan. To attack the Turkish Cypriots suddenly, everywhere on the island. To eliminate them one and all. Stop." I was flabbergasted. I told him I couldn't agree with him, that I couldn't even conceive the idea of killing so many innocent people. He kissed my hand again and went away in a huff. I tell you, he's a criminal.

O.F.: Do you find Papadopoulos better?

M.: I'd say yes. If I had to choose between Papadopoulos and Ioannides, I'd choose Papadopoulos. At least he's more intelligent, or, if you prefer, less stupid. I met him for the first time when he came to Cyprus, shortly after his coup, as minister for the presidency, and no one can say that at that time I was paying him any great consideration. But I saw him again a couple of times in Athens, when I went there to discuss the problem of Cyprus, and I must say that on those occasions he seemed to me much smarter. In any case, supplied with common sense. Well, Papadopoulos was suffering from megalomania, and besides I don't know what he really thought about Cyprus. On the other hand, he was capable of controlling many situations simultaneously, and he was head and shoulders above his collaborators. I don't even think he hated me, in the beginning. He started hating me later, in the last two years. And maybe only in the last year.

O.F.: And you, Beatitude, are you capable of hating?

M.: Well, let's say that the feeling we call hatred is part of human nature. You can't stop anyone from feeling it once in a while. And though I don't like to admit it, since I must preach love, there are moments when . . . well, when . . . All right, let's say that I don't like certain people. Why are you smiling?

O.F.: Because you make me think of certain Renaissance popes who led their armies in war, and I can't understand to what extent you're a priest. So I conclude that maybe you're not a priest at all, but a big politician dressed as a priest.

M.: You're wrong. I'm a priest first and then a politician. Better still, I'm not a politician at all. I'm a priest, first of all a priest, above all a priest. A priest who has been asked to be head of state and consequently a politician. But one would say you don't much like that.

O.F.: No, and I'm dismayed by it. In the world I live in, the struggle of laymen consists precisely in not allowing the spiritual power to be confused with the temporal power, and in keeping a religious leader from becoming a political one.

M.: In my world, on the other hand, it's fairly common. And all the more so in Cyprus, where the archbishop, like the bishop, is elected directly by the people, with universal suffrage. In other words, in Cyprus, the archrepresentative and administrator of the church, he's also a national figure. The ethnarch. And then, in my opinion, the Church should interest itself in all aspects of life—the Christian religion doesn't confine itself to taking care of the moral progress of men, it's also concerned with their social well-being. I see no conflict between my position as priest and my position as president. I see nothing scandalous about my holding both the temporal and spiritual power. Besides I don't lean on a party; I'm not the leader of a political party who goes around asking people to elect him. I simply serve the people in the two capacities that they insistently and almost unanimously offered me. As I explained many years ago to another layman, Prime Minister George Papandreou, I'm strong because I'm weak. Because I have neither a party nor an army nor a police force behind me. And because I don't even know the rules of politics. Because I follow certain principles that are Christian principles and not games, tricks, political maneuvers.

O.F.: Oh, come off it, Beatitude! You, who are a past master in the most Byzantine game of compromise. You, who are considered the most brilliant specialist in intrigue and calculation.

M.: No! I don't use those methods, I don't! I yield to compromises, of course, but never to anything that's not clear and honest. I'm not a saint. But I'm an honest man, and I don't believe politics has to be dishonest. I don't think that in order to have success, it's necessary to indulge in deceit. Do you know why my people love me? Do you know why they forgive all the mistakes I make? Because they understand that those mistakes are caused by bad judgment, not by bad intentions. You must not confuse me with the popes of the past, and in fact, if you were to ask me, I have a very negative opinion of them. I really try to bring Christian teachings into the maze of the office that's been entrusted to me and which I accepted. I'll give you an example. In Cyprus we have capital punishment, and as head of state, I'm the one who has to put his signature on death sentences. But executions in Cyprus are very rare, because every time a condemned man appeals to me, I let him off. Everyone in Cyprus knows the death penalty is nominal, that I always suspend executions. Those popes went to war but I don't accept war; I consider it a madness that's destined to end someday, to be remembered with disbelief. I don't accept bloodshed.

O.F.: Excuse me, Beatitude, but you were the one who actually said, at the beginning

of the struggle for the independence of Cyprus, "Much blood will have to flow."

M.: I can't possibly have said it that way. Maybe I said, "The road to freedom is irrigated with blood," something like that. Maybe I said, "We'll have to die," but not, "We'll have to kill." I was in favor of sabotage, yes, but on condition that it didn't cost the blood of innocent people. All that killing took place when I was in exile and couldn't do anything to stop it. Oh, I'm not the terrible person you think!

O.F.: We'll see. But now let's forget about Cyprus and talk about you. First of all, why did you become a priest?

M.: I always wanted to be a priest. Ever since I was a child. I was barely thirteen when I entered the monastery. But the reason is hard for me to explain. Maybe I'd been impressed by my visits to the monasteries around my village. I liked the monasteries so much. Life there was so different from the kind we led in the village, and I sometimes wonder if for me the monastary wasn't a way of escaping the sheep, the poverty. My father was a shepherd. And he always wanted me to help him look after the sheep, and I didn't like looking after the sheep. In fact, he used to complain and say, "I can't expect anything from my elder son! If I need help when I'm an old man, I'll have to turn to my younger son!" He said it so often that in the last years of his life, when I was already archbishop, I liked to tease him: "Do you remember when you used to grumble and say you couldn't expect anything from me?" He was very religious, like everyone in the family, but he couldn't understand why on Sunday morning I left the sheep to run to the monastery and help the priest say Mass. I was twelve years old when I told him I wanted to take that path, and he got angry. But I wasn't scared, I was so sure that nothing would be able to stop me.

O.F.: And your mother?

M.: I don't remember my mother very well. She died when I was very small; I don't even have a picture of her. In those days, the poor didn't get their pictures taken, especially in the mountains of Cyprus. About my mother, I only remember the day she got ill. There was only one doctor in the whole district, and my father set out on foot to look for him. He had no idea in what village he might find him, and went wandering around for hours, and finally he came back dragging the doctor like a sheep. The doctor used the same pill for all illnesses. Aspirin, I guess. He gave my mother the pill, and she died soon after. I remember the funeral. I remember the nights I slept with my father, because with him I could cry better. And I remember the night when he too started crying, and I said, "If you'll stop crying, I'll stop too." And then I remember my grandmother taking me away, and the relatives saying to my father, "You're young, you should get married again. Also for the children." Besides myself, there was my little brother, and my little sister who had just been born. And one day they brought me home to meet my new mother—Father had got married again. My new mother was a woman in the middle of the room, and she kept whispering, "Come in, come in!" I didn't want to go in because I didn't know her. But then I went in and soon I loved her. She was nice. She's still alive, and still nice, and I still love her. Very much. Oh, it's so difficult, and also so easy, to tell you where I come from. My father couldn't read or write. Neither could my mother, nor my grandmother, nor my stepmother. I think my father resigned himself to the idea of letting me go into the monastery because there I would learn to read and write. When he took me there, he kept urging me: "Be obedient, study . . ."

O.F.: Were you disobedient then too? You just told me that you only obey yourself.

M.: I was shy. I was so shy that in school I didn't even have the courage to get up and show that I'd studied the lesson. When the teacher called on me, I blushed and my tongue got paralyzed. But not even then was I able to obey. Take the story of the beard. When I was twenty years old, the abbot of the monastery ordered me to let my beard grow. And a novice isn't obliged to grow a beard. I refused, and he got angry. "Either you obey or out you go." "All right, I'll go." Then I packed my bag—I knew exactly what would happen. "You mustn't go! Stay." "All right, I'll stay." "But grow a beard." "No, no beard." "Look out or I'll beat you." "Beat me." He started beating me, and while he was beating me, he yelled. "Will you let it grow?" "No." "Now will you let it grow?" "No." Finally he sat down, exhausted. "Please. Let it grow a little. Just a little, so I won't lose face." "No." "Just the little bit needed to make people ask whether you have one or not." I smiled. "This little bit?" "Yes." "Like now?" "Yes." "Not even a millimeter more?" "Not even a millimeter more." "All right." And a compromise was reached without my giving in to obedience.

O.F.: Revealing, I'd say.

M.: It's my strategy. It always has been. I mean, I've always enjoyed the game of pushing myself to the edge of the abyss and then stopping so as not to fall. You see what I mean? It's not that I stop at the last moment because I realize the abyss is there; I calculate the millimeter that I can go that far and no further. The others, naturally, think I'm about to fall, to commit suicide. Instead I go along very quietly, knowing I'll put on the brakes. It was the same with the abbot. I hadn't the slightest intention of leaving the monastery; I liked it too much. But I knew that by making him believe the contrary and taking his beating, he'd give in and accept a compromise that for me was a victory.

O.F.: And has there been any case when your calculations didn't work, when destiny decided for you?

M.: I don't believe in destiny. Everyone makes his own destiny. At the most there exist unforeseen circumstances, which one must know how to take advantage of. I, for instance, hadn't foreseen that I'd become bishop at the age of thirty-five and archbishop at thirty-seven. . . . But that's a story worth telling. After seven years in the monastery, three of which were spent studying at the high school in Nicosia, I was sent to Athens to take my degree in law and theology. There I was caught by the war, the Italian and then the German occupation, a tough as well as adventurous period. After the liberation, however, I got a scholarship in the United States and went to Boston. I liked America—they'd given me, among other things, a small Greek Orthodox parish. I decided to stay there for five years instead of the three that had been arranged and take my teaching degree in theology. And here the plan failed. Two years had barely gone by, in fact, when I received a cable from Cyprus informing me that a certain district wanted to elect me its bishop. I was alarmed. I didn't want to leave America, I didn't want to go back to Cyprus. Cyprus meant nothing to me except a vague geographical knowledge. And a limited one at that, since all I had seen were the mountains where I was born, the monastery where I'd grown up, and the school in Nicosia where I'd studied. Do you know I was eighteen when I saw the sea for the first time? I cabled back: "Many thanks but I don't want to become bishop stop."

O.F.: Are you telling me you weren't ambitious?

M.: Of course I was! No priest can be happy if he doesn't succeed in an ecclesiastical career. But my ambitions were different. The fact is that no sooner had I sent my reply when a second cable arrived: "Elections held. People elected you unanimously." It was 1948, the eve of the struggle for independence. Sadly I took a plane to Athens, and I remember that there I kept asking everybody, "Will I find a taxi at the Nicosia airport?" Then I took the plane from Athens to Nicosia and . . . I've already told you that in Cyprus the election of a bishop is something very democratic. The people participate in it spontaneously, enthusiastically, and without tricks. But I didn't tell you that it arouses a mad fanaticism. And I can't stand fanaticism. In any form. So you can imagine how I felt when, going out to look for a taxi, I saw this incredible crowd fanatically shouting my name. I recovered myself if only to utter what was to be my first political statement: "You wanted me. So I shall dedicate myself to the Church and to Cyprus. And I'll do everything I can to help Cyprus win its freedom and break the chains of colonialism." Then I saw myself lifted up and taken to Larnaca, the district where I'd been elected. And from that moment on, Cyprus became my life.

O.F.: A good life, Beatitude. A lucky life, let's face it.

M.: A tough, difficult life, full of assassination attempts, of risks, anxiety, and exile. I was in the Resistance against the British. Still it's true that two years later, when the archbishop died, I was triumphantly elected in his place, thus becoming the youngest head of a Church in the whole world. It's true that I liked it. But it doubled my political commitment and cost me exile. To get rid of me, the British sent me to the Seychelles and . . . Of course, when I look back on it today, that exile seems anything but tragic. Actually it wasn't an exile, it was a vacation. I was given a nice house where I was served and respected. The landscape was marvelous, so marvelous that I wanted to see it again, and I went back as a tourist and even bought a little piece of land near the same house, which the owner, unfortunately, didn't want to sell. The British treated me well and didn't keep me there long—just eleven months. But at that time I didn't know it and thought they'd keep me for at least ten years or forever. I had no idea what was going on in Cyprus, I had no radio, no newspapers, and I couldn't speak with anyone. And . . .

O.F.: And?

M.: Well, all right, I'll tell you. I wasn't born for the contemplative life. I can stay shut up for a week in this suite in the Plaza, but on the eighth day I have to go out, see people, do something, live. You'll object: didn't the monastery teach you anything? Well, our monasteries aren't very strict—those who stay inside them do so by choice and not because they're forced to. And no one says I should go back and live in a monastery. I prefer to do what I'm doing and . . . why should I go back to a monastery?

O.F.: So I was right to compare you with those popes. Besides I've never believed in the picture some people paint of you: ascetic, vegetarian . . .

M.: I'm not a vegetarian! I like vegetables but I also eat meat. One of my most painful memories is a certain official dinner that was offered me in India. The waiter came over and asked me, "Are you vegetarian?" I thought he was asking if I liked vegetables and I answered yes. Then he put a flower beside my plate and for the whole meal served me nothing but vegetables. I was consumed with envy seeing the others devouring chicken, fish, steaks. In fact, now whenever they put a flower in my hand, I get suspicious.

O.F.: But I was referring to other flowers, Beatitude. It seems you were once at a party where a dancer did a wild belly dance, and you're said to have remarked, "The beauty of woman is a gift of God."

M.: I don't know that incident. It's true, I love popular dances, I like folklore . . .

O.F.: No, no, I wasn't talking about folklore. I was talking about belly dancing. I was trying to ascertain that you're not one of those priests who pray from morning to night and . . .

M.: I'm usually a very simple man. At the same time, however . . . What should I say? . . . When necessary . . . I make certain . . . adjustments. I like to walk, for instance, to run, to climb mountains, to keep in shape. Also because I like sports and I dislike fat people. So whenever I can, I take an excursion, I walk in the woods. . . . Under my robe, you see, I wear trousers. If I always dress this way, in robes, even at home, it's because my people are used to seeing me in a cassock and I can't disappoint them. But cocktail parties bore me, and so do worldly things. . . .

O.F.: I still haven't made myself clear, Beatitude. Maybe it's better to call things by their right names. I was referring to women, to the rumors that you're very fond of women. They even say that in Cyprus you have two, well, two wives.

M.: Come now. In the Orthodox Church, bishops and archbishops can't marry. Only priests can. But then they don't become bishops.

O.F.: I know. I said "wives" to be polite.

M.: . . .

O.F.: Isn't it true you're very fond of women?

M.: . . .

O.F.: All right, let's change the subject. They also say you're not a sincere man, that a word of truth never comes out of your mouth. Do you think a head of state should be permitted to tell lies?

M.: No, this is something I can't accept. I'm so incapable of telling lies, any lie, that when I can't tell the truth, I prefer to keep silent. Silence is always better than lies. Look, during the Resistance struggle, the British arrested me several times. After being arrested, I was interrogated, and naturally I couldn't deny what I was doing. And then everyone knew I had contacts with Grivas. So, in order not to lie, I answered, "I can't say anything. I don't want to say anything. I refuse to answer." And I kept silent.

O.F.: Just what you did with me when I asked you about women.

M.: What did I say?

O.F.: Nothing.

M.: The perfect answer.

O.F.: I'm beginning to like you, Beatitude. And at this point it pains me to insist on the ugly things they say about you. For instance, that you rule through favors, and that you're very rich, and that . . .

M.: I possess nothing. Absolutely nothing except that little piece of land in the Seychelles. I haven't a penny in any bank in the world. I have nothing but a kind of salary, which I can use as I like, but it's very small. I administer the properties of the Greek Orthodox Church in Cyprus, it's true, and as archbishop I can dispose of anything that belongs to the archbishop's palace, but I'm not authorized to use a single cent for myself. Theoretically, even my linen belongs to the archbishop's palace. As for favors, I help many people, it's true. But my friends less than anyone. And my relatives still less. My brother is my driver. That doesn't seem to me a great career; also when you stop to think of the attempts that are made on my life. I stay in good hotels when I travel, it's true. But do you know why? Because I have friends all over the world and they're anxious to pay for me. In London, for instance, after the coup d'état, I went to the Grosvenor House, where I always go. The next morning Charles Forte, whom I'd known from Cyprus where he wanted to open a hotel, came to me and said, "Do you know I'm the owner of the Grosvenor House?" I hadn't known. "It will be an honor for me to have you as my guest for as long as you care to stay in London." And so I didn't pay. In fact, he even wanted me to be his guest in New York, at the Pierre, another hotel he owns I didn't accept because I didn't want to take advantage of him.

O.F.: Yes, but then why do they call you the Red Archbishop?

M.: I've never understood where that came from. Maybe from the fact that I've never made anticommunist propaganda. Or the fact that I follow a policy of nonalignment. Most of the non-aligned countries are accused of being leftist-oriented and even of looking to the Soviet Union.

O.F.: Are you a socialist, Beatitude?

M.: If you're referring to Swedish socialism, not Soviet socialism, I can say I really have nothing against socialism. Among all social systems, it's the closest to Christianity, to a certain Christianity, or at least to what Christian teaching should be. Christianity doesn't favor any social system—it recognizes that any social system, from the capitalist one to the communist, can contain something good. But if I had to choose the best system, or the most Christian system, I'd choose socialism. I said socialism, not communism. And let me add that, in my opinion, the future belongs to socialism. It will end by prevailing, through a kind of osmosis between the communist countries and the capitalist ones. Spiritually it's already happening. The socialist, that is, egalitarian, spirit is permeating all human relationships. Today equality is an almost spontaneous feeling.

O.F.: You're an optimist, Beatitude.

M.: I always have been. And never at random. In the last thirty years a great change has happened in the world. Thirty years ago who would have imagined that colonialism would be over and that war would no longer be accepted as a means for subjugating a country? Who would have imagined that social hierarchies would no longer be accepted with conviction, that the word socialism would no longer be frightening?

O. F.: But if you believe in socialism, how can you administer a church that's one of the richest in the world?

M.: Never so rich as the Catholic Church. And anyway the Church isn't a reactionary force; it doesn't represent the capitalist world. If it often goes to the right, the fault is only of its representatives. And the representatives of the Church aren't the Church; the representatives of religion aren't religion. When you think that not even the priests, bishops, archbishops, and theologians have been able to uproot religion from the hearts of men! I may be too optimistic, but even the Catholic Church leads me to make a positive judgment. It's changed so much in recent years, thanks to Pope John. In 1961, when I was asked to stop in Rome on a state visit, I was invited by the pope. And naturally I had a great desire to go, but still I wondered if I should. Our lack of understanding goes back so far. Not only had I never met a Catholic bishop, I'd never met a Catholic priest! I told myself that the other heads of the Orthodox Church would be offended. But soon after the patriarch of Constantinople, Athenagoras, met with Paul VI in Jerusalem.

O. F.: Did you feel at ease with the Pope?

M.: It was interesting. A pity all that protocol.

O. F.: And who are the leaders with whom you've felt at ease?

M.: Let's say that some leaders, not many, have impressed me, and the others have left me indifferent. They were considered great men, but they were only men at the head of great countries. Among those who impressed me, I'd put Jack Kennedy. That childish face of his was really nice; it had a dignity of its own. Besides Kennedy was simple, human. Along with Kennedy, I'd put Tito. But Tito and I are friends; I like to think he has the same affection for me that I have for him. . . . He's such a dynamic man, full of clear ideas. And generous besides. "Anything you need, just let me know," he always says. I liked Nasser too. I remember meeting him at the first conference of nonaligned countries, in Bandung in Indonesia. It was the first time he'd left Egypt, the first time he'd flown in a nonmilitary plane, and he was so excited. I found that touching. As for Castro . . . I don't know. He has certain qualities necessary for a leader. With me he behaved . . . well, he behaved like Castro. Golda Meir is a very strong, interesting woman, but we disagree about too many things. We've met twice and we didn't exactly throw our arms around each other. Sukarno . . . he didn't impress me. Nixon even less. An ordinary man, very ordinary. And then . . . what do you want me to say? I like Constantine. Not because I'm a monarchist—I saw him coming into the world, I saw him grow up, I like him. But I can't say that because I shouldn't be making political propaganda for him.

O. F.: And Mao Tse-tung?

M.: I wouldn't say I have much in common with him. And I don't know how to define the impression he made on me. His health, when I met him last May, really wasn't good and. . . . Let's put it this way: in China he's a kind of god. His fingerprints are everywhere, obsessively, and I've already told you that I hate fanaticism. I feel more at ease with Chou En-lai. Besides I've known him for nineteen years, since the Bandung Conference. Chou En-lai is so intelligent, so pleasant, with him you can even joke. He prepared a fabulous welcome for me—hundreds of thousands of people in the streets of Peking, a million in Shanghai. I kept saying to him, "You want to make me feel like somebody!" We also had fun when he started talking about our two countries, about the role they'd play in history. He kept repeating, "Our two countries . . ." Finally I interrupted and exclaimed, "Will you do me a favor? Will you stop talking about our two countries, about their historical roles? I feel ridiculous. How can you compare a little island of five hundred thousand inhabitants with a China of eight hundred million? What historical role can we have in common, we two? I'm a mosquito next to an elephant!" Mao Tse-tung was there too. He tried to smooth things over by saying that mosquitoes can sometimes give a lot of trouble, while elephants are innocent. But that didn't go down with me. And I still kept my inferiority complex.

O.F.: Do you often feel that inferiority complex?

M.: Ah, yes. If it's not inferiority, it's uneasiness. During my visit to the Soviet Union, for instance, I stayed inside the Kremlin. Every morning I said to myself, "Good Lord! An archbishop inside the Kremlin!" Podgorny was nice and polite; he did nothing but smile at me, but he didn't succeed in making me forget the paradox. To get out of it, I combined my state visit with a visit to the Russian Orthodox Church. And that was worse. The coronation ceremony for the new patriarch of Moscow was taking place just then, and the crowd was as numerous as in Peking, as in Shanghai. It was very hard for me to behave as though I really felt important. Look, there's only one time when I lost that inferiority complex.

O.F.: When?

M.: When I visited Malta.

O.F.: We can offer you San Marino.

M.: They've never invited me. But I've felt comfortable in Africa too. Oh, it's extraordinary the number of babies and streets that have been named after me in Africa! In Tanzania I did nothing but meet little black Makarioses, and the same in Zanzibar, though Zanzibar is Muslim. In Mombasa there's a Makarios Avenue. And in Nairobi . . .

Ah, Nairobi was the best of all, because in one week I baptized five thousand people. I'd been invited by Kenyatta, another leader who's impressed me very much, and all of a sudden I had an idea. I asked, "How many people could I baptize if I stayed here a week?" They said, "As many as you like." "Even fifty thousand?" "Even fifty thousand." Well, fifty thousand was too much, I said, "Let's do five thousand." The first contingent arrived in two days, coming on foot from very distant villages. And naturally I should have baptized them in the river. But I didn't want to run the risk. The water is polluted and I'm a hygienist. So I threw them all into a swimming pool, adults and children, and . . . For a week I did nothing but fill that pool. It was amusing because there's a Catholic mission there that's not too well liked because of its old ties with colonialism, and to baptize even a single person those poor missionaries had to sweat like hell. Help women give birth, nurse babies, and what have you. For me instead it was quite simple. I didn't have to do any of those awful things, and the result is that in Africa I have at my disposal the largest concentration of black Orthodox Christians. Naturally they understood nothing about what it means to belong to the Greek Orthodox Church. You meet some fellow on the street and ask him, "What religion do you belong to?" And he answers, "To Makarios's religion!" But it's all right just the same and . . . Look, I'll always live in Cyprus. As I told you, Cyprus is now my life. But if I couldn't live in Cyprus, I'd live in Africa.

O.F.: And now I begin to understand something about you, Beatitude. Good-bye, thank you, and see you again in Cyprus.

M.: See you again in Cyprus. Come when you like. I'll receive you as president.

NEW YORK, *November 1974.*

OUR CONTINUED MARCH TOWARD WEAKNESS—ADDRESS OF PAST NATIONAL COMMANDER, THE AMERICAN LEGION

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. TEAGUE. Mr. Speaker, I wish to call to the attention of my colleagues the address of Maj. Gen. Robert E. L. Eaton, USAF, retired, before the annual convention of the American Legion, Department of Maryland, in Ocean City, Md., on July 13, 1977. General Eaton is a past national commander of the American Legion and I am sure that you will find his remarks to be thought provoking.

General Eaton graduated from West Point in 1931 and served with distinction in the Air Force until his retirement in 1961. While serving in the Air Force he held many posts of responsibility and received many awards. However, his most distinguished service has been service that he has devoted to his country as part of the American Legion. He was national commander in 1973 and 1974.

In his remarks, Past National Commander Eaton calls our attention to our continued march toward weakness as a national policy and enjoins all of us to face up to the challenges around us by returning to a position of strength. He quotes from the article in the Washington Star on July 10 written by Michael Novak, entitled, "The Stench of Weakness is in the Air".

I think that my colleagues would like to peruse this article as well. In his discussion of the B–1 bomber decision, he follows the reasoning of Robert Hotz in an editorial in the Aviation Week & Space Technology magazine of July 11, 1977, and I am also introducing this into the RECORD.

I hope that all of my colleagues will take the opportunity to read these stimulating items.

SPEECH OF MAJ. GEN. ROBERT E. L. EATON

Mr. Commander, distinguished guests, fellow delegates to the 59th Annual Convention of the Department of Maryland of The American Legion. Last year I talked to you about what I regarded as the trauma of our defeat in Southeast Asia. The trauma continues to the present time and sets the pattern for another and more difficult era in the life of the Republic. A few days ago I read an article by the columnist Michael Novak in the Washington Star entitled, "The Stench of Our Weakness Is in the Air." Mr. Novak reminds us that the political atmosphere today is the same as that in England prior to World War II when the Prime Minister made his trip to Munich and disowned England's treaty obligations, thus turning millions in Europe into slavery. It was a dismal business, and to this day, we can recall the picture of Chamberlain, an elderly man, holding up his umbrella, and saying, "Peace in our time."

It seems to me that the weakness which flowed naturally from our experience in Southeast Asia is indeed a continuing traumatic and hypnotic business. We seem to be hypnotically accepting a weakened national position which can do nothing but hasten the coming of another war. Many of the things that happen around us today are in the Chamberlain spirit—"peace in our times"—based on concessions and weakness.

There are numerous examples of our weakness that come to mind naturally related to things going on in these days. One of the most recent is the cancellation of the B–1 bomber. We can regard it in almost any light: such as, that it was the fulfillment of a campaign promise to cancel the program and at the same time reduce the defense budget by $5 billion. Curiously the figures come out almost even on that basis. Or we can say that the program was killed because it presented a clear choice between a very expensive system and a lesser expensive system that might also work. This appears to be a superficial ploy but, thus, it must be considered. Regardless of how we look upon the matter, no amount of crying in our B–1 beer is going to bring the program back. Those social welfare members of Congress who were going to have to support the B–1 program in order to face their constituents back home—constituents who support adequate national defense—have, by the President's cancellation order, been given an opportunity to "get off the hook."

In these days when we can, and do, separate form from substance, we should take a second look at the "form" on which the decision was based. The cost figures were greatly distorted in the public discussion. It was continually reported that the cost of a single B–1 aircraft was in excess of $100 million. This amount, of course, represents the 1985 projected cost figure predicated on the current rate of inflation. The present cost of the airplane is $60 million and the proposed substitute, the Boeing 747, which is being considered as a less expensive alternate, would cost $35 million each, off the shelf. To remodel the Boeing 747 so that it can do the job of delivering cruise missiles from outside the perimeter of the Soviets, another $35 million would be required for each aircraft. So, to use the Boeing 747 to do the job, the cost will be $70 million each. And what do we have? A huge subsonic vehicle operating at high altitude with an enormous radar cross section that can be immediately recognized by "over the horizon" radars from thousands of miles away.

But the cost aspects of the program are not the only ones where form took the place of substance. Look at the cruise missile—a subsonic vehicle. The missile has to be preprogrammed, and once launched, cannot be redirected. It has been advertised that the vehicle goes in below the radar screen. Of course, look down radars could pick up the missile. Also, it can be shot down by shoulder held antiaircraft devices. It is well known that the Soviets have a large civil defense or militia force and are equipped with these weapons. It might be found that the cruise missile is much more vulnerable than expected. The warhead is miniscule and the effectiveness of the weapon leaves much to be desired. Actually, with the B–1, a penetration weapon system, it was planned that cruise missiles would be part of the offensive armament along with short range attack missiles and gravity nuclear bombs. It would seem that this still is the most effective and most challenging system as far as our offensive armament is concerned. Cancelling the B–1 weapons system leaves us at a grave disadvantage since we have no alternate method of launching strikes with large yield atomic weaponry. We must rely solely on ICBM's. As far as the B–52's are concerned, some of those who are flying them now are flying the same airplane that their fathers flew. It is worn out. Even if the life of the B–52 can be extended until 1985, what then? What is our follow-on bomber? Or, are we to give up this type of weapon system?

On the other hand, there are those in the SALT negotiating business who have favored unilateral disarmament. The pacifists who feel this way regard the B–1 decision as a step in that direction. These individuals have the view that by unilaterally disarming we might encourage the potential enemy to do likewise. This concept, of course, flies in the face of known history. We can only say that our SALT activities seem to dictate a reduction of all our offensive capability. Since the first of this year our nation has taken major actions which tend to decrease our capability to maintain a balance of strength in relation to our potential adversary who continues to produce new and improved weapons at an accelerated rate. These actions are: the cancellation of the nuclear carrier, the B–1 bomber cancellation, termination of the production of the Minuteman III, a slow up in the development of any land based missile system, and the SRAM missile production termination.

Let us examine another phase of our defense capability—our nuclear weapons—particularly, the recently introduced neutron bomb. In an endeavor to reduce physical damage to cities, and yet be destructive to enemy personnel, our scientists have developed a nuclear weapon that produces a relatively low heat and blast effect, but has a terrific radiation capability. This bomb—the neutron bomb—provides us with a potential to save Western Europe if the Soviets should decide to make a western sweep. Likewise, this is an ideal weapon to keep the North Koreans from charging southward. Yet, during a recent news conference our President announced that Europe could survive without resorting to atomic weaponry. This was proclaimed in spite of his recent PRM–10 Study which reportedly predicted a 30-day survival of Western Europe against a Soviet onslaught.

All kinds of arguments are heard against the neutron bomb. One opposing Congressman is quoted as saying that our country

would be more tempted to use it because of its clean capability rather than heavy fallout bombs. With the neutron bomb we can deter the enemy, and if it is used, our forces can march on toward the battle without fear of fallout effect.

The surprisingly large number of individuals who have supported killing the neutron bomb give but another indication of our continued march toward voluntary weakness.

Then, of course, in foreign affairs our weakness is even more evident. In the case of the Panama Canal, we propose to give away the Canal in order to convince the Panamanians and others in Central America that we are really good hearted people who do things against our own interest. The dangers incident to giving it away are well known. If, today, we set up a time schedule for the giveaway, tomorrow, following the pattern of the Paris Agreements relating to Southeast Asia, the Panamanians would expect us to go the whole way and turn the Canal over to them without further delay.

The proposed "defense" arrangements whereby we would take a hand should the Canal be threatened by a third power seem vague and inoperable. The real danger would be in the case of Panama itself if it decided to deny us use of the Canal. In that event the initiative would be on us to do something about it and we are not very good these days at taking initiatives.

Since the Canal does not allow the passage of our largest carriers and super tankers, there are those who say that it is out of date and not useful anyway. Recently four admirals who are former Chiefs of Naval Operations of the Navy—Admiral Carney, Admiral Anderson, Admiral Burke and Admiral Moorer—have written a letter to the President indicating their firm belief that the Panama Canal is necessary to the defense of our country, and at the same time, they express their grave concern that giving up control of the Canal is a step from which we would not be able to turn back. Of course, it has been proposed that we ought to dig a sea level canal anyway. The problem of getting permission and the great cost of digging a new canal will be affected by the outcome of the present negotiations on Panama. One of the things that is puzzling is that those West Coast areas—the states of Washington, Oregon, California, Alaska and Hawaii—are silent when they ought to be vociferous in their desire to protect shipping which is of so great importance to them. This whole attitude about the Canal is just another sign of weakness.

Finally, let us look at Formosa. Formosa is a land of 16 million people. Under our guidance and our restrictions they have built an economy that is remarkable in this age. Only Japan has done a greater job in the area of technology and performance. Amazingly we seem on the point of abandoning Formosa, turning our back as we did in the case of Cambodia. There, in Cambodia, we let them go under the heel of the tyrant. In a country of 7 million people, 1 million were brutally exterminated. Are we going to stand idly by and watch 2½ million Formosans lose their lives?

Unfortunately, we have adopted an unusual military and diplomatic operational pattern. This pattern began in Korea where we substituted in-place halting of the war for decisive victory. The pattern was followed in Southeast Asia where we negotiated the infamous Paris Agreement and turned our face to the wall while the Agreement was completely ignored. The result was South Vietnam going under the tyrant's foot and the fall of Cambodia and Laos. As I say, the pattern of weakness is everywhere about us and we can just see at this moment the abandonment of Formosa just as Chamberlain abandoned the peoples of Europe and ignored Britain's treaty commitments.

But out of the ashes prior to World War II the Phoenix rose again. We can look back to that time at those who were agitating for continued weakness. When World War II began there were the prophets of doom on every hand—our Ambassador to England, Joseph P. Kennedy, kept the communication lines hot with recommendations that we stay out of the War and that the fall of Britain was inevitable. But strong men—Churchill and Roosevelt—stood up and did the things necessary. Can you imagine today that we have the strength to do the things necessary? Out of these words we presently hear about shame and restoring America's sense of morality and giving away all our power, out of this, out of the ashes the Phoenix will rise again. We will see a strong America that will face up to the conditions that are all around us—an America that will do the things necessary to preserve our way of life. But the time is late and action on the part of all of us is necessary. The American Legion, one of the last bastions of freedom in our country, must recognize its responsibility. We must fight as we have in the past to get away from the stench of our weakness and face up to the requirement that we must remain strong.

[From The Washington Star, July 10, 1977]

THE STENCH OF OUR WEAKNESS IS IN THE AIR

(By Michael Novak)

Thirty-six years ago, in early 1941, the people of the United States and the Congress were anti-war. No one in the public eye was thinking much about impending war in Yugoslavia. No one except Franklin D. Roosevelt, who through a spectacular British success in codebreaking, knew about Hitler's plans to "pacify" the Balkans. Hilter planned to take the Balkans in a week, and then to seize Moscow in a blitzkrieg before the winter.

In utter secrecy, President Roosevelt dispatched his personal envoy "Wild Bill" Donovan to direct secret agents in the Balkans. Their task was to cause dissension in Yugoslavia, so that the Marxist guerrillas under Tito would be drawn into open war with the Nazis. Often in political affairs, power speaks louder than morality. In many nations, Nazi power won collaboration without a struggle. The King of Yugoslavia was ready to submit.

Fortunately, Franklin Roosevelt understood power, and the irresponsibility of mere "morality." He had lived through the terror of Coventry. He knew that Churchill, despite advance knowledge of Nazi plans, could not warn exposed Coventry without tipping off the Nazis. Thousands of innocents died, in order that Britain might live to fight. Churchill and Roosevelt made that decision, accepting blood upon their hands.

The work of U.S. secret agents in Belgrade turned the Nazi occupation into a bloodbath. A palace revolution occurred. Bill Donovan taunted Hitler on the radio and in the press. Enraged, Hitler bombed Belgrade to smithereens. The guerrillas arose. The German armies were exposed to weeks of fighting. Hitler's triumphant strike into Russia was delayed for more than 38 days—later, it stalled in the snows of winter just short of its objective. One out of nine Yugoslavs perished, unknowing, for that cause.

One hopes, today, that the U.S. president and secret services are ready to do what must be done, in spite of public opinion, in spite of the Congress, should necessity once again arise. The pious moralists of the 1930s—forbidding arms, mocking Churchill, blocking Roosevelt—nearly delivered Great Britain to its doom. Ambassador Joseph P. Kennedy, to Churchill's anguish, kept predicting from London the fall of Britain, and privately urged settlement with Hitler.

Although every prescient person knew from 1936 that World War II was coming, most respected moralists held that Hitler was a man of reason like themselves, and had to be protected from the "hawks" around him. They wished to prove the cooperativeness of the democracies. Our real interests, they held, were not affected by the fall of small nations, underdeveloped, faraway.

Today, once again, Yugoslavia is on the front edge of the next moves which will be made by the greatest conventionally armed power in the history of the world, and by ourselves. Once again, Great Britain has been reduced to weakness, and injured from within more severely than from without. Once again, the southern flank of Europe is a weak spot. Once again, Tito is a key to the future, an old man now, likely to be irreplaceable. As in 1914 and in 1941, control over the Mediterranean will be decided by events in Serbia, Croatia, and Slovenia.

At two dinner parties recently, two very different sorts of Americans confided to me that they felt closer to war today than at any period in their lifetime. I agreed. One can feel it in the air. The smell of weakness is a special smell.

Brave words come from President Carter about challenging Soviet power in Cuba, Korea, and other trouble spots around the world. But the words are curiously matched with troop withdrawals and concessions. A pronounced perception of the creeping weakness of America grips the world. Our volunteer army is a disaster. Hurt in Vietnam, the giant has retreated to fascination with its wounds. Wise spokesmen like Vice President Mondale and Andrew Young speak about "wiping away America's moral shame" and "restoring America's sense of morality"—dead giveaways that as power slides away, this nation will cover nakedness with moral preening.

Assume that the Soviets will not dare to launch atomic weapons. The tests of muscle in the next 20 years, then, are likely to come with tanks, infantry, ships, and planes. Already, cynics in Turkey, the Balkans, and elsewhere are studying Russian. Many neutrals position themselves for Soviet dominance.

Power governs world affairs, not moral principles. A truly moral nation must be prepared to accept the dirty hands of military power and secret operations. The grave weakness of the United States, once again, is that our moralists seem to prefer to shine their moral medals, rather than to challenge the open military power and the secret war of hidden agents for which, in fact, our adversary is prepared.

I would feel better with a Churchill and a Roosevelt. The stench of moral language veils our voluntary weakness.

[From Aviation Week & Space Technology, July 11, 1977]

JIMMY'S WEAPONS CHOICE

(By Robert Hotz)

President Jimmy Carter has made his first major military decision in halting production of the B-1 supersonic bomber in favor of expanding the subsonic cruise missile program. Superficially, it appears to be a clear choice between a very expensive weapon and a relatively cheap method of doing the same job In that context it has earned him approval from a majority of his fellow countrymen. After the obfuscations, mealy mouthings and plain lies that have emanated from the White House during the past decade, it is indeed refreshing to have a President explain his decision in plain simple English on live television. It has also earned President Carter wild enthusiasm from the Liberal wing of the Democratic Party, which had misgivings over his conservatism and which now regards the B-1 decision as the slaying of

another fire-breathing technological dragon similar to the killing of the supersonic transport research program. We hope the economic benefits of the B–1 decision will prove less of a mirage than the claimed savings of the supersonic transport cancellation, which eventually cost the taxpayers about $100 million more to cancel than it would have to complete the two prototypes and test fly them long enough to provide some factual data to replace the hysterical theories that still prevail.

FIGURES DISTORTED

We suspect that the "billions of savings" from the B–1 decision trumpeted by Defense Secretary Harold Brown will prove equally illusory. The B–1 cost figures have been atrociously distorted in public discussion. The current B–1 cost in today's dollars is about $60 million per aircraft. The price of a commercial Boeing B–747 wide-body jet touted by Brown as a replacement carrier for the cruise missile is about $35 million plus an equal amount for adding military avionics and launching equipment. The $70-million total for this allegedly "cheap" method is really more than a B–1, albeit as greatly degraded combat capability. A poll among Strategic Air Command pilots charged with the task of delivering cruise missiles to Soviet targets would hardly favor the high-altitude subsonic B–747 with its enormous radar cross section. The $100-million-per-copy cost for the B–1 is actually a forecast for escalation in terms of 1985 prices. The Trident submarine missile system already costs many times that figure, and the MX heavy mobile ICBM will also cost more than a B–1 in 1985 prices.

But the cost juggling is only part of the military mirage. The cruise missile reaches its maximum military effectiveness when deployed along with a penetrating aircraft. Not until President Carter's decision has it been asked to shoulder the entire job of penetrating to all Soviet targets. It has several major military defects. First, it must be preprogramed and can only avoid previously known fixed defensive systems. The cruise missile is blind to mobile defense systems, and all the Soviet antiaircraft missile systems have a mobility capability that outmatches the cruise missile's reprograming time cycle. The cruise missile carries only a small fractional-megaton warhead and because of range limitation cannot reach all prime Soviet targets.

BASIC QUESTIONS RAISED

President Carter did not discuss these points in explaining his decision, but we expect they will surface in the ensuing debate. We do not expect this debate to reverse his basic decision to confine, at least for the foreseeable future, the B–1 program to a development test phase with four aircraft. The Air Force has done a miserable job over the years making its case for the B–1 and pushing the pace and funding of the program beyond its genuine needs. The Air Force has never expounded on the great flexibility of a modern penetrator for tactical and antishipping missions, particularly in view of the growing Soviet surface navy. Nor has it exerted much of a design-to-cost pressure on the program. Rockwell International, the prime contractor, should serve as a good example of where a low profile leads in the defense business and raises basic questions about the role of large conglomerates in this vital industry. Too many of these conglomerates are happy to take the defense contract money but reluctant to fight any of the public battles over their handiwork. The aerospace industry failed to respond to the anti-supersonic transport campaign and lost by a narrow margin. It failed again to respond to the anti-B–1 campaign and will lose by a wider margin. The trend for the future seems clear.

We also are puzzled as to why President Carter surrendered his powerful B–1 SALT bargaining chip so early in the game. The Soviets have long fought to have the B–1 barred by treaty. Now they have achieved their objective at no cost. Their full force can now be concentrated on the cruise missile, which is the major bargaining chip left in U.S. hands for the next round of SALT. It seems to us a poor exchange for the momentary popularity of making good on a campaign promise to sacrifice an enormous blue chip in a long-term poker game.

However, this is only the beginning of the strategic weapon debate, because like most supposedly key decisions it has raised as many questions as it was designed to answer.

CLINCH RIVER COST IS LESS THAN SOLAR

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. TEAGUE. Mr. Speaker, Dr. Schlesinger, during hearings on the Clinch River breeder reactor project conducted by the Committee on Scence and Technology, stated that the cost-benefit ratio of Clinch River was insufficient to support continuation of the project.

Mr. Speaker, the cost-benefit ratio, a useful tool that you and I would use if we intended to invest in an apartment project, has no meaningful application to Clinch River. Of course, the cost-benefit ratio for Clinch River isolated from the commercialization of fast breeders, would be negative. Taken by themselves so are the Homer City coal gasification plant, the national transonic facility for advanced aircraft development, the 10-megawatt solar electric pilot plant in California, and practically every other development supported by the Government. High development cost, unestimable risk, and unproven technology, aside from national security, constitute the primary reasons the Government should be in the business in the first place. Otherwise, Mr. Speaker, we would all be better off if we kept our Government noses out of it.

The second point is that the project cost of Clinch River is not excessive. The total estimated cost of Clinch River is $2.2 billion less the anticipated proceeds of $700 million from the sale of electrical power to the TVA, or an estimated total net cost of $1.5 billion. This is not excessive when you compare the $100 million estimated cost of the 10-megawatt solar electric pilot plant for California—$10 million per megawatt—against the $4 million per megawatt for Clinch River. That is only part of the comparison. A fast breeder can produce power 24 hours a day, a solar electric plant works from 9 to 5.

In other words, both electrical power producing systems: fast breeder and solar, operate on a virtually inexhaustible energy source. The fast breeder will cost $4 million per megawatt installed, the solar electric power tower $10 million per megawatt installed. Solar can only run part time and it cannot produce base power in 1,000-megawatt blocks to turn the wheels of our industry and provide jobs.

The real issue is: Do we want to slide back to the old days or do we want to maintain a pretty darn good lifestyle?

I ask my colleagues to vote against this amendment to terminate Clinch River.

CHANCELLOR VERNON I. CHEADLE RETIRES

HON. ROBERT J. LAGOMARSINO

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. LAGOMARSINO. Mr. Speaker, in 1962 the University of California at Santa Barbara received a dynamic new Chancellor in Vernon I. Cheadle. His administration, until the time of his retirement in June 1977, was to be one of tremendous expansion; enrollment of 4,785 to 14,000; from 15 master degree programs to 41; 2 Ph. D. fields to 27; from 36 undergraduate majors to 100 at present.

Dr. Cheadle is chairman of the Council on International Educational Exchange. His leadership has led to the development of the education abroad program and its present 37 centers in 17 countries.

From 1 research unit in 1962 to 11 today, a distinguished faculty from a variety of disciplines explore subjects of mutual interest. Dr. Cheadle was instrumental in securing for U.C.S.B. a learning resources center containing the most totally comprehensive educational technology west of the Mississippi.

His concern for student welfare and his strong belief that students should share in campus governance are a matter of public record long before it was fashionable for educational administrators to hold such views. Dr. Cheadle leaves a campus where leisure and classroom activities focus on the total student and where student voices are heard at virtually all levels of policy and decision-making.

Dr. Cheadle's awards include one from the California Academy of Sciences which named him a Fellow, a Fulbright Fellowship, membership in the American Academy of Arts and Sciences, and honorary LL.D. degrees from the University of Rhode Island and from Miami (Ohio) University. He also was the recipient of a certificate of appreciation from Lambda Chi Alpha fraternity, a certificate of merit from the Botanical Society of America and an Outstanding Civilian Service Medal from the office of the Secretary of the Army.

Former president of the Botanical Society of America, Chancellor Cheadle has served as that organization's membership committee chairman, general section chairman, journal editorial committee and vice president. His other memberships include the American Institute of Biological Sciences, the Torrey Botanical Club, the Society for the Study of Growth and Development, Society for the Study of Evolution, the American Society of Naturalists, Phi Beta Theta fraternity, Sigma Xi, Phi Beta Kappa and Phi Kappa Phi.

Because of this long and distinguished career I ask the Members of the House to join with me in extending congratulations to Dr. Vernon I. Cheadle and in wishing him a happy and rewarding retirement.

THE CHURCH AND THE GOVERNMENT

HON. GLADYS NOON SPELLMAN

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mrs. SPELLMAN. Mr. Speaker, beyond the wall which our Founding Fathers wisely built between church and state, government and religion are both involved in a common struggle for a better world.

That is why I think it particularly fitting to ask my colleagues in the Congress to join with me in bringing greetings to the 41st annual session of the Baptist Association and Auxiliaries of southern Maryland when it convenes at Sylvan Vista Baptist Church in Fairmount Heights, Md.

In one sense, a church is a place of refuge and tranquility. But there is another sense of "church" in which we are all one. That sense is of a people called to a special mission. More and more, people are nurtured in the church to go out into the world to do justice and to reconcile conflicting forces.

I remember so well the tremendous moral persuasion of the early days of the civil rights movement when so much activity was centered in and around the little churches of the rural South. The time had come to ask for impossible things. And impossible things began to happen.

We have lived, all of us, through a real revolution of rising expectations. When expectations are high, discouragement often walks hand in hand with hope. That is why the theme of this Baptist session, "God's Word Is the World's Hope," has special meaning.

We need hope desperately. Without it, we would have too few adventurers in the Biblical sense—those who, like Abraham, are willing to pull up stakes and move on—not necessarily to new places, but to new challenges, new changes.

It often seems that established institutions inhale and exhale in centuries, that real change takes a long, long time. Perhaps. But it is too easy to grab onto that as an excuse for doing nothing. A really hopeful people, on the other hand, will be drawn into responsible participation in affairs which concern them.

It is this message I would like to bring from us in the halls of government to those in the pews of the church. We need, we welcome such participation. Transfusions of hope can transform discouragement into a sort of divine discontent, driving a people and their institutions on to better things.

I know my colleagues join me in the hope that this Baptist convention will do just that.

GEN. RUSSELL E. DOUGHERTY, CINC, SAC

HON. ANTONIO BORJA WON PAT

OF GUAM

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. WON PAT. Mr. Speaker, as a lifelong resident of Guam and, more recently, as a member of the House Armed Services Committee, it has been my pleasure to meet many thousands of fine members of the U.S. military services. Indeed, we of Guam owe our liberation and freedom from an occupying enemy to courageous U.S. military personnel. A great number of these service men and women have been truly outstanding.

Nearly 30 years ago, when I was Speaker of the Guam Legislature, one of these outstanding individuals, Russell E. Dougherty, was a junior officer at Andersen Air Force Base. Since, I have been pleased to observe this officer make well-deserved progress through the Air Force ranks.

Now, as Commander in Chief of the Strategic Air Command, General Dougherty, after 38 years in the service of our Nation, is retiring from active duty. In marking his departure from active duty, General Dougherty shared with me some parting thoughts.

Mr. Speaker, I would like to share with you and our colleagues these thoughts of this 100-percent professional officer and military leader who has dedicated most of his life to our national defense and interests:

DEPARTMENT OF THE AIR FORCE,
August 1, 1977.

Hon. ANTONIO B. WON PAT,
Delegate from Guam, House of Representatives, Washington, D.C.

DEAR MR. WON PAT: I have just recently written an open letter to all the personnel of my Command concerning my tour as Commander in Chief of SAC, and my impending retirement. I would be remiss, however, if I were not to correspond in a similar vein with you, who have been so closely integrated with our people and our military activities throughout the Command—a dedication and service for which we in SAC are deeply grateful.

For me, this summer marks 35 years of commissioned service and more than 38 years in the military uniform of my country. Having run the gamut of military assignments from enlisted Cavalryman in the Kentucky National Guard to Commander in Chief, SAC, I am pleased to be able to say that I have enjoyed every assignment. Also, I am humble and grateful for the confidence placed in me and the many opportunities afforded me by the President, the Congress, the Secretaries, the Joint Chiefs of Staff, my fellow service men and women, and the people of the United States of America and our NATO Allies.

Although I have no present inclination to "retire" in a conventional sense, I have always been an enthusiastic supporter of the need for a constant, relatively rapid "up and out" policy for our Air Force senior personnel. Continuing youthfulness and upward mobility in the Air Force are key attributes to maximum dynamism and usefulness to the Nation. I am fully prepared and ready to retire from the active military rolls and pass my responsibilities in accordance with our reasoned policies of progression.

Also, I must say that it is comforting to realize that the 35th house in which Mrs. Dougherty will make a "home" for our family is, at last, to be a permanent residence—frequent moving is easier when you are young enough to savor the excitement of change!

As one who has been "on board" or "in the vicinity" during the entire existence of SAC—and has been in a sense both progeny and patriarch—I am proud to have been a part of this dynamic history of SAC (and to have shared these exciting, fulfilling years with you and your colleagues throughout our SAC communities).

During my three years as SAC's leader, the command has continued a marked evolution. We have become "leaner" in people and facilities, while at the same time increasing the numbers of SAC weapons on strategic alert. We have been able to achieve this efficiency by improved management, consolidating support and operations—and by completing the deployment of weapons systems, such as the Short Range Attack Missile and the Minuteman III ICBM.

Some of the changes occurring during "my watch" as CINCSAC have been predictable; others—such as the increased conventional bombardment capabilities, research and development of the B1 strategic bomber, research and testing of the Air Launched Cruise Missile, and new emphasis on human relations—have been truly innovative.

There have been disappointments, of course—and I should especially have liked to have seen greater support for more balanced force modernization toward future years—but I am satisfied that those of us now "on watch" have kept the present force combat capable, have made accurate and reasoned recommendations, and have prepared for future needs to the best of our collective abilities.

For the last thirty-one years, SAC has been a central element of our national policy of deterrence. It has remained so because the men and women of SAC and our Nation have—while not seeking change for change's sake—been open to change, even advocating it, whenever it was perceived better to support national objectives and military effectiveness.

It seems to me that for the next thirty-one years this dynamic spirit will be doubly necessary for all SAC's people and those in our communities who support the Command and its people. Those who serve in the future must be prepared to accommodate changes in their profession which may make Alvin Toffler's Future Shock seem mild by comparison. But those changes cannot be allowed to detract from SAC's professionalism—the dedication, integrity, competence, and selflessness of SAC's People in the service of our nation. And I am confident, under General Richard H. Ellis' leadership, Strategic Air Command will remain dedicated to providing the most capable strategic force that is humanly possible.

As Air Force retirees, Gerry and I now begin a different pattern of life. As concerned citizens, we will continue to be interested in and to work in behalf of our nation's overall security. As a retired military officer, I will give our active duty colleagues my best advice on defense matters when it is requested, but I will never interfere or press such advice on the active leadership. Whatever we do, wherever we go, we shall never forget—nor could we—the deep obligation we owe the people of the Air Force—and of SAC.

And we can never forget the dedication of those not in uniform or no longer on the active rolls who have done so much to make it possible for us to perform our mission. Wherever we have been stationed, we have been welcomed into the privileges and responsibilities of community membership. And there have always been you "Key

Movers"—responsible, patriotic citizens ready to go the "extra mile" with us—whether the needs were for better community relations or better strategic weapon systems. Strong believers in America's security through strength, you never hesitate actively to support or constructively to criticize—though it may cost you socially or financially to do so. For your support all of us are humbly grateful . . . and I, as the Commander in Chief, have particularly appreciated your support and confidence.

Throughout history there has been no nobler calling that that of helping to provide for one's fellow man those greatest of social services—life and freedom. And it is my judgment that in our time, no one has reponded more selflessly to that calling than the members of Strategic Air Command, where—though the preparation for war is our business—the people of SAC have lived our motto: "Peace . . . is our Profession" . . . and none have supported us in that endeavor more positively than you, the active leaders of military support in the communities around our bases.

My thanks for the support, the inspirations, the memories, and the privilege of serving with you in defense of America . . . and the security of our fellow Americans. God bless you and yours throughout the years that lie ahead.

Respectfully . . . and with gratitude.

RUSSELL E. DOUGHERTY,
General, USAF,
Commander in Chief.

BUCKEYE CITED FOR OUTSTANDING ANTIPOLLUTION EFFORTS

HON. DON FUQUA

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. FUQUA. Mr. Speaker, tomorrow, August 6, Buckeye Cellulose Corp., which has been operating 21 years as the dominant industry in Perry, Fla., will receive a national award for their untiring efforts in pollution control and cleanup.

Buckeye is the only industry in the State of Florida, and only one of 19 in the Nation, to receive the Isaac Walton League's "First Annual Award" presented to industry which has performed above and beyond the call of duty in water improvement.

Perry, located in Taylor County, the forest capital of the South and in the heart of my second congressional district, and the State of Florida is proud of Buckeye, a good corporate citizen.

While in recent years national attention focused on the blight of industrial pollution, Buckeye has voluntarily forged the trail in pollution control not only with water but with air pollution and other areas of environmental concern.

The company invested millions of dollars between 1970 and 1973 on pollution cleanup, which earned the favorable respect of even the most astute environmentalists, as well as a resolution of praise from the Florida State cabinet.

In addition, Buckeye has gone to considerable expense to provide public recreation areas on their privately owned land. The Hickory Mound Impoundment offers some of the best waterfowl watching and crabbing on Florida's west coast, and the picturesque Goose Pasture Landing is well known to canoeists who travel down the sparkling Wacissa River.

These efforts and antipollution program, a gesture of good will and cooperation, was instigated well before present pollution requirements were in effect nationally and in the State of Florida. Buckeye was the forerunner of industries who followed suit, encouraged by the company's favorable publicity and public reception of the cleanup program.

Indeed, Buckeye Cellulose Corp.'s environmental consciousness, unheralded in the pulp and paper industry, stands as a successful example to industry throughout our Nation.

It has not only taken from our generous Mother Earth but, in turn, made it a better place for us to live. In this respect, every living being, and generations who are yet to come, are indebted to the pioneering efforts of this outstanding company.

ESTABLISHING A TASK FORCE TO STUDY SCHOOL FINANCING

HON. JAMES L. OBERSTAR

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. OBERSTAR. Mr. Speaker, today I introduced legislation to establish a task force to study school finance and the taxation of real property by State and local governments.

The critical issue of school finance needs a thorough review. The constitutionality of financing education through local property taxes, national education standards, differentials in education quality between districts, and the appropriate combination of State, local, and Federal support are just a few of the complex issues that demand study.

The task force would consider a variety of crucial topics related to these issues in addition to evaluating the effects of real property taxes and feasibility of policies designed to reduce State and local governments' dependency on them. Alternative methods of finance, Federal education standards and guidelines on finance, and effects of disparities in real property on education quality are some of the general areas that would be included.

H.R. 5304, introduced earlier this year by Representative BURGENER, would establish a similar task force to examine real property taxes. However, this task force would contain no members of the academic community or citizen groups concerned with financing of elementary and secondary public schools and would not cover school finance. Because of their interrelationship, it would be inefficient to study real property taxes and school finance separately. Furthermore, isolated changes in the property tax structure could aggravate the problem of school finance. My bill includes these pressing problems in the study of the task force.

Executive discussions over the past 2 years with school board members, school superintendents and principals, teachers, parents, and State legislators throughout my congressional district have convinced me of the need for a thorough review of school financing that hopefully can lead to constructive long-term solutions benefiting all school systems in the Nation.

We must commit ourselves to the protection of the education claims of all children, the search for new funding sources, and the determination of the proper role of the Federal Government. Decisions on individual education programs can only be effective after the foundation for a sound financing system has been laid.

TO ESTABLISH A SELECT COMMITTEE ON POPULATION

HON. J. HERBERT BURKE

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. BURKE of Florida, Mr. Speaker, I am pleased to cosponsor and support H.R. 70, introduced by our colleague, Congressman SCHEUER. I believe, as do so many of us, that there is a great need for this committee. There can be little question of the value of the proposed work of this committee, which will study: First, the major adverse effects of international population growth; second, approaches to cope with this with an emphasis on those measures to reduce the frequency of conception rather than the termination of pregnancy; and third, means to encourage countries to adopt proven fertility reduction methods.

Jack Anderson in his column in the Washington Post on Wednesday, July 27, 1977, quoted a study by the National Security Council concerning the runaway population growth around the world which threatens our national security, even our very existence. I would like to read into the RECORD this column entitled "The Perilous Population Explosion," for my colleagues to think about. It succinctly summarizes my feelings regarding the danger we face because we closed our eyes in the past to this problem.

THE PERILOUS POPULATION EXPLOSION

(By Jack Anderson and Les Whitten)

The final Armageddon will likely come, in the opinion of intelligence analysts, not from a nuclear holocaust but from the simple crush of people.

No less than the National Security Council has labeled the runaway population growth around the world as a "threat to our national security."

The council called for population reports last year from U.S. embassies in 77 countries. Their responses have now been summarized in a grim intelligence document.

The study warns that the sheer mass of people already is beginning to stifle human life on this planet. Our ambassadors report that underdeveloped nations are running out of food to sustain their people. Living costs are plunging these nations into debt until they are unable to finance their own survival.

The human encroachment, like a plague of locusts, is also devastating the land. "A majority of our embassies in Africa, Asia and some in Latin America report large pockets of declining agriculture productivity due to

widespread slash-and-burn farming, overgrazing and overcropping," the study asserts. The cause: "population pressures."

The same warning is echoed in an Agriculture Department report which declares urgently that, unless the population explosion is contained, "there ultimately is no solution to the world food problem."

The population bomb, warns the intelligence study, will also produce a political explosion. In many countries, the U.S. embassies predict "rising unemployment and underemployment, with countless millions unable to eke out a living in rural areas jamming into already overcrowded cities where living conditions for many are appalling."

This "can only spawn social unrest with serious political and even potential strategic implications," the study stresses. By the year 2000, for example, Mexico City may be the most populous urban area in the world.

One expert fears there may be 60 million Mexicans fleeing across U.S. borders within the next generation to escape the overcrowding in their country.

Yet there is "a widespread unawareness of the economic facts of life," states the report, "including wishful thinking that economic development will automatically resolve the population problem." A disturbing 62 per cent of the nations have no population policy at all.

Wars, as historians tell us, are usually fights over resources. Unless careful planning starts now, the huge increases in population coupled with the dramatic decreases in raw materials will cause future wars as people become desperate for the basic necessities.

I am proud to support this legislation and I hope it will be enacted today and that this committee's work will guide us in the future.

U.S. TAX COURT RETIREMENT

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. ULLMAN. Mr. Speaker, today I have introduced a bill to correct an unfortunate interpretation of the provisions of present law dealing with the retirement of tax court judges.

Under present law, if a tax court judge receives tax court retirement benefits, then that judge cannot also receive civil service retirement benefits. This provision against double benefits appears to be correct and I am not proposing to change it.

However, the Civil Service Commission is interpreting present law to forbid even single benefits.

Under the Commission's interpretation, a tax court judge who elects tax court retirement is forever barred from civil service benefits even though the judge never in fact becomes entitled to tax court benefits. As a result, a tax court judge who resigned from that court and later was called back into Federal Government service—in one case, in a variety of Presidentially-appointed positions—cannot get civil service benefits for any of his 25 years of civilian service and 4 years of military service, simply because he once made an election for tax court retirement benefits. This is so, even though this judge did not serve long enough on the tax court to become qualified for tax court retirement benefits. This judge now is excluded from both retirement systems.

To correct the situation, the ranking minority member of the Ways and Means Committee, the gentleman from New York (Mr. CONABLE) has joined me in introducing a bill to amend present law to permit any tax court judge to revoke the election if the judge has not yet begun to accrue tax court retirement pay. A judge who revokes the election would then be put back into the civil service retirement system—if he or she is otherwise qualified—and would not be eligible for tax court retirement benefits.

TRIBUTE TO AN OUTSTANDING AMERICAN

HON. JEROME A. AMBRO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. AMBRO. Mr. Speaker, I would like to take just a moment to bring to the attention of this Chamber the most recent recognition given one of my constituents, Joseph S. Hydrusko, of Massapequa, L.I.

The Long Island Restaurant and Caterers Association recently named Mr. Hydrusko "Restaurant Man of the Year 1977–78," in recognition of the excellence and high standards he demands as host and owner of Dick and Dora's Restaurant in Massapequa.

"Man of the Year" is only the latest in a long, long list of achievements of this outstanding American.

Entrepreneur, sportsman, community leader, pilot, hero, Joe Hydrusko is a Long Islander of the first order. His accomplishments stand as tribute to freedom, opportunity, and the American spirit of competition and adventure.

On the Day of Infamy, December 7, 1941, Joe Hydrusko was a seaman first class on board the U.S.S. *Solace* in Pearl Harbor. Immediately following the Imperial Japanese aerial attack on our naval forces, he asked for and received permission from his commanding officer to take command of a motor launch for rescue operations aimed at saving the lives of those sailors wounded and trapped aboard our crippled vessels.

During the next 48 hours, Mr. Hydrusko, at great danger to his life and personal safety, made repeated rescue missions across the smoldering harbor to the battleships *Nevada, California,* and *West Virginia,* before turning his efforts toward the capsized *Oklahoma.*

Diving repeatedly into the bombed out interior of the *Oklahoma,* he saved the lives of 24 American servicemen trapped inside.

His citation for heroism from the Secretary of the Navy reads:

For heroic achievement on 7 and 8 December 1941 while serving on board the U.S.S. *Solace* (AH–5). During this period, Hydrusko participated in rescue operations which resulted in the freeing of 24 men entrapped in the capsized U.S.S. *Oklahoma* following the aerial attack by enemy Japanese forces on Pearl Harbor. His skill, courage, and devotion to duty throughout were in keeping with the highest traditions of the U.S. Naval Service.

Mr. Hydrusko is now president of the Massapequa Rotary, a board member of the Massapequa Chamber of Commerce and active member of the local Civil Air Patrol.

Just one final, brief note, Mr. Speaker, every Memorial Day Joe Hydrusko leads a squadron of private airplanes on a mission over New York Harbor. Circling close to the Statue of Liberty, he drops a wreath from his plane to a site near the base of this world famous landmark of freedom in memory of those combat GI's that never made it home and whom we all remember with such reverence on that day.

Joe Hydrusko is an authentic hero, an outstanding citizen, and a great American.

IN MEMORIAM: JOSEPH GRAZIANO

HON. LESTER L. WOLFF

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. WOLFF. Mr. Speaker, it is with a profound sadness that I call to the attention of my colleagues the passing of Joseph Graziano. Mr. Graziano, a community leader whose work and dedication transcended the limits of my congressional district passed away a short while ago after a prolonged illness.

In 1958, Mr. Graziano was one of the three founders of Cellini Lodge No. 2206 of the Order of the Sons of Italy in America. He was elected to the post of First Venerable of the lodge and since its inception he was extremely active and a guiding factor in its activities. Over the years, both Mr. Graziano and the lodge have devoted untold energies toward the betterment of the community. Both he and the lodge were deeply concerned with high school related programs in the community which reflected a strong belief in education at all levels. One of the projects of the lodge, under Mr. Graziano's direction, was the institution of a college scholarship program. The lodge was also instrumental in bringing the Italian language within the teaching curriculum of high schools in Nassau County, N.Y.

Both he and the lodge were strong supporters of Cooley's Anemia Foundation and the St. Francis Heart Hospital. Mr. Graziano was particularly active in the affairs of his church, the Notre Dame Parish of New Hyde Park, N.Y., and he was one of those unique men who bore a strong conviction that America's diverse ethnic pride should be preserved. He worked hard toward that end.

Despite his illness, Mr. Graziano was ever present in community affairs. I know that his lodge will continue on the path of community service which he helped to blaze and direct. On September 28, Cellini Lodge No. 2206 of the Order of the Sons of Italy in America will celebrate the ninth anniversary of its founding. Joseph Graziano will be sorely missed.

NUTRITION EDUCATION

HON. RICHARD NOLAN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. NOLAN. Mr. Speaker, it is a particular pleasure for me to enter into the RECORD the remarks of my colleague, Mr. RICHMOND, at a recent Conference on Nutrition and the American Food System sponsored by the Community Nutrition Insitute. Mr. RICHMOND and the members of the Subcommittee on Domsetic Marketing, Consumer Relations, and Nutrition, which he chairs, are concerned over the lack of an effective and coordinated Federal role in nutrition education. Consequently, the subcommittee will be conducting a comprehensive investigation into this problem. It is my hope that as a Nation we will establish a more effective means of providing nutrition information that is vital to the health and well-being of our people.

The remarks follow:

REMARKS BY REPRESENTATIVE FRED RICHMOND

Several weeks ago as I was watching "Rocky" Balboa tenderize a side of beef aging in cold storage, it occurred to me that, even as he was preparing to fight a fight we knew he had to lose in the end, he was lucky. He, at the very least in his uphill struggle, clearly knew who his opponent was. He knew exactly when and where he could be found and he had a clear idea of what he hoped to do . . . deliver one, decisive winning knockout blow.

Perhaps Rocky was such great entertainment because, in our increasingly complex and confusing world, for two hours we lived in the clearly right or wrong . . . black hat or white hat . . . yes or no celluloid world of the Italian Stallion.

Unlike the world outside the theater, Rocky couldn't care less about the levels of antibiotics, marbled fat or cholesterol in the meat he was slamming away at. After all, he only had to hit it . . . not eat it.

Those of us here today, however, have made a commitment to care about our food . . . what's in it, how it's grown and what it's long range effects on us will be. We have further made a commitment to care about the food our fellow 225 million Americans are served every day and about the food required to meet the needs of the earth's four billion persons.

This is a burden of caring that doesn't offer us a single enemy to defeat once and for all. In the public's mind there are no easily identifiable good guys or bad guys . . . and there are no easy victories in sight. Our choice of caring about food and nutrition in America of the late 1970's offers us only the prospect of more work ahead after each small, usually unnoticed victory. We often find ourselves crying scarcity in an age of plenty . . . crisis in an age of calm . . . malnutrition in an age of obesity.

We live in an era when an average consumer's day—from breakfast to midnight snack—demonstrates the scope and difficulty of our task. Start the day with an orange flavored drink containing as many components as the spacecraft that—for some reason—carried it around the moon . . . eggs over and crisp bacon . . . cholesterol and sodium nitrate . . . toast made from a mix containing over 50 percent water and wood cellulose . . . water itself that is possibly contaminated with PCB's . . . saccharin . . . sugar . . . more fats . . . additives . . . preservatives . . . all held together with an alphabet soup of emulsifiers and stabilizers.

In the background, the children's morning television is hardselling multicolored cereals, vitamins shaped like dinosaurs or famous athletes, candy, gum, soda, fast foods, whipped toppings, chips and cupcakes . . . a confusing and expensive babble of interchangable claims and new products.

Later in the day, sandwiched in between similar commercials now aimed at adults, headlines inform us that six out of ten of the leading causes of death in this country are linked to the way we eat. Anchorpersons solemnly inform us that our diet is clearly associated with epidemic rates of cardiovascular failure, cancer, stroke, high blood pressure, hardening of the arteries, cirrhosis and diabetes.

There is also, of course, the occasional nightmarish story of toxic shellfish, botulism and reports that even some mothers' milk has been found to be danagerous to the health of the new born.

The world we have chosen to care about—the world of food and nutrition—is one filled with contradictions: "The best fed people on the face of the earth" apparently killing themselves with the very abundance and variety of products that makes the claim plausible.

It is a world where we can't simply slug away in a rage—although the causes of rage are surely there—but is a world where our staying power will be tested . . . our will constantly in need of reinforcement and our leadership challenged by those with the ready cash access to the mass consumer market.

It is to this world—the world of mass marketing, television, four color magazine layouts, saturation radio jingles and junk mailings for junk foods that we must turn. For, if we abandon this most critical arena of public opinion, the battle for better health through better eating is lost. Lost—in spite of meetings such as this . . . in spite of all the reports and all the task force recommendations. If we are to win—that is—if Americans are to live longer, healthier lives on a balanced diet—we must reach the consumer in the commercial marketplace.

However, we cannot accomplish this by matching outrageous advertising expenses dollar for dollar . . . but by gaining the consumers' confidence by upgrading the quality of the advice and counsel the government offers.

For, it is ultimately to the government that the salted, fattened, confused and panicked consumer must turn. And, unfortunately, today in place of sound, detailed nutritional guidelines, these consumers are deluged by the government with outdated pamphlets or told that the labels we can neither read nor fully understand contain the answers.

Ladies and Gentlemen, when I first sought a seat on the House Agriculture Committee three years ago, I went this route. I asked Earl Butz for his opinion on human nutrition, research and education. From that initial—and memorable—experience, I can tell you that confusion gave way to frustration, and, if your will weakens, frustration can give way to indifference.

It was this frustration that led me to request the Congressional Research Service to comprehensively survey the role of the federal government in nutrition research. What I thought would be a routine request turned out to be a landmark study. For never before has anyone bothered to examine the extent of the federal government's activities in this most essential field.

This report revealed that human nutrition research performed by the Federal government is a haphazard jigsaw puzzle, whose pieces fail to fit together because of a lack of coordination, funding, guidance and planning.

This report revealed that the Department of Agriculture spends less than 3% of its research budget on human nutrition . . . and several times more studying nutrition of pigs, cows, and chickens. And they are the only agency with a specific legislative mandate to conduct human nutrition research.

This report revealed that Federal researchers are forced to work in World War II era labs, with a shoestring budget.

Finally, and most glaring of all, the report revealed that government officials themselves do not know the full scope of or gaps in nutrition research and assistance programs.

As a follow up, I asked that another study be done to assess the government's role in nutrition education. I was, I must say, prepared for the worst by the results of the first study, and the results of the new study are no less upsetting.

That we have 30 separate nutrition education programs does not shock me; that we are spending more than 70 million dollars on such undertakings does not shock me; but it does shock me to learn from our report that, in fact, there is *no* policy, *no* coordination, and *no* reliable measure of the impact of these isolated programs.

Duplication of effort and dispersion of severely limited funds point to a federal role that lacks clear goals, firm resolve or a workable strategy. A patchwork of isolated independently conceived activities are performed to the extent that funding and jurisdiction allow. There simply is no unified federal policy relating food and nutrition to the consumer. Research into needs, knowledge, attitudes and practices of consumers is conducted without a view of how this research may be translated into policy or planning guidance. Each agency and program has built its own network of information distribution . . . many of which, I am sorry to say, are totally ineffective in the face of overwhelming food advertising.

I happen to believe that nutrition on education can definitely alter and influence our food purchases and eating habits and, ultimately, our health. Judging from the obvious success of the food industry to shape food purchasing behavior, there are obviously powerful informational tools which can be developed for this purpose. Their impact, however, will not be felt until government designs a coordinated effort; a unified system which reaches our people through public media programs, community institutions, and organizations as well as through teachers, health professionals, consumer and industry leaders, nutritionists and paraprofessional aides.

Beginning in September and extending throughout next year, the Domestic Marketing, Consumer Relations and Nutrition Subcommittee will undertake a thorough five-part investigation of the role of the federal government in nutrition education.

During our first phase we shall listen to consumers tell us about the problems they have in receiving reliable and useful information about the food they eat. Administration and policymakers of federal programs which have a mandate for nutrition will testify on what their agencies are doing to educate the public. We are particularly concerned about how these officials and their staffs determine what type of information is to be disseminated, what groups should receive this information and whether it is ultimately of any use to the consumer.

Our second phase during the early fall will be to visit two communities: one urban and one rural to evaluate the assistance available to typical American families. Washington administrators may tell us what they think they are providing: we want to know what information is actually reaching the consumer.

Our third phase of hearings which will take place in Washington will bring together representatives from the food industry, the

health and education professions, public interest and private groups and media experts who are involved in the presentation of information about nutrition. We will ask each of our witnesses to describe their activities and advise us on how the federal government might play a more effective role in nutrition information. Quite frankly, after looking at innumerable commercials, pamphlets, posters and programs I am convinced that the public interest groups often do a better job in reaching the consumer.

Our fourth stage, extending through the winter, will be the preparation of a report which will make administrative and budgetary recommendations based on the knowledge gained during our first four phases.

During our fifth phase, we shall solicit additional public comment on our report and recommendations and, with the support of our colleagues in the House and Senate, introduce appropriate legislation to insure that the federal government will play an active and leading role in determining national nutrition policy.

It was only eight years ago that the White House Conference on Food, Nutrition and Health was convened, for the first time bringing together all of the interest groups that must play a role in formulating this national food and nutrition policy. Public attention drawn to these issues resulted in expanded food and nutrition programs, such as food stamps, child nutrition program, and the initiation of new programs such as WIC and Elderly Feeding.

In Congress, under the able leadership of Senator McGovern, the Senate Select Committee on Nutrition defined and began exploring the relationship between food, health, nutrition, domestic production and the international situation . . . cornerstones of a future national policy.

In the absence of direction or, perhaps more accurately, in the midst of contradicting testimony from nutrition experts, and, sensing a rising demand on the part of the public for clear-cut, specific answers to food and diet questions, the Senate Select Committee has taken the bold initiative of proposing national dietary goals. After a generation of indifference to the outworn prescription of the "basic poor", consumers were enthusiastic in their response to the Committee's findings.

To its credit, the new Administration is turning its attention to human nutrition and raising the issue to a national priority. A White House Task Force is currently preparing a report on the status of nutrition research and I am advised that the President will personally determine which issues should be given immediate and long term attention.

Inspired by the work of Senator McGovern's Select Committee, other voices in Congress are now being heard on nutrition issues. With the encouragement of Secretary Bergland and Assistant Secretaries Carol Foreman and Rupert Cutler, the USDA is emphasizing the right of the consumer to an affordable, safe and nutritious diet.

However, no single subcommittee . . . select committee . . . agency or even Administration can, alone, establish national nutrition policies. Now, all our institutions must cooperate to implement already articulated and debated goals.

We must:

Allocate more funds for nutrition research;

Foster interagency coordination;

Disseminate more sophisticated consumer information materials by the government;

Consolidate all federal efforts;

Demand the government take a stance for the consumer, including full labeling and consumer-oriented grading programs;

And establish federal policy and standards on food advertising.

This is our long struggle. It is your job as food and nutrition advocates to keep the issues before the public so that conscious pressure can be brought to bear on the Congress—on my committee—on the bureaucracy, and on the Administration. For, all too often in the decision making process, the voices of growers, producers, packagers and merchandisers have been heard instead of those of consumers.

But, rather than decrying the past neglect of Congress, the unresponsiveness of the bureaucracy and the powerful influence of industry, concerned consumers and their advocates must raise their voices of advocacy in the political marketplace. Many of you realize this. But until you and your colleagues join forces and develop a national nutrition constituency, you will not witness the implementation of a national nutrition policy.

As I look about this room, I see leaders and representatives of each of the separate segments which have an interest in national food and nutrition issues and hope that, in your deliberations today and tomorrow, you will be able to agree on more effective ways to channel your views and recommendations to public policy decisionmakers.

I cannot stress strongly enough the difficulties inherent in the task we have undertaken. If we try to reduce our issues to those clear yes or no, good or bad choices . . . we will fail. In recent discussions I have heard opinions offered condemning an extraordinarily wide range of individuals, groups and things for the questionable state of our health.

Our enemy is not a single food producer, bureaucrat, individual additive, the emerging fast food industry, agrisbusiness, nutritionists holding views differing from your own, unenlightened lawmakers, supermarkets, television, ad agencies or food technology run amok . . . Ladies and Gentlemen there is no one enemy for us to defeat . . . or panacea for us to enact.

Our oppcsition—if we must try to isolate something—is an apathetic public. A public already concerned—to be sure—about the emerging relationship between what we eat and how we live—and die—but still unready to demand—demand—from government, industry, and public groups the sweeping changes necessary to move from a status quo of questionable plenty to a future of healthful plenty.

Our goal must be to arouse this public opinion. Our weapons will not be the paraphernalia of the prize fighter but the well known tools of any dedicated minority seeking change in this country: the conviction of being right, access to an uncensored press and, most of all, a deeply held conviction that our fellow Americans—once alerted to a clear and present danger we already see—will respond.

I see a long, hard road ahead—but, with more people like you across the nation—we will have in the future a nation truly worthy of the description, "the best fed people on the face of the earth."

ADDITIONAL REMARKS ON FEDERAL FUNDS AND ABORTIONS

HON. ROBERT A. YOUNG

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. YOUNG of Missouri. Mr. Speaker, in discussing the use of Federal funds for abortions, much has been said about discrimination against indigent women versus a responsible use of taxpayers' money. Many people, including our President, have viewed the vote on the so-called Hyde amendment as an expression of responsible use of Federal funds, not as a vote for or against abortion.

Until this time, the Labor-Health, Education, and Welfare appropriation bill has been the only opportunity for us as legislators to voice our views on abortion. The various proposed human life amendments have been pending before the Judiciary Committee for several years and there appears to be little chance that any of these proposals will be brought in the near future to the House for discussion or a vote.

Bearing this in mind, I would like to put on the record that my vote for the provision prohibiting the use of Federal funds for abortion was deeper than a mere expression of fiscal responsibility. My vote for the Hyde-Flood language was a simple vote against abortion.

Mr. Speaker, I applaud the fine work of my colleagues, HENRY HYDE, DANIEL FLOOD, and the many others who have spoken out for the lives of the unborn.

INTRODUCTION OF NATIONAL OIL RECYCLING ACT

HON. CHARLES A. VANIK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. VANIK. Mr. Speaker, the Congress is currently considering a series of complex proposals to reduce national energy consumption. Yet, in our search for the exotic solutions we often miss some simple and obvious steps for energy conservation. One such step is to improve our Nation's capability to recycle used lubricating oil. Lube oil is manufactured from the highest quality fraction of a barrel of crude oil. We use these lube oils in a wide variety of applications—automobiles, airplanes, and machinery.

About one-half of all lube oil is consumed during use. The remaining half—with its contaminants of dirt, water, and heavy metals—could be salvaged, reprocessed, and used again. Unfortunately, our economy does not recycle its waste oil. Most used oil is burned, dumped on roads, or poured down sewers. All of these disposal practices have serious environmental problems.

Yet, if this oil were recycled, oil imports could be reduced by over 70,000 barrels per day. Each 1.2 billion gallons of used oil is generated. Less than 8 percent is reprocessed and recycled. Improving our economy's capability to reprocess used oil would clearly make a significant contribution to our long-range energy security.

There are three principal reasons why waste oil is not currently being recycled. The first problem is technical. Assessing the quality of recycled oil as well as new oil is very difficult. Until an economical test procedure for product quality is developed it will not be possible for the consumer to know exactly what he is getting when he shops for motor oil. Fortunately, the Energy Policy and Conservation Act directed the National Bureau of Standards to develop a solution to the problem of developing test procedures to assess

lube oil quality. The NBS is currently working on its program and hopes to begin the second phase this fall.

The second obstacle to used oil recycling is economic. Currently, a large portion of our waste oil—which is produced by automobiles—is being collected at service stations and sold to unscrupulous oil dealers who mix used oil with heating oil and sell it to an unsuspecting consumer. This practice not only victimizes the consumer of heating oil, it robs the re-refiner of valuable feedstock for his process. Solving the feedstock problem will not be easy. A combination of economic incentive and stiff regulation will be required. The legislation I am introducing today encourages States to establish used oil recycling programs. It is through such programs that control over used oil can be most effectively exercised.

The third problem area to successful recycling is educational. The public is simply not aware that used oil when carelessly discarded is a serious pollutant or that when used oil is properly recycled, it becomes a valuable resource. The National Oil Recycling Act addresses this problem by mandating a two-year program of consumer education.

I am hopeful that more action on recycled oil can be taken this Congress. Already the House in the pending energy bill has approved changes in the tax law to remove the discriminatory excise tax treatment of used oil. I would encourage my colleagues to support a continued effort to reduce our waste of this valuable resource.

A summary of the National Oil Recycling Act follows:

SUMMARY OF THE NATIONAL OIL RECYCLING ACT

SHORT TITLE

Section 1 provides that the Act may be cited as the "National Oil Recycling Act".

FINDINGS AND PURPOSE

Section 2 states that it is the purpose of Congress to recycle used oil to the greatest extent possible.

DEFINITIONS

Section 3 outlines the definitions used in the Act.

FEDERAL PROGRAM FOR THE USE OF RECYCLED OIL

Section 4 amends the Energy Policy and Conservation Act to provide for the establishment of a program to recycle used oil generated by the Federal Government. The section directs the Administrator of the General Services Administration and the Secretary of Defense 1. to develop a record keeping system to control the flow of used oil generated from the military and non-military; 2. to prohibit the disposal of used oil by practices which create adverse environmental and public health effects; and 3. to encourage the use of recycled oil by procurement and requiring, where feasible, parties contracting with the Federal Government to use recycled oil and by initiating programs for closed-cycle waste oil recovery and reuse.

CONSUMER EDUCATION

Section 5 directs the Administrator of the Environmental Protection Agency to carry out a program of public education on the recycling of used lubricating oil. The program will focus on the performance characteristics of new and recycled oil, the environmental and public health hazards of indiscriminate disposal of used oil, and the potential of resource conservation through used oil recycling.

GRANTS FOR STATE WASTE OIL MANAGEMENT PLANS

Section 6 authorizes the Administrator of EPA to make grants to any State which establishes a waste oil management plan in compliance with the guidelines of the section. The State plan must—

1. Licensing of used oil collectors;
2. Licensing of used oil recyclers;
3. Procurement regulations for recycled oil used by the State government and parties contracting with the State government;
4. Requirements that retailers of lubricating oil maintain used oil collection facilities on the premises;
5. Prohibitions against the use of used oil as a fuel oil or for oiling State roads unless the oil has been processed to meet Federal and State pollution control laws;
6. An education program on the hazards of indiscriminate disposal of used oil and the merits of recycling used oil.

RELATIONSHIP BETWEEN FEDERAL AND STATE LAW

Section 7 provides that the Act shall not preempt state law when the Administrator determines that state law provides for stricter control of lubricating oil.

RETAIL SALES OF AUTOMOTIVE OIL

Section 8 provides that over-the-counter sales of automobile lubricating oil shall be sold in resealable containers with a deposit of 30 cents per container. The deposit is refundable upon return of the container.

RESTRICTIVE CONTRACTS PROHIBITED

Section 9 makes unlawful contracts which are intended to discourage the recycling of used oil.

FEDERAL PROGRAM OF RESEARCH

Section 10 directs the Administrator of the Energy Research and Development Administration to conduct a program of research to improve the performance and marketability of recycled oil and to conduct a program of research into the environmental and public health impacts of various used oil disposal practices.

REPORT

Section 11 mandates that the Administrator of EPA provide Congress with an annual report on the administration of the Act.

MANDATORY LICENSING

Section 12 provides the Administrator of EPA to order the licensing of an open and competitive recycling industry consistent with the purposes of the Act.

PENALTIES AND ENFORCEMENT

Section 13 provides that specific violations of the Act shall be misdemeanors punishable by a term of six months in prison or a fine of up to $25,000, or both.

COOPERATION WITH OTHER AGENCIES

Section 14 directs the Administrator of EPA to coordinate his activities under the Act with other agencies already involved in used oil recycling.

AUTHORIZATIONS

Section 15 authorizes $4 million for each fiscal year from 1978 through 1982 to fund state waste oil management plans. Another $200,000 per year is authorized for FY 79 and FY 80 to administer the program for consumer education under Section 5. $600,000 is authorized for research under Section 10 for FY 78 through FY 82.

EFFECTIVE DATES

Section 16 establishes that the provisions of the Act will become effective ninety (90) days after enactment.

PRESIDENT CARTER'S PROPOSALS DEALING WITH THE UNDOCUMENTED ALIEN ISSUE

HON. EDWARD R. ROYBAL

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. ROYBAL. Mr. Speaker, the major features of the undocumented alien proposals announced by the administration yesterday are unrealistic and inconsistent with the traditions upon which this country was founded.

The administration recommends putting the aliens into three categories: Those who entered the United States before 1970 could apply to become lawful permanent residents; those who entered between 1970 and the start of 1977 would be assigned a new status called temporary resident alien for 5 years; and those who entered after January 1, 1977, would be subject to deportation if discovered by the Immigration Service.

While I agree with the provision that grants legal resident status to those who came here before 1970, I find it appalling that the administration has proposed the creation of a new subclass of temporary resident aliens for those who entere between 1970 and 1977. The administration reportedly wants to keep these aliens in a state of limbo for 5 years in order to get a handle on the number of people who have been living here without proper documentation. Why, though, should it take 5 years to count the numbers, when the administration intends to allow the aliens only 1 year to come forward and register for their new status?

Clearly, this group of aliens would be stigmatized and segregated from the mainstream of American society. They would be nothing more than braceros, with the right to work and pay taxes, but without access to any social services whatsoever, regardless of need. These so-called temporary resident aliens would be forbidden to be joined by their families who are now living in their countries of origin, thus creating an atmosphere contrary to the President's own philosophy of a strong nation built on family unity. Worst of all, these aliens would be expected to come forward and register with the Immigration Service, not knowing what might happen to them after 5 years. Such a plan would subvert the humanitarian purpose of an amnesty by causing uncertainty and fear among aliens all over the country.

Also unacceptable is the administration's recommendation to impose civil penalties on employers who knowingly hire undocumented aliens, because it will obviously increase employment discrimination against Hispanic Americans. To protect themselves, employers will be encouraged under the plan to request identification from job applicants, proving that the applicants are citizens, legal residents, or otherwise authorized to work in the United States. However, since employers will not actually be required to ask for identification, many will take a safe shortcut and request it only from

those who appear foreign. The applicants most negatively affected by this practice will be Hispanic Americans, who because of their heritage will constantly be asked to prove their legal identity.

I find it intolerable that a people who already suffer a great deal of injustice should be subjected to such a new form of discrimination as a result of the administration's proposals.

Moreover, the idea of employer sanctions contradicts another plan under consideration by the administration to streamline the "H–2" visa program, under which foreign workers can be brought into the United States. On the one hand, the administration would be trying to keep aliens out of U.S. jobs by imposing employer sanctions, while on the other hand, he would be inviting aliens in to take U.S. jobs through the "H–2" program. The only possible explanation for this contradiction is that the administration may want to use the "H–2" program to appease agricultural interests, which would otherwise be badly hurt by the employer sanctions.

It should also be pointed out that so-called improvements to the "H–2" program could turn into a revival of the old bracero program, which was shown by a recent study to have actually spurred illegal immigration. The study, done by Prof. Wayne Cornelius of MIT, revealed that half of the undocumented aliens he surveyed had fathers who had also come to the United States, many of them during the period of the bracero program. And as many as 27 percent of the older aliens in the Cornelius survey had been here once before as braceros.

Clearly, the administration proposals are short-sighted, and may even compound the undocumented alien problem in the future. Unlike the administration, I do not believe there is any intranational remedy, short of a Berlin wall along our borders, which can prevent undocumented entries into the United States. As long as economic opportunities remain so much greater in the United States than anywhere else, people from all over the world will want to come here to make better lives for themselves, with or without proper documentation.

We must therefore help to increase economic opportunities in other countries in order to reduce their out-migration. We should concentrate on increasing bilateral and multilateral aid to Latin America, and we should especially encourage the promotion of human development and the expansion of labor-intensive jobs in Latin American nations.

To this end, I have proposed in my bill H.R. 6093 that we establish a cabinet level commission headed by an ambassador, which would meet with counterparts from Mexico and other countries of this hemisphere to study and make recommendations for a long-term solution to immigration, including the economic development of countries that today send us their poor and oppressed who cannot make a living in their native countries.

LOS ANGELES TIMES ENDORSES MINIMUM WAGE, LABOR LAW CHANGES

HON. GEORGE E. DANIELSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. DANIELSON. Mr. Speaker, the Los Angeles Times on July 18, 1977, contained an editorial endorsing passage of legislation to increase the minimum wage, and amendments to the National Labor Relations Act relating to union elections and labor law violations. I call this editorial to the attention of my colleagues and insert it at this point in the RECORD.

TYING A RIBBON ON A LABOR PACKAGE

Two important pieces of labor legislation supported by the AFL–CIO have won the backing of President Carter. That should make more likely their passage.

As modified at the President's urging, one of these measures would raise the minimum wage and tie future increases to the average hourly earnings of American factory workers. The other bill would stiffen penalties against labor-law violators and speed the workings of the National Labor Relations Board.

The measures still need modest changes, but they deserve enactment.

The minimum-wage proposal, sponsored by Rep. John H. Dent (D-Pa.), chairman of the House subcommittee on labor standards, would boost the federal minimum from $2.30 an hour to $2.65. That increase of 15% is roughly enough to compensate for inflation in the 2½ years since the pay guidance was last raised.

We questioned the dire warnings of business groups that the wage-cost increase would throw large numbers of people out of work and harm the economy. But we do agree with those who oppose tying future changes to an index.

The minimum wage has existed for decades, but its effect on different groups is still not certain. Changes should be undertaken cautiously and after comprehensive congressional hearings—not triggered automatically by the impersonal workings of some obscure index.

Teen-agers, minorities and part-time workers are heavily represented among minimum-wage employes. They have much to gain from a healthy increase, and much to lose if the minimum jumps too fast, pricing their labor out of the market.

It is true that the minimum wage is a very low wage indeed, and that these groups need a better economic lot. But it is equally true that the complex plight of the working poor cannot be fixed by automatic jumps in an index.

The other labor bill is HR 77, a series of amendments to the National Labor Relations Act. The proposal would increase the National Labor Relations Board to seven members from the present five, adding two more officials to conduct hearings and supervise appeals.

This bill, introduced by Rep. Frank Thompson Jr. (D–N.J.), who heads the House labor-management relations subcommittee, would also require prompt organizing of elections after a union had demonstrated that it had won the support of 30% of a plant's workers. It would double the back wages that employers must pay to workers in some unfair-labor-practice cases, and it would add to the legal remedies available against labor-law violators.

Gone from the bill is AFL-CIO President George Meany's earlier insistence on repealing right-to-work laws, and gone is an attempt by the labor federation to let unions win elections without the secret ballot. Earlier versions had included a proviso allowing elections to be decided by union signup cards collected by organizers. That idea, which invited the worst kinds of coercion, deserved the death it has met.

THE CHESHIRE FOUNDATION

HON. MATTHEW F. McHUGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. McHUGH. Mr. Speaker, last December Ralph Hall, who is the administrator of the extended care facility at Wilson Memorial Hospital in Johnson City, N.Y., and Philip Deitch, who is the director of Association for Disabled Individuals at SUNY-Binghamton, visited England in order to research several aspects of health care in that nation.

In the course of their visit, they had an opportunity to spend some time with staff members of the Cheshire Foundation and to visit a Cheshire home. Both were very impressed with the work of the foundation, and of the opportunities made available to disabled individuals living in Cheshire homes.

These homes provide an alternative type of care to disabled people. Unfortunately, few individuals in the United States are aware of the work of the Cheshire Foundation, or of the lifestyle encouraged in Cheshire homes.

I believe that the work of the Cheshire Foundation is commendable, and I would very much like to encourage its efforts. Because so little is known about the work of the foundation, I am inserting into the RECORD two items that I believe will foster a better understanding of that work. The first item is a series of questions and answers about Cheshire homes published by the Cheshire Foundation International. The second item is a report prepared by Ralph Hall and Philip Deitch which discusses their contacts with the Cheshire Foundation during their visit to England last winter.

The report follows:

THE CHESHIRE FOUNDATION

(By Ralph Hall and Philip Deitch)

WHAT IS A CHESHIRE HOME?

A Cheshire Home is a real home, in the normal family sense of the word. It's any kind of suitable building, of almost any size, where all kinds of physically disabled people enjoy the fullest lives they can. One thing that the residents have in common is a deep desire for a creative, purposeful life, above all a life of their own choosing in a family environment of affection and encouragement.

Each Home is different because each one has been set up by local people to meet local needs. The Cheshire Foundation is truly international, with 150 Homes in 32 different countries, and a current growth rate of more than 12 a year.

WHO IS LEONARD CHESHIRE?

Group Captain Cheshire, V.C., D.S.O., D.F.C. is the Founder of the Homes, and they are his concept. Today's network grew out of

his personal concern for one man's predicament. In 1948, Group Captain Cheshire, a retired Royal Air Force Bomber pilot and war hero, heard that a 75-year-old ex-serviceman he knew was dying of cancer with nowhere to go following his discharge from hospital. After determined efforts failed to find him a home, Cheshire took the old man into his own home and nursed him until he died.

Others in similar need followed and these he took in too. But he was soon to discover that the real need was for the young adult disabled, for whom, in the United Kingdom at least, no specialised provision existed at all at that time.

WHO ARE THE RESIDENTS?

The great majority are people too handicapped to be able to go out each day to work or to study, but who nevertheless want, and have a right to expect, as full a life as possible. Many work in the Home's workshop, or in the privacy of their own room and all have interests and hobbies which give meaning to their lives. Whilst emphasis is on rehabilitation of the whole person, in the hope that she, or he may be able to return to independent living in the outside community, there are those for whom this is impossible and they are entitled to look upon the Home as theirs for the rest of their lives.

HOW ARE THE HOMES ORGANISED?

The management of each Home is vested in a committee, or board, chosen to be as representative as possible of the local community, and with maximum involvement by the disabled residents. Thus the Homes fit into the framework of their surroundings, and the residents have a sense of belonging to the community around them.

In each country where Homes exist a Central Trust, or Foundation, is established which, as a tax-exempt incorporated charity, co-ordinates the activities of the Homes. It acts as a guarantor to the public that they are being properly managed in conformity with their declared aims and principles, and is the source of authority for the starting of new ones.

WHO PAYS FOR THE HOMES?

The local Management Committees are responsible to the Central Foundation for the financial costs of building and running their own Homes, and therefore have to find sponsors, arrange covenants and generally organise such fund-raising events as they think appropriate. In most Western countries Government or Local Authority grants are available towards running costs, and in some countries grants or loans for capital expenditure are also available. Such has proved the case with the Home-to-be in Madison, New Jersey. Although residents who can, contribute towards their maintenance, no-one is turned away because of inability to pay.

NORTH AMERICA'S OWN CHESHIRE HOMES

The most rapid growth that the Cheshire Foundation has yet known is taking place in Canada where, in addition to a Home of imaginative design at Saskatoon, 7 Homes have come into being in Ontario in the past 4 years, embracing a wide diversity of approach to residential living for the disabled. Others are planned in Vancouver, Montreal and Nova Scotia, as well as Ontario itself.

The Cheshire Foundation in the United States was first pioneered in Madison, New Jersey where a highly personalised Home for 24 residents is in the advanced planning stage in anticipation of commencing building during the course of 1977. The Foundation is also incorporated in Santa Cruz, California, were the Committee is actively working towards the establishment of a Home.

In Washington D.C., where the Central Trust has very recently been incorporated, the Cheshire Foundation is very privileged to be collaborating with Independent Living for the Handicapped in order to bring into being a first "House" for six disabled residents.

NEW ATTITUDES

The first Cheshire Home came into being 30 years ago because of a new attitude towards the physically disabled. But attitudes have changed a great deal since then. Today's needs require today's answers. If the Foundation is to maintain its momentum it must constantly seek new expertise and new ideas. Above all it hopes for the active involvement of Americans to make the dream of independence come true for more of the world's young disabled.

THE CHESHIRE FOUNDATION—PART II

A person can incur a disability from many sources (i.e., birth, accident or illness.) After all medical attempts at eliminating or minimizing the impairment have been tried, the individual must then learn to continue to live a normal life with the disability. The majority of disabled individuals could lead full and independent lives if the barriers or handicaps were removed—architectural, transportation, educational and employment barriers.

It has now been proved beyond question that 90 percent of even the severely disabled have the capacity, if they get proper training, to take care of their own daily needs, and in many cases to return to gainful employment in a competitive society.

There are those who will always need some level of support service for their personal care and maintenance. Other than this care for their daily living needs, they do not have major medical needs requiring full time medical staff attention. Hospital and nursing homes are expensive for permanent residence and do not begin to simulate a normal living experience. They are designed for those needing skilled nursing care in addition to their daily support needs—thusly they foster dependence rather than independence.

The home sometimes can become a place for the disabled individual; however, this may create two problems. Firstly, the situation may become a permanent drain on the family resources and life style. Secondly, the individual does not have the opportunity to begin to live an independent life.

The professionals in the health field can also become barriers to independence in that they have an educated desire to categorize every type of patient care into very concise terms.

For example, every level of care is precisely identified as either an acute facility, a skilled nursing facility, a health related facility, or a domiciliary facility. Even home health care is being labeled as an alternate level of care. The basic philosophy is that good and sound management requires that a large health system be highly organized and categorized.

It is not surprising that an attempt to establish a Cheshire Home in the United States has met with long delays and many bureaucratic barriers. A Cheshire Home is something uniquely different to any level of care presently identified in the United States. It is definitely not home health care; but then it is not an institution which easily fits into an established American pattern of identification.

THE HISTORY

One can trace the history of the development of the Cheshire Foundation from its founding by Group Captain Cheshire in 1948 when "he came across a man dying of cancer whom no one wanted and who was about to be discharged from the hospital. After trying very hard to find somewhere else for him to go, but without success, he took him into his own house and nursed him until he died. In the course of doing this he discovered others who were in much the same situation, and he took them in too, turning the house into a home for the incurably sick or permanently disabled."

After the success of the first home, the program expanded into what are now over 60 residential homes for the permanently disabled in the United Kingdom with almost the same amount located in 32 countries around the world.

THE ORGANIZATION

This has been merely a chronological and statistical tracing of the development of a concept of providing facilities for the care of disabled individuals. It does not truly provide an insight into the operation of the Cheshire Foundation Homes. Each home is run independently of any day-to-day control from the Central office, and each home attempts to manage its own financial matters in a self-supporting manner. Each home is governed by a local board of community residents so that in theory it can keep in touch with the needs of the local community and become a part of the local lifestyle.

The central foundation does set general standards and provides the capital funds needed to build or improve the homes. These funs are made available to the local communities as loans and are expected to be repaid. Whenever possible the residents themselves are expected to support the rest of the home's activities. All moneys are private non-governmental funds. All homes have a matron as head of staff which will also include a registered nurse and trained assistants.

A VISIT TO A HOME

On December of 1976 the writers had an opportunity to visit a Cheshire Home in Gerrards Cross just outside of London, England. The building, like most of the Cheshire Homes was a large two-story house probably built in the early part of the 20th Century. Except for a large addition on the garden side of the home, it appeared merely to be another home within the Gerrards Cross Community.

The major differences were found inside the home—and the differences were not architectural. Inside was an environment established upon the concept that the home "should be a place of shelter physically, and of encouragement spiritually; a place in which the residents can acquire a sense of belonging and of ownership by contributing in any way within their capabilities to its functioning and development; a place to share with others, and from which to help others less fortunate; a place in which to gain confidence and develop independence and interests; a place of hopeful endeavour and not of passive disinterest."

Ms. Sylvia Ho'mes was the writer's hostess during the visit. She is a resident of the facility along with 25 other disabled including her sister. Both Sylvia and her sister were disabled by muscular dystrophy at birth.

During the on-site visit the writers were also joined by Sister (British for nurse) Barbara Smith and Aide Pauline Heard. The Foundation has a training program in residential care for the disabled which takes about 1½ years to complete. Attendance in the program is not required of all staff hired, and it is not yet formally recognized by the government nor the academic community as a certified program. However, its graduates are well respected and received into the professional community.

After a tour of the facility (to be discussed later), Ms. Holmes and the staff were quite open in their discussion and description of the operations of the home. It became apparent that they were supportive of the concepts and definition of a Cheshire Home. However, there were a few shortcomings noted.

Firstly, Group Captain Cheshire's deeply routed philosophy of individual independ-

ence was strongly evident in this home. No resident was ever forced to participate—in fact Sylvia felt that even strong encouragement to become involved in activities both inside and outside the home could meet with criticism. She felt that many residents would be happier and healthier if they were more strongly encouraged to participate. During the visit, it was mentioned that there was an acute shortage of occupational therapists and that they presently did not have one available which might have helped to involve more residents.

In later conversations with a representative of the Foundation, the independent philosophy was noted and indicated as a current problem in the operation of the homes. Individual freedom is a highly respected way of life for the Englishman and woman; but there may be times when the disabled need to be encouraged to do more for themselves and to become more involved in home activities.

When asked why she chose not to remain at home with her family (where the family was being given support by the government), Sylvia replied that "Home Health Care cannot provide for recreation and just getting out (in the community) as opposed to a residential facility such as the Cheshire Home." This appears to be contrary to the growing assumption in the United States that given the opportunity and support, the elderly and disabled would choose to remain in their homes. The significant difference here is whether or not the residence is the home of the person's parents or whether it is his or her own home adapted to meet the needs of a disabled. This matter will be discussed in greater detail in the summary page of this paper.

Sylvia Holmes felt very strongly that the Cheshire Home residence did belong to the residents and therefore they should have a more active role in the policy setting procedures and the governing of the home. This is a current appeal heard throughout most of the Cheshire Homes, and it is one that the Foundation is addressing. The most suggested solution appears to be to have the residents represented on the local community boards.

As mentioned earlier in this paper, Ms. Holmes did conduct a tour prior to tea. The first impression an American might have upon entering the facility, would be that they were entering a pre-1960 vintage U.S. nursing home. However, as he or she met the residents, noted their youth, and observed the home's operations, he would soon realize that this was not a nursing home of any type known to him.

Although the home has twenty-five patients, the staff is small limited to the Warden, his wife (a nurse), plus two other nurses, a three-person kitchen staff and two housekeepers.

All the residents were disabled either by accident or disease; and most were confined to wheelchair. However, each resident was expected (and appeared to do so) to care for themselves to the fullest extent possible.

The interior of the home would probably not meet the code requirements for most eastern United States health departments. Not due to a lack of cleanliness or medical reasons; but primarily because of the width of doors and halls and other architectural differences between the British and United States standards.

Most wheelchairs were noted to be motorized, and an ingenious system of pullies and hoists enabled many residents to lift themselves into and out of bed. Likewise, most were able to care for their own bowel and bladder needs.

Residents are encouraged and supported in visiting the local community pubs and shops. However, several residents have never taken part in this type of outing. One unique aspect of the homes was an exchange program with a French facility similar to their own. Both staff and residents were exchanged.

Although "the management of each Home is vested in a committee, chosen to be a representative as possible of the local community," the residents admit that they still have some difficulty in receiving full support of their neighbors and fellow-community dwellers for the same basic reasons that exist in other communities around the world—i.e. the communities' concern for depreciation of property value of homes located near 'such a facility'; for fear of the effect disabled have upon children growing up; for the dissatisfaction of being forced to face the reality that the disabled deserve an opportunity to live within the community. The home office of the Cheshire Foundation is aware of these difficulties and as mentioned earlier is presently considering placing residents on the management committees.

CONCLUSIONS

In summary, the Cheshire Foundation Homes for the Sick list as their "Basic Principles" for each home:

1. The Homes have developed and expanded, not according to a pre-conceived plan, but as opportunity or need presented itself, and normally in some premises for which no one else could find a use.

2. They care for the incurably and permanently disabled—those for whom hospitals can do nothing further and who have nowhere else suitable to go.

3. They are run as homes rather than as hospitals, for their function is not to administer curative or surgical treatment. Thus they offer the affection and freedom of family life, the residents being encouraged to take whatever part they can in the day-to-day running of the house.

4. They are un-denominational. Residents are admitted according to need, irrespective of race, creed or social status, all being asked to live together as one family.

Based upon the limited knowledge gathered from one on-site visit and interviews with home office personnel plus a review of available literature, the writers have reached the conclusion that most of the "basic principles" are met and that the philosophy upon which the foundation was established still exists. The major items beginning answers are whether or not each home has a responsibility to its residents to "get them involved" or must the philosophy of absolute individual freedom be adhered to at all times and at all costs. Secondly, to what extent can the role of the residents in the management of the homes be expanded.

Nevertheless, it is apparent from discussions with the Foundation Staff and comments made by British Secretary of State of Health and Social Services, David Ennals, there will continue to be a need for Cheshire Homes as they exist today and even further expansion.

As mentioned earlier, the Foundation is working with a group of American citizens in Madison, New Jersey, to establish a home in that community. The success of this home in creation may very well set the pattern for future development of homes in the United States. To the best of the knowledge of the writers after limited research, no other home of this type actually exist within the United States. It may well be that here is a lesson to be learned.

NEW GENERATION SINGERS

HON. E. THOMAS COLEMAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. COLEMAN. Mr. Speaker, as we were called into session this morning, it was our pleasure to hear the New Generation Singers of the Wyatt Park Christian Church of St. Joseph, Mo., performing on the east steps of the Capitol. It was a delightful way to begin this beautiful day.

The 67 members of the New Generation Singers are among the finest young people it has been my pleasure to meet. Although they have been traveling for nearly a week and keeping a busy schedule, they were fresh, alert, and enthusiastic. In short, they truly represent the best hope for our Nation's future. And, as you know, Mr. Speaker, they are very talented.

Mr. Speaker, I would like to especially recognize the Reverend Byron Myers who is director of the New Generation Singers. Reverend Myers and his wife, Phyllis, sponsored the tour, which included many performances across the Eastern United States. Throughout the year they devote their lives to their church and these young people. Assisting Reverend and Mrs. Myers as tour sponsors are Chuck and Jane Pfander, Doug and Carolyn Dannen, Bill and Doris Steele, and Richard and Barbara Crumley. These folks deserve our special appreciation for their work with these young people.

Mr. Speaker, I am proud to represent a district that produces young people like the New Generation Singers. I am sure you join in my hope that we can look forward to their visit again next year.

A LETTER TO THE SPEAKER

HON. BENJAMIN A. GILMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. GILMAN. Mr. Speaker, my colleague, the distinguished gentleman from New York (Mr. RANGEL), and I believe, as do many other Members, that the President's recent proposal to dismantle the Office of Drug Abuse Policy—ODAP—from the President's Executive Office is a setback in this Nation's efforts to develop a comprehensive national drug strategy program.

In order to express our deep concern over this proposal, we have circulated a letter among our colleagues for their signature, a letter addressed to you, Mr. Speaker, urging that you use your good office to request the President to reconsider his decision to abolish ODAP. To date, 90 Members have signed this letter.

Mr. Speaker, in the interest of calling this letter to the attention of other interested colleagues and in welcoming their support, we insert the complete text and list of cosigners of our letter in the RECORD at this point.

HOUSE OF REPRESENTATIVES,
Washington D.C., August 4, 1977.

Hon. THOMAS P. O'NEILL, Jr.,
Speaker, U.S. House of Representatives, Washington, D.C.

DEAR MR. SPEAKER: We urge you to use your good office to advise the President to reconsider his recommendation to abolish the Office of Drug Abuse Policy (ODAP).

The Congress created ODAP to develop a national drug abuse policy and to finally coordinate the 50 departments, agencies, bureaus and administrations of the executive branch having jurisdiction over drug trafficking and drug abuse.

When President Carter took office, he supported the decision and, for the first time, the Congress and the nation had hopes that progress was being made.

Now, with less than five months existence, ODAP is being charged with the responsibility to research, study and make recommendations to the Congress and then, at the end of the year, go out of business.

Mr. Speaker, it has taken us too long to get our national narcotic problem on the executive agenda for the Congress to recede to the President's request.

We urge your support of our position.

Sincerely,

BENJAMIN A. GILMAN,
Member of Congress.
CHARLES B. RANGEL,
Member of Congress.

THE FOLLOWING MEMBERS OF CONGRESS REQUEST THAT YOU INTERCEDE ON OUR BEHALF AND ADVISE THE PRESIDENT OF OUR DISAPPROVAL OF HIS PROPOSAL TO ABOLISH THE OFFICE OF DRUG ABUSE POLICY

James Abdnor, Joseph Addabbo, Herman Badillo, L. A. Bafalis, Robert Bauman, Robin Beard, Mario Biaggi, Jonathan Bingham, William Broomfield, and J. Herbert Burke.

Yvonne Brathwaite Burke, John L. Burton, Shirley Chisholm, Don H. Clausen, Del Clawson, William Clay, James Cleveland, Cardiss Collins, Barber Conable, and Tom Corcoran.

James Corman, William Cotter, Phillip Crane, James Delaney, Ronald Dellums, Charles Diggs, Robert Dornan, Thomas Downey, Don Edwards, and Thomas Evans.

Billy Lee Evans, Millicent Fenwick, Hamilton Fish, Jr., Daniel Flood, Walter Flowers, Harold Ford, Louis Frey, Tennyson Guyer, James Hanley, and Augustus Hawkins.

Michael Harrington, Margaret Heckler, Elwood Hillis, Harold Hollenbeck, Elizabeth Holtzman, Frank Horton, Henry Hyde, Robert Kasten, Jack Kemp, and Edward Koch.

Robert Lagomarsino, Norman Lent, Trent Lott, Pete McCloskey, James Mann, Marc L. Marks, Ralph Metcalfe, Abner Mikva, Parren Mitchell, and Donald Mitchell.

Toby Moffett, G. V. Montgomery, Morgan Murphy, John Meyers, Lucien Nedzi, Richard Ottinger, Edward Pattison, Claude Pepper, Joel Pritchard, and Tom Railsback.

Frederick Richmond, Peter Rodino, Benjamin Rosenthal, John Rousselot, Marty Russo, Ronald Sarasin, James Scheuer, Joe Skubitz, and Steve Solarz.

Louis Stokes, Gene Taylor, Joe D. Waggonner, Jr., William Walsh, Theodore Weiss, Larry Winn Jr., Lester Wolff, C. W. Young, and Leo Zeferetti.

COMPETITION AMONG ENERGY RELATED INDUSTRIES

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. RODINO. Mr. Speaker, I am pleased the House's debate on H.R. 8444 has focused in part on matters relating to the level of competition in some of the energy related industries. However, particular questions may be resolved, it is useful, I think, to be reminded that our antitrust laws represent a fundamental commitment to vigorous competition that extends to every sector of our free enterprise economy.

As the House may be aware, the Judiciary Committee through its Subcommittee on Monopolies and Commercial Law has been engaged for several years in a careful and thorough examination of many aspects of competition in the energy industries. Some of those inquiries, I think, may be pertinent to issues raised by H.R. 8444.

The committee is, for example, completing a lengthy investigation into the possible anticompetitive effects of oil company joint ventures. By making close business partners of competitors, it may be that these ventures seriously erode competition, to the potential detriment of both businessmen and consumers. If such an anticompetitive potential does exist, the Congress should closely scrutinize these arrangements.

But our inquiry has, in part, been slowed by a lack of reliable, standardized data. For that reason, I am greatly pleased that H.R. 8444 requires the submission of all relevant competitive data, on an individual line-of-business basis, from the petroleum companies. The President, I know, is in strong support of these provisions and he is to be commended for his leadership in this area. Together with the Pre-merger Notification Act we passed last year—an act that provides for the advance review of certain large mergers and joint ventures—these provisions will help give the Congress, the antitrust agencies, and the new Energy Department the critical information we need to insure healthy competition.

As the House may also be aware, the Judiciary Committee is also studying the need for, and the merits of, legislation proposing the vertical divestiture of the major integrated petroleum companies. And we also have before us numerous horizontal divestiture proposals, aimed at forestalling anticompetitive developments in the coal and uranium industries in particular. Those, too, are receiving careful study.

Finally, the Monopolies Subcommittee is also particularly concerned about the state of competition in the Nation's petroleum pipeline industry. Pipelines, of course, are natural monopolies, and that is why they have long been subject to common carrier regulation by the ICC. However, the adequacy of this regulation has in recent months come under some notable challenge. The Justice Department, the Federal Trade Commission, the Department of Transportation, and the ICC itself have all raised concerns of anticompetitive potential—both in petroleum pipelines, and in the proposed deepwater ports that are now a source of so much public concern. These antitrust concerns voiced by the expert administrative agencies—concerns that include the possible exclusion of competitors and the exaction of excessive, monopolistic rates—deserve the most careful attention of the Congress.

Mr. Speaker, all of us have expressed ourselves against monopoly. But all too often, attention is paid only to those sectors of the economy traditionally governed by free markets and open competition. It is in those markets where Government regulation has to some degree replaced and limited free competition, however, that we have sometimes fallen short. It is in many of these very energy-related industries that our concern for competition should be at its greatest—precisely because competition has in these cases been diminished by regulation.

Mr. Speaker, H.R. 8444 is the product of an enormous amount of hard work and I am pleased that, in part, it brings to the attention of the House some of the difficult questions we face in the struggle to maintain a free, vigorous, and competitive energy economy.

NATIONAL ENERGY ACT

HON. JOSEPH D. EARLY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. EARLY. Mr. Speaker, today we passed perhaps one of the most far-reaching and encumbering pieces of legislation that the 95th Congress will have had an opportunity to address itself to. Together, the Congress and the administration, have sought to fashion an equitable national energy policy. While five House committees labored for several months, the final piece of legislation will probably engender more redtape and add to the voluminous paperwork that already inundates our Federal and State agencies.

I think that we have asked for the impossible. What appears to be fair and palatable to all regions of the Nation on paper may be worth academic debate, but possibly would never withstand the acid-test of real-life situations. We have written legislation that asks the Federal Energy Administration, the Federal Power Commission, the Department of Housing and Urban Development, the Department of Transportation, the Energy Research and Development Administration, the General Services Administration, the Farmer's Home Administration, the Government National Mortgage Association, the Community Services Administration, and the CETA program to work together to formulate a coherent and readily available weatherization program for homeowners. While this many agencies and departments attempting to hammer out a single program would seem to preclude a quickly implemented and Catch-22 free program, there are just too many bureaucracies involved with jurisdictions that they have historically protected with a ferocity befitting the so-called king of beasts, the lion.

This plethora of organizations would be required to ostensibly draft a program to conserve our domestic energy supplies while reducing our dependence on foreign imports. I sometimes wonder whether, indeed, we have not unwittingly drafted legislation with its primary thrust aimed at reducing our trade deficit rather than conserving and converting our present industrial complex to alternative fuel sources. We now import nearly 50 percent of all crude oil used in this Nation. There should be no dispute that America has failed to effectively conserve our fossil fuel sources to date. And, now we are faced with the harsh fact that our balance of trade is partially, if not completely, contingent upon our

continued importation of substantial amounts of crude oil.

Unfortunately, we must give economic incentives to the consuming public to conserve, and place disincentives, economic penalties if you will, to prod it toward greater fuel efficiency and alternative fuel sources. As a result, I think, we have enacted a tax bill rather than a national energy policy.

The Congressional Budget Office estimates that through 1982, the pricing policies, regulatory, tax and nontax provisions, to encourage energy conservation, reduce demand for oil and natural gas, and conversion to alternate energy sources will cost Americans, at the minimum, $50 billion. This massive redistribution of wealth is regressive in nature. While it is commendable that the committees have sought to foster the development and deployment of solar energy equipment, the economic incentives are negligible when considering the present tax burden that most moderate and low-income Americans now bear. The committees in their effort to be equitable to all regions and to all Americans have recommended further that a crude oil equalization tax be kept in the legislation to help conserve and convert from such fossil fuels—and perhaps enhancing our balance of trade in the long term.

Again, however, even with a moderate rebate of approximately $28 per household, the cost of petroleum products, in particular gasoline, is expected to increase by nearly 7 cents, and as high as 10 cents on the gallon. The brunt of this new burden will be felt by those Americans who can least afford it. In theory the provision is equitable for all regions of the Nation. But, I suspect, that in practice, this provision will fail to accomplish its stated goal. The provision will flounder in its own complexity creating another bureaucratic nightmare.

Mr. Speaker, I must applaud, though, the action taken during the course of debate this week on the natural gas pricing provisions of the bill. We have successfully enacted legislation that gives sufficient economic incentive for new exploration and development of our domestic natural gas reserves while keeping a reasonable lid on the market price. Consumers will pay more for heating their homes and for cooking their meals, but we have restrained those groups who sought total deregulation. Such action would have drained an additional $70 billion from the consuming public without producing any significant increase in exploration and development of new natural gas reserves.

It should also be noted that the Members of this House acted wisely in resisting attempts to increase the Federal gasoline tax. The 4- and 5-cent increases, as proposed, would have proven regressive. The low- and moderate-income groups would have paid a disproportionate percentage of their income if this additional Federal gasoline tax had been enacted in comparison to those individuals and families in the upper income tax brackets. A recent Harris survey indicated that at $1 a gallon, 38 percent of Americans would change their means of transportation. At $1.25, 49 percent of drive-to-work people would carpool or take public transportation. At $2 a gallon, 54 percent said they would share or abandon their use of a car to get to their place of employment.

There is no doubt that Americans are concerned about the amount of gasoline they consume. But placing a 5-cent-a-gallon additional Federal tax on gasoline would have cut most deeply into middle America's wallet. Those in the upper income brackets would still spend less proportionately of their income on fuel costs than would the majority of Americans.

Mr. Speaker, I wish to make it clear for the record that I personally believe that the title to H.R. 8444, National Energy Act, is a misnomer. The legislation should be entitled a Tax Act of 1977. Those least able to afford insulating and retrofitting their homes will become involved in a bureaucratic quagmire. The continued tax squeeze on middle America will slowly become a strangehold. The administrative procedures required in this legislation will probably cause additional frustration for the vast majority of the American public. It is my thought that we must conserve our domestic fossil fuel reserves while cutting down on our foreign imports. But taxing Americans as provided for in this bill is unfair and will possibly aggravate the existing economic disparity between lower and moderate-income groups and those in the upper income brackets.

While I suppose this bill is fair in theory, it would in my estimation, cause further disenchantment with the Federal Government and with elected officials in general. I also have some serious reservations regarding the procedure by which this legislation was handled. Never have I seen a single piece of legislation pushed so fast and hard by the House of Representatives. One wonders whether sufficient time was spent on formulating and debating the provisions of this legislation. For these reasons, Mr. Speaker, I have reluctantly voted against final passage of this bill.

MR. JUSTICE CLARK

HON. HENRY B. GONZALEZ

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. GONZALEZ. Mr. Speaker, the late Justice Tom Clark died during his 77th year; he would have been 78 years old on September 23.

Tom Clark was a public man, but not widely known, as perhaps the quiet dignity that we associate with the U.S. Supreme Court. He was known as a hard-working Justice, as industrious a man as ever served on the Court. In fact, his retirement was a working one, and at the time of his death, he was actively serving in the Federal court system, providing judicial help in circuit courts that were overburdened with work.

Tom Clark was born in Dallas, Tex., in the year 1899. He attended and graduated from Virginia Military Institute, a place steeped in legend, whose graduates have often gone on to distinguished public careers. Tom Clark spent his university years at the University of Texas, and received his law degree there in 1922. Two years later, he married Mary Ramsey.

For 15 years, Tom Clark practiced law in Dallas, 10 years in private practice, interspersed with 5 years as civil district attorney for Dallas County. He came to Washington to work for the Justice Department in 1937, and by 1943 became Assistant Attorney General. President Truman made him Attorney General, a post that he held until 1949.

President Truman nominated Tom Clark to be an Associate Justice of the Supreme Court on August 2, 1949, and his confirmation by the Senate took only slightly more than 2 weeks. He served the Supreme Court until his retirement at the recess of the Court in 1967, and thereafter continued his judicial work, right up until the moment of his death.

Tom Clark was a hard working, talented servant of the people. He wanted nothing more than that opportunity and privilege. There could be no higher tribute than to say that Tom Clark cared for his country, and served it with honor, every way that he could, and with excellence, in every capacity he held; and he never stinted in his effort, even to the last day of his life. Our country can only mourn the loss of a servant as dedicated as Tom Clark, a rare and good man.

OPEC USE OF THE SDR IN OIL TRADE: WE SHOULD WELCOME IT

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. REUSS. Mr. Speaker, once again, the dollar has dipped in exchange markets. Once again the oil producers, led by Iran, are threatening to value their product in special drawing rights—SDR's. Under the floating exchange rate regime that exists today, we must expect the value of the dollar to fluctuate occasionally with respect to the other major currencies. Over two years ago, in June 1975, the OPEC ministers decided in principle to switch from dollars to SDR's as their accounting unit, but this decision has never been implemented. We must now expect that whenever the dollar looks weak, the oil producers will become worried about taking payment in the U.S. currency. If I were an oil producer, I would get worried too.

For some years, the Joint Economic Committee has advocated reducing gradually the international monetary role of the dollar as a reserve asset that central banks hold, as a measure of value, and as a medium of exchange, in favor of the SDR issued by the IMF. A switch by the OPEC countries from using dollars to SDRs to value their oil would be difficult, since the SDR does not circulate as a medium of exchange that can be used by corporations or individuals. But if the technical problems could be ironed out,

such a transition would produce definite benefits for the United States.

I can visualize the situation in which the price of oil would be stated as a given number of SDR's per barrel and payment by companies purchasing that oil could be made in the appropriate number of dollars, marks, yen or whatever of equivalent value.

The possibility of paying for oil in other currencies according to a fixed SDR value might take some strain off the dollar in exchange markets by reducing the need for OPEC to convert dollar earnings into other currencies. This development might also pave the way for eventual use of the SDR itself as a medium of exchange, although evolution in this direction will necessarily be slow.

The United States must and should take its international and monetary responsibilities seriously. But we should also encourage the transfer of these responsibilities to the SDR, because relieving the United States of some of these responsibilities will help to give this country additional latitude in determining our own fiscal and monetary policies. If the international financial community looked a little more to the SDR, and less to the dollar, policy-makers in the United States might be able to be a little less concerned about the international implications of interest rate variations in the United States.

I welcome this prospective initiative from the OPEC finance ministers.

SETTING OUR HANDICAPPED FREE—SECTION 504 IS NOT ENOUGH

HON. EDWARD I. KOCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. KOCH. Mr. Speaker, with the passage of title V of the Rehabilitation Act in 1973, handicapped Americans obtained long-overdue legislative protection of their basic civil rights. This law protects the Nation's handicapped from discrimination in Federal employment—section 501—in employment by recipients of Federal funds and contracts—section 503—and in housing, transportation, education, health services, and social service programs provided by recipients of Federal funds—section 504.

Until recently, many of the rights, guarantees by title V, often termed the "Civil Rights Act for the Disabled," were meaningless because there were no regulations to implement section 504 of that title. This spring, Secretary Califano developed and signed these regulations, and a broad antidiscrimination program could finally be set into motion.

Handicapped Americans worked long and hard to obtain these regulations as parts of their efforts to insure enforcement of the title's protections. But commencement of a Federal section 504 compliance program is not enough, however, to guarantee compliance with title V throughout the society. Disabled Americans face still another struggle to translate their statutory and regulatory civil rights protections into actual practice by all recipients of Federal funds.

The problem is this—should a recipient of Federal funds fail to comply with the provisions of title V, the Federal agencies administering the funds are empowered to cut off recipients' moneys. Unfortunately, if a handicapped person wants a job, or access to a program that receives Federal funds, an agency does not have the power to order specific relief for the person—it can only threaten to cut off all Federal funds going to the recipient. This drastic action is impracticable as a mechanism to insure enforcement of civil rights protections on an individual basis. Therefore, each disabled person must ultimately turn to the courts if he or she wishes to obtain individual relief.

Individual litigation is thus extremely important to the effective enforcement of title V's guarantees. At present, however, very little title V litigation has occurred, largely because of the need for extensive—and expensive—investigations, document production and expert witnesses to press such cases successfully. Disabled people, who face so many attitudinal and architectural barriers, thus confront an economic barrier that prevents many of them from exercising their private right of action, and individual remedy becomes impossible. Unless individual litigation is made feasible under title V, much of its protections will remain unenforced.

Therefore, today I am introducing a bill to add a new section to title V to allow attorney's fees for litigation brought to enforce its provisions. This additional section serves to give title V parity with similar civil rights laws that award attorney's fees to prevailing plaintiffs. All handicapped citizens would then join the ranks of other civil rights litigants and litigants enforcing section 504 against State and local officials in seeking attorney's fees to offset the great financial burden of enforcing the Nation's nondiscriminatory statutes. My bill makes the courts a viable avenue of recourse for disabled Americans whose civil rights are violated.

The text of my bill follows:

H.R. 8862

A bill to amend the Rehabilitation Act of 1973 to permit courts to allow a reasonable attorney's fee to prevailing parties, other than the United States, in certain actions under title V of such Act

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That title V of the Rehabilitation Act of 1973 (29 U.S.C. 790 et seq.) is amended by adding at the end thereof the following new section:

"ATTORNEY'S FEES

"SEC. 505. On any action or proceeding to enforce any provision of section 501, section 503, or section 504, the court, in its discretion, may allow the prevailing party, other than the United States, a reasonable attorney's fee as part of the costs.".

"SEC. 2. The table of contents in the first section of the Rehabilitation Act of 1973 (Public Law 93–112; 87 Stat. 356) is amended by adding at the end thereof the following new item:

"Sec. 505. Attorney's fees.".

STATE-EMPLOYEE RELATIONSHIP

HON. CHARLES H. WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. CHARLES H. WILSON of California. Mr. Speaker, when Congress returns next month, one item on the calendar will be consideration of H.R. 6566, authorizing appropriations for the Energy Research and Development Administration for fiscal year 1978 national security programs.

One item upon which there is disagreement involves the status of University of California employees at the Lawrence Livermore Laboratory. While the disagreement is limited to one California facility, an amendment may be offered, and for my colleagues' benefit, I offer this background report.

As I see it, the central question is whether the Congress should intrude in the area of State-employee relations while legislation on this subject is presently under discussion by the California State Legislature.

The report follows:

REPORT

The California legislature is considering whether to permit the state's public employees to collectively negotiate labor contracts with their employers. Several measures are now before the legislature.

Assembly bill 1590 proposes to replace all existing public employee-employer relations legislation, including the 1975 law affecting public schools and community colleges, with a single collective bargaining law covering virtually all of California's public employees.

Separate bills have been sponsored by Assemblyman Howard Berman and Senator Ralph Dills.

The Berman legislation (AB 1091) is aimed solely at University of California and California State University and College employees.

Introduced in the Assembly in April, the Berman bill, based upon past practice, is expected to be amended from its original form as it moves through the legislature. The measure has cleared both the Ways and Means Committee and the Assembly. The measure then went to the State Senate, where it was at the time the Legislature adjourned for the summer. The legislature reconvened on August 1.

That bill would affect Lawrence Livermore Laboratory employees because if it becomes law, the Laboratory, as part of the University of California system, would be covered by its provisions.

Currently University of California workers, as well as all state employees, fall under what is known as the Brown Act, authored by then Assemblyman and now our colleague Representative George Brown.

That legislation permits employees to organize, and requires management to "meet and confer" with employee representatives on issues involving wages, grievances, and working conditions. The Brown Act, however, does not provide for the adoption of legally binding labor contracts.

The Berman bill proposes new regulations for University of California employees. Similar to the Rodda Act, which allows the state's public schools and community college employees to choose whether they want collective bargaining, the Berman bill has these provisions.

Academic and non-academic workers, with the exception of those classed as "manage-

rial" and "confidential" employees, would be free to join or not join organizations established for the purposes of collective bargaining.

An organization representing a majority of employees in what is termed an "appropriate unit" could be certified as the exclusive bargaining representative.

An employer and an exclusive bargaining representative may, but are not required to, enter into binding arbitration to settle a dispute that might arise, for example, over interpretation of an agreement.

The act would be administered by the Educational Employment Relations Board which was formed to administer the 1975 law covering public schools and community colleges. This board is similar in scope and function to the National Labor Relations Board. Among the board's duties are: determining the appropriateness of proposed bargaining units, conducting and certifying elections that determine union representation by employees, and investigating unfair labor practices by either management or organizations.

The Berman bill is silent on the controversial topic of public employees' right to strike. California courts have held that state law prohibits strikes by public workers.

In stating who would be permitted to join employee organizations, the bill defines "confidential" and "managerial" employees as two classes excluded from collective bargaining representation.

Managerial employees are defined as those who have "significant responsibilities" for formulating or administering policies and programs. Confidential employees are those whose job requires them to develop or present management's position on collective bargaining or "whose duties normally require access to confidential information which contributes significantly to the development of such management positions."

"Supervisory employees"—those in whom an employer has delegated authority in such personnel matters as hirings, firings, transfers, promotions, layoffs, or discipline—could be represented in a collective bargaining unit. But, the bill says, it is not "appropriate" to have a collective bargaining unit that includes both supervisory employees and non-supervisory employees.

In commenting on the "appropriateness" of other bargaining units, the bill, as now written, makes these points:

. . . skilled crafts employees shall have the right to be a separate unit of representation, based on occupation. Skilled crafts employees shall include, but not be limited to, employment categories such as carpenters, plumbers, electricians, painters, and operating engineers.

There is a presumption that professional employees should not be included in the same bargaining unit. However, the presumption is rebuttable.

In each case where the appropriateness of the unit is an issue, the California Educational Employment Labor Relations board decides the question on the basis of the community of interest between and among the employees and their established practices including, among other things, the history of employee representation, the extent to which such employees belong to the same employee organization, and the effect of the size of the unit on the efficient operation of the college or university.

Meanwhile, the California Senate on June 21 approved a bill sponsored by State Senator Dills, sending this collective bargaining proposal to the Assembly. As passed by the Senate, the Dills measure provides state workers—excluding University of California employees—a system of employee relations very similar to that now provided to California city and county employees under a law known as the Myers-Milas-Brown Act.

Introduced by Senator Dills as Senate Bill 839, the legislation would provide that employer representatives would meet and confer with representatives of recognized employee organizations—if employees choose collective bargaining—and make a good faith effort to reach agreement on terms and conditions of employment.

If agreement is reached, a binding "memorandum of understanding" would be jointly prepared and submitted to the Legislature for approval and funding. If agreement cannot be reached, a mediator could be appointed to help resolve the dispute.

The bill also provides for such things as the development of regulations pertaining to the official recognition of employee organizations, the role of management and confidential employees and additional dispute resolution processes.

Either the Berman or the Dills bill would have to be approved by both the Assembly and the Senate and be signed by the governor before it becomes law. That action would have to come in this session of the Legislature for a new collective bargaining law to take effect on July 1, 1978.

A VOID TO BE FILLED

HON. HAROLD C. HOLLENBECK

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. HOLLENBECK. Mr. Speaker, the sudden death of Archbishop Makarios on Wednesday of this week is a great tragedy for the people of Cyprus. Archbishop Makarios worked long and hard to earn the trust and confidence placed in him by the people of Cyprus and his memory will remain as an inspiration to Greek-Cypriots.

During the 1950's Makarios participated in the militant drive to secure Cypriot unification with Greece. His efforts directly contributed to the independence achieved on August 16, 1960. During his 17-year tenure as the major political figure in his country, Makarios worked toward a lasting peace, and managed to survive even the most difficult of situations. In the past two decades Cyprus has come to the brink of war three times. Makarios weathered the political confrontations on the island of 700,000 whose evolution has been shaped by the conflicts between its Greek ethnic majority and Turkish minority.

Because of his benevolent rule, he was genuinely loved and supported by the significant majority of Greek Cypriots. Those who knew him well spoke of him as an immensely charming and charismatic leader who was without equal.

Despite the threat of violent death which tormented his existence over the past years, Makarios continued to work in a public capacity aimed at unionization with Greece. His death has created a void which will be difficult to fill. I only hope that his successors will work to follow the goals of national unification and peace, and that some day, Cyprus will enjoy the benefits of political freedom and tranquillity that it so richly deserves.

THE FISHERY CONSERVATION AND MANAGEMENT ACT OF 1976—SHADES OF PROMISE

HON. ROBERT L. LEGGETT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. LEGGETT. Mr. Speaker, commercial fisheries traditionally have been an important source of income and employment in coastal areas in the United States. However, the nature of the resource and the institutional arrangement controlling the harvesting of this resource made it difficult to attract capital, technology, and young fishermen, thereby relegating commercial fishing to marginal break-even operations in yesteryear.

The U.S. fleet has been characterized by old vessels which were expensive to maintain, relatively inefficient, and subject to high and rapidly increasing insurance rates. These vessels were not being replaced. The fishermen or crews on many of them received relatively low earnings for the long hours they worked. New fishermen were not being attracted to these fisheries and the average age of fishermen seemed to be rising steadily.

Between the years of 1960 and 1976, the United States take of fish off its shores has remained relatively stable, even declining in certain locations, while the foreign take off the U.S. coasts increased monumentally. This situation has caused overfishing in at least 10 major commercial stocks and has caused correspondent adverse economic consequences to our fishermen.

This was the picture we faced when the Fishery Conservation and Management Act of 1976 was enacted on April 13, 1976, just 15 months ago. It was my hope and the hope of my colleagues that this act would be a giant step forward in our efforts to revitalize the U.S. fishing industry. Very early reports indicate that this act may be meeting some of our expectations.

I have asked the Department of Commerce to do a study on the economic benefits of the act so we can determine exactly how it is benefiting the fishing industry and what more needs to be done to assist this important industry to regain its proper place in the ranks of the world's major fishing nations. Perhaps we have been effective!

I wish to bring to the attention of my colleagues an article in the July 25, 1977, Wall Street Journal which indicates how much the picture of our domestic fishing industry has changed. The article entitled "After Years of Decline, U.S. Fishing Industry Is Beginning to Boom," by Neil Ulman, follows:

AFTER YEARS OF DECLINE, U.S. FISHING INDUSTRY IS BEGINNING TO BOOM

(By Neil Ulman)

GLOUCESTER, MASS.—Although the fish are still running, the aging commercial fishing trawler Natalie III is returning to port here, her voyage marred by equipment failures. It has happened before—the vessel is about 30 years old—but on this occasion, Natalie III skipper Anthony Parisi is surprisingly undis-

couraged. Times are sure to get better, he explains, because "big things are changing in this industry."

And indeed they are. Consider:

After years of decline, the New England fishing fleet's catch is a striking 25 percent above year-earlier levels.

Foreigners are showing up at U.S. fishing ports everywhere, eager to contract for supplies of American-caught fish.

Young people, typified by the resemblance of Natalie III's crew to a college football team, are coming back to the fleet.

And Mr. Parisi himself, with two of his brothers, impatiently awaits delivery of a new 110-foot, steel-hulled purse seiner under construction in Maine at a cost of nearly $1 million. The boat is part of a new boom in fishing-vessel financing and construction.

IMPACT OF THE 200-MILE LIMIT

Credit for all this, fishermen say, goes to the 200-mile "fisheries conservation zone" established by Congress last March 1. By giving U.S. fishermen first crack at fish within 200 miles from shore, the new regulation had cleared over 400 foreign fishing vessels from U.S. waters. And although fisheries experts say the full effect of the law on the long-troubled $3.3 billion domestic fish industry is yet to be felt, they are surprised by the difference the 200-mile zone is already making both here and in fishing ports around the world.

In addition to the U.S., nearly 50 other countries have established 200-mile fishing boundaries, most of them in the past six months. Nor will it be long, believes John A. Knauss, dean of the University of Rhode Island's Graduate School of Oceanography, before all coastal nations adopt the zone, extending new claims of national sovereignty over 37 percent of the world's ocean. But because American waters have been a prime source of fish for so many other countries, it's the U.S. limit that is having an especially significant impact abroad.

Fish prices in Japan, for instance, have been rising sharply ever since the new U.S. and Russian limits forced many Japanese fishing vessels from Pacific waters within those nations' 200-mile zones. As a result, the Japanese government has begun a $750 million program to improve Japan's coastal fishing grounds. And the Soviet Union, hundreds of its vessels pushed out of U.S. Atlantic and Pacific waters, is turning to the coastal waters of Africa and Asia, stepping up diplomatic efforts to secure access to fishing areas there.

THE GERMANS' COMPLAINT

Meanwhile in West Germany, Nordstern High Seas Fishery Co. complains that foreign-fishing quotas set under the U.S. law are so low that there could be 5,000 workers out of jobs in the German fishing industry within a year. To fill the supply gap created by the quotas, Nordstern would like to take fish directly from American fishing vessels and process it at sea, a spokesman says. (Mr. Parisi, the Natalie III skipper, says he already has been asked by Nordstern if he would be willing to deliver fish to German processing vessels. Nordstern denies making such an approach, apparently in the mistaken belief that such transfers would be illegal.)

Other foreign fish-processors also are expressing interest in doing business with the American fleet. William Gordon, Northeast regional director of the National Marine Fisheries Service, a Commerce Department arm, reports that in the four months since the 200-mile limit was set, over 30 delegations from Japan, Spain, Poland, West Germany and Italy have shown up here seeking American sources of supply for fish they used to catch themselves off U.S. coasts. A year earlier, by contrast, there were only two such visits.

Besides attracting foreign processors, the 200-mile limit is also stimulating investment within the U.S. fishing industry itself. The Fisheries Service says the amount of loans it guarantees on fishing-boat construction totaled $21 million in the just-ended fiscal year, compared wtih $8 million in fiscal 1976 and $5 million the year before. Among the recent recipients are Mr. Parisi and his brothers, who are using a guaranteed loan to build their new boat. It is an investment that Mr. Parisi says depended on the protection of the 200-mile limit. "Without it there wouldn't have been any U.S. fishing industry—no stock to fish on," he declares.

LURING NEWCOMERS

The improved climate is luring newcomers as well. Frederick Leber, a 34-year-old former staff attorney with the Securities and Exchange Commission, is building a $350,000 83-foot trawler which he plans to operate with a hired skipper. Mr. Leber expects to pay off his government-backed loan on the boat in six to seven years, depending on fishing prices.

"If prices stay where they are this week (around 20 cents a pound for cod), we'll just get along," he says. "If they go where they were last winter (around 75 cents a pound), we'll make a lot of money." In any case, Mr. Leber adds, he "wouldn't have done it" without the 200-mile limit.

This is good news for builders of fishboats. Bender Shipbuilding Co., a Mobile, Ala., concern that is building Mr. Leber's boat, says a recent surge of orders has extended delivery times to a year, compared with six months last winter. In Seattle, Marine Construction and Design Co. reports nine new fishing vessels on order, the first such orders in 18 months. And Newport Shipyard Inc., Newport, R.I., which hadn't built a fishing boat "since the 1940s," is completing a 96-foot vessel for delivery this summer to the Gloucester fleet and negotiating two other contracts, a spokesman says.

Aiding the fishing industry's resurgence is the sharp rise in the size of the New England catch. The amount of fish brought into principal ports since the 200-mile limit went into effect totals 110 million tons, up 25% from the year before. Marine biologists who watch the fish stock are reluctant to assign specific reasons for this increase; it is certainly too early for the 200-mile limit and its quotas to cause a rise in the stocks, they caution. And federal statisticians on the West Coast, an even bigger fishery than New England, say there doesn't appear to have been any dramatic change in landings this year, although hard figures are still lacking. (Much of the fishing from boats out of West Coast ports takes place beyond the 200-mile limit.)

But fishermen themselves haven't any doubt that the 200-mile limit is making the difference in New England. Edward MacLeod, chairman of the New England Fisheries Steering Committee and manager of Kennebec Fish Co.'s Gloucester operations, points to a chart of New England waters to explain: "Foreign vessels fishing in the Gulf of Maine and the Georges Bank used to work over the schools of fish out there—break them up and scatter them. Now those fish are coming in closer where the U.S. fishermen have a chance."

Whatever the case, processors of fresh fish have turned New England fishermen away at least twice this spring, unable to handle their catch. "That's the first time I can remember that happening in 15 years," says Rose Ciulla, who helps manage Star Fisheries, a small processor on Gloucester's Harbor Loop. Star finds the outlook so promising that it plans a $700,000 expansion of its facilities that would allow it to handle 40 boats at a time, up from six currently, Mrs. Ciulla adds.

On a larger scale, Seattle-based New England Fish Co. plans a $2 million to $3 million addition to its Kodiak, Alaska, processing plant. The new facilities will process bottom fish such as cod, pollock and flounder caught in waters where the Russian and Japanese presence is being cut back. "We think the outlook for bottom fish is good because now the U.S. can manage these resources so they will continue to produce," a spokesman says. "That's a tremendous change."

These processors, however, worry about foreign competition for U.S.-caught fish. While Korean Marine Industrial Development Corp. recently contracted to take American fishermen's catch aboard its processing vessels inside the 200-limit off Alaska, two West Coast industry groups that advise the government of fishing-quota policies recommended disapproval of the deal. And the National Marine Fisheries Service, which says it has received "several applications" for permits like those sought by the Koreans, is scheduling public hearings at fishing ports around the country to help determine whether foreign processors should be allowed to operate within the 200-mile zone.

Still, for all the growth predicted for the U.S. fishing fleet, it's likely to be some time before the industry can fill domestic demand. Currently, nearly half the fish consumed in the U.S. isn't the fresh-caught product of the American fleet but rather fish caught by foreigners in distant European or Mid-Atlantic waters, frozen and then sold to large food processors and retailers here. As a result, the U.S. is running a $1.5 billion annual trade deficit in fish products.

One problem is that even if the fleet could catch enough fish to satisfy all domestic demand, U.S. fresh-fish processors lack the capacity to turn out frozen fish in the volume that large food-product companies require. Indeed, the inability of the fresh-fish processors to absorb today's rising catch has even forced some fish prices down.

Many in the industry, however, believe this situation will be a temporary one. "I foresee the domestic industry once again catching enough fish to sell to processors like ourselves," says Ross N. Clouston, president of Gordon Corp., a General Mills Inc. subsidiary that markets frozen-fish products. Others predict further increases in U.S. fish exports. "There's a market somewhere in the world today for every fish an American fisherman can catch," declares Mr. Gordon of the Fisheries Service.

Such prospects are bringing young people back to the domestic fleet. The pay is good: A deckhand can earn $20,000 a year now, while a skipper can make up to $35,000 a year, says Natalie III's Mr. Parisi. And the University of Rhode Island, which claims to offer the nation's only bachelor's degree in fishing, says the number of students signing up for the curriculum rose to 87 last year from 58 in 1975. Applications for this fall's semester total 100 for 50 available openings, the university adds.

PERSONAL EXPLANATION

HON. JIM LEACH

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. LEACH. Mr. Speaker, because of scheduling conflicts, I missed the following votes and would like to record how I would have voted if I had been present: Roll No. 84, "yes;" roll No. 138, "yes;" roll No. 183, "yes;" roll No. 205, "yes;" roll No. 259, "yes;" roll No. 289, "no;" roll No. 299, "yes;" roll No. 300, "yes;" roll No. 301, "yes;" roll No. 376, "yes;" roll No. 378, "no;" roll No. 421, "yes;" and roll No. 464, "yes."

On roll No. 9, I voted "present" be-

cause of a conflict of interest caused by ownership in a family company directly affected by the legislation in question. Subsequently, my family has agreed to sell out, through merger, our interest in the family business.

On roll No. 227 and No. 373, I voted to prohibit aid or trade to Cuba. My feeling is that such a prohibition is justified with respect to aid, but not trade. We have trade relations today with both the Soviet Union and the Peoples Republic of China. Trade implies mutual advantage, not approval of domestic political systems.

OIL IMPORTS: A CONTINUING AND GROWING DISASTER

HON. CHARLES A. VANIK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. VANIK. Mr. Speaker, in June, the Library of Congress released a major report entitled "Project Interdependence: U.S. and World Energy Outlook Through 1990." The report, prepared at the request of both House and Senate Committees, is an excellent statement of the enormous energy problems facing the Nation. The report clearly indicates that the President's plan, which has been weakened by the Congress, is inadequate to deal with the energy problems facing the United States.

The following quotes from the report are the best summary I have seen on the probable level of oil and natural gas imports which will be required by the United States during the next few years. These figures indicate that at the present level of imports, we are facing a long-range trade and balance of payments problem which threaten the value of the dollar and the stability of our economy and the world's economy:

OIL AND NATURAL GAS IMPORTS

10. Under base case demand and supply conditions laid down in this report, natural gas imports are expected to grow from 0.9 TCF in 1976 to 1.5 TCF in 1980, 2.1 TCF in 1985, and 2.4 TCF by 1990. Oil imports—crude oil and oil products—are projected to increase from 7.2 million b/d in 1976 to 10 million b/d in 1980, 11.8 million b/d in 1985, and 12.9 million b/d by 1990. The strategic oil storage program is projected to add another 0.4 million b/d in 1980 and 0.3 million b/d in 1985.

11. Additional oil imports will come primarily from Arab countries in the Middle East and North Africa. Total U.S. imports from the Middle East and North Africa are projected to grow from about 2.5 million b/d in 1976 to 6.6 million b/d in 1980, 7.4 million b/d in 1985, and 7.9 million b/d by 1990. The adverse effects of another oil embargo on the economy at current and projected Arab oil import levels could be anywhere between very substantial and disastrous.

12. The implications of a dependence on the Middle East and North Africa in 1985 equal to total oil imports in 1976 are manifold and include: (*a*) potential oil supply interruptions as a result of war in the Middle East, or confrontation with the Soviet Union or, acts of sabotage by terrorist groups; (*b*) unknown effects of the accumulation of vast monetary reserves in Saudi Arabia and a few other Arab Gulf countries on the world economy; (*c*) potential conservation policies of Saudi Arabia or other Arab Gulf countries with limited capital absorptive capacity, resulting in escalating oil prices; (*d*) reduced leverage in the exercise of U.S. foreign policy in the region; (*e*) possible friction within the western alliance systems related to potential competition for available Middle East oil supplies.

These Library figures are most ominous. The Library estimates we will be importing 10 million barrels of oil per day by 1980—that equals 3.6 billion barrels per year. Assuming $15 per barrel oil by that time, which may well be a conservative assumption—our payments to foreigners for oil will be $55 billion per year. The figure of $55 billion is approximately half of the value of our total imports today, half of our defense budget, half of our social security/medicare budget—it is a national treasure that is being sent overseas in exchange, not for capital goods to make our country better, but for fuel to be burned away.

These figures are stark testaments to the need to conserve and to develop alternative forms of non-oil energy.

THE CLEAN AIR ACT AMENDMENTS OF 1977

HON. PHILIP E. RUPPE

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. RUPPE. Mr. Speaker, automotive workers, not only in Detroit but throughout the United States, heaved a deep sigh of relief when Congress last night finally passed and sent to the President the Clean Air Act Amendments of 1977.

This act provided, in part, an essential extension of the overly strict automotive emissions schedule due to take effect this year. These statutory standards would mean lost jobs to thousands of workers if an extension were not passed.

Although the automotive emission standards finally agreed upon were more stringent than those included in the House-passed bill, H.R. 6161, workers in the automobile and related industries, who comprise about one out of every five jobs in our labor force, were spared the hardships associated with job lay-offs that would have occurred without this 11th hour reprieve by Congress. Accordingly, the measure passed by a voice vote.

But the automotive emissions schedule was only a part of the bill which will have a wide-ranging impact outside the automotive industry. I refer, of course, to the restrictions on stationary source emissions; and, in particular, the issue of significant deterioration. It seems that in our rush to meet the mid-August deadline for automotive emissions, we may be unnecessarily restricting further development in the rural areas of the Nation, such as my own district of northern Michigan.

While I clearly favor a continuing effort to improve the quality of the Nation's air, I am deeply concerned that, ultimately, this legislation will lead to a "no growth" policy for areas such as northern Michigan.

In particular, I worry about the stringent emission restrictions placed upon class I areas, and how this new legislation will affect development in adjacent or nearby lands surrounding the class I areas.

Coming, as I do, from a district that includes three national forests, a national park, a national lakeshore, and a Federal wildlife refuge, and where the preservation of northern Michigan's unique environment and development of mineral resources has gone hand-in-hand for over a century, stringent growth restrictions arising from the significant deterioration section of this legislation would be not only unnecessary but also an economic hardship on my district, which is currently experiencing an economic revival.

It is unfortunate that the Breaux amendment permitting an 18-day variance in sulfur dioxide emissions was only adopted for class I areas and not also included for class II areas. It remains to be seen whether this variance will be sufficient to meet the strict increment levels established under this legislation.

Undoubtedly, the provisions dealing with significant deterioration will result in lengthy and complex regulations and perhaps even legal battles over interpretation of the act.

Therefore, I want to express my reservations about this legislation as it pertains to significant deterioration. I fear Congress may again be confronted with this issue in the very near future.

AIR BAG DECISION WILL REDUCE FATALITIES

HON. DOUGLAS WALGREN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. WALGREN. Mr. Speaker, I would like to bring to the attention of my colleagues the following article concerning the air bag issue.

[From the Scranton Times, July 13, 1977]

AIR BAG DECISION WILL REDUCE FATALITIES

Overshadowed by President Carter's announcement of an end to the B1 bomber program was the news of the decision of Transportation Secretary Brock Adams to require automatic crash protection devices in all new cars by the 1984 model year.

The two announcements came the same day. The B1 decision will avoid an unnecessary expenditure of taxpayer dollars. The decision to require air bags or automatic restraints in cars will mean a saving of lives.

The Insurance Institute for Highway Safety, which has been a leading proponent of automatic protective devices in cars, reports that more than half of the 27,000 auto accident deaths each year result from crashes in which air bags or automatic seat restraints would prevent fatalities. Secretary Adams said his decision could save as many as 9,000 lives a year.

While the devices have been available for some years, the auto industry has been reluctant to make them standard equipment. And most motorists have declined to use the seat belts and related equipment which are now required in new cars. Legislatures have been unwilling to mandate seat belts be used by motorists and passengers.

To get around the problem, safety officials have been urging that automatic safety de-

vices be required by law. The former Transportation secretary, William T. Coleman, Jr., declined to issue such an order. He urged auto makers to install air bags on half a million cars in late 1979 on a voluntary basis.

But highway safety is not something that can be left to a voluntary basis, as has been shown by both manufacturers and the motoring public. With air bags and automatic seat restraints elevated to equipment required by law, the devices will be there when needed. The timetable setting deadlines of the 1982 model year for larger cars and 1984 for all cars is a reasonable transition period for car manufacturers and the public to get used to the idea. And mass production of the devices will make them less expensive than they are now.

SEEKS CONSUMER PROTECTION AGAINST FRAUD IN THE MARKETPLACE

HON. BENJAMIN S. ROSENTHAL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. ROSENTHAL. Mr. Speaker, in seeking ways to increase the ability of consumers to exercise their rights in the marketplace, this Congress is considering a number of proposals designed to give consumers a strong voice in the regulatory process and provide consumers the legal ability to fight against fraud and unfair practices. One such proposal is section 7 of H.R. 3816, the FTC Amendments Act of 1977. H.R. 3816 is scheduled to reach the House floor shortly. The bill, and especially section 7, has been the subject of an intense lobbying effort by some members of the business community. Since much of the opposition to section 7 comes from business groups who are also opposed to a bill which I have sponsored creating a Federal agency for consumer protection, and since many of the arguments made against the ACP and section 7 are similarly illogical and often inconsistent, I would like to bring those inconsistencies and contradictions to light and to urge those Members of Congress concerned with affording consumers adequate protection to support section 7 of H.R. 3816.

Section 7 allows consumers who are injured by a violation of an FTC rule or order to sue individually or as a class for damages resulting from the violation. In short, this provision allows consumers to use the orders and rules of the FTC to obtain relief from fraud or unfair business practices by creating a private right of action.

Contrary to the picture of massive and frivolous law suits which would result from this provision as painted by its opponents, the ability to use this section is narrowly prescribed. In order to bring a law suit under this provision, the FTC must have certified in the rule or order to be invoked that it is appropriate for use in private relief. In other words, the FTC must provide by the terms of the rules or order that it can serve as the basis for consumer suits.

Section 7 spells out specifically the way in which notice shall be given to potential members of a class and the way in which damages shall be proved, awarded, and distributed. It provides defendants with substantial protection against irresponsible litigation and unjustified damages awards by requiring that the suits and resultant awards be conducted according to well-defined criteria.

Yet some business groups continue to oppose section 7 with tortured arguments based on distortion of the section's provisions and positions which are totally contradictory with positions taken by the same groups against other consumer protection legislation.

For example, it has been argued against section 7 that in order to preserve uniformity of law enforcement and regulatory activity, one Government agency should enforce the statutes within its congressionally mandated jurisdiction. However, when faced with the prospect of one Government agency created to insure that those statutes are enforced with serious representation of the consumer viewpoint, uniformity of enforcement is opposed.

Another example of the inconsistency in the business arguments against section 7 and the consumer agency is the too-much-Government argument. The consumer agency legislation has been criticized by its opponents as a costly additional layer of bureaucracy. Section 7 is a legislative proposal designed to afford consumers serious protection against marketplace abuses at no cost whatever to the Federal Government and without creating any additional layers of bureaucracy. Yet it is as strongly opposed as the consumer agency.

The real issues raised by section 7, however, are not the issues of uniformity or cost or even the wisdom of a class action mechanism. The real issue is resources. At an FTC oversight hearing by the Commerce, Consumer, and Monetary Affairs Subcommittee, which I chair, Congressman ELLIOTT LEVITAS, Democrat of Georgia, made the following observation to the Commission:

Mr. Gibson and others have commented about limited resources and the impact which that has had upon the decisions made not only at the regional offices, but in Washington as well. That is a factor well known to the private practitioner. In fact, I would guess that that is one thing on which the private practitioner with a marginal case can rely most effectively. If he puts you people to enough work, he knows that you are going to go on another matter where you have a better cost-benefit relationship existing. ("Federal Trade Commission Regional Office Operations", hearings before the Commerce, Consumer, and Monetary Affairs Subcommittee of the House Government Operations Committee, March 15 and 16, 1977.)

Indeed, it is well known to the business interests which oppose section 7 that the FTC with its limited resources cannot possibly detect and sue every violator of its statutes. Section 7 will allow aggrieved consumers to use their FTC Act to sue the violators which the FTC would never get to. In fact, statutes authorizing combinations of public and private enforcement are common in the antitrust, securities, employment discrimination, civil rights, and environmental areas precisely because limited Government resources alone could not realistically be expected to solve the problem.

This Congress has an opportunity to give consumers both the voice they need in the regulatory process and the tools necessary to enforce the rights afforded to them by that process. I urge my colleagues to support section 7 of H.R. 3816.

REPRESENTATIVE BINGHAM'S LETTER ON THE CLINCH RIVER BREEDER REACTOR

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. BROWN of California. Mr. Speaker, my good colleague, Representative JONATHAN BINGHAM, had an excellent "Dear Colleague" letter the other day in support of the President's decision to defer the Clinch River breeder reactor. For the educational value to all of us, I insert his letter into the RECORD.

The letter, dated July 14, follows:

JULY 14, 1977.

DEAR COLLEAGUE: I am writing to urge your support for George Brown's amendment to the ERDA authorization bill, H.R. 6796, an amendment which will provide $33 million for termination of the Clinch River Breeder Reactor project, while retaining nearly $500 million for continued research and development of more safeguardable breeder reactors.

Over the past several weeks the Congress has been subjected to an intense and often misleading lobbying campaign by proponents of the Clinch River project. In writing today, I want to share with you my understanding of the facts of the situation and offer you my reasons for supporting the President's decision to defer commercialization of the breeder reactor.

It is my belief that the spread of nuclear weapons capability represents the single greatest threat to the continued existence of human civilization on this planet. Specifically, the danger is that terrorist organizations or irresponsible nations such as Uganda or Libya will gain possession of enough plutonium to readily manufacture nuclear weapons. The present generation of light water nuclear reactors do not present this danger: they use a slightly enriched uranium fuel which does not contain plutonium. After use in light water reactors, the spent fuel rods do contain some plutonium, but it is mixed in with lethally radioactive by-products of the fission process and is thus relatively inaccessible.

President Carter is presently pursuing a courageous and far-reaching foreign policy initiative designed to curb the use of plutonium as a reactor fuel. At the heart of this difficult effort is the attempt to prevent premature commitment to breeder reactors. If the House were to encourage the commercialization of the plutonium breeder by approving full funding of the Clinch River project—which would use a pure plutonium fuel—we would completely undermine the Administration's vital antiproliferation effort.

The key point here is that through the introduction of commercial plutonium-fueled breeders such as Clinch River, the U.S. would sanction the use of plutonium as a legitimate article of daily commerce. It would take only twenty pounds of plutonium to fashion a nuclear weapon as destructive as the bomb dropped on Nagasaki. The acceptance of this pure weapons-grade material as a reactor fuel would encourage the development of a "plutonium economy" where pure nuclear bomb material would be a daily cir-

culation throughout the globe; in such a world nuclear antiproliferation efforts would be completely hopeless, and international safeguards on plutonium diversion would be impossible to enforce. That is why the House International Relations Committee reported last year, after two years of study on international safeguards that "Safeguards which are adequate and effective when applied to nuclear reactors are inadequate and ineffective when applied to nuclear reprocessing facilities." The same rationale lay behind the International Relations Committee's vote on May 24 of this year to support President Carter's decision to terminate the Clinch River project and vigorously pursue development of more safeguardable alternatives.

Foreign nations share our deep concern over the dangers of the plutonium economy. Several of the Carter Administration's antiproliferation initiatives have already met with significant success abroad, despite the fact that representatives of the U.S. nuclear industry have constantly encouraged opposition to these initiatives from within the atomic bureaucracies of foreign nations. Specifically, we can be pleased by the announcement by the French and the West Germans that they will enter into no new contracts to export nuclear fuel reprocessing plants to purify plutonium for use in breeders. The U.S. has also been successful in preventing the premature operation of such a plant in Japan. Canada and Australia—two of the world's leading uranium producers—have strongly embraced U.S. antiproliferation efforts. The British have initiated a far-reaching national debate on their breeder program. And in West Germany—where there is presently a moratorium even on light water reactor construction—a key committee of the Parliament has frozen funds for their breeder reactor research program.

What the termination of the Clinch River project offers to this nation—and the world—is time, time to examine seriously the effects of using pure plutonium as an article of daily commerce. There are many, many alternatives; the most prominent are alternative breeder reactor designs where various mixtures of uranium, thorium, and plutonium might be used as fuel instead of the pure, weapons-grade material for which Clinch River has been designed. Again, there is nearly $500 million dollars in the ERDA bill for the study of these alternative breeder types which will not be affected by the Brown Amendment. We are *not* "killing the breeder program".

But we are faced here in the Congress with an industry lobby hungry for the $2.2 billion contracts for Clinch River. They are claiming the program is necessary because we are running out of uranium to fuel conventional light water reactors. This is not true; we have at least enough uranium to fuel all the conventional nuclear reactors we could possibly use until well into the next century. The breeder industry is claiming we need to build the Clinch River breeder now, or else we'll soon have energy shortages. This, too, is untrue; even if we were to continue top priority funding of a commercial breeder program, it would offer us less than half the energy we'll be getting from solar power by the year 2000, according to ERDA estimates. The fact is that the plutonium breeder will produce little or no energy this century. Nuclear power's contribution to our energy needs can be met by light water reactors. Clinch River backers are pushing the program because they say it is desperately needed to supply jobs. Yet a $2.2 billion program is an absurdly costly way to provide a few thousand temporary jobs. We can have more jobs *and* additional energy sources a lot cheaper, a lot safer and at far less peril to ongoing foreign policy initiatives without pouring the lion's share of our energy research and development monies into a commercial plutonium breeder. As a final point, it is worth refuting the statement made by CRBR proponents that we should reject the Administration's views and proceed with Clinch River construction because to do otherwise would break up the program's management team. This statement fails to acknowledge the abysmal management record this project has had since 1973: over the past four years the original price tag has soared from $699 million to $2.2 billion, with industry's share of the total cost plummeting from 50% to less than 12%.

The Carter Administration has made the courageous decision to develop alternative breeder reactor designs with our allies while terminating the Clinch River project. I feel strongly that this decision deserves the support of the House. I urge my colleagues to reject the simplistic arguments made by the breeder industry and to support the Brown Amendment to terminate Clinch River funding.

I am enclosing some other comments on the breeder issue supporting termination of the Clinch River project.

Sincerely,

JONATHAN B. BINGHAM.

ADDITIONAL COMMENTS ON THE CLINCH RIVER PROJECT

President CARTER. (Letter from Dr. James Schlesinger to Rep. Bingham 5/23/77) He (the President) believes the Clinch River Breeder Reactor is unnecessary for the maintenance of the U.S. nuclear research and development program. The CRBR is a highly expensive program designed to give momentum to the commercialization of the LMFBR. This effort is superfluous at this time . . . the President believes that continuing with the CRBR program is unwise."

Secretary of State CYRUS VANCE. (Letter to Speaker O'Neill 6/14/77) If we were to proceed toward the early commercialization of the breeder at this time, by funding the Clinch River Breeder Reactor, it would undermine our credibility and call into question our motives in calling for a joint reassessment of the problems associated with early entry into a plutonium-based economy.

Dr. JAMES SCHLESINGER. (Testimony before Science and Technology Committee 6/7/77) The current estimate for nuclear capacity in the year 2000 is less than one-third of what the estimate was when the CRBR project was authorized . . . the breeder program in this scenario need not begin until after 2000 . . . I believe commercialization of the LMFBR should be deferred and the construction of the CRBR should be cancelled.

Secretary of Defense HAROLD BROWN. (Letter to Rep. Downey 6/9/77) . . . . there is a very clear increase in the risk of proliferation of nuclear weapons capability associated with the widespread use of plutonium . . . The acquisition of a nuclear weapons capability by any additional countries certainly increases the possibility of a weapon being used and is clearly *inconsistent with our national security interests.*" (Emphasis added.)

NEW YORK TIMES. Construction of the Clinch River plant would have little effect on our ability to build breeder reactors a decade from now, if they are needed . . . Clinch River is an unnecessary project combining poor economics, bad foreign policy and needed technology.

UAW. We strongly endorse the President's decision to indefinitely defer all further development of breeder reactors.

ATLANTA JOURNAL. Jimmy Carter is America's first president with a background in nuclear education. We believe he has reached the right decision on the breeder. It is unnecessary at this time, combining bad economics and bad foreign policy.

UMW. President Carter has made a very fine initial attempt in the international forum to move toward an international solution (to) the serious problem of nuclear proliferation . . . a $150 million authorization (for Clinch River) will undermine the progress that has already been achieved.

WASHINGTON POST. The Clinch River breeder reactor is turning into a peculiarly ominous symbol. If its construction is canceled, no scientific knowledge or technology will be lost. President Carter is trying to discourage the commercial traffic in plutonium here and around the world. He deserves congressional support.

USW. The development of the breeder reactor should be placed at a lower priority and viewed only as a possible long range supply option. Its use in the near future is neither necessary (because of other supply options which can better meet short range needs) nor practical (because of the immense financial burden and safety problems, particularly regarding the use and proliferation of plutonium.)

BOSTON GLOBE. Given the incomparable risks to mankind of the proliferation of nuclear weaponry, the development of breeder reactors could be justified only in the most dire circumstances, when a failure to proceed threatened the very future of the nation. In the case of the Clinch River project that is emphatically not the case.

WASHINGTON STAR. We believe Congress owes itself—and the tranquility of the world—a close look at the case against Clinch River funding . . . we believe (the President's supporters) have a strong case, a case that in any event deserves consideration before Congress caves in to the Clinch River lobby.

The following additional groups and organizations support the President's decision to terminate funding for the Clinch River project.

HORACE DUNAGAN

HON. ED JONES

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. JONES of Tennessee. Mr. Speaker, I want to take this opportunity to pay special tribute to a friend who carries on one of the best programs I know of. He is Horace Dunagan, of Caruthersville, Mo.

He is a man I have known a long time. He grew up near my home. Today, he is president of the First State Bank in Caruthersville. In that capacity, he has sought out new ways that the bank can assist his community and its people. He actively seeks out new customers by talking to people one on one to show them how the bank can help them to accomplish those goals they have set for themselves.

One of his greatest attributes is his ability to talk to a wide variety of people, from the poorest to the richest. Horace Dunagan is a man who has made his niche in life from hard work and a desire to help people. He was recently honored by being the subject of the cover story of Bankadministration Magazine. I would like to include that story in the RECORD at this point:

HORACE DUNAGAN, JR.: A PROFILE OF BAI'S CHAIRMAN OF THE BOARD

(By Charles Remsberg)

Dawn has scarcely broken over the Missouri Bootheel this Saturday, but Horace Dunagan is behind the wheel of his car, traveling down a dusty back road between two cotton fields. For most employees of the First State Bank in nearby Caruthersville, it's a day off. But for Horace, First State's president for more than a decade, it is a chance to practice the style of banking he loves best—searching out first-hand the problems people have, then showing them ways the bank can help.

In a few moments, he'll be in a field talking with a farmer about his chemical weed control program and listening to the man's complaints about the soaring cost of new machinery. At a crossroads store, where he'll stop later to buy cigars, he'll learn of the owner's dream of installing an island of gasoline pumps. That afternoon at an estate auction in a small town backyard, a carpenter's widow will tell him about the accident that claimed her husband's life and the staggering medical bills she is left to pay.

"I'm not much for sitting still in my spare time," says Horace as he steers the car off the road into the cotton field. "I know it sounds corny, but my favorite hobby is finding new customers for the bank."

He heads the car down a turn row toward a farmer who is laboring over his tractor. "Something about banks scares people. I can go to their homes, farms and businesses and visit with them, and they're different than they are in my office. They feel freer to tell me what they're thinking, what they want, what they need. Once you break down that barrier on a one-to-one basis and explain all the things a bank can do for them, then they will come in and talk across a desk."

He brings the car to a stop and lets the dust settle before stepping out and striding toward the farmer with a cherry hello. "The reason a lot of people haven't done business with us is because we haven't asked them. Of course, it often takes more than simply asking, but it is far better than just sitting in the bank, wishing."

In his 28 years in banking, Horace H. Dunagan, Jr., BAI's Chairman of the Board, has done precious little idle wishing. Since he ferried across the Mississippi River from his native Tennessee in 1955 to become executive vice president and chief executive of the First State Bank of Caruthersville at the age of 31, he has earned a reputation as an aggressive "action" man, with a special bent for relating banking to people and their communities.

When he arrived in Caruthersville, once a French fur trading outpost and now the seat of soybean and cotton rich Pemiscot County, First State "just had a charter," recalls one long-time resident. "They'd make a loan only if they knew you real well and had loaned to you in the past." In two decades of operation, the bank's total assets had reached only about $5.5 million.

In the years since, First State has become a $34 million bank and is still growing. Under Horace's guidance, it has more than quadrupled its physical plant, added an array of services—instalment loan department, complete savings program including certificates of deposit, farm management and a trust department—not previously available in the area, and broadened its loan policy to accommodate customers wanting to borrow for everything from college educations to major industrial installations. Its legal loan limit has risen from $40,000 to $400,000, and last year it turned an impressive 1.34% profit on its total assets.

A major factor has been Horace's way with people. Bob Morgan, First State's executive vice president, said: "Mr. Dunagan is able to talk to a person who is in here to buy food stamps as well as someone who is in to buy a $100,000 time certificate or get a $100,000 loan. He can see their side of the picture because he has been where each of them is right now."

In addition, he has sustained a youthful enthusiasm for new approaches and an unwillingness to be deterred by obstacles. When a hospital equipment manufacturer was considering Caruthersville for a factory site a few years ago, Horace proposed that First State and one of its correspondent banks finance the project with public industrial bonds. However, the Missouri legislature had only recently sanctioned such instruments, and their constitutionality was yet to be upheld. When some hesitation consequently greeted Horace's proposal, he promptly buttonholed a neighbor and persuaded the man to immediately file a test suit. The law was affirmed, $400,000 in bonds issued and a new industry brought to town. Since then, both the plant's production and work force have more than doubled and a second bond issue has sold without difficulty.

Projects to improve the town, from a riverfront park to public housing, have repeatedly commanded Horace's energies, even when no direct benefit seemed likely for the bank. He considers his most rewarding civic effort a frustratingly long campaign for a bridge to span the Mississippi River between Caruthersville and the Tennessee shore, to replace the inconvenient and unpredictable ferry service. He carried a quest for federal aid to Washington through four presidential administrations before government officials finally were persuaded to include such a superstructure in the interstate highway system. The $30 million bridge was opened to traffic last December. "Our bank didn't even get the contractor's account," Horace laughs. "But I still believe that a bank that helps its community helps itself in the long run."

The distance from Horace Dunagan's office of glass and polished wood to the place where he was born 53 years ago is 35 miles over that bridge and along winding roads of rural Tennessee, a journey of several light years in atmosphere.

Along with six brothers and sisters, Horace "learned to scramble early in life just to stay alive," he remembers. During the depression their family home, near the settlement of Eaton, was a rickety shack in a cotton patch that his father—a tenant farmer—worked with mules. Horace was 14 before a government loan from a New Deal farm program enabled the Dunagans to move to their first house with a coat of paint and running water. Horace saw his father become one of the most progressive and successful farmers of the area.

On his seventeenth birthday, too young to shave but "a bit weary of the farm," Horace enlisted in the Navy. After the attack on Pearl Harbor, he saw action as a pharmacist's mate assigned to the First Marine Division for the invasions of Guadalcanal and New Britain. "I was the youngest man in my division and the only one in my company not wounded or stricken with malaria," he says.

Discharged, he married his childhood sweetheart, Sara Zarecor, finished high school (the only married veteran in a class of teenagers), and in 1949 was graduated from the University of Tennessee with a B.S. Degree in Agriculture. He planned to become a county agent, but instead, he "backed into banking" by taking a $225-a-month job as farm representative for the First Citizens National Bank in Dyersburg, Tennessee.

Horace's penchant for bank-community partnerships emerged quickly at First Citizens. In one of many programs he instituted, the bank began importing breeding stock—sheep from Montana and registered cattle from Wisconsin—to auction to area farmers for improving their herds. "We would loan the farmers money to buy the animals and as their returns from livestock went up, our deposits increased, too," he explains. He also arranged for the bank to sponsor free soil tests, with Horace advising on the basis of the results what fertilizers could best be used. Getting farmers to spread more fertilizer meant higher cotton production and, again, more money flowing into the bank. "The idea was profits tied to service—a soft-sell approach," he says. "I learned that people were ready to listen to anything that could help them have a better way of life." In acknowledgement of the benefits his projects brought the area, Horace was named outstanding young man of the year by the Dyersburg Jaycees in 1951, the first non-member in that county to be given the honor.

When he moved to Caruthersville in 1955, Horace accelerated his "people" approach. "First, we adopted a policy of talking to everyone who came into the bank. If they wanted a loan and we thought it was sound for the person, the bank and the community, the loan would be made, even though other banks might have said 'no.'"

Some loans were so small—$200 to buy a used car—the cost of the paperwork exceeded the return. But as the borrowers' situations improved and they needed money for large personal or business investments, their loyalty to the bank ultimately translated into profits.

Horace encouraged First State employees to become active in civic organizations, community projects and local politics. To further heighten the bank's visibility he launched a weekly radio program for which he interviewed area residents at their homes, farms and businesses, and he created a stream of imaginative promotional programs to assure First State coverage in the local newspaper.

In recognition of steadily mounting profits, First State's board named Horace president in 1963. Later he also became president and is now board chairman of the affiliated Bank of Hayti in nearby Hayti, Missouri.

Through state and national associations, Horace has worked hard for many years to strengthen professionalism in the banking industry. An accomplished public speaker, he has, among other things, presided over a series of BAI's Forums for Presidents of Community Banks and is a section leader and faculty member of The School for Bank Administration. A BAI board member since 1974, he has also served as chairman of the Community Bank Council. He is also a past president of the Missouri Bankers Association.

"Horace never seems to unplug banking," Sara complains good-naturedly. While he concedes impatience with most "sitting down" hobbies, he has been known, in periodic bursts of recreational energy, to ride a bicycle more than 120 miles in a single day. He "plays at" tennis, jogs occasionally, recently bought an old Ford pickup truck to restore and sometimes putters in a woodworking shop behind his home. As an active member of Rotary International, he has logged 27 years of perfect attendance at club meetings and has served Rotary International as a District Governor. Most of his non-working time, however, revolves around Sara, their three married children and six grandchildren.

During his term as BAI chairman, his principal goal, Horace says, will be to proselytize more bankers into community involvement. "To build your bank, you have to build your community. It's amazing how much a bank can influence its community, and too often, because of short-term thinking, banks are responsible for their communities not doing better."

"In banking, we have to think of both direct and indirect profits. And often, I've found that indirect profits prove the most important."

GROWING NEED FOR UNITED NATIONS MIA INVESTIGATORY COMMISSION

HON. BENJAMIN A. GILMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. GILMAN. Mr. Speaker, I recently introduced legislation, House Concurrent Resolution 252, CONGRESSIONAL RECORD, June 17, 1977, urging the President to instruct the Secretary of State to enlist the good offices of the Secretary General of the United Nations for the purpose of establishing a special U.N. investigatory commission charged with the responsibility of securing a full accounting of Americans listed as missing in Southeast Asia.

This fall, it is anticipated that the Socialist Republic of Vietnam will be admitted to the United Nations. Enjoying all the privileges and benefits conferred upon it by virtue of its U.N. membership, Vietnam will also be expected to fulfill, in good faith, obligations incumbent upon all members of the international body dedicated to the maintenance of world peace and security through the peaceful and judicious settlement of international disputes.

Against this background can be posited the increasing frustration pervading our unrelenting efforts to crack Vietnam's inherent recalcitrance to provide us with information concerning the fate of American MIA's.

Both the Presidentially appointed Woodcock MIA Commission and the administration's negotiating team at the United States-Vietnamese Paris talks, have provided us with an abundance of Vietnamese pledges; but exceedingly little in the way of tangible, substantive information about Americans missing in Southeast Asia.

Recent hearings before the Subcommittee on Asian and Pacific Affairs of the House Committee on International Relations have provided us with not easily dismissed testimony, from an on-the-scene observer, that here is indeed, key information concerning our MIA's being witheld from us by the Vietnamese.

Twenty-four of my colleagues have joined me in cosponsoring this resolution to establish a U.N./MIA investigatory commission which would not only take testimony, but seek the full cooperation and facilities of the Socialist Republic of Vietnam in obtaining information on American MIA's.

As Vietnam enters the United Nations this fall, there could be no clearer affimation of its commitment to the humanitarian principles embodied in the U.N. Charter than its agreement to fully cooperate with this U.N./MIA special commission in ascertaining the fate of American MIA's in Southeast Asia.

Accordingly, I urge my colleagues to support House Concurrent Resolution 252, so that this Nation may enlist the assistance of the United Nations in acquiring all available information concerning our MIA's.

I request that the names of those 24 Members cosponsoring this timely and important measure be listed at this point in the RECORD:

LIST OF MEMBERS

Mr. Baucus, Mr. Bonior, Mr. Brodhead, Mr. Broomfield, Mr. Caputo, Mr. Cohen, Mr. Frenzel, Mr. Frey, Mr. Goodling, Mr. Guyer, Mr. Kemp, Mr. Kindness.

Mr. Krueger, Mr. Mitchell of New York, Mr. Murphy of Pennsylvania, Mrs. Oakar, Mr. O'Brien, Mr. Roe, Mr. Vento, Mr. Walsh, Mr. Waxman, Mr. Whitehurst, Mr. Charles H. Wilson of California, Mr. Winn.

OBJECTS TO DEFERRAL OF BREEDER DEMONSTRATION PROGRAM

HON. MARILYN LLOYD

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mrs. LLOYD of Tennessee. Mr. Speaker, today I filed an impoundment resolution as an objection to a deferral of fiscal year 1977 budget authority on this Nation's vital breeder demonstration program. Shortly after the Congress returns in September, I expect that the will of the Congress will be expressed on whether or not the United States can afford to turn away from the most promising inexhaustible energy source available to it. For the President to thwart due process, a full-fledged congressional participation in shaping our Nation's energy future, would be extremely unfortunate.

The GAO has continually reviewed the validity of the breeder program, especially its objectives, and still recommends strongly that the Clinch River demonstration project be continued on an expeditious schedule. As the focal point for a broad based program to examine all facets of breeder technology, Clinch River is a unique vehicle for providing many real-world answers to questions about the viability of this important long-term option. This country must lead the world—not retreat from its responsibility. Due to the President's actions in May, orderly progress toward a full public review of questions dealing with Clinch River was abruptly terminated. The President has, in fact, been instrumental in adding costly delay to the project schedule that has gone beyond the impact of his February budget cut to $150 million, the funding the Committee on Science and Technology has included in H.R. 6796. The revised deferral action will further exacerbate the conduct of vital national energy research in a cost-effective manner. These actions could destroy the will of our technical and industrial community to participate fully in the challenges that lie ahead. Without that commitment, this country's future will be doomed.

At a time when we have been asked to wage the moral equivalent of war on our energy problems, it does not make sense to prematurely interrupt an orderly process of government-industrial development before a full and open deliberation on the consequences of such actions has been undertaken.

In reference to this subject, I believe that my colleagues may be interested in the following assessment which was recently made by a former House Member, Mr. Craig Hosmer.

A recent Washington Post editorial argued that the administration's indefinite delay of breeder reactors and spent nuclear fuel reprocessing will "create breathing and thinking space" in which other nations can consider alternatives to a plutonium economy, come to understand the President's reservations about it, weigh incentives the administration may offer countries to forgo breeder reactors, and then, "if it turns out that plutonium is the wave of the future, to try to work out some international disciplines to make it less dangerous."

The illogic of this position is that we already are a third-of-a-century down the road with plutonium. Thousands of tons of it exist around the world under a variety of national and international disciplines. The fact that nuclear war has not happened is no argument that safeguards and security cannot and should not be improved. The need "to make it less dangerous" is with us here and now and always. It is risky nonsense to argue that this need will not exist if we forgo breeders and reprocessing.

It is not "breathing and thinking space" that is needed. It is a Carter blueprint for an effective international proliferation control structure that is needed. His public concern over plutonium and proliferation has put government and nuclear leaders worldwide in a mood to impose whatever new international disciplines over plutonium, short of renouncing it, that he suggests. He has won this one. He should pick up his winnings.

If the Carter structure and disciplines are proliferation resistant for existing plutonium, they will also be proliferation resistant for plutonium generated by reprocessing and breeder reactors. Imposing them will simply be an incremental matter. Thereupon these technologies may be used safely to help overcome the energy deficits of many nations. For example, as fuel for breeders, otherwise unusable Government owned uranium tailings represent almost 165 years of energy for the U.S. at the rate we now use it. Plutonium's energy may comfort Americans; for many other countries it can mean survival.

The President's antiplutonium stance is popular with nuclear opponents. It satisfies no-growth proponents and turns their political wrath on others. His energy advisor, James Schlesinger, believes that a slowed rate of energy growth offers a few years leeway for emotions over plutonium to cool before commitment to a post-light water reactor technology must be made.

Surely the prospect for delay in making any decision that fires up the plu-

tcnium issue must seem attractive to the President. If delay lasts past the next election, one fewer hot issue will have to be faced.

But the cost of delay cannot be ignored. Failure by the President to suggest new disciplines and institutions to make present and future plutonium stockpiles less dangerous will cause a golden nonproliferation opportunity to slip by. But, if he suggests them, that will certify that the plutonium problem is manageable and ignite a political firestorm amongst nuclear opponents whose case is based on an assertion that the problem is unmanageable; that is, nothing short of suppressing breeder technology can "save us."

That is Jimmy Carter's dilemma. Congress can extricate him. By voting funds to continue CRBR, Congress will keep the breeder option alive without embracing it. This will free the President to make timely international antiproliferation suggestions by removing the domestic political considerations now holding him back.

NINTH ANNIVERSARY OF THE INVASION OF CZECHOSLOVAKIA BY THE U.S.S.R.

HON. EDWARD I. KOCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. KOCK. Mr. Speaker, August 21 marks the ninth anniversary of the Soviet Union's invasion of Czechoslovakia. On that day in 1968, Soviet forces marched into Czechoslovakia and overthrew the progressive regime of Alexander Dubcék. Many of us vividly remember reading about or watching films of gallant Czech youths hurling homemade Molotov cocktails at invading Soviet tanks.

The reason for the Soviet invasion was brutally simple. The Dubcék government dared to implement some liberal measures and sought to secure a semblance of civil liberties within a Soviet bloc country. Moscow was unable to tolerate any democratic reforms so close to its borders—it feared the spread of such a movement as a subverting threat to its own security system and even to its legitimacy as a government. The result was a Soviet military invasion and occupation of a defenseless nation striving to assert a modicum of national independence.

The struggle for freedom of the Czechoslovakian people has been a long and hard one. In 1918, Czechoslovakia was declared an independent and sovereign country by the victorious nations at Versailles. The people enjoyed a period of political tranquillity under a parliamentary democracy until the spring of 1938. But 1938 was to bring the initial dismemberment of Czechoslovakia under Nazi pressure. It was a tragic fact that the Western democracies turned their backs on the regime of President Benes and thereby secured a new, ominous definition for the word "appeasement." It is bitterly ironic that, at this time, it was Stalin's Soviet Union that was willing to stand up against Hitler's aggression and oppose Nazi encroachment on Czechoslovakia.

And so began a 40-year history of tyranny. Czech partisans fought valiantly against the Nazi occupation and actually succeeded in assassinating Himmler's chief aide, Reinhardt Heydrich, on a visit to Moravia. In revenge for that act of courage, the German authorities razed the village of Lidice and executed all its male inhabitants—a tragic symbol of the Czech passion for liberty.

Czech jubilation at the end of Nazi occupation in May, 1945, died swiftly when the Czech Communist Party staged a Soviet-backed coup d'etat in 1948. Czech independence was again crushed, but the desire for freedom was not extinguished. The temporary progress and political reforms of the late 1960's was to end abruptly in the late summer of 1968 as Soviet shock troops destroyed all efforts at restoring a legitimate government based on respect for the rights of the individual.

Today Czechoslovakians enjoy few freedoms. They remain in a repressive state, their political and ethnic integrity still held in bondage by the leaders in the Kremlin. However, the Charter of 77, a document requesting greater liberties for individuals in Czechoslovakia, and the general rise of dissidence proves that the fire of freedom continues to burn in their hearts. And the fact, in itself, is a remarkable phenomenon. After a long history of domination and betrayal by foreign powers, the Czechs still strive vigorously in their quest for national liberty.

Mr. Speaker, August 21, 1968, must serve as a vivid reminder to the free world about the ways in which the Soviet Union treats the aspirations of freedom-loving people. It represents Soviet repression in its raw form. Moreover, the invasion of Czechoslovakia portrays the outright hypocrisy of the Kremlin leaders. Today, they claim that we, in our concern for Soviet dissidents, interfere in their internal affairs. Then, let us point to the summer of 1968 as an example of blatant Soviet interference in the affairs of another nation.

Today we must condemn the Soviet Union's occupation of Czechoslovakia in 1968. And as we pay tribute to those people who fought and died in the streets and alleys of Prague and other Czech cities for the very ideals which led to the birth of our own country, we must continue to reaffirm our support for human rights in Czechoslovakia and Eastern Europe. The undying thirst for liberty among the peoples of Eastern Europe is the Achilles' heel of the Soviet empire. It is a matter on which the Kremlin will always be on the defensive—an issue on which they know they can never win. The Russians will hate us for our strong advocacy of human rights for Czechoslovakia and other countries under the Soviet yoke—and we must never falter in that advocacy.

UNFAIR FOREIGN TRADE PRACTICES

HON. JIM LEACH

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. LEACH. Mr. Speaker, I have today introduced H.R. 8868. This bill amends the Trade Act of 1974 to broaden the criteria for determination of unfair trade practices to include currency undervaluation. If such a determination is made, the President may take remedial action on behalf of U.S. companies under section 301 of the Trade Act.

Frequently criticism is levied against countries like Japan for subsidizing their export trade through various means, including tax policies and shipping practices. Often overlooked is the maintenance by some of our important trade partners of artificially undervalued currencies. Such artificial currency undervaluations have a profound effect on the competitive position of U.S. produced and manufactured products in our own and in third country commercial settings.

The remedial approach authorized in H.R. 8868, intended to be triggered by a decision of the U.S. International Trade Commission, is aimed at increasing, rather than limiting, free trade. No responsible legislator favors stark trade protectionism which is beneficial to neither the United States nor the world economy. However, our Nation must respond to a foreign country that utilizes competitive techniques not normally associated with free trade. We have a responsibility to those companies and employees adversely affected by unfair competitive practices, in this instance currency undervaluation.

Recently there has been serious discussion of the United States devaluing the dollar. In my judgment this would be a major error. A far preferable approach would be a responsible administrative policy which balances the social imperativeness of protecting jobs with the general economic advantages associated with free trade. The issue for our Government is to insure that trade is carried out in an orderly, equitable manner with all countries following the same general precepts. Lacking acceptance of such preceptual parameters, penalties should be devised to deter the type of export parochialism practiced by countries which maintain undervalued currencies.

Below is H.R. 8868, I plan to reintroduce this legislation October 5 and would urge my colleagues to consider joining me as a cosponsor:

H.R. 8868

A bill to designate the maintenance of artificially undervalued currencies by foreign countries for certain purposes as unfair trade practices with respect to which the President may take remedial action under section 301 of the Trade Act of 1974.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section

301(a) of the Trade Act of 1974 (19 U.S.C. 2411(a)) is amended—

(1) by striking out "or" at the end of paragraph (3);

(2) by inserting "or" immediately after the comma at the end of paragraph (4);

(3) by adding immediately after paragraph (4) the following new paragraph:

"(5) maintains an artificially undervalued currency for purposes of facilitating its export trade which action with respect to its currency has the effect of substantially reducing sales of competitive United States products within the United States,"; and

(4) by striking out "restrictions or subsidies" in the matter immediately preceding subparagraph (A) and inserting in lieu thereof "restrictions, subsidies, or actions".

LESSONS FROM THE NEW YORK CITY BLACKOUT BY A MINORITY SMALL BUSINESSMAN

HON. JACK F. KEMP

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. KEMP. Mr. Speaker, the New York Times recently carried an extremely interesting article, about the recent New York City blackout and the subsequent looting, by Mr. J. Bruce Llewellyn, president of Fedco Foods, one of the largest black-owned companies in America, and Mr. Adam Walinsky, a lawyer.

Mr. Llewellyn writes as one whose concern for the people of New York's ghettos is shown by his personal commitment to the creation of a viable business employing thousands of minority citizens and providing important services for them in the hope of making a profit for his company.

He is rightly critical of the way Government has responded to the needs of small businessmen like himself. Politicians pay lip service to private enterprise, but their actions belie their words. The "employment" programs erected by Government have only created jobs for bureaucrats and fostered a philosophy among the recipients that everyone is entitled to live well whether they work or not, and that private enterprise is a synonym for "ripoff." Well, the "ripoff" is in the public sector programs, the high taxes to pay for them, and the attitude they foster among the people of "something for nothing."

Moreover, businessmen and property owners did not receive the police protection to which they had a right. Police made little effort to protect businesses from looting in order to avoid hurting any of the looters. But this is a double standard, because everyone knows that if the rioting had spread into white areas downtown, all possible force would have been used. As long as the violence was confined to small ghetto businesses, anything was tolerated.

I believe that this situation is deplorable. On the one hand, welfare has become a right, while police protection is no longer considered one. I think this is the opposite of the way it ought to be. Welfare ought to be a condition to be avoided and discouraged, not a right. While police protection cannot have one standard for a large business downtown and another for a small ghetto business.

It is open to question whether calling out the National Guard and adopting a tougher attitude toward looters would have helped a great deal. In conditions such as those that prevailed during the blackout there is little likelihood that the mere presence of armed troops would have been much of a restraining influence. Nevertheless, it is an accepted practice during riots and natural catastrophes, such as earthquakes and tornadoes, that looters are dealt with very harshly. The fact that the police action taken was so much less than anyone had a right to expect will ultimately make any reoccurrence of a riot in New York City vastly worse than it would otherwise have been, and even greater force may be necessary to restore order. But certainly the National Guard and police should have been used to maintain order and protection for the people.

It is tough enough for any business to survive in America today even under the best of conditions, given the unreasonable regulations and taxes imposed by all levels of government. But it is especially tough for those in the ghetto. Those who try to do business there ought to be encouraged, as should all residents, by systematically reducing the tax barriers to employment opportunities and prosperity that are engendered by New York City, New York State and the Federal Government.

The article follows:

[From the New York Times, July 31, 1977]

BLACKOUT LESSONS

(By J. Bruce Llewellyn and Adam Walinsky)

Dr. Samuel Johnson thought that the prospect of hanging would "powerfully concentrate" the mind. But the looting in New York City seems instead to have turned most minds into poisonous mush. We have a very short time to learn the real lessons. They are as follows:

1. Present Government programs—welfare, jobs, housing, etc.—are wholly ineffective and cannot prevent a repetition of the disorder. This is not the same as saying that employment is unimportant; it is critical. But what is needed are permanent, productive, self-supporting jobs in the private sector.

The billions spent by Government since 1965 have created jobs, not for the needy poor but for bureaucrats and what Herman Badillo calls "poverticians." These programs increase cynicism, since they teach that stealing is acceptable: Indeed, the politicians are the original looters. They are also an important source of the ethic of entitlement—everyone is entitled to live well whether or not they are willing to work toward their own comfort.

2. Liberal rhetoric has created something approaching contempt for work and effort. The rioters of the 1960's often spared black merchants who put "Soul Brother" signs in their shop windows. But brotherhood was no safeguard in 1977.

So a generation of struggling black and Hispanic entrepreneurs, built up with the aid of Government loans and their own enormous efforts over the last decade, was utterly destroyed. This was, in some substantial part, the result of years of nattering about the evils of private enterprise: If, as millions of people have been told on television, ghetto merchants are all "ripping off" their customers, then the customers can excuse themselves by stealing back their own.

Those who mouth this easy rhetoric have little conception of business, let alone the special conditions of the ghetto. They ignore the extra costs of insurance, of security guards, of theft losses; they are insensitive to the increased dangers of holdups, the problems of night hours, the difficulty of hiring. Oddly, those who thus implicitly justify destruction of ghetto business often bemoan the absence of jobs in poor areas.

3. Class distinctions still hold: The institutions of power evidence a shocking indifference to real black and Hispanic needs. The great majority of blacks and Hispanics are not looters and arsonists, but victims of these crimes. Yet after the looting, the organs of the press Establishment all congratulated the police for their "restraint." That "restraint" consisted mostly of outnumbered policemen standing by and allowing the mobs to steal anything they wanted, and destroy the rest. Any damage to property, any number of burned-out stores and homes, was presumably better than damage to persons. So the police were under obvious orders, not only not to shoot but not even to use their clubs; and this was applauded.

Imagine, however, if the riots had moved downtown: if it were Bloomingdale's that had been looted, and Park Avenue apartments that were torched, and New York Times presses that were smashed beyond repair. When that day arrives, be certain that the concept of "restraint" will change sharply.

Police Commissioner Michael J. Codd said on television that "sufficient force," including "deadly force," would have been used to prevent the rioters from any move out of the ghetto. The truth seems to be that we will accept any amount of damage, so long as it is confined to small-business men (whether white, black or Hispanic), and so long as the homeless are black and Puerto Rican.

4. Those places that escaped significant damage were of one kind: where the owners armed themselves and stood guard, ready and physically able to injure even a few of the looters. No doubt all ghetto businessmen would prefer an effective police presence, or even the National Guard, to prevent their destruction—just as residents would prefer that the police keep their homes from being burned. But if we are not to be protected, we will have no alternative but to protect ourselves.

5. When the looting began, Mr. Codd called for all off-duty patrolmen to report. Thousands of heroes came. Thousands of malingerers stayed home (Mr. Codd says "only" 1,500). Out of a total force of over 25,000 men, fewer than 10,000 seem actually to have been on the street. Their hard work and long hours and the firefighters' gallant efforts make more irresponsible, by contrast, the actions of those policemen who refused their duty. This is unforgivable; and a pay raise for those individuals who refused their basic duty in this crisis should be inconceivable even in the debased politics of this city.

6. The response of government at every level has been bankrupt. While the looting was in progress, City Hall did its best to minimize it. When it was over, the Governor made clear that the National Guard would never be ordered in. And the President has yet to order disaster aid (although he has been quick to offer it to flooded Johnstown, Pa.).

At every level, we are offered pious explanations of "the real causes," but no serious action to address them. Even for the immediate victims of the looting, there is little help.

The Small Business Administration loans now being offered are no more than a chance to start all over again from scratch. Welfare payments cannot make up for lost jobs, nor will Federal Section 8 housing programs rebuild the burned-out housing.

As always, there will be welfare and food stamps for blacks and Hispanics who do nothing. For the vast majority who work, for those who try to join the American parade, there is only indifference and a queer sort of distaste.

7. Help is desperately needed. The looting has done incalculable damage. Many businesses, along with the jobs they created, have gone forever. Many potential new businesses will go elsewhere. It was always difficult to build up employment in the ghetto; the barriers are now higher than ever.

First, there must be assurance that this will never happen again. Not that people will not attempt to steal and loot—another such episode is inevitable, either when the lights go out again, or on some other pretext. What we need is a pledge that if there is a "next time," the authorities will be prepared, and that sufficient forces will be deployed to prevent it. This means disciplining the policemen who did not show up; it may mean reorganizing the Guard; it will certainly mean a change in orders, to assure that property is protected.

Second, there must be assistance in rebuilding shattered neighborhoods and businesses. Disaster aid would certainly help now.

The state must require that insurance companies not only pay losses but write new policies in ghetto areas. There must be tax incentives to locate business in ghetto areas and offer employment to residents. If we are at all serious about jobs, a program of this kind would do far more than all the Government's self-enriching "poverty" programs. At a minimum, the city should immediately enact emergency legislation to exempt from all city taxes, for perhaps seven years, every looted business that reopens.

Third, and most of all, we must end the vicious double standard that now governs politics, the news media and the entire society. Whites are expected to learn, but black children are assumed to the uneducable, are allowed to graduate illiterate. Whites are expected to obey the law, but blacks are allowed to defy it—so long as they confine their depredations to other blacks. "Restraint" is preferred to protection—so long as those left unprotected are the powerless. This is not only tripe, it is suicidal.

Dr. Martin Luther King Jr. told us that we must combine the qualities of the serpent and the dove—a tough mind and a tender heart. In New York, in 1977, we need both more compassion and more strength: a real determination to improve ghetto conditions, and a total intolerance of the lawlessness that makes improvement impossible.

PERSONAL EXPLANATION

HON. MARTHA KEYS

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mrs. KEYS. Mr. Speaker, on Wednesday, August 3, 1977, I was unavoidably absent from the House. Had I been present, I would have voted on matters coming before the House as follows:

"No" on roll No. 500, an amendment offered by Mr. FLOWERS to delete section 548 of the bill, which extends Federal antitrust jurisdictions to the siting of fossil fuel electric generating plants;

"Aye" on roll No. 501, an amendment offered by Mr. HORTON to strike the Federal van pooling program.

CHARITY DISCLOSURE BILL (H.R. 41) THREATENS RELIGIOUS FREEDOM

HON. GENE TAYLOR

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. TAYLOR. Mr. Speaker, on July 25, 1977, House bill 41, the dubious and controversial so-called charity disclosure bill, squeaked past its Post Office subcommittee by a narrow 4 to 3—with Democrat and Republican opposition.

I voted against the bill because the more I studied the field of charitable giving and the more testimony we heard pro and con, the more I became convinced that this bill is both impractical, economically repressive to charitable giving, and an unconstitutional threat to the free exercise of religion in America.

The sponsors of the bill intend to require all charitable organizations—including religious organizations, churches, schools, mission societies, hospitals, and so forth—seeking contributions, by mail or through radio or TV, to provide at the time of the solicitation complete disclosure of the percentage allocation of funds received between the ultimate charitable purpose on one hand and fund raising, general, and administrative costs on the other.

The sponsor's concept is that if the internal workings and financial costs of an organization are widely revealed, the public will be able to distinguish between good and bad, efficient and inefficient charities.

After the charitable organization calculates its costs percentage figure and publicizes that in every mailing piece, donation envelope, radio and TV broadcast, this bill would then allow the U.S. Postal Service to get complete control of the financial records—expense accounts, contributors lists, and so forth—of each charitable and religious group, so that the Postal Service can verify and publicize whether the charitable organization is truly publishing an honest figure.

Aside from the seemingly unconstitutional aspects of a proposal like this, there are good grounds to believe that the bill's percentage disclosure requirements are not practical. The bill does not take into account different methods of raising funds, and it does not recognize the various groups of people solicited by our various charities. Furthermore, it puts the charity in the position of looking like a liar to the press and public when the Postal Service accountants come up with different percentage costs figures because they used a different method than the charity-church uses in allocating costs between ministry and administration.

This percentage reporting requirement assumes that percentages are a good basis for comparing charities or for judging a charity on its own. The cost of fund-raising, expressed in a cold figure or percentages, is of itself a very bad criterion of the worth of a charity. And when you get into appeals by religious groups, will the Postal Service claim as fund-raising costs an entire mailing or broadcast which asks for funds—even though most of the mailing or broadcast is spiritual refreshment or teaching?

Several of the witnesses who testified on this bill pointed out that percentage disclosure will place certain types of charities and charitable organizations in a statistically unfair light and give no recognition about the value of their work. Some organizations, legitimate and worthy, have and always will have higher fundraising costs not because they are inefficient or mismanaged, but simply because their cause is different.

Mr. Speaker, all charitable institutions, regardless of fundraising techniques or fundraising costs will be innocent victims if this legislation passes. Only a small number of charities run costly fundraising programs, yet this bill would penalize and harass thousands of decent ones, including practically every church and religious organization in the country. The bill, as passed by our subcommittee, exempts from its regulatory features "any local religious congregation or parish" which solicits exclusively from its members. But, Mr. Speaker, there is hardly a handful of religious groups who solicit only from its members.

Quite frankly, there has been little need shown for this type of pervasive legislation. There are more than sufficient forces at work to expose and remedy any "charity rip-offs" and to protect the interests of both the public and legitimate charities.

First, we have the vigilance of the press. Second, we already have in the law the nonprofit authentication process and audits of the Internal Revenue Service. Third, we have the false representation statute, a consumer protection law covering nonprofit and religious organizations, and Fourth, we have the existing statutes dealing with postal fraud.

Perhaps the greatest protections offered the public against rare abuses is the peer pressure and various codes of ethics of religious and other groups of fundraisers, plus the overwhelming availability to contributors of financial summaries, if the contributor specifically requests it.

Even without all the existing legal protections, the bill fails to take into account one all important fact: donations to charity are, by definition, made of one's own free will. There is no force compelling people to give. Every individual has the right not only to give or not to give, but to ask for whatever information or financial report he or she desires from that charity, before he or she makes a decision to contribute.

CONSTITUTIONAL OBJECTIONS

Mr. Speaker, the U.S. Supreme Court has consistently held that Government, in its dealings with religion, must not inhibit religion, must not become excessively entangled with religion, and must not violate the first amendment's free exercise rights.

The attempt through this bill to regulate the activities of religious organizations and churches and to compel disclosure of church financial information would infringe both the establishment and the free exercise clauses of the first

amendment. The sanctions allowed for Government to take, including putting a mail stop on those organizations refusing to publicly disclose their sources of income and contributors' lists, would have a profoundly chilling effect on solicitations of funds by churches. I do not think the bill's apparent exemption for "membership organizations," even with the addition of the words "any local religious congregation or parish," is adequate to avoid an unconstitutional inhibition of the free exercise of religion in the absence of a compelling state interest.

Witness after witness raised constitutional objections to this bill during the hearings, and their arguments against enactment impress me very much.

This bill would place a burdensome paperwork requirement on all churches, both large and small, if they received any charitable contributions through the mail. By forcing them to open their books and records for review and examination by the U.S. Postal Service and, under the Freedom of Information Act, revelation thereby to the press and public, religious contributors would no longer have confidentiality and protection from disclosure, harassment, and possible persecution or discrimination.

I for one am not prepared to vote to have the Postal Service or any Federal agency looking down the necks of this Nation's churches and charitable organizations in this manner.

STRAIGHTENING THE RECORD ON VAN POOLING

HON. JOHN L. BURTON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. JOHN L. BURTON. Mr. Speaker, section 701 of H.R. 8444, the National Energy Act, was to authorize establishment of a voluntary and self-sustaining Federal van pooling program for employees of Federal agencies.

In view of some inaccurate statements opposing section 701, let us clear the air with a few facts.

Section 701 permits two types of programs. The first enables Federal agencies to work through the private sector. Agencies are given express authority to encourage and cooperate with such non-Federal sponsors. To facilitate this, the section lifts several legal and institutional barriers.

The second type involves Federal purchasing or leasing—repeat leasing—of a limited number of vans—up to 6,000. However, as the Government Operations Committee report declares, in general van pooling arrangements not involving Federal lease or purchase should be favored. With Federal leasing or purchasing of vans goes the requirement that virtually all expenses must be recovered through rider charges. Only an insignificant amount of administrative costs would not be returned. Section 701 and the Government Operations Committee report make this clear. Of course, special costs for a few vans to handle handicapped employees would be underwritten.

GSA calculates the monthly charge for a Government-purchased van as $31.53 for a 50-mile daily round trip—a reasonable figure. Where the van is leased, the rider charge would be about $2 a month more—still reasonable. GSA estimates that each year the same number of private vans as federally leased or owned vans would enter the overall program.

This program would start on a solid base of years of research and actual experience with ridesharing in the Department of Transportation, the Department of Energy, and GSA.

GSA would start slow, with not more than 300 vans leased or purchased for the first year. This would require an appropriation of $3,345,000 for that year, all recoverable. Figures for subsequent years are shown in the GSA cost estimate below. Congressional budget and appropriation processes naturally would govern all funding. This is a modest program, and the General Accounting Office testified that its administrative burden need not be great.

Section 701 would mean that Federal agencies could do what Congress for years has urged non-Federal employers and organizations to do: Use van pooling to save fuel, cut traffic, and reduce parking.

FEDERAL VANPOOL PROGRAM—GSA/DOT COST ESTIMATE,[1] BASED ON A PHASED ACQUISITION OF VEHICLES

	1978	1979	1980	1981	1982	1983	1984	1985	Total
Number of vans:									
Vans (Government-owned or leased)	300	+1,200	+1,500	+1,500	+1,800				
Disposal					−300	−1,200	−1,500	−1,500	
		=1,500	=3,000	=4,500	=6,000	=4,800	=3,300	=1,800	
Vans (private)	300	+1,200	+1,500	+1,500	+1,500				
		=1,500	=3,000	=4,500	=6,000				
Total	600	3,000	6,000	9,000	12,000				
Recoverable expenses [2] appropriated:									
Capital, at $7,400/van	$2,220	$8,880	$11,100	$11,100	$13,320				$46,620
Fleet administration	400	500	600	600	600	$600	$600	$500	4,400
Promotion, training, marketing	350	550	500	450	350				2,200
Initial operating expense [3]	375								375
Total	3,345	9,930	12,200	12,150	14,270	600	600	500	53,595
Directly from fares:									
Operating 50 mi/day/250 days/×10 cents a mile	(2)	1,875	3,750	5,625	7,500	6,000	4,125	2,250	31,125
Insurance at $600/van	180	900	1,800	2,700	3,420	2,700	1,800	900	14,400
7-percent interest on unrecovered-purchase price	105	525	1,050	1,575	2,100	1,680	1,155	630	8,820
Total	285	3,300	6,600	9,900	13,020	10,380	7,080	3,780	54,345
Total expenses	3,630	13,230	18,800	22,050	27,290	10,980	7,680	4,280	107,940
Revenues:									
Resale at $2,000/van after 4 yr				600	2,400	3,000	3,000	3,600	12,600
Fares [4]	1,135	5,675	11,350	17,025	22,700	18,160	12,485	6,810	95,340
Total	1,135	5,675	11,350	17,625	25,100	21,160	15,485	10,410	107,940
Nonrecoverable expenses:									
Handicapped program:									
Modifying vans [5]	32	32	32	32	64				192
Loss of fares due to modification	23	45	68	91	113	91	68	45	544
Total	55	77	100	123	177	91	68	45	736

[1] In thousands of constant fiscal year 1977 dollars.
[2] Expenses incurred above existing agency budgets as a direct result of Federal vanpool program.
[3] From appropriations (1st yr only) to establish needed operating reserves.
[4] Estimated average passenger fare $31.53/mo—based on 10 paying passengers per van/50 mi round trip.
[5] Based on 20 vans/yr at $1,600 modification.

Note: Expenses which cannot be identified (because of the small amount of time expended or the excessive effort needed to determine them) are assumed to be a part of an existing employee's normal function and are not itemized in this cost estimate. That such unrecoverable costs should be kept to a minimum is evidenced by the administrator's letter to the Honorable Jack Brooks, Chairman, House Government Operations Committee, dated July 1, 1977.

RARE II

HON. PHILIP E. RUPPE

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. RUPPE. Mr. Speaker, recently, the U.S. Forest Service announced that it would conduct a complete review of roadless and undeveloped areas in the national forest system for possible designation as wilderness areas under the national wilderness preservation system.

This roadless area review and evaluation program, or RARE II, is intended to be a much more comprehensive review of undeveloped lands than an earlier one conducted in 1973. In addition, public workshops have been set up to allow private participation in this inventory process.

To the extent that this program will provide a thorough inventory of all undeveloped area in the national forest system, it will serve a useful twofold purpose. It will not only lessen the possibility of further court litigation, as in Sierra Club against Butz, but it will also move the Nation a step closer toward the goal of preserving those undeveloped areas which should be preserved for future generations.

However, in our haste to preserve genuine wilderness areas, we must not allow the criteria for wilderness designation to become so broad as to swallow up areas already adequately protected due to their remoteness or inaccessibility.

Unfortunately, wilderness designation can sometimes lead to economic hardships to the nearby property owners, as well as long delays in settling such issues as accessibility and rights of way. I cite for example the difficulties encountered in Rock River Canyon, and Sturgeon River areas where access roads were arbitrarily closed, due to their wilderness designations.

If we are to develop a fair and equitable inventory of roadless and undeveloped lands, consideration must be given to such factors as:

First, designating as wilderness only those areas which are not adequately protected under existing Federal ownership status,

Second, taking into account the economic impact that such a designation would have on nearby landowners, businesses, and communities, and,

Third, exploration of certain multiple-uses of land considered for wilderness designation that would not destroy or disturb its unique qualities.

Another problem that must be clarified is the status of lands included in the RARE II inventory. While it is understandable that new, disruptive activities should necessarily be limited in areas whose unique qualities would be lost if not preserved until a final designation decision is made, it would not be appropriate to freeze all use of lands pending the outcome of this initial inventory phase.

For example, timber harvesting that has been continuing in areas included in this inventory should not be discontinued in this phase I review. Clearly a cessation of such activities would expand this inquiry beyond the review stage. It is my belief that the impact of this review process on the public should be minimized to the greatest extent possible, if this is indeed to be only a review.

I would hope that the U.S. Forest Service will be particularly sensitive to the needs of the affected citizens before considering additions to our wilderness system. Preserve that which must be protected or forever lost, but allow the public access to that which is already sufficiently protected and allow these lands to remain available to all.

LaCROSSE VOTERS HAVE SENT US A MESSAGE

HON. JOHN M. ASHBROOK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. ASHBROOK. Mr. Speaker, on August 2, the voters of LaCrosse, Wis., recalled their entire five-man school board by a margin of better than two to one. Recall of public officials is unusual. But most important was the issue which caused the voters to unseat their school board.

The issue was permissiveness. The school board had fired a principal who had had the audacity to enforce discipline in a school plagued by drugs and violence. He searched the students for drugs and confiscated them. When a student got out of line, he put him back into line, by force if necessary. With a comment that these methods were "30 years behind the times," the board removed this hard-liner. They would apparently rather have drugs and violence in their schools than defy fashionable social theories.

As so often happens today, it was the public officials who were looking to the past, while voters had their eye on the future. Liberal education policy is as out of date as beatniks and pegged pants. The school board claimed that the principal was 30 years behind the times. He claimed he was 30 years ahead. They were both right. The social experiment of permissiveness which ruled education over the past two decades has failed. We have to return in the future to the solid values of the past.

Thirty years ago there were things Americans simply would not stand for. Drugs in school was one of those things. Rowdiness in school was another. LaCrosse has shown us once again that the voters are often far wiser than their officials. If firm discipline and concern for our young people is behind the times, elected representatives had better start getting old-fashioned fast, or they will follow the LaCrosse school board in an abrupt return to private life.

Voters are demanding basic education combined with old-fashioned, firm discipline, and I, for one, could not be more delighted.

LOOPHOLE IN CANADIAN-AMERICAN AUTOMOTIVE AGREEMENT OF 1965

HON. CHARLES A. VANIK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. VANIK. Mr. Speaker, as a representative from one of the major auto and automotive parts producing areas of the Nation, I have long been concerned about certain problems in the operation of the Canadian-American automotive parts agreement of 1965.

The 1965 agreement was signed to reduce barriers to automotive trade between the two countries and to encourage trade expansion. There is considerable disagreement between the two nations as to which country has gained the most from the agreement. For example, the Canadian House of Commons is currently studying a major report "harshly critical" of the activities of the Big Four auto companies in Canada and their operations under the 1965 agreement. I personally feel that Canada has benefited far more than the United States as a result of this agreement. There is no disagreement over the fact that the volume of trade has expanded dramatically in both directions. For example:

U.S. new passenger car imports from Canada

	Units	Value (millions)
1964	9,201	$18,703
1976	825,590	4,072,150

U.S. new passenger car exports to Canada

	Units	Value (millions)
1964	15,644	$42,223
1976	573,470	2,442,987

As the figures indicate, the percentage growth in new car sales has favored Canada, and in general, the automotive trade surpluses which the United States had with Canada in the mid-1960's have turned to deficits.

One of the problems with the agreement is that Canada promised to eventually remove the tariff on new autos exported to Canada for sale. While the United States removed its tariffs on Canadian imports, Canada was allowed to maintain a tariff "during a transition" period. Twelve years later, they are still "in transition" and have failed to remove the tariff on our autos shipped to Canada for sale to Canadian customers.

Another potentially more serious problem has just come to my attention. Under the agreement, the United States elected to continue its existing tariffs against the imports of autos and auto parts from countries other than Canada. Canada, however, chose to provide the same duty-free treatment to other nations as it agreed to apply to the United States in the 1965 agreement. As a result, automotive parts, which would be subject to a tariff if they entered the United States directly, are entering Canada duty-free, being placed into

finished auto assembly lines in Canada and then those autos are being sold in the United States. This loophole is possible, because the 1965 agreement applied to autos which had only a minimum of 50 percent of their value produced in North America.

The effect of this loophole on American and Canadian workers can be seen by studying the use of foreign imported parts at the Ford Motor Co.'s St. Thomas, Ontario plant. The St. Thomas plant is using some 766 Brazilian engines per production day for placement in Pintos. Over 800 French transmissions are installed in the St. Thomas assembly line per day. According to the United Auto Workers, the Ford engine plant in Lima, Ohio, used to make the engines that were shipped to St. Thomas. However, since the engine was obtained from Brazil beginning in 1975, some 600 workers were laid off; 375 are still out of work with seniority recall rights, while approximately 200 have lost recall rights.

These specific examples were obtained earlier this summer and may no longer be accurate, due to new model startups and changes in production lines. The example, however, is accurate of the type of problems developing because of a loophole in the agreement.

Needles to say, the hourly wage costs in Brazil are much lower than the hourly wage rates for auto workers in North America. Yet interestingly enough, there does not appear to be any reduced price to the consumer on autos assembled and sold with these foreign parts compared to the same models made totally in North America.

I do not believe that this loophole in the agreement should be allowed to continue and I will be introducing legislation to increase the value added requirement under the 1965 agreement from 50 percent to 75 percent.

It is interesting to note that the legislation passed in the last Congress mandating increased auto efficiency and improved miles-per-gallon standards defined North American autos as ones with 25 percent or more of their value added in North America. The same standard should apply to the Canadian-American trade agreement.

The present 50-percent value added requirement level is unfair to North American workers and appears to have no benefit for the consumer.

PERSONAL ANNOUNCEMENT

HON. BRUCE F. CAPUTO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. CAPUTO. Mr. Speaker, on July 20, 1977, I was absent at the time two votes were taken. I would like to indicate for the RECORD how I would have voted had I been present:

Rollcall No. 441, adoption of the conference report on Water Resources Research and Saline Water Conversion Act (H.R. 4746). I would have voted "yea."

Rollcall No. 442, adoption of the conference report on Health Programs Extension Act (H.R. 4975). I would have voted "yea."

A TAIWAN SELLOUT LOOMS UNDER CARTER

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. DERWINSKI. Mr. Speaker, I wish to insert the following article, appearing in the Anaheim Bulletin of July 19, by Allan C. Brownfeld, a penetrating observer of the Washington scene. His article takes a pessimistic view of the forthcoming trip of Secretary Vance to Peking. I hope that Mr. Brownfeld is overpessimistic, but I am afraid he is not.

[From the Anaheim Bulletin, July 19, 1977]

A TAIWAN SELLOUT LOOMS UNDER CARTER

(By Allan C. Brownfeld)

Secretary of State Vance is now planning his trip to Taiwan in August and, as he does, pressures are mounting for the U.S. to abandon Taiwan and "normalize" relations with Communist China.

One indication of how strongly the Communist Chinese feel on this question came in an unusually tough statement from Vice Premier Li Hsien-nien, who met on July 4 with Admiral Elmo Zumwalt while he was visiting China. Vice Premier Li said the following: "As to when and in what way the Chinese people are to liberate their sacred territory of Taiwan, that is entirely China's internal affair, which brooks no interference."

Writing from Peking, Ross Munro of The Toronto Globe and Mail noted that, "The statement was another Chinese rebuff of U.S. probes for some sort of direct or indirect assurance from Peking that it does not intend to use military force to reunite Taiwan with the mainland."

After his meeting with Vice-Premier Li, Admiral Zumwalt said that he "detected no flexibility" in the Chinse positions in regard to Taiwan. One week earlier, Secretary Vance had urged China to "join the U.S. in mutual efforts to normalize relations, but added that the U.S. "places importance on the peaceful settlement of the Taiwan question by the Chinese themselves." Vice Premier Li appeared to be responding to the Vance statement when he declared that the U.S. must take the following steps of disengagement from Taiwan: "Severance of diplomatic relations, withdrawal of its troops and abrogation of the defense treaty—and none of the three can be dispensed with."

The idea of the men in Peking determining U.S. policy is itself a shocking presumption on their part. Unfortunately, there is some evidence that the Carter Administration is in the process of submitting to their demands.

In a major speech concerning U.S. Asia policy delivered to the Asia Society on June 29, Secretary Vance appeared to be paving the way toward a fruitful visit to Peking in August. Some observers found it significant that the speech omitted mention of American guarantees for Taiwan, although State Department officials stress that there has been no change in the status of the American Security Treaty with Taiwan. Yet, one Taipei newspaper declared that, "The Secretary of State's address could be construed as a calculated insult to this country. Secretary Vance is associating himself with the Machiavellianism of Richard Nixon. He is not standing on the Carter platform of morality and human rights."

Already, the U.S. seems to be taking steps away from its commitment to Taiwan. The U.S. has reduced its military forces on Taiwan from 10,000 at the time of the Shanghai Communique in 1972 to 1,400 at the present time. The Military assistance and advisory Group has been reduced to 35 members, largely concerned with the cash sales of military material. When the Carter Administration assumed office in January, the U.S. Ambassador to Taiwan, Leonard Unger, sent in his resignation. It was not picked up, many in Washington say, because the U.S. did not want to name a new Ambassador to the Republic of China—thereby irritating Peking.

While the Carter Administration may be toying with the idea of abandoning the U.S. commitment to Taiwan, there are powerful pressures at work which would make this a costly political decision. The State Department has been receiving cables from its embassies all over non-Communist Asia reflecting concern on the part of our Asian allies that the U.S. is withdrawing from its commitments in the region. Beyond this, support in the Congress for Taiwan is perhaps as strong as ever. On a recent visit to Taipei, Senator John Sparkman (D-Alabama), chairman of the Senate Foreign Relations Committee, asserted that the U.S. "will not alter its relations with the Republic of China" while seeking normalization of relations with Peking. Senator Sparkman noted that, "It seems to me that it is both unwise and unnecessary" to accept Peking's terms to establish normal relations.

There are also many in the U.S. who argue that the Carter Administration's embrace of Peking is in direct contradiction to its human rights policy. Professor David N. Rowe of Yale University states that, "If President Carter really does mean not to 'embrace' dictatorships, he should immediately cancel Secretary of State Vance's plan to visit Peking in August to advance normalization of relations with the Red regime there. Or is the Carter Administration in reality so afraid of the Soviet Communists. . . . It seems to embrace the Chinese Communist dictatorship?"

Quietly, the Carter Administration has been taking a variety of actions against the Republic of China. The State Department has discouraged any American companies from participating in any oil and gas exploration off the coast of Taiwan and has requested the termination of a $917,000 contract between the Republic of China and M.I.T. stating that the program "is not in the furtherance of the foreign policy. . . of the U.S." If we are not preparing to abandon Taiwan what is the purpose of such actions?

Even those on Taiwan who disagree with the Nationalist Government are shocked at the heavy-handedness of what appears to be U.S. policy. One of Taiwan's anti-government politicians said: "You gave us to Chiang Kai-Shek and now someday you are going to turn us over to the Communists. Carter talks about morality. He should know we want to be independent. It is going to be a sad day for the Taiwanese."

Hopefully, those Americans concerned with keeping our commitments will see to it that that sad day never arrives.

HELSINKI'S UNFULFILLED PROMISES—KIM FRIDMAN

HON. CLARENCE D. LONG

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. LONG of Maryland. Mr. Speaker, Kim Fridman is a Ukrainian Jew who is forced to remain in the Soviet Union against his will. His wife and daughter have emigrated to Israel, and he is denied work in his chosen career as a radio engineer.

He has been harassed by the authorities for such activities as teaching Hebrew and the history of the Russian Jews.

For a government to presume the authority to meddle in the religious or cultural lives of its citizens is repugnant. To refuse to allow religious or cultural dissidents to leave and pursue their beliefs elsewhere is unspeakable.

Kim Fridman must be remembered and helped.

HOW SOME PENNSYLVANIANS COPE WITH THE HIGH COSTS OF COLLEGE

HON. LAWRENCE COUGHLIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. COUGHLIN. Mr. Speaker, I would like to bring an article to the attention of my fellow colleagues that was written by Henry Klein and appeared in the July 26, 1977 edition of the Evening Bulletin.

The article illustrates the diverse and sometimes ingenious ways in which several middle-class Pennsylvania families are coping with the soaring costs of higher education. The financial hardships are especially grim for the larger families where the costs of a college education are swiftly becoming prohibitive.

The plight of these families speaks eloquently of the need for assistance to the middle American, traditionally the segment of our Nation that pays the most taxes, provides the stability the Nation enjoys and which is often forgotten in the talk of tax reform and social justice.

Tax relief for families bearing the costs of higher education is becoming an economic necessity to insure quality skills and education of our future America.

The article follows:

HOW TO CUT CORNERS AND AFFORD COLLEGE

(By Henry Klein)

The cost of a college education is soaring out of sight.

Tuition, room and board plus incidentals at the University of Pennsylvania, Bryn Mawr College, Haverford College and Swarthmore College currently hover around $7,000.

Even public institutions in this area—subsidized by tax money—range between $3,000 and $4,000. Costs have escalated about 10 percent each year since 1970, with little hope of slowing down.

If you have a high school freshman in your house, you'd better have (or know where to get) about $5,500 for the first year of a state college, or nearly $10,000 at a private one.

To discover how parents are putting their children through college, I recently asked readers of my Sunday Bulletin "Live & Learn" column to share their experiences and secrets.

They were remarkably and admirably candid in telling their hardship stories, although some requested anonymity. Most are using the standard forms of financial aid (government grants and loans), but in some unusual combinations with self-help.

If any single "secret weapon" emerges from their stories, it is their intense commitment to providing more education for their children than they got from their parents.

This is a family-shared commitment, with everybody—grandparents, father, mother and children—pitching in their savings and sacrifices.

The family of Mr. and Mrs. Richard A. Sorrell, of Havertown, has used just about every imaginable way of putting five children through higher education.

"In 1970 our No. 2 son went to New College," Mrs. Sorrell reports." Tuition, room and board were close to $4,000 per year but we felt it was worth it because he was a near-genius and knew exactly what he wanted to do.

"His first year we provided part of the money (which we had frugally saved). He was able to get a $1,000 loan and about midyear was awarded a $1,000 scholarship. He also earned incidental money for books, plane fare, etc. working at odd jobs.

"That year my husband lost his job at Boeing and also was hospitalized with a serious illness. I went to work part-time (I'm an RN) till he was employed again and we got financially stable once more. All money I earned went into a college account for the children.

"Our sons's second year he got a $700 student loan and another $1,000 scholarship while we paid the difference. By his third year we were paying the total bill because according to the Parents' Confidential Statement we were making a shade too much money to qualify for any sort of aid.

"He finished in three years and earned a teaching fellowship at Stanford where he has just graduated with a Ph.D. in chemistry and has a job at the University of North Carolina. His wife helped support him through Stanford.

"Meanwhile No. 1 son had come from the Army in 1972 and began at Eastern College in St. David's under the G.I. Bill. He lived at home and commuted. We gave him room, meals and provided medical care when needed. He works at a part-time job.

"In 1973, No. 3 son graduated from high school but decided not to go to college. He is a natural-born auto mechanic and works in a foreign car garage. He attends necessary classes to keep up with latest trends, so is constantly adding to his education that way.

"From June 1973 to September 1974 we had a little breather, so we could accumulate a little more money in the bank.

"In 1974, No. 1 daughter went to Indiana (Pa.) State College and I went to work part-time. In 1975, No. 2 daughter also went to Indiana and after rejection of both PSC's we never bothered to submit anymore.

"The girls work in the summer if they can find jobs. I finally switched over to full-time work. I'm also adding to my own education, classes that relate to my work. I'm prepared for the day I might have to support myself. I feel better mentally and physically than I ever have."

A family of six children has had a grim history of sacrifices.

"We value education a great deal in this family and have drunk powdered milk and eaten hamburger for many years to afford college," says the mother.

"We have turned sheets (when about half-worn, tear down the middle and sew selvages together, then hem edges)—they last twice as long. We have made lye soap from fat scraps, gardened, frozen and canned, cut our own hair, washed our car (10 years old).

"My husband gets a good pair of shoes about every two years. Other than a $20 raincoat, I have not had a coat that did not come out of the thrift shop for 12 years.

"My husband has never made more than $12,000, though we are furnished with a rent-free house. Ten years ago he was making $5,500. We have put almost $10,000 of our own money into our children's education so far, excluding what was saved in their own names.

"One son had almost $2,000 saved in his own name when he started college. They have gotten scholarships, grants, loans and jobs—from baby-sitting and waitressing to patching roads. We have borrowed $3,000 from our insurance policies. We have not inherited any money. For some years I worked part-time.

"The third one is going to college now. One went to a top-notch state university although we paid out-of-state tuition; one went to an Ivy League college; one to a fine private college. For several years we had two in college."

"But it can be done if you have the will and work hard. This sounds pretty grim but we don't find life that way at all. Laughing youngsters and their friends are always running through the house."

A Wilmington family which was financially able to send only one of its five children "strongly resent the so-called hard-core disadvantaged given grants."

Marguerite C. says: "The fifth and last child is the only one we have sent to college. Five children in eight years. We regret not being able to send the other children who wanted to go, but they have all made it, thank God.

"Our daughter goes to the University of Delaware. Tuition is $978 a year. She commutes with four other students, each takes their turn driving 22 miles each way.

"She works 16 hours a week, clearing about $38 which pays for her books and all her clothes. I went back to work at 45 years of age and her tuition is paid by the savings we deposit at $200 a month.

Many readers are caught in the "middle-class squeeze." They are too rich to qualify for financial aid—yet too poor to pay the full cost.

June R. Bitzer, of Ft. Washington, poses this dilemma: "We have hard-earned income property giving us assets too high to qualify for a grant. We do not want to consider a loan, and we do not feel commuting is an answer because living away from home is in itself an education.

"Sadly, our three children are only given the choice of in-state colleges and they are responsible for their own personal expenses. Our children's ages are such that of the eight consecutive years of college costs, there will be four years of double tuitions. Therefore they must work in the summer."

"A Frustrated Sucker" claims "there is no secret weapon."

"It's depressing," she writes. "The whole system is totally unfair. Why should the middle-class, hard-working people have to bear the burden of the country with taxes and college costs?

"My husband and I have four jobs between us to pay for these two things. We are sick of being discriminated against by the minorities. If they are to be given free college, at least the middle class should be able to deduct college costs from their income tax.

"We are 'too rich,' to get the free help, but have to have four jobs to keep our head above water.

"Our daughter had a perfect 4.0 average upon graduation from high school. She selected an inexpensive state college for her music degree, thinking we could not afford an expensive conservatory. She should have been offered a scholarship for her talent and intelligence. She graduated from college with a 3.96 average.

"Since she wants to continue in graduate school, we told her to select a top conservatory since she had gone to a cheap college. The one she now attends costs $6,000 per year minus $2,314 which they awarded her in fellowships and assistantships."

People who are self-supporting, divorced or separated have their own stories and methods.

Charles McGuigan, of Brigantine, N.J., a waiter, uses a rehabilitation grant and a job stay in a community college.

A divorced mother who is putting herself through college relies on food stamps, a Pennsylvania Higher Education Assistance Agency grant, an interest-free bank loan (state guaranteed), and a special scholarship from her college for women over 25.

"If the motivation is there, it becomes easy. And the children are happy if you are happy achieving," she says.

Nancy Dougherty, of Broomall, is "a self-supporting college student who is dependent on the generosity of the state and a part-time job." She also shares her apartment with a roommate.

A Wilmington mother describes an unusual wrinkle—a collateral loan. Her daughter has worked since age 16 and has saved $2,500. When she began college, the family obtained a collateral loan from a bank for the first year's college costs. The loan interest rate of 9 percent is offset by the 5¼ percent interest she receives on the $2,500 savings.

However, they are also using the National Direct Student Loan, a college grant, summer and part-time work earnings, and a small scholarship—toward a $6,000 annual expense.

"We do not know what the future holds as our income is very unstable," she says. "But we feel even a year or two at an out-of-state, competitive college is an invaluable learning experience."

If there are any "secret weapons" in winning the war against rising college costs—it's the working wife and the cooperative husband.

Mrs. Nora Reyner, of Norristown, has two children at college, costing about $8,000 a year—which they pay completely without loans or scholarships. The children work during the summer.

"How do we do it?" asks and answers Mrs. Reyner. "Way back when the children were 6 and 5 years old, I went back to college for my elementary education certification—going to class at night and Saturdays. Almost all of my earnings went into savings deposits for the specific purpose of providing our children's education.

"My husband and I do our own housecleaning and he does all home repairs—painting, plumbing, electrical work, gardening. We live within our means."

TOO MUCH HOSPITALITY

HON. RICHARD A. GEPHARDT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. GEPHARDT. Mr. Speaker, in recent months the House has considered and passed legislation restricting the ability of aliens from receiving sizable payments from the supplemental security income program after a short period in the country. KMOX-radio in St. Louis broadcast and editorial on May 13, 1977, opposing these benefits and later sponsored several call-in shows that enabled a full discussion of this issue by the people.

As a clear channel station heard in over 30 States, I believe that this editorial played a significant role in informing the public of the abuses of this program.

I think that this is a good sign for those who look to radio for an in-depth analysis of news and issues facing the public.

I would like to share with my colleagues the text of that editorial:

Elderly aliens are pouring into the United States by the tens of thousands to get government pensions and free medical care from Uncle Sam.

These foreign oldsters may be costing the American taxpayer as much as one-half billion dollars a year. What's more, it's perfectly legal under present American law for these senior citizens to receive these benefits.

We imagine you are as shocked by these facts as we were when we read them recently in an article in the Chicago Tribune. It seems that a change in the Social Security regulations in 1974 made it possible for registered aliens to bring their old people to the United States from their native lands.

After a thirty-day waiting period, these oldsters are eligible for checks ranging from $167.80 a month to $295.00 a month and free medical services. The influx of the elderly from foreign countries has become so big and so organized that welcoming committees greet the newcomers and help them fill out the necessary forms to get benefits. The funds for this purpose do not come from Social security, but general revenue—your dollars and mine.

This situation is intolerable at a time when millions of our own people are without work and all are pressed by inflation. We urge you to write your congressmen and senators immediately to call for a stop to this wasteful, disgraceful boondoggle.

Americans are a hospitable people but this is ridiculous.

FIRST NATIONAL BANK OF ARIZONA—100 YEARS OF SERVICE

HON. ELDON RUDD

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. RUDD. Mr. Speaker, next Friday, August 12, the 3,500 men and women of First National Bank of Arizona will be celebrating the bank's 100th anniversary of doing business in our great State.

The bank will officially mark its centennial at its current branch in Prescott, former capital of Arizona Territory, on the same site where the Bank of Arizona opened its doors in 1877.

I am touched by the nostalgia of this event, because as a native Arizonian myself I well know the importance of this bank in helping to guide Arizona's development and growth to statehood in 1912, and to its position today as one of America's truly most desirable places to live.

I remember the founding Bank of Arizona's good impact on the community and the Verde Valley where I was born and raised. I also remember Sheriff Jim Roberts, a fine example of law enforcement in Arizona's earlier era, who with a single bullet from a single-action Colt 45 deterred an intended robbery at the bank's branch in Clarkdale.

Mr. Speaker, this celebration by First National Bank of Arizona is as much a personal tribute to the bank's distinguished chairman of the board, Mr. Sherman Hazeltine, who has displayed great leadership in shaping First National Bank's course as well as Arizona's destiny.

Sherm Hazeltine is a true gentleman who exemplifies all that we admire in a good banker. The sheer impact of this man's personality and respectability made First National Bank of Arizona what it is today. When Sherm Hazeltine made an agreement, he kept his word, and it is this honor—this trust—that is the hallmark of his legacy to Arizona banking.

Sherm and Mary Hazeltine moved from Prescott to Phoenix about 20 years ago, and since that time they have involved themselves in every worthwhile endeavor. He is retiring this year as First National Bank's chairman of the board. I wish him well. His great leadership and legacy will undoubtedly continue to benefit the entire State of Arizona.

Mr. Speaker, the building of the West and its economy has taken many roads. This is true in Arizona, and First National Bank will continue to play an impressive role as it has in the past.

REVISION OF DRUG LEGISLATION

HON. PAUL G. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. ROGERS. Mr. Speaker, last year and again at the beginning of this session I and several of my colleagues introduced legislation which would significantly revise the existing treatment of drugs under the law by the Food and Drug Administration. Briefly, the legislation required that drugs be accompanied by patient package inserts; reporting of information bearing of the safety of marketed drugs after they have been approved; notification to health practitioners of hazards to human health presented by drugs; authority for the Food and Drug Administration, upon approving a new drug application, to prescribe conditions and limitations on its approval to insure that it is used safely and effectively; an expansion of the drug research efforts of the U.S. Government; the requirement that upon taking action with respect to a new drug, the Food and Drug Administration must release a detailed summary of information relating to that drug's safety and effectiveness; and an easing of the criteria by which drugs may be immediately suspended from the market.

Today, Mr. Speaker, I am reintroducing that legislation with substantial revisions and circulating it for my subcommittee colleagues seeking cosponsorship. These revisions are designed not only to assure that drugs on the market today are safe, but also will provide the public with far greater information as to the reasons for their approval and will serve to speed the approval of drugs not now currently on the market which are much needed. Specifically, the new legislation makes the following additions and revisions to last year's bill:

First, it authorizes a merging of the so-called investigational new drug and new drug application processes whereby a drug protocol may be approved by the Secretary and, if the test results of the protocol do not differ substantially from the results required by it, the drug will be approved. This provision, called a drug development protocol, is similar to the product development protocol provisions of the Medical Device Amendments of 1976. It is my hope and belief

that this provision will serve to cut down on unnecessary delays in getting safe and effective drugs to the market.

Second, the legislation would authorize limited marketing of investigational new drugs. It provides that the Secretary may approve, for a 2-year period with provision for extension, the offering for sale in interstate commerce of a drug presently in the investigational stage if the drug is determined to be safe and if it presents a significant advancement of the treatment of disease.

Third, the legislation would require that upon approval of a new drug application, an order withdrawing approval of such an application or an order suspending a new drug application, all information bearing on the safety and effectiveness of the drug must be made available to the public. As a quid pro quo for this new requirement, the patent life of a drug is changed such that the term of a patent would not expire until 17 years from the date of the approval of a new drug application.

Mr. Speaker, there are other differences between this legislation and the previously introduced legislation, but I have highlighted the major changes. I anticipate holding hearings on this legislation this year, and look forward to working with my colleagues and the general public toward successful enactment of this legislation during the 95th Congress.

THE NEED FOR LABOR LAW REFORM

HON. CHARLES WILSON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. CHARLES WILSON of Texas. Mr. Speaker, I would like to bring to the attention of my fellow Congressmen a story which highlights some of the difficulties with our labor laws. This is a case history of a firm that has reportedly violated our labor laws with impunity and somewhat denied its workers some rights this Congress attempted to guarantee them under the National Labor Relations Act.

The workers of Schill Steel in Houston, Tex., fought over 12 years for the right to have a union and to secure a collective bargaining contract. In May of 1962, workers of the firm contacted the local Steelworkers representative and expressed their interest in a union. By August, an election had been held and the union had won and was certified.

During this period the company reportedly questioned employees on their opinion of the union, promised additional benefits if they voted against the union, threatened removal of various benefits if they voted in the union's favor, indicated that they would fire the union's leaders if their identities were learned, and actually did fire one such organizer, Columbus Caldwell. Caldwell was one of the original employees to ask the union to assist the workers in organizing.

Subsequent to the union election, the company apparently refused to recognize the union and fired another employee who had supported the organizing efforts, Wilburn Brown. Considered by one of his supervisors to be among the 5 best employees in the plant of 50, Brown was fired allegedly because of insubordination and laziness. The charge of insubordination stemmed from a fight Brown supposedly had with one of his supervisors. Yet, the very same supervisor denied ever having such an argument; and in fact, testified before the NLRB that he was told "to make Brown mad so he, a manager, would have a reason to fire him."

The National Labor Relations Board found that the company illegally fired both Brown and Caldwell and ordered that they be offered reinstatement to their former jobs with back pay. The Board also saw through the company's arguments and found that it had improperly refused to recognize and bargain with the union. Consequently, the Board ordered the company to bargain in good faith and to refrain from further acts discouraging union membership. This order was affirmed and enforced by a court of appeals cease-and-desist order in 1965, already 3 years later, which found the case replete with "evidence of the company's antiunion animus."

Bargaining then proceeded until January 1966 when a contract was fully agreed upon by both parties, and even signed by the union. Unexpectedly, the company then refused to sign the agreement it had helped draft. Company representatives claimed that the union no longer represented a majority of the employees and petitioned for a new election.

This prompted the National Labor Relations Board to seek an order holding the company in contempt of the 1965 court order directing Schill to bargain in good faith, and expected that both parties, the union and management, to begin bargaining immediately.

But delay by the NLRB in filing the charges and procedural delay fostered by Schill prolonged the rendering of a final decision until 1973. In its decision. the court was very clear:

> It should be unnecessary to add that any further violation or infringement of the rights of the employees involved by this company will be met with extremely harsh sanctions from this court.

At the court's direction, and under this threat, the company and union began bargaining again on August 17, 1973. Bargaining continued until January of 1974 when an agreement was reached; an agreement that gave the workers a wage increase, a reasonable seniority system, and other benefits common to workers at so many other plants.

Schill Steel is one of a growing number of companies who have ignored the purpose our labor laws. To such violators, the threat of a cease-and-desist order from the NLRB, or even a contempt of court citation is less compelling than a chance to break a worker's organizing drive. The law must state that in any organizing drive, every effort be made to protect the worker from unfair labor practices, regardless of which party engages in it.

AVIATION SAFETY—MORE MUST BE DONE

HON. ELLIOTT H. LEVITAS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Friday, August 5, 1977

Mr. LEVITAS. Mr. Speaker, on March 15, I addressed the House on a matter of serious concern to us all—air safety. The main consideration was whether the Federal Aviation Administration was adequately discharging its statutory obligation to regulate the safety of flight, both on its own initiative and in response to recommendations made by the National Transportation Safety Board—NTSB.

We are fortunate in having such an outstandingly good safety record on the part of the American airline industry. For this we can be thankful. But, there is still much more that can and must be done if we are to avoid future tragedies of major proportions.

I pointed out that as of February 16, 1977, well over 200 NTSB recommendations dating back to 1970 were still open on the books—either not rejected by FAA or agreed to in principle by FAA but not yet fully implemented. I went on to describe in some detail 27 of these open recommendations limited to those covering passenger safety and crash survivability, including inflight and postcrash fuel fires, passenger and crew seats and restraining devises, cabin area crashworthiness, and emergency evacuations. Following my speech the Public Works and Transportation Committee's Subcommittee on Investigations and Review, chaired by my good friend and very able colleague from Georgia, Congressman Bo GINN, began an investigation into the manner in which FAA conducts its regulatory business. When my March 15 speech was made, it had been a long time since the latest U.S. air disaster. However, the tragedies at Tenerife, Canary Islands, and New Hope, Ga., which claimed over 600 lives, soon followed. Many of the topics addressed on March 15, fuel fires, crashworthiness and the inability of passengers to escape a "survivable" accident were present in those two disasters.

Mr. Speaker, today I address the House to report on the status of the open recommendations discussed on March 15 and hearings held in July by the Subcommittee on Investigations and Review.

In short, all of the recommendations I reported on in depth are still "open," that is not yet fully implemented. I have seen little or no progress on any of the items—in fact, I am beginning to suspect that some vital rulemaking projects are being consciously delayed or shelved.

One glaring example of FAA failure to come to grips with a serious problem is in the area of fuel fires. It is indisputable that post crash fuel fires pose a serious threat to air safety. According to a recent NTSB Special Study—NTSB–AAS–77–1, fire erupted during 141 U.S. certificated air carrier accidents from 1965 to 1974. Of the 7,043 persons aboard these air-

craft, 1,848 were killed, with about 292 deaths attributable to fire. In only 38—27 percent—of these accidents were impact forces so severe that survival was impossible regardless of the presence of fire. These statistics do not include the many persons who perished in the fuel fires at Tenerife and New Hope.

FAA's inadequate response in this area may be illustrated by the following. In 1964 the agency issued an Advance Notice of Proposed Rulemaking entitled "Prevention of Crash Fires in Transport Airplanes" covering fuel containment and ignition suppression. No new standards or rules resulted from this effort, and the new generation of widebody jets were introduced with little or no improvements in this area. In early 1974 a Notice of Proposed Rulemaking was issued proposing to require explosion prevention systems for transport aircraft. Although the comment period on that NPRM closed some 3 years ago, on April 25, 1977, FAA published a notice to the effect that a public hearing would be held on fire and explosion hazard reduction in transport category airplanes (Federal Register, Vol. 42, page 21202).

In that notice the FAA made the following statement in justification for the hearing:

> That a public hearing would provide a forum to obtain information needed to determine whether a requirement should be developed to reduce the hazards of fuel system fires and explosions associated with both in-flight and impact-survivable turbine powered transport category airplane accidents.

Can there be any question as to whether such a requirement should be developed?

Perhaps in no other area has FAA fallen so far short in carrying out its charter than in dealing with the fuel fire problem. The agency's level of effort over the years in research and development has been minimal and lack of FAA effort to incorporate technology developed by other agencies is disgraceful. The Investigations and Review Subcommittee is examining FAA's activities in this area, and Chairman GINN has indicated that this is one topic on which hearings may be held. I sincerely hope that the FAA public hearing held in May was not for the purpose of merely buying time. I hope that much new information was received so that FAA can get moving to a conclusion on this vital safety problem.

Another example of FAA failure to come to grips with a serious air safety problem is in the area of flammability, smoke emission, and toxicity of aircraft cabin materials. There is an obvious close connection here with inflight and post-crash fuel fires. In addition to the danger of flames, it has long been understood that toxic gas emissions from burning cabin materials pose a high risk of death due to asphyxiation, and smoke emissions greatly impair the ability of passengers to evacuate burning aircraft. Despite these dangers, at the present time there are no existing standards for toxic gas or smoke emissions from aircraft cabin materials. Flammability standards do exist, but many of these standards have not been upgraded for years. FAA efforts to deal with cabin materials requirements have been inexplicably piecemeal and unreasonably slow. Yes, FAA has begun numerous rulemaking projects dating back to the midsixties and has collected reams of public comments on the issues, but the rules and standards have not been forthcoming.

The current status is that on July 18 FAA issued a call for a public hearing—Federal Register, vol. 42, page 36976—on the subject of compartment interior materials in transport category airplanes. In justifying the need for a public hearing to be held in November FAA stated the belief—

> * * * that further consideration, including research efforts, should be given to the interrelationships of flammability, smoke emission, and toxic gas emission characteristics of compartment interior materials in transport category airplanes before further action is taken with respect to Notices 74-38, 75-3 and 75-31.

Mr. Speaker, I submit that just another public hearing is not necessary to consider the interrelationship of flammability, toxicity and smoke. Responsible individuals and corporations have for many years urged FAA to consolidate its efforts in this area, and the public dockets on existing piecemeal efforts are replete with such references. Again, I truly hope that this call for public hearings is not an effort to buy time—we cannot afford to let the clock continue to run while lives are being needlessly lost.

I would now like to report on the very important hearings held last month by the Investigations and Review Subcommittee. The topic of the hearings was: "Aircraft Passenger Education: the Missing Link in Aviation Safety."

These hearings left me with the following firm impressions:
